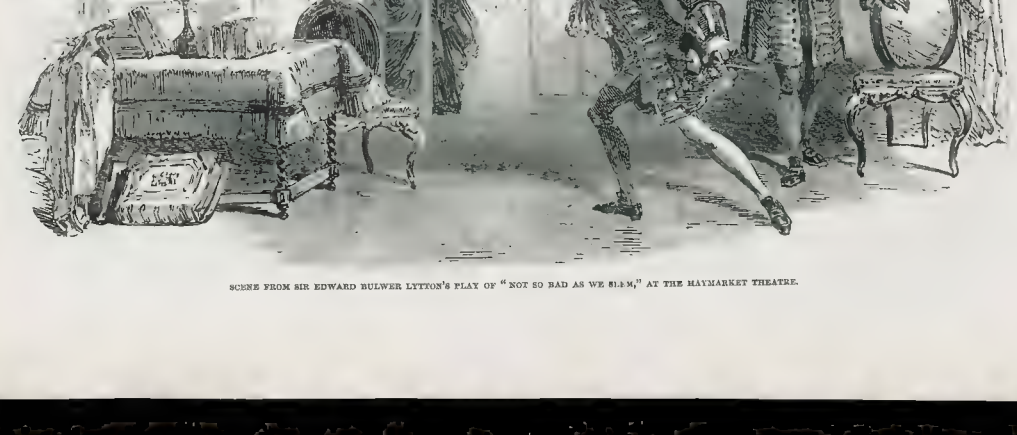
M. Ravel continues to be attractive, and on Friday appeared in a remarkably piquant new character in a very vivacious piece, strangely entitled "Une Rivière dans le Dos." The hero is one with the inconvenient habit of temporarily appropriating the property of others. A diamond necklace is not safe from his larcenous fingers; to conceal the possession of which he places it in the nape of his neckcloth, from whence it progresses down his back, and finds a final refuge in his boots. His embarrassments are oddly interpreted by M. Ravel. In the next piece, of "Le Corporal et la Payse," the subject of which is familiar to the English public in the Adelphi farce called "Seeing Wright," this clever actor is curiously funny in the scene of the nursery; though some of the details are *rather* too broad, but the comical face of Ravel, in a female night-cap, it may be imagined, was infinitely ludicrous. On Saturday, the extravaganza named "Une Fièvre Brulante," by M. Moiseville, was revived, in which M. Ravel performed the part of *Richard Tremblay*, and produced the same effects in it which made it so successful in 1846, when, it will be recollected, M. Ravel enacted the character, and established that name with the British play-goer by which he is now so largely profiting.

HAYMARKET.

Sir Edward Bulwer Lytton's comedy of "Not so Bad as We Seem; or, many Sides to a Character," written, as our readers are aware, for the Literary Guild, and played by that distinguished troupe of amateurs before the Queen, and also in London and the provinces, was produced in public at this theatre on Saturday. Its representation by regular actors was evidently an object of curiosity and interest, as the house was full to witness it, and the performance throughout received a large measure of applause. The plot of this piece is framed for the purpose of illustrating the integrity of the literary character. A poet, fallen from his high estate, has become a Grub-street pamphleteer; and has also been charged with the possession of a chronicle or diary, kept by a deceased brother of the *Duke of Middlesex*, which being supposed by such publishers as Tonson and Curll to contain "smart and spicy" scandal in connexion with aristocratic circles, is eagerly sought by them as an article of purchase. The poor author, with the claims of a starving family upon him, is sorely tempted, but resists the temptation to the last, and thus ultimately wins the esteem of all parties. The *Duke o' Middlesex* just mentioned, the type of aristocratic



SCENE FROM SIR EDWARD BULWER LYTTON'S PLAY OF "NOT SO BAD AS WE SEEM," AT THE HAYMARKET THEATRE.

pride, was confided to Mr. Stuart, who succeeded "indifferent well;" better still was Mr. Howe, as *Mr. David Fallen*, the pamphleteer, who sustained the part with much *vraisemblance*, the thinking and independent man being skilfully brought out. Mr. Barry Sheaven, in *Harebrain*, had a kindred character—a M.P., who owes all, as he mistakingly terms, to his own cause, but he made the part too starry and mouthy, though far from being edacious. Of great excellence, the *Sir Geoffrey Thorndale* of Mr. Webster stood out in bold relief, as a well-defined and elaborate impersonation. The intentions of the character fro a suspicion to fear are well conceived, both in the style of the *bonhomie*, and the vein of the mysterious *Silent Lady of Devil Mere-stone*: one of which is presented in our illustration. New was Mr. Leigh Murray, as *Lord Wilford*, deficient in the appropriate qualities for a representative of the reigning mode. In his assumption of Curll's character, also, he was admirable; and made the most of the famous Hustle bet by of Prize Minister But the crowning hits of the representation were the drunken scenes of Messrs Keeley and Buckstone, as *Mr. Shadbolt Softhead* and *Mr. Sandbag Rowley*. Here they chased the hand and triumphantly, and ensured the success of the remaining acts, heavy as they are. This comedy now is fairly before the public; and, judging from the experience of the first night, it promises fairly to retain a permanent position. Some of the writing is excellent; its defects of structure, and its too direct moral are owing to its original purpose, not to want of skill on the part of the author. As a matter of course, the piece is admirably mounted, and the conclusion, was vehemently called for; but Mr. Webster announced, with regret, that Sir E. B. Lytton was so seriously indisposed as to be unable to attend the theatre.

PRINCESS'S.

On Monday the most magnificent mounting of Shakspeare's tragedy of "Macbeth," within our recollection, was exhibited at this theatre to overflowing audience, we believe, indeed, that it exceeds all precedent. Mr. Kean has been at pains to explain to the public, in an elaborate address, the principle on which he has proceeded, in regard to costume and architecture. He has, for instance, been compelled to proceed upon a compromise of principle; and, in the diversion of positive materials in Scottish tradition, to borrow from those of the nations in connexion with the land of *Macbeth*. The Norsemen, Danes, and Anglo-saxons have accordingly contributed their quota to the general fund of illustration, and the whole has been executed previous to the conquest has been produced on the scene. In treating the supernatural scenes, an abundant use has been made of gauze, so that the witches are continually presented involved in thick mist, which, in the case of the larger groups, has an exceedingly massy and solemn effect; and many of the scenes besides are so enveloped that the change from one to the other is managed almost with the effect of a dissolving view. Other means of effect are also resorted to. The ghost of *Banquo* at the banquet first occupies the centre of the stage, with the head strongly illuminated; and then reappears in the interior of a pillar which becomes transparent for the purpose. Numerous opportunities for by-play are sedulously found or made; and the long processions, and new pieces of stage-business, whicl. give weight and solemnity to the performance. Music is likewise frequently introduced; thus the banquet scene commences with the strains of harpers, several of whom in ancient costume being exhibited aloft in a gallery with their harps. So far the production may be regarded as a well-appointed spectacle; but the acting, by its excellence, made it something more. Mr Kean was chaste and impressive in the early scenes of *Macbeth*; adopting where requisite a conversational tone, and throughout wisely depending rather on intensity than vehemence. His elocution in some points was exceedingly fine. Mrs. Kean's *Lady Macbeth* had received, it was evident, the most careful study; and her powers of execution did full justice to her judicious conceptions. In a word, her delineation was marked by vigour and determination. At the close of the banquet scene she manifested the exhaustion of energy, which, re-acting on the lady's constitution, led to her somnambulism, and that remorse which, in the original text, terminates in suicide. We must not close this notice without recording a triumph on the part of Mr. Ryder in the pathetic scenes of *Macduff*. The play was performed for the most part according to the stage version; but the corrections from Mr. Collier's manuscript authority were adopted, and some, also, of more doubtful accuracy, from Mr. Charles Knight. Locke's music was played. The house was crowded, and the curtain fell to immense applause.

DRURY-LANE

An experiment was made at this house on Monday with M. Casimir Delavigne's "Louis XI." To suit it to the conditions of the present stage, this fine play has been reduced to three acts by Mr. W. R. Markwell, who has effected his translation with some elegance. The interest of the drama lies in a group of few persons; the fraselle *Louis* himself (Mr. Davenport); his physician, *Cottier* (Mr H Wallack); and the *Duke of Nemours* (Mr Edward Stirling); to which may be added the *Dauphin*, very nicely played by Miss Emma Fist.

With his character of this Monarch the general reader is sufficiently acquainted through the pages of "Quentin Durward." Mr. Davenport had a difficult task with the irritable, malignant, perfidious, and scapelous King; but he gave its various phases with remarkable command over rare histrionic resources, and individualised the old and silling man with a degree of perfection seldom attained. Mr. Davenport gave a study, indeed, that he is capable of much greater things than he has hitherto been permitted to undertake. We fear that there is insufficient movement in the drama to justify a lengthened run; but, at any rate, the occasion has not been thrown away by this deserving actor.

OLYMPIC.

A new farce, entitled "A Deed without a Name," has been produced at this theatre. It has no great pretensions as to plot or composition, but gives opportunity Mr. Compton's humour, in the part of a gentleman who pretends to commit suicide, in order to cure his wife of ill-temper He re appears as the ghost of himself, and frightens her into compliance. The piece was completely successful.

ISTHMUS OF DARIEN SHIP CANAL.—A lecture on this project was delivered on Wednesday evening, by Dr Cullen, at Wyld's Globe, Leicester square. The lecturer commenced by pointing out the great advantages that would accrue to the commercial world by cutting through the Atlantic and Pacific by a ship canal. He described the various ship canals across the Isthmus that had hitherto been proposed, viz., the Tehuantepec or Mexico; the Nicaragua, from San Juan del Norte to Realejo, and from San Juan del Norte to San Juan del Sur; the Atrato, by Napipi and Cupica; the Chagres, or Limon Bay, to Panama; and the Darien, from Port Escosces to the Gulf of San Miguel; and raised reasons to all these routes except the Darien. The latter was stated to be the only practicable line. In this route the Cordilleras, or mountain ridge was divided by transverse valleys that did not exceed 150 feet in elevation, and the base was only two miles in width, with a plain extending for 15 miles to a point on the river Savana, 20 miles above its mouth. The greatest distance to be excavated was 8 miles, and the canal would possess this advantage which was not offered by any other route. Port Escosces was a very safe and extensive harbour: the largest vessels could enter it, and ride close in shore. The Gulf of San Miguel, which opened into the Pacific, had also good depth of water. The ship canal communication would be to cut from Panama, which was in lat. 9 deg. 58 min., and lon. 77 deg. 56 min., or from the mouth of Lara to Port Escosces, a distance of from 45 to 55 miles, of which there would be three or four miles of deep cutting. The canal, to be serviceable, must be cut 30 feet deep, to which the tide of the Pacific to flow right through it across to the Atlantic, so that ships bound from the Pacific to the Atlantic would pass with the flood, and those from the Atlantic to the Pacific with the ebb tide of the latter. The canal would be 150 feet wide, and the alternate currents from the Atlantic to the Pacific, which occurred every six hours, would cause the canal to last for ages, as their effects would be gradually to enlarge it, widening the banks and deepening the bottom. From the tide flowing at the rate of three miles per hour, it was necessary possible that the passage could be effected in six or six and a half hours. The lecturer also gave a description of the inhabitants of Darien, the healthful nature of the climate, and the fertility of the soil.

NEW ARCTIC EXPEDITION. Commander Inglefield has received orders to set out again, with the *Phœnix* a row-steamer, to assist in the search for Sir John Franklin. He will fit [illegible] stores to Beechey Island [illegible] where he may deem fit, in the direction of his former voyage. The *Isabella*, sailing-vessel, will accompany the *Phœnix* as far as [illegible] to be stationed at some spot in Baffin's Bay while the *Phœnix* proceeds on her voyage of discovery.

THE EMIGRATION COMMISSION.—This company despatched the [illegible] ton, Captain Shirdick, from Southampton for Sydney [illegible] outward [illegible] and amongst their [illegible] to be followed by the [illegible] Montero, [illegible] Sir Charles Fox's [illegible] Hall. Of the [illegible] shipped, the [illegible] [illegible] [illegible]

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

The LORD CHANCELLOR stated the intentions of the Government in regard to a law of reform. He thought it desirable not to proceed to further reforms in the Court of Chancery and the superior Courts of Common Law until the reforms which had been so recently effected in those courts had been tested. With regard to the proposed fusion of law and equity, he thought it would be unadvisable if, with his short experience on the woolsack, he were to attempt any measure on this subject. The state of the testamentary jurisdiction of the country should have his attention; and he would place himself in communication with Dr. Lushington, to see what changes could be effected in the mode least likely to cause injury. With regard to the law of marriage and divorce, commissioners had been appointed to inquire into these subjects, and, until they had reported, it would be impolitic to propose any thing. Another beneficial measure he found almost ready to his hand. This had reference to the transfer of land and a registration of deeds. It was utterly impossible that the land of the kingdom could be transferred as easily as Bank of England stock. The objections (said the noble and learned Lord) lie on the very surface:—

"It is obvious that £1000 of stock is precisely the same as any other £1000 of stock, while every man's acre is different from his neighbour's acre. It is therefore necessary that we should be able to identify every particle of land that is subject to transfer. At present the difficulty in what is called the transfer of land does not arise from the state of the law relative to the transfer of land. If there were no ownership but that of fee simple there would be very little difficulty indeed in the transfer of it; but we admit the complication of interests arising from mortgage, settlements, jointures, entails, and what are called shifting estates, and the difficulties are very considerable; because, when a party sells, he must prove that none of these circumstances affect his title. I believe that this is at the root of the difficulty and expense in the transfer of land in this country, and not in the system of conveyance."

There were two modes by which the transfer of land was made expensive at present—one arising from the length and complication of conveyances, and the other, and the really important one, from the investigation of titles. The length and complication of conveyances did not arise from the state of the law, but from the desire of the person purchasing to have the title details on the subject from the conveyancer. The aggregate number of statutes, inclusive of Scotch and Irish statutes, amounted to about 20,000.

"They are (said the noble and learned Lord) all in a most repulsive form: there is no classification; but they are huddled together in the most complex fashion. It is part of the common law of the land that there cannot be a single stop in a statute, and, though you see them printed with stops, I have heard it argued that if the stops were in different places a different meaning would attach, and that the stops must be disregarded altogether. Then, again, the style in which they are couched is most perplexed. You will see enormous sentences occupying a whole quarto sheet, unbroken by a single paragraph or division. By one of the Editors of law the judges are supposed to be acquainted with all the law, both written and unwritten. To suppose that they really do know anything like all these statutes is absurd. No human mind could master them. What has been the consequence? Knowledge is impossible, and therefore ignorance has ceased to be a disgrace."

Of the enormous mass of our statutes only about one-fourth remained to be dealt with in consolidation, so that there were no insuperable difficulties in the way. He proposed to secure the services of Mr. Bellenden Ker, and of two or three other gentlemen well skilled in the subject; and with these gentlemen working under his special direction, after a plan he had marked out, he thought the statutes of the Legislature might be placed before the community in a compact form, and in language intelligible to the whole community.

"I conceive (said the noble Lord in conclusion) there is no reason why this proposed step should not, at some future time—some few years hence—constitute the foundation of a "Code Victoria," that shall put us on the same footing a neighbouring nation is sustained by that great code which will immortalise its creator long after his triumphs and his failures in all other matters have passed into oblivion" (Hear, hear)

The Lord Chancellor then laid upon the table a Bill for the Registration of Deeds

Lord ST LEONARDS said the fusion of law and equity might rather be called the confusion of law and equity (A laugh). He doubted whether any human was competent to digest the statute-laws of the country into a code.

The bill was read a first time.

The MARQUIS of CLANRICARDE called attention to the language of the President of the Board of Control, in a late speech to his constituents at Halifax.

The Earl of ABERDEEN assured the noble Lord that the most amicable relations existed between France and England. With respect to the speech complained of, though the expressions employed were not so respectful as might have been used to the Sovereign of a foreign state, he still thought its argument legitimate. He was sure, however, that nothing was farther from Sir Charles Wood's intention than to say anything offensive to the French Emperor.

HOUSE OF COMMONS.—MONDAY.

Mr. DISRAELI drew the attention of the House to the following paragraph in a speech delivered at Halifax by the President of the Board of Control (Sir C. Wood), reflecting upon the conduct of the present Emperor of the French

"Take our nearest neighbours; such a despotism never prevailed in Europe, even in the time of Napoleon I. The press gagged; liberty suppressed; no man allowed to speak his opinion; the neighbouring country of Belgium forced to gag her press, or else Europe free but one, which, thank God, he cannot gag; and hence his hatred of our press, and alone dares to speak the truth"

Lord J. RUSSELL said he had called upon his right hon. friend for an explanation, and had received from him a letter, which the noble Lord read to the House. It was in the following terms:—

"I expressed no opinion on the conduct of the Emperor, indeed, if any one, though I cannot conceive that an English Minister is to be precluded from adverting to what he understands to be the state of things on the Continent (Loud cries of 'Hear, hear'); but I can say, with the utmost sincerity, that in doing so nothing could be further from my intention than to use words which could be considered as offensive to the Emperor; and I regret that any expression should have fallen from me on that occasion on which such an interpretation could have been placed"

The CHANCELLOR of the EXCHEQUER announced his intention to submit a measure amending the law relating to Savings-banks.

Mr COBDEN inquired whether the British Government had had any communication with the Government of France with respect to the increased naval preparations alleged to be going on in that country? He put this question because a letter appeared in the *Times* of Saturday, from the Earl of Mount Edgcumbe, in which the noble Earl asserted, from private and exclusive information which might be relied upon, that the French were meditating a descent upon our shores

Lord J. RUSSELL said the increase in the French naval force was not such as to justify the British Government in asking any questions of France thereupon. The relations between the two countries were of the most friendly nature; and, with respect to European affairs, he believed understanding prevailed between the two Governments. He knew nothing of the peculiar information possessed by the noble Earl; and, added the noble Lord, "I don't attach so much importance as my hon. friend to the statement of a Peer of the realm, because there are Peers of the realm who as authority is by no means infallible" (Hear, and a laugh).

The General Board of Health Bill passed through committee.

The LORD ADVOCATE obtained leave to bring in a bill for the reform of Sheriffs Courts in Scotland. The bill also provided greater facilities for the ejection of tenants, when the term of their tenancy had expired

On the motion of Sir J. SHELLEY, a select committee was appointed to inquire into the operation of the laws under which dues or taxes are levied on the introduction of coals into the metropolis and the neighbourhood, the mode of collection, and the expenditure of such dues or taxes

Lord J. RUSSELL could state on behalf of the Corporation of the City of London, that they were willing to meet any inquiry into the subject (A laugh,

HOUSE OF LORDS.—TUESDAY.

The Bishop of EXETER protested against the Government measure on the Clergy Reserves [illegible]. He asserted that every member of the Canadian Legislature [illegible] committed himself to the secularisation of the Clergy Reserves [illegible] Provincial Legislature could give them the power. The present Ministry contained, as it did, [illegible] even the Duke of Newcastle and Mr. Gladstone, were the last persons from whom such an act of spoliation was to have been expected.

The Duke of NEWCASTLE defended the measure, as being founded upon the right of internal self-government which had been conceded to the Canadian Legislature.

HOUSE OF COMMONS.—TUESDAY.

Lord J. RUSSELL gave an explanation as to the course intended to be taken by the Government relative to the Income-tax, from which it may be inferred that the Government have it in contemplation to propose during the present session, an alteration in the Income-tax, and possibly a modification in the mode of assessment.

Mr. DRUMMOND moved for leave to bring in a bill to facilitate the sale and purchase of land. He wished to establish the rule that, after a title had been once examined by a competent tribunal, and established, that one examination should be held conclusive for ever. His object was to have these titles registered, which would be held good for ever after. He wished to have a registration of titles, which was a thing totally separate from a registration of deeds. A registry of titles would shorten the delay, and in that sense would enable land to be transferred as easily as stock. Leave was given to bring in the bill.

Mr. F. PEEL moved for leave to bring in a bill to empower the Legislature of Canada to deal with the Clergy Reserve Fund in Canada West. When Canada was divided into two provinces in 1791, it was provided that whenever the Crown disposed of its waste lands, one-seventh should be reserved for the Protestant clergy. Large quantities of land had been so reserved; and at the present moment the Clergy Reserves consisted in part of land and in part of money invested in the Funds. The fund was appropriated to the payment of stipends to ministers of different denominations, but by far the greater portion was received by the Established Churches of England and Scotland. In 1840 it was determined to unite the two provinces, and a compromise was agreed to by the Canadian Legislature, which, however, in its practical operation, had been found to give a greater share of the Reserve to the Churches of England and Scotland than was warranted by the proportion of population following the creeds of those churches. The people of Canada desired a readjustment of the question; and the object of the present bill was to give the Legislature of Canada the power of altering the present arrangement. He did not think it right to anticipate that the clergy reserves would necessarily be alienated from religious purposes, and secularised by the Legislature. The endowment of the Roman Catholic Church in Lower Canada might be dealt with by the Legislature, and it was now only proposed to set the Protestant endowment on the same footing. The Government had taken ample guarantees for the enjoyment by the present clergy of the Church of England of the stipends now paid to them, which would be continued so long as they should live.

Sir J. PAKINGTON and Sir R. INGLIS opposed the bill, on the ground that it interfered with the rights of property solemnly guaranteed to the Protestant clergy by the act of 1840

Lord J. RUSSELL argued for the right of the Colonial Legislature to decide for itself whether to distribute the property either among clerical or lay bodies. He doubted, however, whether it was wise in the Canadian Legislature to wish to disturb the act of 1840; and anticipated that violent hardships and anomalies would be engendered by any steps which should apply the fund to secular purposes, and bestow those which were appropriated exclusively to religious purposes, but apportioned between religious sects. The noble Lord congratulated the House upon the happy results of the union of the two provinces. There was no instance of dependency of the British Crown having made so rapid an advance in prosperity within an equal space of time as Canada had done since the Legislative Union had taken place—Leave was given to bring in the bill.

HOUSE OF COMMONS.—WEDNESDAY.

The County Elections Polls Bill was read a third time by a majority of 129 against 28

On the motion of Mr. Deedes, the Parish Constables Bill was read a second time

Mr. T. DUNCOMBE obtained leave to bring in a bill to amend the act for the more effectual prevention of cruelty to animals, by extending the power of appeal.

HOUSE OF LORDS.—THURSDAY.

Their Lordships met at five o'clock

Lord Brougham was in attendance, having just arrived from France.

TRANSPORTATION TO AUSTRALIA.

In reply to Lord Montegle, the Duke of NEWCASTLE took the opportunity of correcting a misapprehension that prevailed in reference to what Lord John Russell stated in the other House of Parliament upon the subject. Although the Government had determined to abolish transportation to Van Diemen's Land, they felt it necessary to continue transportation, for a short period and to a limited extent, to Western Australia.

THE LORD-LIEUTENANCY OF IRELAND.

Lord CARDIGAN, in asking the noble bart at the head of the Government whether her Majesty's Ministers contemplated the abolition of the office of Lord-Lieutenant of Ireland, recommended by Lord John Russell when Prime Minister of the country, took occasion to express his opinion of the uselessness of the office of all others, and of the necessity of abolishing it to impart the first and proper administration of the law in Ireland.

The Earl of ABERDEEN said, he believed that the noble Lord alluded to by the noble Earl had found reason to change his opinion on this subject before he left office. The present Government had no intention to abolish the office of Lord-Lieutenant of Ireland.

The Earl of WICKLOW expressed his disappointment at the answer just given by the noble Earl at the head of the Government

Lord BROUGHAM, having referred to the great and long reform of the Lord Chancellor, expressed his regret that he (Lord Brougham) was not present when the noble and learned Lord made his statement on the subject. The opinions and intentions therein expressed were highly creditable to the noble and learned Lord. He also tendered his thanks to Lord St. Leonards, for his efforts in the way of law reform. He noped that the statement of the noble and learned Lord on the Woolsack and not made, as many similar ones had been, more to mark time than really to advance in the way of reform. Lord Brougham also moved the first reading of Lord Dunedin's Law of Evidence Bill, which he had framed for the purpose of extending it to Scotland

The LORD CHANCELLOR said it would not be necessary for him to assure their Lordships that, when he made his statement on the subject of law reform, it was really his intention to advance. He would be most happy to avail himself of the valuable assistance of Lord Brougham in his proposed amendment of the law.

The Law of Evidence (Scotland) Bill was then read a first time.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

In reply to Mr [illegible], Sir JOHN YOUNG stated that [illegible] nature on the subject of Ministers' Money [illegible] was under consideration of the Government, and would [illegible]

Lord PALMERSTON, in answer to [illegible] not prepared to state the time at which the Government would be able to bring forward a measure on the subject of [illegible] ecclesiastical dignitaries

Mr. FREWEN moved that the Excise duty on hops is impolitic and unjust, and ought to be repealed. The hon. gentleman entered into statistical details, for the purpose of showing that the operation of the tax was oppressive and unequal, its collection was vexatious, and the whole burden and inconvenience of it fell upon a body of persons engaged in a work of agriculture which employed a large number of labourers.

Mr. FULLER seconded the motion.

Mr. GLADSTONE hoped that the House would not enter into a discussion of the question of [illegible] duties. He admitted that the case of the county of Sussex was undoubtedly hard [illegible] compared with other hop-growing districts; but the [illegible] rather for a readjustment of the mode of levying the tax than for its repeal. A tax ought never to be repealed until the House had decided what the expenditure for the year should be. An abstract resolution of the kind was not the mode by which the question of retrenchment should be considered.

Mr. E. BALL supported the motion, alleging that the House was bound to adopt it, in accordance with its own Free-trade principles.

Mr. BELLEW characterised the motion as another attempt of Mr. Frewen to place hops in direct opposition to all England. Nothing could be more suicidal for persons itself than to claim the repeal of the hop duty—thus opening the door to the unrestricted admission of foreign hops into the English market.

Mr. HARCOURT opposed the motion for agricultural reasons

Mr. BRIGHT disputed Mr. Gladstone's dictum that such motions should not be brought forward until the financial statement was made. The hop tax was a disgrace to a civilised country.

Mr. HUME said, if independent members were to take the advice of Mr. Gladstone as to the time and mode in which such motions should be made, no good would ever be done for the country

The motion was negatived by a majority of 175 to 91.

THE CASE OF THE MADIAI.

Mr. KINNAIRD brought under notice the case of the Madiai, with the view of inducing the House to agree to an address "that her Majesty would graciously be pleased to take such steps as her Majesty may deem most fitting for bringing under the notice of his Imperial Highness the Grand Duke of Tuscany the strong feelings prevailing among a large number of her Majesty's subjects, in consequence of the persecution now actively begun in Tuscany of those who secretly or openly profess principles held by her Majesty in common with the majority of her Majesty's subjects in this United Kingdom, which persecution appears likely to increase in intensity through the decree lately promulgated, which re-enacts the penalty of death against the so-called deprivers of the religion of the State." The hon. gentleman said that the imprisonment of those persons for reading the word of God and caused the greatest consternation, not only in England, but throughout Protestant Europe, and even as far as America. Previously did the President of the United States feel on the subject that he had not only addressed a remonstrance to the Tuscan Government, but had offered a vessel to convey the Madiai to the United States, and to provide for them there. He wished much the British Government had exhibited the like humane promptitude. He had served at the conclusion that the case of the Madiai and the persecutions of a like kind which had occurred, must be taken as evidences of the determination of the Roman Catholic hierarchy to put down Protestantism by force wherever the aid of the civil power could be obtained. In his opinion no cheap preferred against the Madiai of having violated Tuscan law had been disproved by the facts.

Lord D. STUART seconded Mr. Kinnaird's motion

Mr. ROEBUCK followed in a speech of some length, in the course of which he denied that the Madiai had been condemned for reading the Bible, but for carrying on a system of proselytism by foreign agency, and for holding a conventicle in their own house, contrary to the law of the country. Why did not the Foreign Minister of this country interfere, and remonstrate with the Emperor of Russia when that great potentate authorised the persecution and the torture of the Catholic nuns of Minsk? No; the tender mercies of the Government are only to be exercised in the case of Protestants. He quoted from Lord Palmerston with having written a despatch to the Marquis of Normanby in 1847, containing expressions of satisfaction at the expulsion of the Jesuits from Switzerland, and in which he recommended their extermination, as well as any lay Catholics that advocated their cause. After adverting to the case of Tahiti as another instance of a similar character, the hon. gentleman said he would put the sincerity of the Government in their profession of religious liberty by submitting a motion for the interposition of the Crown on behalf of Roman Catholics suffering persecution in Sweden, and other Protestant countries. The resolution before the House was opposed to the facts of the case, or he would have supported it.

Lord J. RUSSELL complimented the hon. member on the ability of his speech; but said he had wished to see if he could be invariably consistent in whether he approved or otherwise of the principle of punishing persons for their religious opinions. With respect to the proceedings of Lord Palmerston, in the case of Switzerland, he must say that there was nothing like inconsistency in the conduct of the noble Lord, who, if he had erred, had erred entirely upon Roman Catholic and not upon Protestant authority. It was also to be recollected that not only the King of Spain but the Pope himself had expelled the Jesuits from their dominions. With respect to the case of Minsk, the Pope had energetically interfered in their behalf, and surely it was equally natural that England should interfere on behalf of Protestants similarly persecuted. Taking the case of the Madiai as represented by the Tuscan Government and by Mr. Lucas himself, the punishment inflicted was a moral crime against which the voice of England was raised; but it would be equally raised against any similar persecution of Catholics in Sweden or elsewhere. He would at once state, as a universal principle, that religious persecution was odious and indefensible; but he would advise Mr. Kinnaird to withdraw his motion, and leave the subject in the hands of the Government.

Mr. BOWYER remarked upon the fact that Lord John Russell was not able to give a single instance in which England had ever [illegible] on behalf of persecuted Roman Catholics [illegible]

Mr. H. DRUMMOND said that [illegible] of the Madiai was due to the [illegible] power, and not by the ecclesiastical. Similar excuses were made for the massacre of St. Bartholomew and for outrages of the character. He quitted the Catholic Church to persecute, but he could not [illegible] of Catholic hierarchy.

Mr. FAGAN, as a Roman Catholic, expressed his regret that such [illegible] could have been carried out as that against the Madiai.

Lord ASHLEY thought there could be no doubt of the propriety of interference on the part of England; but such interference should be of a non-political character

Sir R. H. INGLIS repudiated the principle laid down by Mr. Lucas, that the British Government was at all called upon to consider the wrongs of persons living out of the dominions of the Crown.

Lord PALMERSTON said that Mr. Lucas, finding himself unable to say one word in defence of the Duke of Tuscany, had made some observations (which Lord Palmerston) heard with pain on the subject of Switzerland. The noble Lord then proceeded to defend the course he had pursued in recommending the retirement of the Jesuits from Switzerland, which was the obvious course under the circumstances.

Mr. KINNAIRD then withdrew his motion, and the House adjourned.

DINNER TO NONCONFORMIST MEMBERS OF PARLIAMENT.

A GREAT Dissenting demonstration took place at the London Tavern on Wednesday evening, when nearly 400 gentlemen from the metropolis, and from more than seventy towns in the provinces, celebrated, at a public dinner, the successes achieved by the Dissenting body at the recent elections. Mr. Samuel Morley, who presided, was supported by fifteen Dissenting members of Parliament—Sir J. Anderson, Stirling; Sir G. Goodman, Leeds; Messrs. E. Ball, Cambridgeshire; T. Barnes, Bolton; J. Bell, Guildford; J. Cheetham, South Lancashire; F. Crossley, Halifax; G. Hadfield, Sheffield; C. Hindley, Ashton; J. Kershaw, Stockport; E. Miall, Rochdale; R. Milligan, Bradford; A. Pellatt, Southwark; M. Peto, Norwich; and J. Pilkington, Blackburn. Two other members, Mr. A. Hastie, Glasgow; and Mr. O. Thompson, Aberdeen—were unavoidably absent. There were also present the Hon. and Rev. Baptist Noel, Wentworth, B.A.; Rev. Dr. Vaughan, Rev Dr. Massie, Rev. Dr. Stoughton, C. Pearson, Rev. Dr. Campbell, Mr J. Cassell; Mr. E. Baines, of Leeds, the Rev. Dr. Hamilton, A

The Chairman said [illegible] understood the company to meet to-night as Evangelical Nonconformists. While they had a hearty sympathy with everything political that tended either to increase liberty or happiness, and they knew it to be understood that Dissent was not a mere political movement. There were in the House of Commons, it was supposed, as many as 36 members who held, in the main, Nonconformist principles. They represented a population, according to the last census, of 3,203,078 persons. They formed about one-eighteenth of the House, and they represented a sixth of the electoral mass of the population of England. He gave "Our Representatives in Parliament."

The toast was acknowledged by Mr. Cheetham, Mr. S. M. Peto, and Lord Mahon. Mr. Peto gave his brother members and the House some prudent advice. He deprecated bringing forward motions prematurely in the House, and thought it undesirable for the Dissenters, either in the House or out of it, to adopt an aggressive policy. The only way in which the Dissenters could create a public and Parliamentary sentiment was by maintaining, for a time, a defensive policy, by vigilantly watching measures of public importance, by opposing every [illegible] measure, by opposing every extension of the state church system at the expense of the people, and by frequent inculcations of sound views on these questions.

Mr. Miall, who followed, said:—"I have had but very slight experience of the House of Commons; but I believe that, to an earnest, practical mind, sensible of its powers that which it desires to be of importance, the House is, after all, a useful legislative assembly. It has its moods of vexation, it will not suffer itself to be turned into a debating club; and very properly so; it exercises this function for those objects that are to end only in [illegible] of time; but if a man earnestly and practically desires to say something which is [illegible], and that man is sufficiently supplied with a good sense of necessity, the House will listen with respect. Not there less than elsewhere are moral qualities powerless. There, as elsewhere, [illegible] influence will have their due weight. Whatever we do with our [illegible] principles there, must undoubtedly be done with due discretion, but if we do invariably put them aside, I believe we shall descend to political nonentity on the occasion of all the world."

The chairman proposed "Our Literature," which called up the [illegible] and Mr. Josiah Conder. The latter said: "The four most popular books, perhaps, in the English language were written by Dissenters—Milton's "Paradise Lost," John Bunyan's "Pilgrim's Progress," Defoe's "Robinson Crusoe," and Watt's "Psalms" and "Hymns" (Loud laughter and cheers.)

Mr. Barnes, M.P., gave the "Milton Club." Mr. H. Bateman, who responded, said that premises had been purchased in Ludgate-hill, where it was intended to erect a very simple elevation, bearing upon its front the appearance of a sentimenally private house, where everybody who came within the Nonconformist signification of the word, and Nonconformists would be heartily welcome. The ground, which had been purchased, was freehold; and, if adequately supported, no doubt the contemplated building would remain for generations in the service of the great Nonconformist body

The Chairman proposed "The Press," coupling with the toast the names of Edward Miall, Esq., and the Rev. Dr. Campbell.

Mr. Barnes promised to do his part in the *Leeds Mercury* towards supporting the new members in the maintenance of Nonconformist and Liberal sentiments in the House—especially in regard to the Newspaper Stamp, the Taxes on Knowledge, for the purpose of showing their baneful tendency in keeping back the education of the people in its maturer stage, and expressed a hope that Nonconformist members of the House of Commons would unite as one man in support of any proposition which might be introduced for the entire removal of these taxes.

The proceedings did not terminate until half-past eleven o'clock. Ladies were admitted to the galleries at each end of the room, and the fair spectators appeared to take great interest in the proceedings.

Mr. Ransford and a glee party were in attendance; but the speeches were so long, that very little demand was made upon them for their musical services.

EXHIBITION OF THE BRITISH INSTITUTION.

SECOND NOTICE.

Our complaint against the prevailing coldness of treatment of our landscape-painters generally bears with peculiar force and significance against a picture by F. R. Lee, R.A., in other respects an admirable work, "Benmore, with the town of Killin, taken from the North of Loch Tay." All the striking features, all the nice details of a magnificent stretch of mountain scenery, are embodied on the canvas with great precision and command of perspective; but how cold is the sky, the floating clouds still clinging to the hill-top! how chilling cold the surface of the lake! how cold and cheerless all!—the more so for the thin flickering ray of sunshine almost smothered before it touches the earth! In referring to a production by so esteemed an artist, in further illustration of our general position, we are actuated by no wish to make an invidious selection; that is unnecessary when so many works around err in the same respect; but to show that even our very best hands set example for a style of treatment which we are fain to consider an unhappy one, if not utterly untruthful; and to express a hope that their influence may before long be turned in a more wholesome and agreeable direction. It may be alleged, in answer to these remarks, that there are as many cold days in warm and favoured land; and that in Holland, where the climate is still less genial than with us, winter scenes have been a favourite subject with her best painters ever since she had a school. We grant both these positions; but, in reply to them, submit that although the loveliest women have sometimes their hours of ill humour, an artist rarely selects their aspect at such times from choice; and that the Dutch, whilst in hundreds of admirable works they faithfully represented the bitter realities of a winter's day, took care to enliven and light up the scene by the introduction of figures clothed accordingly, and engaged in sports and occupations appropriate to the season. Without these additions, the mere representation of an ice-bound lake or snow-covered plain would be as unmeaning and repulsive as in some other instances of the kind which come under our notice in the present and other modern exhibitions, but which we need not now stop to particularise.

"ST. AGNES."—PAINTED BY H. O'NEIL.

Over Mr. Lee's landscape, on the east wall of the North Room, is a figure subject by H. W. Phillips, entitled "Lydaka, from the play of 'Valerie,'" a striking though not complimentary portrait of the inimitable *trapsticuna*, Rachel, as she appears in the wild scene of revelry in the play named. The golden goblet is poised in her hand, her face is flushed, and her features wear an expression of momentary triumph and defiance. It is, altogether, a highly characteristic picture; though, in our opinion, not finished up to the mark

Very near at hand, on each side of the above, are two as unsatisfactory nonentities as it were possible to conceive in the domain of canvas: the one "An Archer," with a green dress and a very fir from "arch" expression; the other a "Lady Hawking;" insipid, stiff, and chalkily coloured. But for the fact of their being the productions of an R.A., H. W. Pickersgill, we should almost have been tempted to have passed by these very feeble productions in silence; but, at a time when the extension of the resources of the venerable Academy—the seat of the "aristocracy of art," as it has been styled—is under discussion, it is interesting to see what example has been, and is likely to be, set by the *élite* of that institution.

J. E. Lauder, of Edinburgh, has a study of a "Money Lender," which exhibits considerable command of expression and cleverness in the design. The treatment is evidently intended to be studied after Rembrandt; but there is an absence of that great master's marvellous harmony and tone, and especially a prevalence of blue and cold mixed tints, in which Rembrandt never dealt. The same artist has a tolerably successful "illustration" piece of Duncan "Bailie Mackwheeble at Breakfast," after a well-known passage in "Waverley."

C. R. Ross has a small picture after the style of Etty, "The Sea Nymph's Toilette"

A dainty damsel dressing of her hair—

very gaudy in colouring, and adventitiously attractive in texture; but, upon the whole, hard and unsatisfactory. We have also a less showy but more ambitious study of "Sappho contemplating suicide on the brink of a rocky precipice," in which considerable command of feature and careful drawing are displayed.

H. C. Selous has a truly startling embodiment of the murder scene in "Macbeth," in which Macbeth has evidently been startled and over done. The inhospitable Thane, dressed in gaudy nondescript attire, stands "grinning horrible" over the sleeping guests, [illegible] attendants who [illegible] uncomfortably and unpicturesquely huddled together. A single lamp casts a lurid and unwholesome light upon the scene, at the back of which is a green curtain. All the details are stagy and exaggerated. It becomes almost imperative to condemn errors of conceit in men of real genius when they are liable to be followed up by such extravagances as those in the example before us.

O'Neil exhibits a "Study," and a "St. Agnes," the latter of which we Engrave. It is a pleasing picture: the attitude is simple and

THE CRITICS."—PAINTED BY T. EARL.

THE WINTER EXHIBITION.

"PLEASURE-BOATS ON THE DANUBE.—MORNING."—PAINTED BY JOHN ZEITTER.

dignified; the expression of the upturned face speaks of devout resignation; whilst the features are eminently feminine and beautiful. The colouring is not quite so successful, that of the drapery being cold, and that of the upper part being of a lurid glow unfavourable to the complexion.

Amongst the *pièces de genre* (which we shall notice more in detail on a future occasion) come two animal pieces which attract a good deal of notice. The one is by J. Wolf, who ushers it in with a pun (there ought really to be a notice in front of the catalogue—"No puns admitted!"), which runs thus:—"Just out, the Tale (*tail*) of a Teal" (*Quarterly List of New Works on Natural History*). It represents an unfortunate, or perhaps we should say fortunate teal, just escaped from the claws of two hawks, leaving his "tail" behind him, which his two assailants, perched on the top of a rock, still fight over. The birds are vigorously painted; the foliage admirably true in colour and texture.

The other animal piece now under notice, and which we Engrave, is by T. Earl, and is entitled "The Critics." Here we have a couple of rough terriers intently scanning the merits of an engraving from one of Landseer's well known and favourite dog pieces; amongst the various animals represented, in which they fancy they recognise an old acquaintance or rival. The joke perhaps is not founded on fact—not perhaps true to nature; but *si non e vero e ben trovato*—the features and expression of the two dogs speak for the correctness of their portraiture; and it is impossible to contemplate their interesting occupation without participating in their feelings.

WINTER EXHIBITION OF SKETCHES.

We have already noticed the opening of this interesting exhibition for the current year. Our purpose in now recurring to it is to present Engravings of two of the works exhibited which struck us as possessing peculiar merit.

The "View of the Danube," with groups of persons looking out for the arrival of boats, by Zeitter, is pleasing in character, and nicely filled up in the details.

The study of "Russian Peasants," by Ivons, small though it be, is an extremely vigorous and striking effect. The group consists of three persons: two of them are earnestly engaged in the fascinations of "the hazard of the die;" whilst the third, who is partially overcome with the fumes of strong drink and tobacco, languidly surveys their proceedings. The drawing throughout is masterly.

"RUSSIAN PEASANTS PLAYING AT DICE."—PAINTED BY A. IVONS.

METROPOLITAN NEWS.

RETURN OF METEOROLOGICAL OBSERVATIONS,

AS OBSERVED DURING THE WEEK ENDING THURSDAY, FEBRUARY 17

Day of Week	Barometer. Corrected and Reduced to 32°	Thermometer. Highest Temperature in the Day	Lowest Temperature in the Night	Mean Temperature of the Day	Departure of Temperature from Average	Degree of Humidity.	Direction of Wind.	Melted Snow in Inches

Note. The sign — denotes below the average.

The reading of the barometer for the week, at the height of 32 feet above the level of the sea, was 29·946 inches. The weather during the week has been very severe, the temperature varying from 8° to 11° below its average. The mean temperature of the week was 31·9°, being 7·6° below the average of thirty-eight years. The mean daily difference of temperature during the week was 8°6°. The temperature has varied during the week from 29·8° on the 16th, to 29·6° on the 15th. Snow fell on the 11th, 12th, 13th, 16th, and 17th, producing nearly 0·3 in. (three-tenths of an inch) of water.

Lewisham, Feb. 18, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week, 1653 children were born of these, 846 were boys, and 807 were girls. For the eight corresponding weeks of the years 1845 to 1852, the average number was 1497. The number of deaths in the week was 1151, while the average number was 1[illegible]. In the months of December, 1852, and January, 1853, was 1027; so that the effect of the cold weather is evidenced by an increase of mortality to the amount of at least 200 weekly. Of diseases of the lungs and organs of respiration, 312 cases proved fatal—the average number is only 214. To hooping-cough 52 deaths are attributable (its average is 40); to measles 21 deaths are chargeable (its week is 3 only); to violence, privation, cold, and intemperance, 43 deaths during the week are attributable.

THE SPRING MEETINGS of the Royal Institution will commence on Saturday, the 5th of March, and the second on Saturday, the 19th of March—each night at the usual hour, 8 o'clock.

ROYAL COLLEGE OF SURGEONS.—The annual Hunterian oration was delivered on Monday in the new theatre of the Royal College of Surgeons, by Sir Brandby Cooper, F.R.S., in the presence of one of the largest audiences ever collected within the walls of that learned institution; an audience comprising the *élite* of the surgical profession resident in the metropolis.

THE PRUSSIAN LEGATION.—His Excellency the Prussian Minister and Madame Bunsen have given a grand dinner at the new residence of the Prussian Legation, on Carlton-house-terrace, to Lord and Lady John Russell and a large party of eclectic gentlemen.

THE CONSERVATIVE LAND SOCIETY.—The third drawing for the distribution of shares amongst the uncompleted shareholders of this society took place on Saturday, at the offices, 33, North-street, Strand. The next drawing will take place on the 12th of March.

THE ROYAL LONDON OPHTHALMIC HOSPITAL.—The annual general meeting of the friends and supporters of this institution was held on Monday, in the board room of the hospital, Bloomfield-street, Moorfields. There was a large attendance of governors, and the chair was filled by the Rev. John Russell, D.D.

ROYAL GEOGRAPHICAL SOCIETY.—A crowded meeting of this society was held on Monday, at the Royal Institution, Albemarle-street; Sir Roderick I. Murchison, president, in the chair. The papers read were:—1. Abstract of Letters received from Mr. Ladislaus Magyar, dated the 20th of April, 1851, Sah-Quitom, on the River Kasabi, Kalunda, in Africa. Translated from the Hungarian, by Dr. H. Bradshaw, accompanied by a learned Commentary on the same, by Mr. Cooley. 2. Remarks on the Country between Seleucia, the Valley of the Orontes, Antioch and Apiamea to Beles, on the Euphrates, by Lieut. W. F. K. Stanton. 3. Notes on the Watershed of the Wadi El Arabà; by Captain W. Allen, R.N., F.R.S., F.R.G.S.

CLERGY ORPHAN CORPORATION.—The annual meeting of this corporation was held on Monday, at the offices, 79, Pall-mall. Sir R. H. Inglis, Bart., M.P., presided. According to the report, the operations of the committee had been attended with considerable success. The report of the building committee was read, and stated that a sum of about £16,000 was already subscribed for erecting a new building in lieu of the one at St. John's-wood. It appears the greater part of the money was the gift of Dr. Warneford, who was a donor to the amount of £1,000.

SOCIETY OF ARTS.—On Monday evening Mr. Frederick Warren, of Manchester, delivered the first of a course of four lectures at the Society of Arts, on the History, Trade, and Manufacture of Cotton. This lecture was devoted to a consideration of the natural history of the cotton plant, and of the countries in which it flourished.

HORTICULTURAL SOCIETY.—A meeting of this society was held on Tuesday, at the society's rooms, Regent-street, the special objects of exhibition being camellias, table pears, and forced vegetables. Owing to the unfavourable state of the weather, however, there was a very small collection of specimens, the larger proportion of which had been grown from the society's own gardens. Mr. Ingram, gardener of the Royal Gardens, Frogmore, received a prize for some fine asparagus, the hundred heads exhibited weighing twenty pounds. The camellias were principally furnished by hot-water pipes. The chair was taken by Mr. Henderson. The next meeting is to be held on the 1st of March.

ST. THOMAS'S CHARTERHOUSE NEW SCHOOLS.—On Thursday these schools, in Goswell-road, the foundation of which was laid by the Marquis of Lansdowne, on the 28th April, 1852, were opened by the Earl of Granville (Lord Privy Seal), the Bishop of London, the Bishop of Salisbury, the Dean of St. Paul's, the Dean of Hereford, &c. The schools, which are built in the Byzantine style, will accommodate 1000 children, in addition to 600 accommodated in the old school. The total expenses have been £8245, of which £2146 has been subscribed, in addition to Government grants of about £2000, leaving £1140 to be provided for. In the evening about 160 friends of the institution dined together at the Albion Tavern, Aldersgate-street, and we doubt not a large sum was subscribed to cover the deficiency.

LONDON HALL AND SILK MERCERS' ASSOCIATION.—On Thursday week the annual meeting of this association was held in Exeter Hall; Mr. John Pearce in the chair. The report stated that during the last year, 76 applications for relief had been favourably entertained, and the whole expenditure had been £1000, exclusive of £1200 invested, making the funded property of the company £26,485. The report was adopted, and the usual formal business transacted.

FEMALE SERVANTS' HOME.—On Thursday, a public meeting in aid of the society was held in the Thatched House Tavern, St. James's, Sir Peregrine Maitland, G.C.B., in the chair. It appeared from the statements made that there are 100,000 female servants in England, of which 30,000 are always out of place. Since the establishment of the society, in 1846, 25,000 wanting places had been registered free of expenses, and many thousands had been assisted in all health, and prevented falling into distress and misery. A number of resolutions were passed relative to the meeting to use its best efforts to enable the society to enlarge the sphere of its usefulness.

ROYAL THAMES YACHT CLUB BALL.—On Tuesday the spirited and liberal members of this club gave their annual ball at the Hanover-square Rooms, which were crowded with elegantly dressed company throughout the evening. The stewards were indefatigable in their exertions, which were completely successful; and the result was, altogether, one of the most select and attractive entertainments of the season.

SEWERS COMMISSION, &c.—On Monday Lord Palmerston received deputations on the subject of the mismanagement of the Metropolitan Sewers Commission and the police of the metropolis, at his private residence in Carlton-gardens. The deputations, consisting of 50 or 60 gentlemen from nearly every metropolitan parish, were accompanied by Sir B. Hall, Bart., M.P., Mr. T. Duncombe, M.P., Lord Dudley Stuart, M.P., Mr. Wilkinson, M.P., Mr. W. Williams, M.P., Sir Benjamin Lacy Evans, M.P., Sir J. V. Shelley, M.P., and Mr. E. J. Hutchins, M.P. Sir B. Hall, having introduced and stated the objects of the deputation, Lord Palmerston said he felt it to be his duty, as it was his inclination, to exercise the office he then held to the best of his energy and ability to the public advantage. In order to do this, he was most anxious to hear the expression of the opinions of the public as represented by the deputation, for he was much obliged to those gentlemen who had come there that day to give him practical information on which he should no doubt find exceedingly useful to him as a guide. The deputation then withdrew, and proceeded to the official residence of the Chief Commissioner of Public Works, Sir W. Molesworth.

CARPENTERS AND JOINERS.—Mr. Tufnell, M.P., had an interview with Sir James Graham, at the Admiralty, on Monday, for the purpose of presenting petitions from the shipwrights and joiners at Devonport, praying for an increase of wages paid at Sir George Berkeley, M.P., who was to have accompanied his colleague, was prevented by indisposition.

MUSIC.

THE UNPUBLISHED WORKS OF MENDELSSOHN.

A war is controversy has been carried on, for some time, respecting the extraordinary keeping back from publication of the unpublished works of Mendelssohn. The heirs of the composer have in their possession a chest full upwards of sixty MS compositions in his library. His wife, after her Lieland's death, gave the manuscripts to Paul Mendelssohn, the banker, of Berlin, a brother of the composer. Paul Mendelssohn, not being a musician, handed over the MSS. to Herr Schleinitz, a well-known amateur, who, however, took up so much time in preparing the works for the press that it was found necessary to withdraw the MSS. and confide them to the care of a committee of four professors, namely: Herr David, the violinist and composer; Herr Hauptmann, the organist and composer; Herr Hiller, of the popular pianist and composer; and Herr Rietz, a professor of the Leipsic Conservatory. Now these four artists are charged with a much heavier fault than that of indolence. Their behaviour was accused of slowness, but the professors have subjected themselves to the graver accusation of suppression, and suppression of the worst kind that of withholding from the public eye and ear the MSS. of a Mendelssohn, whose inspirations, it need scarcely be added, belong to the world—not to Leipsic and its four professors. Here, then, is the entire case. Some twenty-six posthumous productions have seen the light, and more than double that number are at the "tender mercies" of four artists who dare to take upon themselves the responsibility of publishing what they in their wisdom may deem to be worthy of Mendelssohn's genius. Now this is not the case of an editor of the works of a deceased writer, who in the interest of public morals, or having regard for the feelings of existing persons, takes upon himself to keep back certain portions of private correspondence, or of excuse objectionable matter. It is the glorious attribute of music that it is incapable of being clothed in a bad thought; and, therefore, with Mendelssohn wrote and did not publish, cannot affect his good name. "But," say the somewhat desperate and fanatical advocates of suppression, "we fear if we publish such and such a work, the world may think less of Mendelssohn's genius." This defence is adding insult to injury. Commit Mendelssohn's genius to the flames at once, and there is an end of the matter; but it is a monstrous stretch of executive power, a flagrant violation of the principles of honest editorship of posthumous works, and it is a daring disregard of public opinion to find out that you must suppression is to be the mode of action, when the world is absolutely panting to hear every note that Mendelssohn committed to paper.

NOTES OF THE WEEK.

The second meeting of the English Glee and Madrigal Union took place at Willis's Rooms last Monday night, Mrs. Endersohn, Miss Williams, Messrs. Lockey, Hobbs, Foster, and Phillips being the principal singers.

Lord Joseph Hamilton, Commissioner, on Monday night, at the New Beethoven Rooms, Queen Anne-street, opened a series of concerts of chamber music, aided by Herr F Hennen, second violin; Herr Goffrie, tenor; and Mr. W. F. H ed violoncello. Mr. Hennen was the violinist, and Mr. Aguilar the pianist. Herr [illegible] for piano, violin, and violoncello has much merit, particularly in the adagio, but it is excessively difficult to execute

Herr Pauer, the pianist, gave the first of a series of three *soirées musicales* at Willis's Rooms on Wednesday, with the co-operation of Miss Dolby, Mr. W. S. Bennett, and Signor Piatti. Herr Pauer is rapidly making his way in the estimation of the public as an executant of first-rate ability. His playing of his own arrangement of Handel's concerto No. 2, is a fine specimen of his just appreciation of his master; and, associated with Mr. Bennett's beautiful fantasia in F minor, for two pianofortes the amateurs must have exhibited a rare treat. Of Herr Pauer's sonata in C minor, for pianoforte and violoncello, we have every reason to report favourably. It is full of thought and true merit; the adagio has especial[illegible]. It was faultlessly given by the composer and Piatti. Pauer's triumph over the enormous mechanical difficulties in Chopin's sonata in B flat minor, the work of pianoforte [illegible]

Last week Mr. Ella's musical evenings took place on Thursday, at Willis's rooms, with the valuable assistance of Molique, Mellon, Goffrie, Piatti, Henry Blagrove, and Miss Dolby, who sang Miss Laura Barker's fine cantata "Œnone." Molique's beautiful quartet in B flat, Op. 42, was included in the programme, as well as Haydn's quartet in D. No. 79, Spohr's quintet in C minor, and Beethoven's theme and variations in F, Op. 34.

The Lent performance of Handel's "Messiah," by the Chelsea Sacred Harmonic Society, took place on Thursday night, at the Commercial-hall, in the King's-road. The principal singers were Miss Chambers, Mrs. Dixon, Mr T. Williams, and Mr. Leffler; Mr. Rowley was leader of the band, and Mr. Surman the conductor.

Standigl, the famed bass singer, is in London this season.

Mr. Charles Braham, the tenor, who has been studying three years at Naples, has just well great success at Messina, in Rarini's "Maria Regina d'Inghilterra," and in Donizetti's "Polyeuste" (I Martiri).

Handel's oratorio, "Judas Maccabæus," was performed at Exeter-hall last night, under Costa's direction, with Miss Birch, Miss Dolby, Mr. F Huddart, Messrs. Sims Reeves, T. Williams, and Phillips, as chief vocalists.

The English Glee and Madrigal Union (Miss Eliza Birch, Miss Dolby, Mr Francis, Mr Lund and Mr F Bodda) were engaged at the Misses Scrimpton's Literary Institution on the 9th; and the Islington Literary Institution on the 14th; the rooms at both places being crowded, and the public delighted with the musical treat.

The musical meetings for the ensuing week will be the third concert of the English Glee and Madrigal Union, and the performance of the "Messiah," by the Harmonic Union, on Monday; Mr. Sterndale Bennett's second pianoforte concert, on Tuesday; the first of Mr Lucas's Musical Evenings, on Wednesday; Mr. Lindsay Sloper's *soirée*, on Thursday; and the second of Mr. Lindsay Sloper's *soirées*, on Thursday. Mr. Hillet will begin his concerts of pianoforte music this evening (Saturday).

The *Edinburgh Advertiser*, in its account of the concert last Monday, given under the General Reid Bequest for the Chair of Music, which the University has just instituted, states in the highest terms that the playing of Madame Pleyel, the pianiste, and of the singing of Madame Fiorentini. Miss Alleyne, Mr. Weiss, and Mr. F. Mori were the other artists.

MISS CATHERINE HAYES IN CALIFORNIA.—A letter from San Francisco, dated Dec. the 31st, gives the following information respecting the appearance in the land of gold, the "El Dorado del Mundi," of Miss Catherine Hayes:—"Miss Hayes has made no less than seven nights' engagement with Mr Barnum, who is likely to realise as much by the contract as he did with that of Jenny Lind. Miss C. Hayes has now been here five weeks, singing with immense success. The tickets for the first concerts were put up to auction, and no less than £250 was paid by a gentleman for the first one to the third concert; and at the succeeding ones as much as 500 to 600 dollars for the choice of seats. She has had fourteen concerts, and, at a public requisition of the principal inhabitants, she is to give ten or more before she visits the interior. Despite of the great fire, and a dreadful storm which took place lately at Sacramento, she is expected to be very successful. The weather here has been most dreadful since her arrival; it has rained in torrents, but, nevertheless, the concerts have been crowded. People—even the ladies—rone in great high boots, india-rubber cloaks, and hoods. Carriage hire is very expensive—to take only two persons to and from a concert, as much as £10 is constantly given. A coachman boasts that he has made £250 by Miss Hayes' first six concerts. So much for cab-hire here. Diamond rings, gold nuggets, fifty-dollar pieces, have been thrown to her on the stage. At one concert a ring hat was presented to her, ornamented with green velvet and shamrocks, in bas gold, clasped in front with a harp of the same material. The most costly specimens in gold have been sent to her. Miss Hayes will visit South America before she returns to New York. The Empire Exchange Company escort Miss Hayes, after a concert, to her hotel, with music, banners, and torches. Herr Mengis, the barytone, is also engaged. The concerts have been given in the San Francisco Hall, in Washington-street. One speciality at the concerts will make your sickle to Europe—the artists sing in costume sometimes.

POTTLOCK, THE HARPIST.—It will be gratifying to those persons who took an interest in the case of Pottlock, the young harpist, of Newport, Monmouthshire, to learn that he has been admitted as a pupil in the Royal Academy of Music—thanks to the kind intervention and assistance of the Earl of Westmoreland, the Chairman of the Committee of Management; Viscount Raneigh, Lord Alfred Churchill; Sir Charles and Lady Morrison, Hall, in Washington-street. One speciality at the concerts will make your sickle to Europe—the artists sing in costume sometimes.

POTTLOCK, THE HARPIST.—It will be gratifying to those persons who took an interest in the case of Pottlock, the young harpist, of Newport, Monmouthshire, to learn that he has been admitted as a pupil in the Royal Academy of Music—thanks to the kind intervention and assistance of the Earl of Westmoreland, the Chairman of the Committee of Management; Viscount Raneigh, Lord Alfred Churchill; Sir Charles and Lady Morrison, Hall, Tredegar; the Rev. Sir Henry Cazalet, &c. The artists who also aided the youth were Madame Fiorentini, John Parry, Brinley Richards (the composer), and Mr Balsir Chatterton. The last-mentioned Lady performer kindly gives his gratuitous instructions to Pollock, so that he is now in the best hands; and it will depend upon himself to realise the expectations of his patrons and friends.

CONGREGATIONAL SINGING.—Every work tending to improve the condition of country choirs, must be accepted with satisfaction. Every help afforded to the choir master to promote solemn psalmody must be gratefully acknowledged. Every assistance extended to improve private devotional singing, must be clearly acceptable to the amateur of sacred music. We, therefore, see with pleasure that under the title of "The Standard Psalmist," edited by W. H. Birch, organist of St. Mary's, Avenshan, and published by Hall, Virtue, and Co., London, Psalm tunes to the extent of eight pages of type are in course of weekly publication, at threepence each Number; the work being proposed as a companion to the Rev. W. J. Hall's Selection of Psalms and Tunes, who has given his permission to has the words published with each tune.

PROVINCIAL INTELLIGENCE.

THE ROYAL RESIDENCE AT BALMORAL.—Contracts for the new Royal residence about to be erected at Balmoral are now completed, and the work has been undertaken by tradesmen in the district. The building is not to be so extensive as was at first reported, but it will be a handsome edifice in the Norman style of architecture, and the private property of the Royal family.

ELECTION MATTERS.—The petitions against the return of Mr. Wickham and Mr. Milligan, for Bradford, have been withdrawn. The statement that Mr. Keeles, M.P. for Blackburn, has consented to accept the Chiltern Hundreds, is without foundation.—Viscount Ebrley is a candidate for the representation of West Worcestershire in the Conservative interest, the vacancy being caused by the elevation of the late member to the Earldom of Beauchamp.

DEFRAUDING THE CUSTOMS.—A serious charge has been made at Liverpool, against Messrs. Fletcher and Frith, flint makers of that town, and their principal clerk, Mr. Kerfoot, for returning the amounts (in flint sales) below the prices realised, in three different instances. The defendants were committed for trial at the assizes, but bail of £500 each was accepted.

THE ASHTON-COURT ESTATE.—A new claimant for the title and ample estates of the late Sir John and Mrs. Upton Smyth, of Ashton-court, near Bristol, has just come upon the field. It is [illegible] "Sir Richard Smyth, Bart., of the Priory, Clifton [illegible] lawful son of Sir Hugh Smyth, Bart., and nephew of John Smyth, commonly called Sir John Smyth, of Ashton-court, and Heath house, Stapleton." The present claimant is a youth of 16 years of age, the son of Mrs. Upton; and the value of the property is estimated at from £30,000 to £80,000 a-year

A NEWLY-INVENTED "RIFLE BULLET" MACHINE.—Mr. J. Anderson, managing superintending engineer of the Dial-square Royal Arsenal, has invented a curious and ingenious "rifle bullet" machine, capable of turning out 100,000 bullets per day, in a most perfect manner. The Board of Ordnance have adopted that mode for supplying the British service with rifle bullets.

LORD RECTORSHIP OF MARISCHAL COLLEGE, ABERDEEN.—The Earl of Carlisle is to be nominated for the high office of Lord Rector of Marischal College and University. The duties of the office are mostly a nominal character [illegible] according to the charter, the Lord Rector may have to decide questions of a highly responsible description. There have been several other names mentioned, but it is believed that if the noble Lord consent to go down personally and be installed he will be very cordially elected

NEW USE OF MILK.—In consequence of the advance in the price of [illegible], a manufacturer of woollen cloths, in the neighbourhood of Thirlstone, tried whether milk mixed with oil would not answer the purpose. The experiment fully succeeded, the mixture being far better than olive oil alone. The consequence has been that milk has advanced to 1s. 4d. per gallon in the neighbourhood of the woollen cloth mills.

DESECRATION OF THE SABBATH.—A young man of respectable appearance, at Leytonstone, has been found guilty of shooting sparrows in a field near the high road, on Sunday during divine service. The accused was told that he was guilty of a double offence—desecration of the Lord's day and breaking the law, which rendered it penal to discharge a gun in the direction of a thoroughfare within a mile's distance. The accused was fined 40s. and costs, or three months' imprisonment. Not with the least grace or very great alacrity he paid the fine and costs, £2 5s. 6d, shouldered his costly gun, and marched in slow time away.

THE LATE MURDER AT ROMFORD.—Saunders, the man committed for murder, is either insane or feigns to be so. One constable and the chaplain have been with him really night and day, and have much ado to stimulate madness. One of the warders asked him how the flies fingers were (they got out with cutting his victim's throat), when he replied, "It was no matter whether they were well or ill, as he was about to be scragged." He eats, drinks, and makes merry, as if he considered his tomorrow not worth a groat.

PRESERVED MEATS.—A committee at Deptford is examining the claims of preserved meats to be served in the navy dinner-boy-hood. Much of it has been found in a good state; and the general opinion is, that most of the bad portion has been obtained from foreign meat by Mr. Goldner, who has also been called upon and paid the sum of £3000 for non-fulfilment of contract.

SCARCITY OF SEAMEN.—In consequence of the large number of vessels which have been despatched for and lying in the ports of Australia, there is a great scarcity of seamen. Outbound vessels are detained for a length of time, waiting for men to man them. At the Welsh ports seamen are very scarce, and eager to sail for the Australian diggings. Sunday evening (Oct. 24th), at Swansea, in spite of the Sunderland bush, Bristol, for the purpose of enrolling seamen for her Majesty's service, and a rendezvous for this object has been opened in the neighbourhood.

TURN-OUT OF COTTON CLOTH WEAVERS.—Manchester has been placarded with an appeal to the public from the Havannah weavers of Messrs. J. F. Westhead and Co., who complain that they have been compelled to strike at a reduction of wages below what are given in Manchester of 15 per cent. The cotton districts have been remarkably free from strikes for some considerable time past, until this arose.

A MISER.—One of this unusual class has just died at Newby in Westmoreland. When William James was a young man, he became possessed of a little property; he worked as a labourer, and added to his store, through a long series of years by scraping and saved, denying himself every comfort and almost mere necessaries. During his latter years he lived in a cottage alone, in the most wretched style. Several estates had been mortgaged to him, as it has been said, at the [illegible] of his bed, and upon which [illegible] vowed when dying, is supposed to contain money and securities to the amount from £20,000 to £30,000. His heir is a nephew in London, his sister's son

DEATHS BY COLD ON DARTMOOR.—Corporal Paxton and private Driver and Carlin, of the 7th Fusiliers, stationed at the Dartmoor Prison, left Princetown, for Moreton, on their leave in the snow on Dartmoor, on Saturday night. It is surmised, from the positions in which their hats and knapsacks were scattered, that they passed through the first encampment of the Duke of York, and reached the Devil's bridge, a mile and a half further. There they could not proceed, and retraced their steps to the first drift, which by that time had become impassable, and there they unhappily perished. Paxton, who returned to Princetown, states that he and Panton were four hours coming from Dourstand farm (five miles), being at times up to their arms in snow, which was in some places at least 6 feet deep. He succeeded in reaching Panton from returning the same evening. The bodies of Driver and Carlin were found

CHANGE OF FORTUNE.—A striking instance of this has recently occurred in the person of Lieut H.M.S. *Volcanoes*, at Plymouth. The individual who has now fallen on times precisely into the lap of Fortune has been a stoker or fireman, the immense property of which he has now become the inheritor having been [illegible] in the Chancery Court for many years. A few days ago this begrimed son of Neptune was visited by a gentleman, who communicated to the object of his visit the astounding intelligence that he was entitled to the Earldom of Stockport, and the immense property attached to the title, of the value of £[illegible] per annum. The feelings of the poor fellow, on learning what had taken place in his affairs, may be readily conceived.

IRELAND.

THE GREAT EXHIBITION.—A deputation from the Executive Committee of the Great Exhibition of 1853, headed by the chairman, Alderman Roe, has waited on his Excellency the Lord-Lieutenant, for the purpose of submitting the plans &c., of the building. The Lord-Lieutenant and Countess subsequently visited and inspected the building, with which they expressed themselves very much pleased.

REPRESENTATION OF TRALEE.—A correspondent of the *Freeman's Journal* states that a report is prevalent to the effect that Mr. Maurice O'Connell is about to resign the representation of Tralee, and that Mr. Sadlier is to be the new candidate. Mr. O'Connell has since indignantly denied the report. He says—"The statement is simply a lie. No man dare suggest to me so dishonourable a negociation."

CARLOW ELECTION.—A petition has been presented by the electors against the return of Mr. Alexander, on the ground of bribery, intimidation, and illegal majority.

MR. PIERCE MAHONEY, the Clerk of the Crown in Ireland, has dangerously ill, his medical attendants having little or no hope of his recovery.

BOARD OF TRADE RETURNS.—The accounts relating to the trade and navigation of the United Kingdom, for the year ending the 5th January, 1853, are issued, and afford satisfactory evidence of the prosperity of trade and commerce. The value of the exports of British and Irish produce and manufactures, during 1853, shows an increase over 1851 of £[illegible] and over 1849 of £[illegible], over 1840 of £22,[illegible], and over 1846 of £[illegible].

CITY SEWERS COMMISSION. On Tuesday a court was held; Sir James Duke, M.P., in the chair. The meeting was numerously attended, in consequence of this being the first court under the new commission. A variety of public business was transacted, but most of it was of a purely official character. The officer of health was re-appointed unanimously.

SUBURBAN POST-OFFICES.—Amongst the new Post-office arrangements is one of considerable importance to residents in the suburbs. In future letters can be ordered to be collected at the receiving houses at the different branch offices in the suburbs after five P.M., early the next morning, to be in readiness for the first mail carts; but Mr. Rowland Hill, it appears, has determined that these suburban letters shall be collected and forwarded to the General Post-office, by special mail-carts, at ten P.M. on the evening of the day of posting. This plan will greatly advance the delivery of letters posted within the limits of the town post districts after five and up to ten o'clock at night.

ISLINGTON PARK.—A deputation from Finsbury on the subject of Albert Gate, Knightsbridge, waited upon the Earl of Carlisle (Lord Wednesday, in Downing-street. The deputation consisted of Lord Robert Grosvenor, M.P.; the Lord Mayor, M.P.; Sir J. Duke, Bart., M.P.; Mr. T. S. Duncombe, M.P.; Mr. Hastings Russell, M.P.; Mr. W. Tyler, Mr. J. J. Bunning, Mr. J. Bailey, and Mr. J. [illegible].

THE NEW CRYSTAL PALACE.—A deputation of the various trades, [illegible] on the opening of the Crystal Palace on Sunday, have waited on Lord Hamerton. The noble Lord received the deputation with great courtesy; and, after listening to the arguments advanced by the different speakers, admitted the importance of the question, but replied that he could not at present give definite pledge as to the course which the Government might feel bound to take when it came on for discussion before Parliament, but, at the same time, he could and would promise to give it his best consideration. He would also undertake the presentation of their petition to the House of Commons.

OMNIBUSES IN HYDE-PARK.—During the last two or three days the state of the roads has been exceedingly bad, in consequence of the [illegible] and sinking thick frost. By permission of the Board of Works and Woods, the Knightsbridge and Brompton omnibuses have been permitted to enter the park at the [illegible] gate, and proceed to the Albert and Kensington gate, passing through the latter into the Kensington-road. To this considerate arrangement the public owe their safety as well as time.

EXTRAORDINARY DISCOVERY AT THE GENERAL POST-OFFICE.—Considerable surprise has been occasioned at the Inland Department by the accidental discovery of bank-notes and jewellery to a very large amount, supposed to be the property of a series of letter-robberies which occurred two years since. The objects of the discovery were found in an extra office only used under a pressure of business. Information was at once forwarded to the secretary's office, and the property will be examined, and deposited in a place of security. A list will be issued, to enable the persons by whom the various articles were transmitted to identify and recover them.

DWYER the policeman, who was almost killed by Cannon the sweep, attended at the Lambeth police-office, and informed the magistrate that he was much better, though still suffering. The Home Secretary presented him with £5, and the Commissioners of Police have granted him six weeks' leave of absence. The subscriptions received for his use amounted to £102 1s. 1d. Mr. Elliott said he would consider what was best to be done with the money. Dwyer thought of investing it in the Funds.

FIRES DURING THE WEEK.—No. 20, Castle-street, Holborn, has been much damaged by a fire, and a poor woman named Ann Cole a victim to the flames. —The premises of Mr. Lambert, College-street Chelsea, have been in jeopardy from fire; the contents of the upper rooms were consumed.—A second fire has taken place at the Coach and Horses (Ben Cauvin), in St Martin's-lane, and much damage done. A fire took place in the extensive premises of Messrs. Forrest and Greenlees, in Bond-street, which at one time threatened much damage; but was got under without much loss.—The premises of Mr. Bird, a dealer in parrots, &c., in Spitalfields, has been injured by fire, and some birds destroyed.—Another fire took place at the same time, at Mr. Last, in Bethnal-green-road, and much injury resulted.—At 18, Lant street, Borough, Mr Barwise's workshops, &c., have been consumed, and some damage done to the neighbouring houses.

NATIONAL SPORTS.

TATTERSALL'S

THURSDAY.—Beyond an improvement in Orestes and Honeywood, the latter's fashion has changed hands, the betting this afternoon led to no alteration worth speaking of; it resulted in the following averages:—

7 to 1 agst Miss Mowbray	14 to 1 agst Vlew Halloo	16 to 1 agst Vletross
15 to 2 — Hawkesdaff	16 to 1 — Hawkesdaff	15 to 1 — Crabbe
13 to 1 — Due-au-Dharras	16 to 1 — Bourton	

LIVERPOOL SPRING CUP.—5 to 1 agst Doubt

NEWMARKET SUMMER STAKES.—100 to 1 agst Maria (t)

METROPOLITAN HANDICAP.

12 to 1 — Canada	10 to 1 — Stringsbourne	22 to 1 the Baiver (t)
	25 to 1 agst Brigadier	

GRAND NATIONAL CURLING MATCH.

NORTH v. SOUTH.—The great gathering (after missing two annual meetings for want of ice), took place on Tuesday, on a new pond, or loch, near Cramond-bridge, in Perthshire. Nearly 60 clubs had notice of the meeting, and the total number of players on the ice was little short of 200. The place of the gathering is thus described:—When the players and spectators were all assembled the scene was very beautiful—a vast moor moorland studded by the Ochils and the Grampians, and in the midst of it sixty acres, crowded and black with moving men, looking like a mere dot amid the far-spreading scene of desolation around. These wilds never before heard the sound by so much life and stir—not perhaps even when Mar marched across them in 1715 on his way to Sheriffmuir.

Among the players were the Duke of Atholl, the Earl of Mansfield, Lord Kinnaird, Lord Strathallan, Sir W. Gibson-Craig, Sir John Ogilvy, Sir J. M. Mackenzie, Hon. Colonel Lauderdale Maule, M.P.; Mr. Cowan, M.P., Mr. Stirling, of Keir, M.P., &c. The Duchess of Atholl and a party of ladies also graced the spot.

The result of this great match was, that the North obtained 2426 "shots" against 1857 scored by the South.

ELECTION OF A NEW "TATTERSALL'S" IN SOUTHWARK.—A very spacious building is now being erected on a large plot of ground opposite the Elephant and Castle, Newington, on the site of the old Fishmongers' Almshouses. It is to be called "Tattersall's Repository for the Sale of Horses," and in enacting the racing business now carried on at Tattersall's at the West-end. The contractors are Messrs. Piper; and the building and offices, when completed, will have a very handsome appearance. On the north and east sides, which front the St. George's road and the Newington-road, handsome shops will shortly be erected, and a large and commodious hotel.

In the Rolls Court, Sir John Romilly gave judgment against Mr. Hudson in the action between him and the York and North Midland Railway Company. The Master of the Rolls decreed as follows:—"Declare that 6 Scotch trades' [illegible] and Vale of Neath Railway Company [illegible] the Eastern Counties Railway Company [illegible] Hudson, and the Halifax and [illegible] Railway Company [illegible] in his character of chairman and director of the said company, declare that the defendant is bound to account for all such sums from the sale and disposal of such shares respectively take an account of all monies produced by, or arising from, the sale of the East and West Riding Extension shares and the Hull and Selby, disposed of by the defendant, or by his order, or for his use; and in taking such account, let the defendant be charged with interest at £5 per cent for the sums so received by him, or for his use, from the time the shares were received; and in taking such account the defendant is to have credit for all sums paid by him to or for the use of the company in respect of such shares; and he is to have credit for all such allowances as Sir John has directed the defendant to be the 2nd with costs at £5 per cent; for, if his decision were correct, the defendant stood in the position of a trustee who had derived profit from the property of his cestui que trusts. As the expenses of the suit up to the 9th of June had been principally occasioned by the defendant contesting his liability to account, he must pay the costs up to and including this hearing; but the costs of the rest of the suit must depend on the account. With regard to the demurrer to the 1st claim's statement, prayed by the bill, the bill must be dismissed as to the

CHESS.

TO CORRESPONDENTS.

RICARDO.—We have stated repeatedly that we reply immediately to all communications that reach us, but we cannot do newspaper [illegible] for delays at the Post-office, or even for those which [illegible] [illegible] [illegible]

THE COUNTESS DE TEBA (EMPRESS OF THE FRENCH).—PAINTED AT MADRID.

THE COUNTESS DE TEBA (EMPRESS OF THE FRENCH) AT MADRID.

The above Portrait of the Empress has been copied, by the kind permission of its illustrious proprietor, from a picture painted at Madrid, in 1850, by M. Odier, the celebrated French historical painter. At the above date, the Countess might be seen on the Prado, riding her favourite Andalusian horse, and was usually accompanied by her family and friends: she wears the national costume of a *maja*, with the *sombrero* and *basquina*; ladies in Spain do not wear any peculiar riding-habit.

RAILWAY BETWEEN SEAHAM AND SUNDERLAND.

The want of railway communication between the important ports of Seaham and Sunderland has long been felt to be a serious inconvenience by the inhabitants of both these towns. On Tuesday (last week) the interesting ceremony of "cutting the first turf" of a railway intended to connect these two ports took place, in the presence of a large assemblage of the inhabitants of the adjacent districts.

This Railway has been projected by the Marquis of Londonderry, and is to be executed throughout by his Lordship, at an estimated cost of £50,000. In addition to affording the means of speedy communication between the two towns, the project embraces the connecting and opening an easy way to the sea-board for many important colliery districts, hitherto compelled to send their mineral produce round by circuitous routes. The new line, which is seven miles in extent, will enjoy the remarkable distinction of being commenced and carried through without the obstruction of competing interests—the necessary buying off of opposing landholders, or the expense of an application to the Legislature. It will be made without an act of Parliament; the whole of the land traversed belonging, with unimportant exceptions, to the noble Marquis. The ceremony was witnessed by a very large number of persons, including the leading inhabitants of Seaham and Sunderland, among whom we remarked the Mayor of the latter borough, James Hartley, Esq.; Hon. Thomas Liddell, Mr. W. Ord, Mr. Roland Burdon, Rev. Hart Dyke; Rev. H. Peters, rector of Sunderland; Sir William Eden, Mr. Nicholas Wood, &c. The scene was highly animated. A platform, occupying the site of the intended Seaham station, was erected in the centre of a field, commanding a fine sea view on one side, and upon the other the ancient church of Seaham, with the family mansion of Lord Londonderry in close proximity. The guests invited to be present assembled in the town of Seaham, at one o'clock; and shortly afterwards moved in procession, headed by two excellent bands belonging to his Lordship's collieries, to the scene of operation, where they were met by the Marquis of Londonderry, accompanied by the Mayor of Sunderland, and two or three other gentlemen, in a carriage and four. His noble Marquis was welcomed by the assembled multitude with loud cheers. His Lordship, together with his friends, having mounted the platform,

Mr. Joseph Wright, of Sunderland, then came forward, and addressed the company, expressing his admiration of the public spirit and liberality of Lord Londonderry, and the advantages which this railway would confer upon the district, and concluded by wishing success to the Londonderry and Seaham and Sunderland Railway, and long life and happiness to its noble and spirited projector. (Loud cheers.)

Mr. White, iron-master, of Seaham, next characterised the benefits to be derived from the proposed railway, and bore testimony to the great public works which Lord Londonderry has already carried out in this locality, as well as to the active benevolence of his Lordship and the Marchioness.

Mr. Christopher Bramwell (of Sunderland) spoke in support of the proposed railway, remarking that it could not fail to give a great impulse to the coal trade of the district.

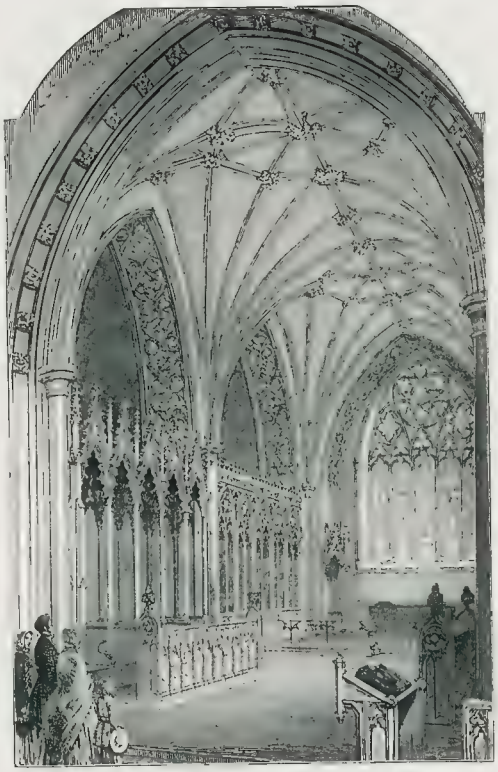
Mr. George Elliott, C.E., then presented to Lord Londonderry a very handsome silver-mounted spade; when his Lordship addressed the company in a speech, in the course of which he made the following observations:—"When I added the estate to this Wynyard family property, there was a notion a harbour might be made at this end of the estate, and I was introduced to a clever engineer of that day, named Chapman, who projected a small basin. The coal-trade at that time was in a sad state. The rivers of this wealthy district, Sunderland and the Tees especially, were frequently shut up, and there was not then the enterprise and vigour which has lately grown up in the flourishing town near us ('Hear, hear,' and laughter). In fact, our trade was imprisoned; vessels loaded with coals frequently remained weeks and weeks without actually clearing for sea. Coals were sent down to the banks of the Wear, and shipped there into keels, and again from them into ships; and I myself, at that period, was paying to the commissioner of the river Wear £3000 a year for permission to send my articles by this river to market (Hear, hear). Great discontent prevailed. Sunderland having a good thing, kept their own. And they were right. So would any of you have done the same ('Hear, hear,' and laughter). Such was the state of things, when it occurred to me that if I could get a harbour my trade would be in my own hands, and I should not have to go to sea for it. I embarked at once in the undertaking, against the opinions of those I valued, and ought to have looked up to, and engaging Chapman, and entering as rapidly as possible into other arrangements, I launched your little harbour. Urged on by the same principle which guided me in the case of Seaham harbour, viz. that I should not have to seek a trade, for that if I made the harbour the trade would come to me, I conceived the project of constructing the railway we are about to commence this day (Hear, hear). I knew that the trade of many of the collieries to the southward of us in this great county must pass, sooner or later, our little half-way house of Seaham on their way to Sunderland, and I thought if we could get them to stop on the road we should be safe to obtain a large addition to our present trade. (Hear, hear). Communicating these views to my able manager and engineer, the latter set about the matter in real earnest, and has already formed engagements with the South Hetton and Haswell Colliery Companies to carry their coals over the line as soon as completed, either to ships in the first instance at Seaham, or, if not, to send them on to Sunderland. The trade is, therefore, secured before the railway is commenced. There is my project, and that is the simple history of it." In conclusion, his Lordship said, "If I live to see this last project successfully accomplished, I shall cheerfully lay my head upon my pillow and resign life, conscious that, so far as concerns those whose interests Providence has committed to my care, I have to the fullest extent of my means discharged the duty which has devolved upon me" (Loud cheers).

The noble Marquis descended from the platform amidst the hearty cheers of the multitude assembled, and, advancing a few feet, cut a piece of the turf with his spade, and threw it into a handsome mahogany wheelbarrow in the most approved fashion. His Lordship next, amidst, if possible, still greater acclamations, wheeled the barrow across the field to his carriage, on the top of which, together with the spade, it was triumphantly elevated.

The noble Marquis then, together with about eighty gentlemen, returned to Seaham-hall, where a handsome dejeûner was served. The extraordinary spirit and energy displayed by Lord Londonderry, throughout the day, notwithstanding his advanced age, were the subject of general congratulation.

THE MARQUIS OF LONDONDERRY COMMENCING THE SEAHAM AND SUNDERLAND RAILWAY.

NEW CHURCH AT CHARLECOTE.—VIEW FROM THE SOUTH-EAST.



INTERIOR OF THE NEW CHURCH AT CHARLECOTE.

CHARLECOTE NEW CHURCH.

This beautiful edifice has been erected from the design of Mr. John Gibson, architect, upon the site of the old church, and at the sole expense of Mrs. Lucy, of Charlecote-park, near Stratford-upon-Avon, and celebrated as one of the early haunts of Shakspeare.

The church is situated in the park, near the high road, at the end of an avenue of fine old elm-trees which leads from the family mansion. The style of the church is Gothic, of the fourteenth century. The exterior, as well as the interior, (the latter being richly groined), is entirely of stone, principally from the quarry belonging to the Earl of Warwick, and which is of similar quality to that used in the building of Warwick Castle.

FONT IN THE NEW CHURCH AT CHARLECOTE.

The plan consists of nave and chancel, 120 feet long, with the Lucy Chapel and vault; and on the north side, over the latter (which is partially below the surface), there is a gallery with seats for the school children, and space for the organ. On the south side rise a tower and spire, the belfry being pierced, and at the angles angels are carved, holding open books. The lower part of the tower forms a vestry. The east elevation, shown in the View, has a richly-moulded light as well as a circular window, the latter lighting the Lucy Chapel, and under the string-course of these windows are carved, in panels Scriptural texts. The gables are surmounted with richly-sculptured crosses. The north elevation of the Lucy Chapel has three elaborately-carved openings—the centre bearing the arms of Mrs. Lucy, quartered with those of her late husband, with the inscription "Ædificavit Anno Domini 1852," and the initials M. E. L. at the angles, which are attached with a cord to a scroll and shield. The north and south sides of the nave are similar, having gabled buttresses, from which are boldly carved gargoyles, the emblems of the Evangelists, and the crests of the Lucy family. The windows, which are of two lights, are double moulded and cusped, and the whole is surmounted by a parapet and carved string course

The west elevation of the church is treated with much novelty in design, having a deeply sunk panelled arcade serving as seats in lieu of a porch, the centre one forming a richly-carved doorway. Above these are incised appropriate texts; and there is also a very fine and elaborate circular window, fitted with stained glass, representing the heads of the Apostles, with scrolls containing the Creed; the head of Our Saviour being in the centre: the glass in this and the three subject windows in the nave were presented by the children of Mrs. Lucy; the circular window being given by Miss Lucy; that containing the Baptism, Woman of Samaria, Sermon on the Mount, and Christ's Agony, was given by Mrs. Fitz-Hugh; whilst that given by Aymir Lucy is in memory of his father, and executed by Holland. One of the remaining nave windows contains the arms of the Queen and of the see of Worcester, with symbols of Church and State. The other windows have borders, pike and crosslets, the arms of the Lucys. The east window contains stained glass, representing the Ascension, the Four Evangelists, &c., and is the gift of Mr. Lucy, in memory of his late father. The circular window in the Lucy Chapel is a rich armorial design; being, as well as the east window, by Willement, and having the shields of the Lucys (who lie buried there), with dates of their death, and the family crest in the centre

This chapel is exceedingly interesting from the fact of its containing the beautiful monument, by Bernini, of Sir Thomas Lucy (of Shakspearian fame) and his lady, representing their full-length figures, elaborately carved in statuary marble, and placed under an arcaded canopy of various-coloured marbles. There are, also, two other interesting monuments in the chapel, which latter is separated from the chancel by an elaborately-carved oak screen. Reverting to the chancel, which has a brass railing, there is a successfully stained window, containing large figures of St. Peter and St. Paul, with the deliverance from prison and the conversion; these being the gift of the architect. This window, with those not otherwise described in the nave, were executed by O'Connor. There are five lofty oak canopied, groined, and carved stalls on each side of the chancel, of fine character and workmanship.

The reredos under the east window is very exquisite, being elaborately carved in stone tracery, and consisting of passion-flowers surrounded by a lily wreath. The floor is partially marble. The pulpit and reading-desk, to correspond with the stalls and screen, are of oak, and this work is extremely well executed by Davis, of London, from the architect's details. The seats are open, and all of oak. The beautiful font was executed at the cost of the late Lord and the Downger Lady Willoughby de Broke; the workmanship, in Caen stone, being confided to J. Hollins. Round the bowl is a boat fretting to baptism, four angels holding shields, upon which are carved symbols, are on the sides of the stem, with lilies and tracery between; the names of the donors and date being carved upon the lower step. The whole of the nave and chancel has what in these days is a very unusual feature, viz. a richly-groined stone and embossed ceiling, springing from clusters of semi-detached shafts. The masonry and roof have been very nicely executed by Messrs. Locke and Nesham.

The design of the church throughout has been well studied, and the details admirably carried out by its accomplished architect, John Gibson; and to Mrs. Lucy is due the highest praise for her munificence in having so beautiful a temple erected for the service of the church. It was consecrated on the 2nd inst. by the Lord Bishop of Worcester: a distinguished assembly being present at the ceremony.

ANCIENT CHAPEL IN LEADENHALL-STREET.

It has been known many years that a beautiful vestige of early English architecture existed beneath the house at the south-east corner of Leadenhall-street, No. 110, and directly opposite Aldgate pump. The house is in the occupation of Mr. Brown, watchmaker. The arches and vaults on the basement have been hitherto used as a warehouse for wood and other materials; but the extreme beauty of the details, particularly the sculpture and groining, has just led to an investigation. Descending from Mr. Brown's shop, through a dark passage, the centre of the old Chapel is attained, which is lighted by a grating in the pavement, whither the steps shown in our Engraving, lead. The light streaming down through this stairway, produces a most pictorial effect, while the side aisles of the chapel are gloomy in the extreme, and the groining of the roof can only be seen after remaining in the obscurity for a short time, or by means of a light. On the right of our Engraving is a small doorway, with an iron ring or socket for the reception of a bolt; also a hole for the reception of a bolt placed a little higher. This doorway communicates with a staircase, four steps of which are visible, and evidently formed part of a newell or winding stair

ANCIENT CHAPEL IN LEADENHALL STREET.

The ancient chapel has lately been cleared, and has been somewhat erroneously stated to be a discovery of the other day. It has been described as a chapel dedicated to St. Michael, designated by old historians as "Sancti Michaelis Aldgate," and built by Norman, Prior of St. Katharine's of the Holy Trinity, in the reign of Henry I. and his Queen, Matilda of Boulogne, about the year 1108. From the ground to the crown of the arches is 10 feet; and, allowing the shafts to be buried 16 feet, gives a height of 26 feet to the interior of the building. The iron hinges of the easements are still attached to the walls, from which circumstance it is conjectured that the structure originally stood on the surface, but that the ground outside has been raised gradually, until the chapel has assumed its present crypt-like appearance.

We scarcely think the style of the architecture justifies our ascribing it so so early a date as the commencement of the twelfth century.

A Correspondent of the *Times* of Wednesday considers that—

There is not any reasonable room for doubt as to the fact that the first Prior of the House of the Trinity, because that priory itself is said to have been built "near to the chapel of St. Michael," and the parish of St. Michael was one of the principal parishes in the priory for its maintenance in the year 1115. The chapel, then, would seem to have been built before the priory (founded in 1108); but whether the architecture will bear out this assumption of antiquity remains an open question, until some one shall have exerted himself to remove the sixteen feet of dirt under which it is hidden. In the middle of the twelfth century a fire ravaged that part of the city, and destroyed a stone house, probably a remain of Roman sway in that district on the immediate neighbourhood of the chapel; but if the chapel were destroyed, it was soon rebuilt, for it is mentioned as then existing, in a survey of the sale of the priory, made by command of its inmates, about the year 1264. From that time until the time of Stow I can find no mention of it. He only speaks of it incidentally, thus:—"The Priory of the Trinity was built, near to the said chapel of St. Michael, and continueth, &c." We can scarcely infer from this paragraph that the chapel was then in use, because he gives a particular account of every other religious edifice in the city, and in particular describes the church of St. Katharine, which stood but a few hundred yards from the chapel, and which, though originally on a level with the street, was in his time so much lower that "men went down into it by steps, seven in number." If he did not occupy the house under which the chapel, he certainly lived in the neighbourhood of it, for he tells us that the Vaniff of Romford was executed at Aldgate Well, on the pavement of his (Stowe's) house. As there are two sides to a street, we cannot specify his house in this paragraph; but in any case it is most extraordinary that so zealous, patient, and able an antiquary should be ignorant that a relic so beautiful lay buried within a few yards of his own residence.

RAILWAY INTELLIGENCE.

South-Western Railway.—The half-yearly meeting of proprietors was held at the London Tavern on Wednesday, the Hon. Francis Scott, M.P., in the chair. The report showed that the net revenue for the half-year amounted to £134,266 18s. 3d.; which, with the surplus from the 30th June, 1852, of £107 1s. 5d., left a balance of £136,653 19s. 8d. applicable to a dividend, from which the directors recommend a dividend of four per cent on £6,746 334, which would leave a balance of £747 8s. 10d. to be carried over to the next half-year. After some discussion the report was adopted, and a dividend of four per cent agreed to.

The Great Western.—On Thursday the half-yearly general meeting of this company was held at the Paddington station; Mr. C. Russell, the chairman, presiding. The chief business transacted was the declaration of a dividend for the half year, at the rate of four per cent per annum, and the re-election of the directors, who had retired by rotation. The directors congratulated the shareholders on the way the company were in a very satisfactory state, inasmuch as they were enabled to pay the ordinary dividend, although there had been a general reduction of fares and a diminution in the charges for the conveyance of goods, and the repair of the line, in consequence of the wet weather during the last few months.

Eastern Counties.—The accounts of this company show the total earnings for the half-year to have been £445,769 1s. 1d., and the expenditure £346,615 7s. 9d. The net balance in hand (including that from the last half-year), amounts to £100,983 6s. 4d., out of which, after paying interest and guarantees, the directors propose to declare a dividend of 3s. per share, leaving £4374 16s. 8d. to be carried to the credit of the next account.

York and North Midland.—It appears from the accounts of this company, that the gross revenue for the past half-year has been £256,314 16s. 10d.; and the working expenses and taxation, £96,045 2s. 8d.; leaving a net profit of £160,269 14s. 2d. for the benefit of the shareholders. The amount remaining applicable to dividend on ordinary stock is £63,262 9s. 7d.; from which the directors recommend the payment of a dividend at the rate of 3 per cent per annum, leaving £4921 19s. 7d. to be carried to the next account.

Manchester, Sheffield, and Lincolnshire.—The report of this company for the past half-year states that, after paying the debenture and other interest, there remains to the credit of the revenue account the balance of £19,605 13s. 3d.; out of which the directors recommend the payment of one half-year's dividend on the £6 preference shares, amounting to £15,975; and leaving £4681 19s. 3d. to be carried to the next account.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

The leading feature in the Money Market this week has been the publication of an official notice, to the effect that the interest on the next issue of Exchequer Bills, viz., on and after the 10th proximo, will be at the rate of 1d. per diem, or £1 10s. 5d. per annum, instead of 1½d. per diem as at present. This proposed reduction has been unexpected, and those parties who have large amounts temporarily invested, are, of course, annoyed at the change, and strongly condemn the course taken by Mr. Gladstone. As might be expected, the premium has suffered a considerable decline, and the March Bills have only marked 25s. to 30s. When we consider the matter in all its bearings, we are led to the conclusion that the step is a judicious one. True it is that a high premium can scarcely be expected; but its amount will, of course, be wholly governed by the available supplies of surplus capital, and the demand for money.

Under the impression that large additional amounts will shortly be invested in Consols, the Market for those securities has been somewhat active, and prices have steadily improved. Jobbers in general have operated largely for the next account. Several parcels of Stock have been taken for the reduction of the Debt, and full average purchases have been effected on account of private buyers. On Monday the Three per Cents Reduced were marked 100½; the Three per Cent Consols, 99⅝; the Three-and-a-Quarter per Cents, New, 102⅝; and Consols for Account, 99⅝; Bank Stock was 212; India Bonds were done at 50s.; and Exchequer Bills, 25s to 32s premium. Both on Tuesday and Wednesday the market for Consols was firm, and prices were slightly on the advance. The dealings were continued on Thursday, and the Three per Cent Consols marked 99⅝ ⅝ ⅝ ⅝; the Three per Cents Reduced, 99½ to ⅝; the New Three-and-a-Quarter per Cents, 102⅝; and Consols for Account, 99⅝ ⅝. Bank Stock was 212 to 213. Long Annuities were 19¼. India Bonds 49s. to 52s. Ditto Debentures £100, 5l.; Exchequer Bills, 24s. to 26s. Advances were at 2½ per cent, and 2½ premium.

The exchange upon New York having become more favourable, we have had an import of 200,000 dollars from the United States. The Continental exchanges are still against us, the current rate of entry being nearly 25 per cent per annum, and 14s 7hree per Cent Bonds, [illegible]

A Constantinople correspondent says that the Porte has come to the resolution of fixing the Turkish loan, the sum to be sold at 8 per cent. Swedish Scrip, however, has ruled at 2 discount. On Thursday, Brazilian Four-and-a-Half per Cents were 97⅛; Ditto New Five per Cents, 103; Buenos Ayres Six per Cents, 83; Mexican Three per Cents, 20¾; Peruvian Deferred, 62⅝ to 63; Portuguese Four per Cents, 35; Spanish New Deferred, 23; Spanish Passive, 5¾; Spanish Committees Certificate, 4⅞. Spanish Loan, 5¾; Ditto, Venturo, 4¾; Dutch Two-and-a-Half per Cents, 65¾; Ditch Four per Cents, 85; Russian Five per Cents, 120; Russian Four-and-a-Half per Cents, 104; Cardinian Five per Cents, 94¾; and Spanish Three per Cents, 47¾.

Miscellaneous Shares have been in but moderate request. Australian Agricultural have been [illegible] North British Australian Bank, 5¾; South Australian, 6¾; Australian Bank, 23¾; Australian Rice, 8¾; Chartered Bank of [illegible] English, Scottish, and Australian Bank, 53½; London Chartered Bank of Australia, 19¾; London Chartered Bank of India, 20; Sydney Cove Coal and Iron, 2¾; Union of Australia, 50¾; Union Bank of Australia, 50¾; Western Australian, 5¾ to 6¾; Crystal Palace, 7; General Steam Navigation Company, 30; Rotherwas Lands, 2¾; North of Europe Steam, 4¾; Peninsular and Oriental Steam, 87¾ to 89; Royal Mail Steam, 83 to 82; Van Diemen's Land, 16 to 16¾.

Railway Shares have been in somewhat improved request, and prices have been well supported. Most of the dividends declared at the various half-yearly meetings are considered satisfactory. The following are the official closing prices on Thursday:—

Ordinary Shares and Stocks.—Aberdeen, 20¾; Caledonian, 69¾; Cork and Bandon, 15¾; Eastern Counties, 13¾; Eastern Union, 10; Edinburgh and Glasgow, 78; Edinburgh, Perth, and Dundee, 39¾; Great Northern Stock, 79¾; ditto A Stock, 43; Great Western, 61¾; Lancashire and Yorkshire, 79; Leeds Northern, 16; London and Blackwall, 8¾; London and North-Western, 109¾; London and South-Western, 92; Manchester, Sheffield, and Lincolnshire, 36½; Midland, 78¾; Newry, Warrenpoint, and Tanderagee, 9½; Norfolk, 12; North British, 36; North Staffordshire, 13¾ ex div.; Scottish Central, 102; Scottish Midland, 85. South Devon, 20¾; South Eastern, 80¾; South Yorkshire and River Don, 73; Waterford and Limerick, 27¾; York, Newcastle, and Berwick, 71½; Ditto, Extensions, 13; York and North Midland, 61¾.

Lines Leased at Fixed Rentals.—Preston and Wyre, 47¾; Ditto, Half Shares, 23¾.

Preference Shares.—Aberdeen, No. 2, 4¾; Eastern Counties, No. 1, 1½; Ditto, 5% per Cent Stock, 14¾; Great Northern, Four-and-a-Half per Cent Scrip, 3¾; Great Western Four-and-a-Half per Cents, 100 ex div.; Manchester, Sheffield, and Lincolnshire, New £10, 11¾; Ditto, New, 5¾; Consolidated Bristol and Birmingham Six per Cent Stock, 148 ex div.; North British, 10¾; South-Eastern, 20¾; Norfolk, 4

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE.—MONDAY, Wednesday, and Friday, MACBETH. Tuesday, Thursday, and Saturday, ST. CUPID; or, Bow-Bay's Fortune; and the SPITALFIELDS WEAVER. The PANTOMIME every evening.

PARLIAMENTARY PORTRAITS.

MR. THOMAS PHINN, M.P. FOR BATH.

The selection of Mr. Phinn to represent a constituency so important as that of Bath was one of the incidents of the last general election that

MR. THOMAS PHINN, M.P. FOR BATH.—FROM A PHOTOGRAPH BY BEARD.

tended to counterbalance the many extraordinary caprices to which the electors were in many parts led by party feelings. Mr. Phinn had no notoriety to recommend him, nor were his professional pretensions more than would have justified him in presenting himself to some small borough constituency, and taking the chances of an ordinary hand-to-hand contest. It is very rarely that the influences prevail which led the electors of Bath to return Mr. Phinn by a respectable majority over his Conservative competitor. The most striking instance of the kind we remember was when the present Judge Talfourd was returned for the borough of Reading, partly on the score of his literary and professional reputation, but mainly because he was the son of a respected inhabitant of the borough. Mr. Phinn, too, is the son of a citizen of Bath, and he also had become known to the electors from having professionally practised in the Western Circuit. Hence the readiness with which his claims were recognised by the Liberals of Bath, who, as their long confidence in Mr. Roebuck attests, were no mean judges of Parliamentary qualifications.

The previous career of Mr. Phinn does not afford any very interesting materials for a biographical notice, although his activity has not been confined to his profession. He is the son of the late Thomas Phinn, Esq., who for many years had a large practice as a surgeon in Bath. Mr. Phinn's mother was Miss Caroline Bignell, daughter of Richard Bignell, Esq., of Banbury. Mr. Phinn, senior, was well known in his day in connection with politics in Bath. In the old Tory times, when to question the absolute fitness of all existing things was to invite odium as well as opposition, Mr. Phinn was a zealous Reformer; and when Bath was a close corporation, returning two members, he was one of the fifteen members of the corporation who contrived to secure one Liberal representative in the person of the late General Palmer.

Mr. Thomas Phinn, the subject of this notice, was born at Bath, in the year 1814, so that he is now in his 39th year. He was educated on the foundation at Eton, with a view to a Fellowship at King's College, Cambridge; but although he was captain of the school for four months—an unusual time to elapse without a vacancy—he was unlucky enough to be superannuated, and so to lose his chance. While captain of Eton school, it fell to his lot to present Dr. Keate with the plate subscribed for by those under his tuition on his leaving the office of head master, a circumstance in itself sufficient to establish a link of sympathy between the new member for Bath and the old Etonians in the House of Commons. From Eton, Mr. Phinn went to Exeter College, Oxford, where he gained an open scholarship and first class honours in classics. This was in 1837. In November, 1840, he was called to the bar at the Inner Temple, and he has since practised on the Western Circuit. In July, 1848, he was made Recorder of Portsmouth; and, in 1851, was transferred to Devonport as Recorder. On resigning the Recordership of Portsmouth, he received the unanimous thanks of the Town-council of the borough for his services.

When the St. Albans bribery case commanded the attention of Parliament, and called for inquiry, the Government of the day looked about for fit persons to conduct it. Mr. Phinn's position rendered him eligible for the purpose, and, conjointly with Mr. Slade and Mr. Forsyth, he was nominated a commissioner to investigate the allegations of bribery against the electors of that borough.

Mr. Phinn was now about to appear in a more important character. Lord Duncan, who had represented the city of Bath, declined the contest threatened by the Tory party, and the electors looked about for a fit successor. The memory of Mr. Phinn's father as a stanch and unflinching advocate of Reform principles, at a time when to uphold them was neither so easy nor so profitable as now, had been cherished by his fellow-citizens; and the important position occupied by his son as Recorder of a large town, as well as his long practice on the Western Circuit, pointed him out as an eligible representative. He was accordingly applied to. After much consideration, he agreed to contest the representation with Mr. Whateley; although, in order to do so, he had to give up a lucrative and largely-increasing parliamentary business. On the other hand, he is the counsel assisting the Attorney-General in all matters connected with the Stamps and Taxes department of the Inland Revenue. In his political principles he is a Liberal of the most decided kind. He is prepared not only to advocate the development of Free-trade principles in their full integrity and to their utmost extent, but he also is prepared to vote for household suffrage, the ballot, and for an inquiry into Maynooth, conjointly with a similar inquiry into all other ecclesiastical endowments in Ireland. Mr. Phinn made some spirited speeches at Bath during the election. He is unmarried.

MR. KENNETH MACAULAY, M.P. FOR CAMBRIDGE (BOROUGH.)

Among the practising barristers to whom the last general election opened the doors of the House of Commons, Mr. Kenneth Macaulay is one of the most eminent and one of those most entitled to a seat in Parliament. He has wisely deferred soliciting or accepting that honour until he had arrived at a position in his profession entitling him to official promotion rather as a matter of personal right than of party favour. His rapid rise, without adventitious aid, to prominence and leadership as an advocate, augurs well for his future Parliamentary career. It is scarcely more than thirteen years since he was first called to the bar, yet he is now leader of his circuit, one that boasts of many of the most rising men of the day.

Mr. Kenneth Macaulay may claim the good-will of the House of Commons in virtue of his relationship to one of the most distinguished ornaments of that assembly. The youngest son of the Rev. Aulay Macaulay, vicar of Rothley, in Leicestershire, he is the cousin-german of the Right Hon. Thomas Babington Macaulay, the brilliant orator the philosophic statesman, and the not less sound than fascinating historian. Mr. Macaulay has on his side what may be termed youth in a man first entering Parliament, after having fought his way to eminence in his profession. He is in his thirty-eighth year. He was

MR. KENNETH MACAULAY, M.P. FOR CAMBRIDGE (BOROUGH). FROM A PHOTOGRAPH BY BEARD

born in his father's parish of Rothley in the year 1815, and was educated at Jesus College, Cambridge, where, in the year 1839, he graduated as a Master of Arts. In the same year he was called to the bar at the Inner Temple. He chose the Midland Circuit, where his legal knowledge and forensic ability opened the way for him to the leadership. In February, 1848, he received his patent as Queen's Counsel, and is also a bencher of the Inner Temple.

Mr. Macaulay contested successfully as a Conservative the borough of Cambridge at the last election. He was returned at the head of the poll by a majority of nineteen over his colleague, Mr. Astell, who polled 803 votes. The unsuccessful candidates, Mr. Shafto Adair and Mr. Mowatt polled respectively 737 and 673 votes. Mr. Macaulay is a supporter of the Derby policy, according to the Disraeli dispensation. He avows himself opposed to the re-imposition of protective duties on exempted imports, but is favourable to such a revision of public burdens as will meet the claims of the agricultural interest to fiscal justice. It is to be presumed, also, that he will follow Mr. Disraeli in any proposals he may make for the further extension of Free-trade, according to the programme rejected last December. Mr. Macaulay is prepared to resist any attempt to lower the franchise, but will vote for an inquiry into the Maynooth institution. He married, in 1843, Harriet, the only daughter of William Woollcombe, Esq., M.D.

WRECK OF "THE QUEEN VICTORIA" STEAMER ON THE [illegible] ROCK, OFF HOWTH.—"THE ROSCOMMON [illegible]" (SEE PAGE [illegible].)

THE ILLUSTRATED LONDON NEWS.

No. 610.—VOL. XXII.] SATURDAY, FEBRUARY 26, 1853. [SIXPENCE {WITH SUPPLEMENT, GRATIS.

THE NEW MINISTERIAL ARRANGEMENTS.

THE Aberdeen Ministry, previously strong, by the union of the ablest men of all the political parties in the State—with the exception of the ex-Protectionist party, or forlorn hope led by Mr. Disraeli, and the ultra-Peace party, a hope equally forlorn, led by Mr. Cobden—has received, during the week, a new accession of strength in the person of the Earl of Clarendon. It might have been desirable that Lord John Russell should have continued to occupy the important post of Secretary of State for Foreign Affairs. During the short period in which his Lordship, with a rare abnegation of self, and a patriotic disregard of personal convenience, when the interests of the public were concerned, held the seals of the Foreign Office, the affairs of that department were administered with equal energy and discretion. The honour of the nation was in safe custody. Where tact was necessary, tact was displayed. Where vigour was called for, vigour was exercised; and where the public feeling required an able, an earnest, and an authoritative expression towards a foreign State, great or small, Lord John Russell found the opportunity of making himself the fitting representative of the sentiment of the nation. His eloquent and noble letter of instruction to Sir Henry Lytton Bulwer, in the affair of the Madiai, was alone sufficient to endear him to his countrymen, and to mark with honour his short career as Foreign Secretary. It appears, however, that his Lordship's health s not equal to the double task of leading the House of Commons and of administering the Foreign Department. He has, therefore, in pursuance of an agreement or understanding with his colleagues when the Ministry was formed, resigned the seals of the Foreign Office to the Earl of Clarendon; and retained, without any specific department of Ministerial duty, the high and onerous post of Leader of the Commons. In this last capacity his Lordship stands unrivalled. No living statesman so thoroughly understands the rules, the courtesies, the wants, and the temper of that assembly. Like the late lamented Sir Robert Peel, Lord John Russell lives and moves in a Parliamentary atmosphere. Among the Commons of England he is in his appropriate sphere. As leader, either of the Ministerial or of the Opposition side, his peculiar genius has the fittest field for its display. Under his guidance the parliamentary forces of the Liberals and moderate Conservative members muster in a formidable phalanx. If at times they prove recalcitrant on a minor question, they always yield ready obedience to his superior judgment on a great one, and look up to him with a confidence unimpaired by the remembrance of the excessive nepotism—a fault with which his friends as well as his foes have sometimes charged him. Exceptions will, doubtless, be taken by some of the political opponents of the Ministry, to the position which his Lordship will for the future hold in connection with it, but as that position, though unusual, is strictly constitutional, and as the age as well as the long public services of his Lordship entitle him to the respect and deference of all parties in the state, there is every reason to believe that the arrangement which has been made will be as popular within the walls of Parliament as it has already proved itself to be throughout the country.

The new Foreign Secretary is widely known as an accomplished and able statesman. As representative of Great Britain at the Court of Spain at a period when the British Ambassador at Madrid had the most arduous and delicate duties to perform; and when the peace of Europe depended in no slight degree upon their proper fulfilment, the Earl of Clarendon established a high reputation. As representative of Royalty in Ireland at a time when revolution stalked over Europe, and when rebellion threatened the dismemberment of the British Empire, his Lordship not only confirmed but increased the reputation he had formerly acquired, and marked himself out as a statesman destined, in other and even more important capacities, to render services to his country. His presence in the Ministry will not only lend it grace, but will give it strength at home and abroad.

At no period during the present century has it been more necessary than at present, that our foreign relations should be conducted with judgment, firmness, and dignity. The present state of Europe has been truly described as volcanic. The armies of the great Powers march and countermarch upon a thin crust of revolutionary lava. The whole condition of France, Germany, and Italy is anomalous and unnatural. The most monstrous armaments known since the days when the first Napoleon kept the world in continual alarm, are maintained by nations that claim to be at the head of Continental civilization. Brute force is everywhere in the ascendant. The trading and industrious classes, alarmed by the excesses of a frenzied, ignorant, and misgoverned democracy, look with complacency upon the physical coercion which, while it deprives them of the freedom they once prized, yet prevents the recurrence of such terrible anarchy as signalised the year 1848. But this state of things cannot last. It is too costly, too hazardous, and too subversive. The peace of the world is in no man's hands. Louis Napoleon might be as peaceably disposed as he alleged himself to be at Bordeaux, or as Mr. Cobden fondly imagines him to be towards all Europe, and towards this country in particular, and yet a war might burst forth to-morrow, utterly irrespective of him and of his inclinations. The state of Italy, of Hungary, and of Germany is critical in the extreme. The train is laid, and an explosion

ARRIVAL OF THE INDIAN AND AUSTRALIAN MAILS AT ALEXANDRIA.—(SEE NEXT PAGE.)

may burst, not only by the hand of a wilful incendiary such as France might prove, but by one of a thousand nameless and unforeseen accidents beyond the control of statesmanship. In such circumstances it behoves Great Britain to be watchful and prepared, that she may exert her immense moral influence in the preservation of peace, should it be endangered or that she may act as the umpire and the mediator, should strife unfortunately arise.

The character and previous career of the new Foreign Secretary are such as to inspire confidence that he will be found equal to all emergencies. And should his own experience fail to guide him in any conjuncture of unusual importance, he may claim the assistance of the most competent of living statesmen who have held the same high office. The country remembers that the Ministry boasts in its ranks no less than four ex-Foreign Secretaries. The Earl of Aberdeen was, as few will need to be reminded, the Foreign Secretary of the Peel Administration, and conducted the affairs of that department with a dignified discretion that won the respect of every foreign state. Lord Palmerston, whose name in every part of Europe is synonymous with British vigour, enterprise, and (to use his own expression) "pluck," also brings his immense experience and popular renown to the support of the foreign policy of his colleague. Lord John Russell—by no means the least efficient of the three—also represents to foreign nations as well as to his own, the intelligence and spirit that may be brought to bear upon this department; while Lord Granville, the successor of Lord Palmerston in the Foreign-office, during the last few months of the existence of the Russell Administration, won, in that brief period, the respect of every state with which his duties brought him into correspondence. Thus the Ministry is particularly strong in a department where strength is particularly necessary. And this strength, we firmly believe, will conduce in no slight degree to the honour of Great Britain and the security of Europe.

ARRIVAL OF THE OVERLAND MAIL AT ALEXANDRIA.

The arrival of the Overland Mail is a period of great excitement in the thriving port of Alexandria. As soon as the steamer drops anchor, she is surrounded by boats, some bringing off friends, and others sanitary officers, while many 24 or 30-oared boats, full of sailors of the Pasha's fleet, all dressed in white, are continually passing and repassing, with all the animation of a regatta. The Pasha's fleet—" huge black hulks of moulding men of war, from the stems of which trail the dirty red flag" occupy the harbour, which usually contains, besides the Egyptian men of war and steamers, a very large number of European merchantmen, and a French and Austrian gun-brig.

The landing-quay at Alexandria is said to be like the dockyard-quay, Portsmouth, with a few score of brown faces scattered among the population. When the passengers are landed they find flies and cabs plying for hire, and a yelling chorus of boys, with donkeys, who crowd out the excellent English, "Ride, sir—donkey, sir—I say, sir!" The donkeys of Egypt are a different race from those of England; for, as soon as the passenger is mounted, they dart off at the rate of seven miles an hour. The Egyptian donkey is always pulling away at his bit, and is anxious to be off as fast as possible. Instead of a saddle, his equipment is a cushion of carpets, strapped over his sleek and well-kept hide, and affording a comfortable seat

In five or six minutes the traveller arrives at the Frank quarters, and the handsome broad street where the principal hotels and merchants' houses are to be found. The Consuls have their houses here, and host their flags. The house of the French Consul is large beyond the ambition of private mansions, on the east side of the grand square, as is shown in the Engraving. Here, also, is the unfinished English church, also shown in our Sketch, which is advancing towards completion. Some £500 are still wanting to pay off the amount advanced by the trustees, and to finish details; a sum which, considering the wealth and respectability of the English travellers who pass through Alexandria, it may be confidently expected will soon be raised. Since the church was commenced a large Roman Catholic church has been completed; and within the last few months a very fine Greek church has been well nigh completed. The site for the English or Anglican church was granted by Mehemet Ali; it is by far the best in Alexandria

Our letters from Alexandria state that the town is daily assuming a more European aspect. Steamers and sailing-vessels from nations are to be seen in the spacious harbour; wharves and stores are being built to meet the increasing requirements of trade; and the dusty houses and European looking streets now swell the dimensions of what was, not many years ago, an insignificant seaport town. Street lamps and well-constructed *trottoirs*, as well as shops, also in uniform, show the spread of European civilization. Four large hotels, neat horses and carriages constantly in requisition, besides an increasing number of Egyptian donkeys, indicate a great increase in the visitors to Alexandria. A public clock recently erected in the grand square also demands notice

The completion of the chain of steam communication between England and Australia, by way of India and the Overland route, promises a new era of prosperity to Australia. The largest number of letters and newspapers which arrived on the 4th December last, was 254. 29 of which were from Australia. There can be no doubt, however, that the correspondence between Australia and England, through Alexandria, will be very considerably increased when the arrangements have been matured, and delays through the non-arrival of steamers have been guarded against.

The cordial reception given to the commanders and officers of the Peninsular and Oriental Company's steamers in the several Australian ports and Singapore, indicates the importance attached to the new means of steam communication between Australia and England, by the inhabitants of our Australian and a portion of our Eastern possessions. New Zealand also contributes letters and journals to the Australian letter-bags.

The accompanying Sketch shows the arrival of the camels with the Indian mail and Australian letter-bags at the Post-office; an omnibus with Indian passengers is seen at the Post-office door. The British Church and French Consulate are also shown, as we have stated, on the east side of the Grand Square. The boxes seen upon the camels' backs contain the Indian mail. Boxes are used because of the convenience and safety with which they can be transported on the backs of camels across the Desert of Suez. Letter bags could not be so conveniently packed on camels' backs as boxes, and they would be liable, besides, to be cut open and their contents extracted by the Copt and Arab camel guides across the Desert. The wood of which the boxes are composed is about three-eighths of an inch in thickness; each box is about two feet long, and a foot and a half in height and breadth. The covers of them are securely nailed down, and sealed in such a manner that they cannot be broken open without the seal being destroyed.

GOLD FROM AUSTRALIA.—The *Three Bells*, from Melbourne, arrived in the Downs on Wednesday afternoon; she left October 28th, and brings 17,205 oz. of gold, valued at £68,820. The *Chariot*, *Rosburgh Castle*, and *Alert*, each with a similar sum, are daily expected, having left about the same time as the *Three Bells*.

TRANSPORTATION OF CONVICTS.—The Lords Commissioners of the Admiralty have chartered a vessel for the conveyance of 300 convicts to Fremantle, Western Australia. All the transports to be conveyed by this ship have undergone a probationary imprisonment in this country, and received instruction in trades and pursuits required in the colony. The convict guard is to consist of seventy-five of the enrolled out-pensioners of Chelsea Hospital. They will be accompanied by their wives and children, and will remain in Western Australia as military colonists, receiving from Government, in addition to their pension, a grant of land, and a further sum of 2s. per diem when called on to perform military duty

GENERAL POST-OFFICE NOTICE.—On the 1st of March next the postage upon letters between the United Kingdom and Mauritius may either be paid in advance, or the letters may be forwarded unpaid This arrangement, however, does not apply to the internal colonial rate of postage, which will invariably be collected in Mauritius. All letters and newspapers for Mauritius are forwarded, as a rule, via the Cape of Good Hope, by the packet having Plymouth on the 16th of each month, except such as are specially addressed to be sent by the Overland Indian Mail, viâ Marseilles, or viâ Southampton. The following rates of postage are charged in this country on those letters for Mauritius, the postage of which is paid in advance: Viâ the Cape of Good Hope or viâ Southampton: Not exceeding half an ounce, 1s.; one ounce, 2s., two ounces, 4s.; three ounces, 6s.; and so on, according to the scale for charging inland letters. Viâ Marseilles: Weighing under a quarter of an ounce, 1s. 10d; half an ounce, 2s. 2d.; three quarters of an ounce, 2s. 10d.; one ounce, 3s. 6d.; one ounce and a quarter, 7s. 9d. Newspapers addressed to Mauritius are free of charge when sent by packet, viâ the Cape, or viâ Southampton, but are chargeable with a postage of 3d each when sent viâ Marseilles.

FOREIGN AND COLONIAL NEWS.

FRANCE

M. de la Cour, Minister of France at Vienna, is appointed Ambassador at Constantinople. and M. de Bourqueney is appointed Minister at Vienna

M. Auguste Heurtier, appointed on a commercial mission in China and the Eastern provinces, is to sail immediately for Macao

M. Pages Dupont, editor of the *Union*, M. Tanski, and Messrs Lowenfeld, Hartmann, and Etienne, correspondents of the German press, have been liberated with a simple caution

Imperial decrees have been issued increasing the pay of the non-commissioned officers of the army and navy by 10 centimes a day This will entail an additional annual expense on the nation of 1,095 000f There are 30,000 non-commissioned officers in the army and navy, whose pay will be each increased by 36f. 50c. per annum.

The Emperor has received from the Queen of Great Britain and Ireland a reply to the letter notifying his marriage. A similar letter has been presented from the King of the Belgians

The Emperor is a great patron of the turf, and he has agents at present in England buying up all the available blood stock that is offered for sale. Within the last few days a bill opening a supplementary credit of 300,000f. for the national breeding-studs has been distributed to the Legislative Body.

The debate and explanations in the House of Commons on Friday have produced the best possible effect in Paris. The Bourse opened firm on Saturday, and the Three per Cents rose to 81f The report of the attempt on the life of the Emperor of Austria produced some uneasiness, and the Three per Cents fell to 80f. 50c. On Wednesday the Three per Cents opened at 80f. 35c., and closed at 80f. 40c. for the end of the month. The Four-and-a-Half per Cents closed at 105f. 95c.

SPAIN

The Queen of Spain has exercised her prerogative to strengthen the Roncali Ministry by nominating forty-three new senators The *Espana*, *Clamor*, *Publico*, and *Diario Espanol*, were seized on the 13th. The *Nacion* and *Las Novedades* had experienced the same fate the day before.

ATTEMPT TO ASSASSINATE THE EMPEROR OF AUSTRIA

Great consternation was caused in Vienna on Friday week by the knowledge that an attempt had been made upon the life of the young Emperor. The attack on the Emperor took place between twelve and one o'clock. His Majesty, who had been walking on the bastion, had halted for a moment near the Karinthian gate to observe the exercises of some soldiers who were below. The assassin approached the Emperor from behind with a table knife, and rushing at him, dealt him a blow between the head and shoulders. Thanks to the hulan uniform which the Emperor wore and to his manteau, the wound was not at all serious The man, who was arrested on the spot, is named Libeny. He is twenty-two years of age, and is a native of Stuhlweissenberg, in Hungary. He says that he was formerly the hussar servant of Count Nicolas Esterhazy. He has been in Vienna one-and-twenty months, working as a tailor. At the examination which took place he stated that he had no accomplices; that he formed the design of striking a blow at the Emperor as long as 1850, "in order to let people see what a Hungarian could do for his country, oppressed by gendarmes and police. For these eight days I have walked up and down the bastions to catch the Emperor. However, I did not wish to kill, but only to wound him. *I fear nothing.*" When led off to prison, he cried incessantly, " Vive Kossuth."

The following additional particulars have been published —His Majesty was accompanied by Count O'Donnel, one of his aides-de-camp. While the Emperor and his companion were leaning over the parapet, in order to look at the soldiers, who were exercising in the dry moat below, the assassin came up the stairs leading up to the ramparts from the end of the Karnthner-street. Rushing suddenly upon the Emperor, the assassin attempted to stab him in the neck with a large knife—" a kitchen knife," something like those used by our shoemakers. Happily the blow was parried by that the weapon, striking upon that part of the skull which descends below the ear, inflicted a merely superficial wound. Before the blow could be repeated Count O'Donell struck the villain in the face, and a citizen, who was walking with his wife, seized the assassin and throwing his arms round him confined his arms to his sides It, however, appears that the assassin managed to liberate himself for a time, as it is generally reported that he was taken away on the above-named conveyance. The Emperor did not lose his presence of mind for a moment, but smilingly bowed to and thanked the persons who crowded round him He at once walked to the palace of the Archduke Albrecht, which is close by, and there the necessary applications were immediately made to the slight wound. At three o'clock the Archduke Francis walked on the ramparts, and the expression of his countenance sufficiently showed to the crowds, who bowed much lower than usual to him, that his son's wound had not created little importance.

The criminal, as he was led away, continually exclaimed "I am alone! I have no accomplices!" This, of course, obtained but little credit, and domiciliary visits were immediately paid to the house in the Leopoldstadt where he worked, as also to some others in the same suburb, and in the city.

On his arrival at the police office, the prisoner exhibited the greatest effrontery and self-possession. Without waiting to be questioned, the commissary he declared that he had harboured his villanous intent ever since the year 1850, and had for the last three weeks frequented the ramparts in the hope of meeting with his intended victim. "My object was not to kill him, but only to give him a " blessur." (*blessure*). It does not appear advisable to give the man's expressions literally; but he loudly declared that he had acted solely from a patriotic motive, vehemently and repeatedly asserting that he was *gane allein* (quite alone). The prisoner, a short slight man, about twenty-three, was soon removed to the police prison, where he has since been examined by M. de Felsenthal, the Commissary, who was a short time ago in England in search of persons who had forged Austrian Treasury Bills.

Eye-witnesses have communicated further particulars connected with the *attentat* itself. While the citizen who seized the man was struggling with him, Count O'Donell, who had drawn his sword, was about to use it, but was restrained by the Emperor. Some ten or a dozen persons were at a little distance, and immediately ran up to the spot; the hands of the assassin were soon tied His Majesty, who had taken out his Landkerchief, and was stanching the blood which flowed from the wound, exchanged the anxious inquiries with the words: "My good people (*liebe leute*), I am not much hurt

The wound, though deeper than was at first believed, is by no means dangerous. The surgeons, however, insisted on their patient at once retiring to bed, instead of driving out in the city, as he was much inclined to do.

The last bulletins are :—

FEB 19, FIVE P.M.

Since this morning the state of his Majesty's health has undergone no great change The wound-fever is less than it was yesterday evening

FEB. 20, ONE A.M.

The state of his Majesty's health is as favourable as can be expected The wound-fever returned, sooner than was expected, but was not severe, and of shorter duration than usual. Superficial pattens a sleep was undisturbed

The Emperor had returned to the palace some time before the Archduchess Sophia was made acquainted with what had occurred. A message from his Majesty, begging her to go to his room, prepared her for something out of the common way. As the Archduchess entered, her son went to meet her; and, smiling, said—" Do not be frightened, dear mother; my neck is only a little stiff

The wound was about two inches in length, and if the point of the knife had not been turned (bent) by striking against the bone, the blow must have been fatal. Count O'Donell, whose name sufficiently proclaims his parentage, has received the Order of St. Leopold. One of the first persons who hurried to the Court to express his sympathy was the Earl of Westmoreland

On the evening of the 19th there was a great deal of sincere enthusiasm exhibited. Shortly before six, several Court equipages, containing the Empress Mother (the widow of the late Emperor Francis), the Archduke Francis, the Archduchess Sophia, and the younger brother of his Majesty, drove through a dense mass of people to the cathedral, where they were followed by the whole of the aristocracy. When the Archduke and Archduchess reached the Stephan's Place the cheering was loud, hearty, and prolonged. Illumination in an hour became so general that not a window was to be seen which was not brilliantly lighted up The troops on duty near the cathedral were Hungarians, and their *Eljens* even overpowered the *Vivats* of the civilians. It is worthy of remark that no Hungarian who is in possession of the national uniform was missing at the *Te Deum*; and the wives of many of them, who had long been almost strangers at Court, were among the first to go to express their sympath

The scandalous and cowardly attempt upon the life of the descendant of Maria Theresa, Joseph, and Francis, has roused all the better feelings of the people of Vienna; and the moment is favourable for re-establishing the friendly relations which during so many long years existed between the throne and the people. Whether James Libeny is the tool of a party, or merely a political fanatic, must soon become known; but his act was regarded with universal indignation and abhorrence. That the public is still labouring under a painful and depressed feeling was evident in the Opera-house the next night As it was foreseen would be the case, the *attentat* has filled the Hungarians with indignation, and they eagerly remind their German and English friends that such a circumstance is without parallel in their history. About twenty years ago a murderous attempt was made on the Emperor Ferdinand, while hereditary Prince, at Baden. The culprit, a military man, named Reindl, whose benefactor the kind hearted Prince had been, expiated his crime in the fortress of Munzacs, where he died after an imprisonment of some years.

Since the proclamations of Kossuth and Mazzini, the insurrection in Milan, and the attempt upon the Emperor's life, the exasperation of all classes of people against England has attained the highest pitch Strong representations had previously been made to Lord Westmoreland, and a note sent off to London, on the subject of the licence given at England to political refugees

The German papers state that a rising was anticipated at Pesth, and fears were entertained of a general outbreak. The police in Pesth had arrested twenty travellers in the Hotel d'Angleterre. The garrison was under arms, and ready to act at a moment's notice.

THE INSURRECTION AT MILAN

According to the latest accounts from Milan, there was still great difficulty in obtaining access to or on leaving the city. Baron Martini, Military Commandant, had threatened to punish severely any person raising cries, singing, or whistling in the streets. Two persons had been condemned and hanged one for having taken up arms against the soldiers at the Josa gate, the other for having two muskets in his shop and having been seen with the insurgents in the Rue Bottonuto. A deputation of the Milanese waited upon Count Gyulai, who received them courteously, but gave them little hope that the Government would relax its system of severity. The Municipal Treasury had paid a forced contribution of 40,000 florins, and is, in addition, to pay one of 50,000 florins every Wednesday until further orders. Fresh troops arrived every day, and the gates of the town still remained closed. The Parisian *Charivari* has been prohibited throughout the whole extent of the Austrian Monarchy

The instigators of this foolish and wicked outbreak seem to have reckoned on the excitement which usually prevails in the great cities of Italy towards the close of the Carnival; and they knew that the Austrian garrison of Milan was momentarily reduced, in consequence of the movement of troops to the eastern frontier. The attack itself was begun by the cowardly assassination of detached sentries in various parts of the city; in one street a guardhouse was taken, and the officer commanding it murdered; and in another a banker was stabbed, and a fresh murder has since been committed in the Duomo, or Cathedral. The ruffians who committed these atrocities, and availed themselves of the disorder they had occasioned to stick up Mazzini's proclamation, are described as ragged wretches, for the most part unknown in Milan The inhabitants, and even the populace in that city, abstained from taking any part in these proceedings Yet fifty or sixty human beings were killed or wounded in this pitiful and wanton affray; and never did a case of the kind call down more signal condemnation on its reckless authors. Marshal Radetsky has, however, with singular want of tact, taken the opportunity to declare that "the inhabitants of the Lombardo-Venetian territory have allowed themselves, *with a few inevitable exceptions*, to be intimidated by the infamous revolutionary party, instead of openly and loyally making common cause with the Imperial Government;" and accordingly, though the insurrection was at first attributed exclusively to a band of foreign emissaries, Milan is treated with as much rigour as in the events of March, 1848, had been repeated. Indeed, more; for on that occasion no capital executions took place; whereas thirteen persons have already been shot or hung

Among the persons arrested at Milan, there were a number of women and young people not more than fifteen years of age Some of them were helping to make a barricade, others were distributing wine and brandy to the revolters

The Austrian Government has ordered all the natives of Ticino, resident in Lombardy, to quit the kingdom of the workmen in twenty-four hours, landed proprietors and others within three days. About 5000 Ticinese would suffer by this measure. A telegraphic despatch from Ticino announces the arrival in the canton *en masse* of all those banished from Lombardy. The accounts from Milan of the 18th state that the Commandant had permitted the Ticinese to take their departure in the special trains running for some days from Milan and Lodi. Despatches were immediately sent to the 29th report the continuance of the blockade; salt was even prohibited.

On the 16th an omnibus full of Swiss students, expelled from Pavia, had arrived at Lugano. The frontier of Grisons is re-opened; the pass of St. Gothard remains closed.

A Mazzini movement was to have been attempted at Florence.

GERMANY.

A treaty of commerce has just been completed between Austria and Prussia. This treaty may be regarded as the most important event that has occurred in Germany since the establishment of the Confederation and Zollverein, Austria having furnished irrefutable proofs of her determination to adopt a system of progressive liberal commercial policy.

PORTUGAL

We have Lisbon news of the 18th. The Portuguese Cabinet was in a precarious state, not only in consequence of the Duke of Saldanha not having been able to re-visit the Queen, and settle the new batch of Peers, but also on account of the probable cessation of diplomatic intercourse with the Brazils, occasioned upon the latterguese Government's quarrel with the Brazilian Minister. Mr. Drummond.

THE WAR IN MONTENEGRO.

Hostilities have recommenced in Montenegro. On the 4th, the Turks, under Omar Pasha, set fire to three villages. There is every prospect of a most sanguinary struggle, the Turkish commander indulging in threats of extirpation and general massacre; while the Montenegrins are said to be resolved on the determination to shed the last drop of their blood in self defence

Advices from Constantinople of the 6th ult., state that the several grievances between Austria and Turkey have been at length summed up and presented to the Porte in a manner calculated to command her attention. Count Leiningen, on his arrival from Vienna, at once demanded an audience with the Sultan. He then presented a note from the Emperor of Austria, the contents of which are to the following effect :—

1. The Emperor complains that large armaments have been assembled near the Austrian frontier without due notice having been given to that Government, also that the exposed situation of Montenegro has occasioned the Austrian troops to be stationed there, and demands explanation of the object and extent of these armaments

2. Since it be his wish that Montenegro should not be exposed to the attacks of Turkish troops, enjoy high rank, to demands that these dangerous hordes be at once removed, and under no circumstances

3. That his domain be conterminous with Servia should be at once conceded

4. That the indemnities complained of by Austrian subjects should be taken into consideration without delay, with a view to its speedy adjustment of their claims

To this note is added a list of the several claims of Austrian subjects against the Porte

As soon as the Divan heard Count Leiningen's proposition, the French and English Ambassadors were sent for, and several conferences held with Fuad Effendi

It was reported in Vienna on the 21st, that the settlement of the differences between Austria and the Porte had been proposed and was referred to France. The appointment of a new French Minister at Constantinople was held to confirm the truth of this rumour.

AMERICA

We have advices from New York to the 9th inst

In the United States Senate, on the 7th, the Monroe-doctrine resolution of General Cass had again been the topic of discussion

Telegraphic accounts from New Orleans confirm the report that the State of Honduras had taken possession of the English settlement at Limas. They had appointed a commandant, and declared that the State of Honduras would, at all hazards and every sacrifice, continue to the territory

A Message was received in Congress, from the President, transmitting a report relative to the negociations with England on the reciprocity and fisheries questions. The terms of the treaty are, that, excepting Newfoundland, American and colonial fishermen are to enjoy the same privileges in the markets of both countries

We have important news from the Rio Grande. Matamoras pronounced in favour of the revolutionists on the 28th ult., when the citizens rose, and a battle ensued, which resulted in the complete

success of the insurgents. General Avelos resigned the command of the troops on the 1st inst., in favour of Colonel Bassave, who will retain the command until the arrival of Colonel Cruz from Camargo. The whole state of Tamaulipas has now declared in favour of the revolution.

We have dates from the city of Mexico to the 15th ult. The new President, Cavalos, had been invested by Congress with extraordinary powers, which were denied to Arista. Cavalos immediately released a large number of prisoners imprisoned by Arista for political offences.

UNITED STATES.

(From our own Correspondent.)

WASHINGTON, D.C., Feb. 7, 1853.

The Agricultural Society has had meetings lately in this city, for the advancement of knowledge among the farming population. The principal object of the society, at this moment, is the creation of an agricultural bureau, with a minister at the head of it, having a seat in the Cabinet. I conclude it will be carried at an early day. Professor Mapes made some statements of interest. He mentioned that, in some districts of the United States, 100 bushels of shelled corn to the acre were raised; but the average was only 30 bushels. In the state of New York, 30 bushels of wheat per acre used to be raised; it is now only 12½ bushels. In Ohio it was once 35 bushels per acre; and now it is sunk to 15 bushels. This shows an amazing decrease of fertility in this country. To recover the fertility of the land, knowledge must be spread among the farming class. I have no doubt that it will excite much surprise when I say that the ignorance of that class in this country is hardly surpassed anywhere in Europe—I speak of their own line of business—and that there are vast numbers to be found, not merely ignorant, but little removed from the savage. In the Southern States, within the limits of Georgia, South Carolina, &c., is a wild population, living partly by agriculture, partly by robbery inferior, morally, to the slaves, and holding them inferior in a bondage more terrible than anything Mrs. Stowe writes about. Among the Southern and Western people education is difficult to establish so as to effect the moral elevation of the population. Hence, all the atrocities of slavery when power is vested in such hands; and hence the wild nature of western habits in general. Not only do settlers exhaust land by successive crops, and then remove to other "locations" to renew the same ruinous system, but the unscrupulous cutting down of timber has proved great injury, by having the effect of exposing the land to be carried away by the rains. A son of Patrick Henry mentioned to me two years ago, that it was a common remark among the Virginia farmers how rapidly the rocks "had grown up through the soil." How could it be otherwise? I pointed out to him the beautiful Potomac flowing at our feet in a broad stream, not less than a mile in width, tinged strongly with the yellow soil of the surrounding country. "There lies the greater part of your rich lands (I replied), at the bottom of yonder stream, or carried by the current to the ocean." Occupying almost the whole breadth of the river, for several miles in extent, is a bank of mud, collected by an injudiciously-constructed bridge. Fifty years ago the river was some forty feet deep in most parts; now, navigation is difficult everywhere above Alexandria. The every-man-for-himself system has done this. Ignorance and selfishness will leave plenty to be remedied in the future. Only by combining and putting their knowledge together, and impressing it kindly upon their fellow-men, can the intelligent hope to introduce beneficial changes. Much is being done all over the country to disseminate information. The great engine of knowledge here is the press. Almost every man takes one or more papers, and their contents are less political than useful in general; while many are devoted exclusively to science, agriculture, domestic economy, literature, &c. But if the mind is not trained in youth—if the soil is not properly prepared for the seed, of what avail is the information disseminated? I mentioned, in a former letter, that Washington was a growing city. Hitherto its progress has been slight, compared with that of other American cities; but it has begun within a couple of years, to look up considerably. Two causes tended to check its prosperity: first, the uncertainty as to its continuing to be the capital city of the Union, and seat of Congress and Government; secondly, the impossibility of creating here any business sufficiently important and extensive to support it independently of Government aid. There is little wealth here; there are, consequently, very few really good houses fitted for the residence of the rich. While Congress is sitting, the hotels and boarding houses are filled from cellar to garret; the wealthier families putting up with mean accommodation sooner than be away from here during "the season." Washington, like London, has its "West-end"—the streets immediately about the White House being considered most attractive. They contain many of the handsomest houses in the city. An idea may be formed of the general features of the place by any acquainted with Versailles, in France. Standing on the terrace of the capitol, looking west, but on a level considerably greater than that occupied by the palace of the "grand monarque," you see two avenues 160 feet wide branching somewhat north-west and south-west—a middle avenue alone is wanting to complete the similitude. The north-west avenue is the one most built upon, and probably eight-tenths of the population lie north of it—so at Versailles. But, in the laying out of these avenues, the latter place has been improved upon for the capitol, with its limited though pretty grounds, is the central and most elevated point from whence the avenues branch. Looking from the east side of the capitol, the north-west avenue (Pennsylvania Avenue) becomes the south-east, and so on with others. A mile from the capitol (west), up Pennsylvania Avenue, stands the White House, again interrupting the view along the avenue, for it only terminates at Georgetown, the whole length being some five miles. All the ground between the two avenues (west) to the Potomac, is to be laid out as a park, and will form the finest public grounds in the United States. Washington is nobly laid out, and is worthy of the name (used as it is somewhat in ridicule) of the "city of magnificent distances."

L.

ROYAL NAVAL SCHOOL, NEW-CROSS.—Sir James Graham, the First Lord of the Admiralty, under whose patronage this school was projected in 1831, has handsomely expressed, through Admiral Bowles, the President, his intention to give annually for competition, amongst such of the students of this institution as are the sons of naval or marine officers, the marine cadetship, which was granted by his predecessors in office.

SOCIETY FOR YOUNG FEMALES.—Sir Brooke W. Bridges, Bart., in company with a number of gentlemen, visited the asylum belonging to the charity, at Tottenham, on the 16th. The number of inmates varied but little from 40 at the present time 50 inmates, that several had been sent to service, and that 500 had received the benefit of the institution. After the establishment had been inspected, and much satisfaction expressed, the company separated.

REFRESHMENT-ROOMS OF THE HOUSE OF COMMONS.—The first report from the Select Committee has been presented. The committee had recommended that the purveyor should be engaged; and that the accommodation had been complied with; that the plate, &c., supplied by the late purveyor should become the property of the House; that the refreshment-rooms on the principal floor be appropriated to the special use of the members of the two Houses of Parliament, and of the principal officers of the House; and that the refreshment-rooms on the ground floor be reserved for the convenience of strangers.

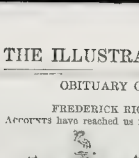
ADVANCE OF WAGES ON RAILWAYS.—In consequence of the increased value of all the necessaries of life, the directors of the Great Western and the Bristol and Exeter Railway Companies have raised the wages of the numerous servants employed upon their line from 1s. to 2s. per week, according to station and conduct. The enhanced scale has been paid by the former company, and the latter commenced yesterday.

EXTRAORDINARY ROBBERY.—One of the most singular and daring robberies ever committed occurred at Macclesfield, on Sunday last, in the house of Mr. John Dean, upholsterer, Park-green. Mr. Dean is treasurer to a loan society held there. During his absence on Sunday evening at church, five young men in masks contrived to get into the house, where they found an elder lady, Mrs. Dean, a Miss Jackson, and a Mr. Jackson—the latter two friends, who had previously called while passing. The robbers, who were armed with pistols and bludgeons, then took the house as their own, and the first act of demand they made was a threat to destroy them if they raised any alarm; and, three remaining in charge below, the other two went upstairs, where they remained about twenty minutes. The whole then retreated by the back door, and got clear off with the booty, which consisted of a bag containing £178 8s in silver, belonging to the loan society; also a £26 note, two others of £10 each and three £5 notes, all of the Bank of England; with between £20 and £30 in gold, as well as some old coins, including a "spade-ace" guinea, two old 5s. pieces, a shilling of Queen Anne, and also a patent silver watch. All these, except what was in the carpet-bag, were the money and property of Mr Dean, who is thus a loser of more than £80, besides the £128 8s. belonging to the loan society. From some inquiries made by the thieves about the papers and desire of the loan society, it is supposed they were interested in getting them to destroy them. Hitherto the parties have escaped detection, but the local police think they shall be enabled to trace them.

OBITUARY OF EMINENT PERSONS.

FREDERICK RICHARD, EARL OF BELFAST.

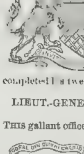
ACCOUNTS have reached us from Naples announcing the death, in that city, on the 17th inst., of the youthful Earl of Belfast. His Lordship, we regret with an accident some short time since, had ventured, despite of the opposition of his medical attendant, to the rehearsal of the play of "Marian Delorme," which was to be acted by private theatricals, at Mr. A. Craven's, and in which he was to take a part. He there caught cold, and died after a brief illness.



Lord Belfast was only son of the present Marquis of Donegall, by Harriett-Anne, his wife, daughter of Richard, first Earl of Glengall. He completed twenty-first year in November last.

LIEUT.-GENERAL SIR LOVE PARRY JONES PARRY, K.H., OF MADRYN, CO. CARNARVON.

THIS gallant officer died of apoplexy on the 23rd ult., aged seventy-one. He was the eldest son of Thomas Parry Jones, Esq., of Llwynon, county of Denbigh, by Margaret, his wife, daughter and co-heir of Love Parry, Esq., of Penmarth, who became possessed of Madryn, through his marriage with Sydney, daughter and co-heiress (with her sister Mary, wife of Edward Hughes, M.A., father of the 1st Lord Dinorben) of Robert Lewis, Esq., of Llysdulas, co. of Anglesey, Chancellor of Bangor. Sir Love Parry's paternal ancestors were a branch of the descendants of Tudor Trevor, Lord of Hereford, founder of the tribe of the Hanmers.



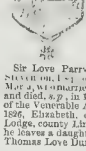
At an early age he entered the army, served in America, commanded at Quebec, and had a horse shot under him at Lundy's-lane.

From 1806 to 1807 he sat in Parliament for Horsham, and from 1835 to 1837 for the Carnarvon Boroughs. He was a magistrate and Deputy-Lieutenant for Carnarvonshire, and acted for many years as Chairman of the Quarter Sessions. In 1840 he served as High Sheriff for Anglesey.

Sir Love Parry married first, in 1806, Sophia, only daughter of Robert Nixon, Esq., of Binfield, Berks and had by her three daughters: Eliza Mary, who married I. Hanbury, Esq., of Hollybush, county Monmouth, and died, s.p., in 1838; Madeline Ellia Georgina; and Mary Gertrude, wife of the Venerable Archdeacon Crawley. Sir Love married secondly, in 1826, Elizabeth, only daughter of Thomas Caldecott, Esq., of Holton Lodge, county Lincoln, and niece of the late Lord Feversham; by whom he leaves a daughter, Sarah Elizabeth Margaret; and one surviving son, Thomas Love Duncombe Jones Parry Esq., now of Madryn.

SIR THOMAS BRANCKER, KNIGHT, OF LIVERPOOL.

THE death of this respected gentleman occurred on the 13th inst., at his residence, in Mount-pleasant, Liverpool. Sir Thomas was for many years connected with one of the leading mercantile firms in that town, and took a prominent part in local and municipal affairs. He served the office of Mayor of Liverpool, and acted as a magistrate for the county of Lancaster. The family from which he descended was settled at Marnhall, in Dorsetshire so far back as the time of Henry VIII. The first of its members who became established at Liverpool was Benjamin Brancker, second son of the Rev. Thomas Brancker, M.A., Head Master of the Royal School of Macclesfield, a learned divine of the seventeenth century. He was grandfather of Peter Whitfield Brancker, Esq., Mayor of Liverpool, who married Hannah, daughter of James Aspinall, Esq., and left several children, of whom the eldest was the gentleman whose death we record.



Sir Thomas was born September 17, 1783, and married, August 6, 1812, Eliza-Jane, second daughter of William Hill, Esq., of Denton's-green, Lancashire, by whom he had three sons and two daughters.

THE RIGHT REV. JOHN KAYE, D.D., BISHOP OF LINCOLN.

THIS learned and estimable Prelate died on the 19th inst. His Lordship was born in 1783, the son of Abraham Kaye, Esq. He received his early education under Dr. Burney, and afterwards entered at Christ's College, Cambridge. In 1804, he gained the university prize for the Latin declamation, obtaining the highest distinctions, both in classics and mathematics, that the University can bestow. In 1814, he was elected Master of Christ's College; in 1815, he was created D.D., by Royal mandate; and, in 1816, succeeded Dr. Watson as Regius Professor of Divinity. In 1820, he was consecrated, at the early age of thirty-seven, Bishop of Bristol; and, in 1827, translated to the See of Lincoln.

As a theological writer, Bishop Kaye holds a prominent place. Two of his treatises are well known: his "Remarks on Whiston, Clarke, Jackson, and Lardner," and his "Reply to the Travels of an Irish Gentleman." His celebrated Lectures on Ecclesiastical History, as illustrated by the writings of Tertullian and Justin Martyr; and his account of the "Writings and Opinions of Clement of Alexandria," are most valuable contributions to sacred literature. His Lordship's last volume, a portion of which is now in the press, is on "Athanasius and the Council of Nice."

In private life, Dr. Kaye was greatly beloved. His piety, his gentle nature, his unostentatious charity, his mild virtues, and meek and humble deportment, were qualities that could not fail to endear him to all who came within his influence. His Lordship married, in 1815, the daughter of John Mortlock, Esq., and has left issue.

THE RIGHT REV. WILLIAM GRANT BROUGHTON, D.D., BISHOP OF SYDNEY, AUSTRALIA

THE death of this esteemed divine occurred on the 21st inst., at 11, Chester-street, Grosvenor-square. Dr. Broughton, formerly of Pembroke College, Cambridge, where he graduated as sixth Wrangler in 1816, was consecrated Bishop of Australia in 1836. At that period the diocese included the whole of Australia, but in 1847 it was confined to the central portion of the colony, the diocesan receiving the title of Bishop of Sydney and Metropolitan Bishop in Australia.

Dr. Broughton married a daughter of the late Rev. John Francis, but was left a widower in 1846. At the time of his demise he had come to London to settle there the question of synodical action in the colonies.

GEORGE J. CRAWFORD, ESQ., LL.D.,

SECOND JUDGE OF THE SUPREME COURT OF SOUTH AUSTRALIA.

MR. JUDGE CRAWFORD died at Adelaide on the 24th September last. He had filled for more than two years, with honour and esteem, the important position of Second Judge of the Supreme Court of South Australia. The local journals refer with regret to the loss the colony has sustained in this estimable man and upright judge.

Mr. Justice Crawford was son of the late Rev. Dr. Crawford, of St. Anne's, county Longford, Vicar-General of Ardagh.

DR FARISH

JAMES FARISH, M.D., who died on Saturday, the 19th instant, in Lancaster-place, Strand, was the only surviving son of the late Rev. Dr. Farish, one of the most distinguished mathematicians of his day. Dr. Farish inherited the clear intellect of his father, and was remarkable for the soundness of his judgement and the accuracy of his knowledge. He was a large contributor of scientific articles in the "Penny Cyclopædia," and among the first promoters, as well as the honorary secretary, of the Institution for Baths and Washhouses for the Poor. He was well known as a physician than as a surgeon, though he never obtained a fashionable practice in either branch of the profession, for he dedicated his time and talents chiefly to the service of the poorer classes. His natural benevolence led him among them, where he found abundant occupation. Few medical men, however, have gained so much of the confidence and affection of their patients, whether rich or poor, as Mr. Farish. It is worthy of mention, as an example of his accuracy, that, a few years since, he detected some typographical errors in an Oxford edition of the Bible which led to its suppression or partial cancelment. He took his degree at Cambridge, and was acknowledged as a man of talent in the University, though he did not aspire to academical honours.

LADY CHARLOTTE ELIZABETH PENRHYN.

LADY CHARLOTTE PENRHYN died on the 15th inst., at East sheen. Her Ladyship was the eldest sister of the present Earl of Derby, was born 11th July, 1801; and married, 16th December, 1823, Edward Penrhyn, Esq.

ADVERTISING IN THE "ILLUSTRATED LONDON NEWS."—An advertisement every week for a quarter of a year, and out of every copy printed for one publication only, would be found to announce paper of the value of twelve shillings, at the wholesale price.

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

The Lord Chancellor entertained his colleagues in the Administration at a Cabinet dinner, on Wednesday, at his residence, in Upper Brook-street.

The Duke of Argyll has directed the Armoury at Inverary Castle to be thoroughly renovated. It contains 300 muskets, which have not been used since the rebellion of 1745.

The Right Hon. Henry W. Wynne has retired from the diplomatic service, after a period of 55 years since his first appointment.

Mr. Sadlier, it is reported, will resign his Treasury appointment for the Clerkship of the Crown, vacant by the death of Mr. Peirce Mahony.

Mexico supports but one apothecary's shop. The population is 60,000. It is a novel sight to see any person ill.

Mr. Lambert, Assistant Chief Engineer of the Portsmouth dockyard, has left her Majesty's service, and accepted an appointment as Superintending Engineer to the General Screw Steam Navigation Company at Southampton.

Sergeant Hunter, attached to Captain Benley's troop of the Royal Horse Artillery, has disappeared this week from the garrison, his defalcations amounting to £300.

On the morning of the 8th there were 308 cholera patients at St. Petersburg. In the course of the day 29 new cases were declared, with 12 cures and 16 deaths.

The office of Consul-General at Alexandria has been filled up by the promotion of John Green, Esq., who was her Majesty's Consul at the Piræus.

For distinguished sculptors, applied to by the committee of the Whittington Club, to execute a monument to Hood, after a design to be supplied by the committee, have declined the commission.

It is stated in the New York papers that an alarming sickness prevailed among the 72nd Highlanders, stationed at Fredericton, New Brunswick.

Her Majesty's steamer, *Inflexible*, has had from the Newcastle mines, the South Wales, no less than 2000 tons of coals, and her officers found they were admirably adapted for steam purposes.

Mr. T. Duncombe's bill to give the right of appeal in all cases on conviction of cruelty to animals has been printed. At present the magistrates are given to penalties exceeding £5, which is declared by the bill to be a "great injustice."

Earl Fitzwilliam has lodged a petition with the Commissioners of Encumbered Estates in Ireland for the sale of his property in Carlow and Wicklow, which produces upwards of £30,000 per annum.

Signor Farini has published the fourth volume of his "History of the Roman States." Mr. Gladstone has already translated the first two volumes.

It ought to be generally known, and especially at the present season, that any man may, on his hands and knees, safely traverse ice which would not nearly bear his weight when on his feet.

The Minister of Commerce of Prussia has issued an order permitting the import, free of duty, of scrap iron, for the construction of iron vessels, into all the Prussian Baltic ports.

The premises of Messrs. Onions, bellows-makers, Bradford-street, Birmingham, have been destroyed by fire. From the combustible character of the stock several hours elapsed before the fire was got under. The amount of property destroyed is estimated at several thousand pounds.

An optical phenomenon was observed last week, just over Montmartre. For about twenty minutes Paris, with its river, houses, and monuments, were seen reversed in the atmosphere, just as if a glass had been placed in the sky above.

The West Coast of Africa mail-packet will be detained until the next Tuesday, and the mails to be sent out by her will not be made up in the General Post-office until the evening of the 28th inst.

Mr. C. P. Roney, the Secretary of the Dublin Industrial Exhibition, has been appointed general superintendent of the St. Lawrence and Atlantic Railroad.

The emigration mania has taken deep root in Wiltshire. Mr. Sidney Herbert does all in his power to assist poor persons to emigrate to Australia. A large village in Wiltshire is almost depopulated, owing to the inhabitants having emigrated.

The Parisian *Charivari* has been prohibited throughout the whole extent of the Austrian Monarchy.

Dr. Gully, of Malvern, expresses a confident opinion of the success of the treatment which Mr. Roebuck is now undergoing for the re-establishment of his health.

The Education Committee of the Queen's Most Honourable Privy Council had a meeting on Monday at the Privy Council-office.

The Earl of Carlisle has been chosen Lord Rector of Marischal College, Aberdeen, by a very large majority.

The Academy of Moral and Political Sciences at Paris has elected Mr. Macaulay as corresponding member, in the room of Dr. Lingard.

The deliveries of tea in London last week were 126,000 lbs., larger than in the preceding week.

The Duke of Newcastle is said to have made an offer of his hand to the youthful Miss Hume, only daughter of W. F. Hume, Esq., of Greenwood, Wick-on, and niece of Captain Buck, Esq., a lady alike distinguished for her extreme youth, beauty, and wealth.

Henry Danby Seymour, Esq., M.P., has delivered a lecture to the members of the Salisbury Literary and Scientific Institution, on "the British Empire in India."

The 9th inst. was observed at Stockholm as a day of rejoicing for the recovery of the King. Banquets were given, and in the evening there was a general illumination.

Forts are to be erected at Carey's Sconce and Warden's Ledge, at the western extremity of the Isle of Wight. Batteries existed on these spots 300 years ago.

Some of the friends of M. de Lamartine have proposed to raise a national subscription, for relieving him from his pecuniary embarrassments; but the poet and historian has refused to accept anything in the shape of a gift.

An immense order for handcuffs and leg-irons is now in course of execution in Birmingham. A large quantity has already been shipped for Melbourne.

Three emigrant ships, the *Sir Fowell Buxton*, the *Eglinton*, and the *Australian Express* have been wrecked on their voyage to Australia; and, although there were nearly 1000 souls on board, the whole have escaped except two passengers and a boatswain, who were drowned.

John Williams, an American has been convicted at Edinburgh of murdering Andrew Mather, a toll-keeper in Berwickshire, and left for execution on the 14th March.

Within the last few weeks several suicides have occurred in Sheffield, chiefly of boys, which might be clearly traced to the morbid feeling which comes over the minds of those who have been witnesses or have heard descriptions of public executions.

Mr. Thomas Hamlet, the well-known builder of the Princess' Theatre, and an eminent jeweller and silversmith, died, at his house, Park-place, St. James's, on Monday, aged eighty-four.

The produce of wheat in Ireland in 1851 was 1,493,525 quarters; less, by 600,000 or 700,000 quarters, than the produce of the Canadas.

The New York Yacht Club have issued a challenge of 500 dols. against all nations, "provided one foreign vessel be entered for the race." The contest to take place on October 13, 1853.

Abd-el-Kader lives in the greatest retirement at Broussa, spending his time in reading and prayer. He has commenced writing a religious work, to be called "Meditations on the Koran."

The Hon. Spencer Ponsonby has been appointed private secretary to the Earl of Clarendon.

Government has resolved on inquiring into the circumstances attending the loss of the *Queen Victoria* steamer; and Captain Walker has visited Dublin to hold an investigation for that purpose.

One of the wives of the Sultan died on the 6th inst., at Constantinople. Her funeral took place on the following day, with the usual ceremonials.

A porter named Cooper, who was sentenced to ten years' transportation, for a burglary at Messrs. Whitaker's (in whose employ he had been for ten years), has been proved innocent, by the confession of a man convicted of another burglary.

On Saturday evening, two men were proceeding to work, and, while passing through Kilburn tunnel, heard an engine approaching. They lay down between the rails, thinking the engine would pass over them; but, unfortunately, before the engine struck them, and almost cut them to pieces. Both have died.

The late Earl Beauchamp, by a codicil to his will, has left to the present Countess all the plate, jewels, trinkets, china, glass, linen, ornamental articles, and objects of *vertu*, and also all such furniture in the house in Portman-square, purchased by himself, as the Countess may select.

The Great Central Gas Consumers Company have, with timely liberality placed large quantities of coke at the disposal of the police magistrates, for distribution by the poor during the inclement season. Fifty chaldrons are given to the Guildhall magistrates, twenty-five chaldrons each to the magistrates at other metropolitan police courts.

THE ROYAL MAIL SCREW STEAM-SHIP "CALCUTTA" IN A HURRICANE, OFF THE ISLAND OF MAURITIUS.

THE "CALCUTTA" STEAMER IN A HURRICANE.

We have been favoured by a Correspondent with the accompanying Sketch and details of the recent hurricane off the Island of Mauritius, through which the Royal mail screw steam-ship *Calcutta* passed in safety on the 20th of Dec. last. Our Correspondent writes from the *Calcutta*, off Madras; the Sketch is by a friend on board during the hurricane.

Our detention (writes our Correspondent) from the accident of the breaking of some of the machinery connected with the screw having expired, we left the Mauritius, not without some misgivings, on the 17th of December. For two or three days previous the barometers on the island had been most anxiously watched by the inhabitants; and the unsettled state of the weather induced the prophesy of a hurricane, backed by M. Bosquet, the almost infallible prophet of Cyclones. But, nothing daunted, the good ship sped to sea. The barometers for the next two days were attentively observed; and, on the night of the 19th, the captain having kept the ship directly out of our proper route, awakened our apprehensions; and it soon became evident that a hurricane was approaching. Every possible precaution was now taken, we were made snug for the night. Fortunate for us was it that our far-seeing captain had made Colonel Reid, his study, and Piddington, his *vade mecum*.

At about five A.M. on the 20th the weather changed most rapidly; the sea increased. At eight the barometers still continued to fall.

At noon the hurricane was at its height, and it was then wisely decided to steer the ship such a course as the crafty in Cyclones recommended. It has been my ill fate many a time to have doubled the Cape, and to have seen the finest ships under most trying circumstances; but I have never seen the *Calcutta* equalled. It would be well for those who started from Plymouth with us on their Australian voyage in the ill-fated *Melbourne*, had they had such a sea-boat; they would have now been picking up their "nuggets," instead of lying in Lisbon with their masts gone, and screw on deck. After running to the N.W. for four or five hours, before terrific gusts, and a heavy, turbulent sea, the weather rapidly improved, and by sunset we were finishing our claret and blowing the hurricane over again.

SHANGHAE FOWLS PRESENTED TO HER MAJESTY.

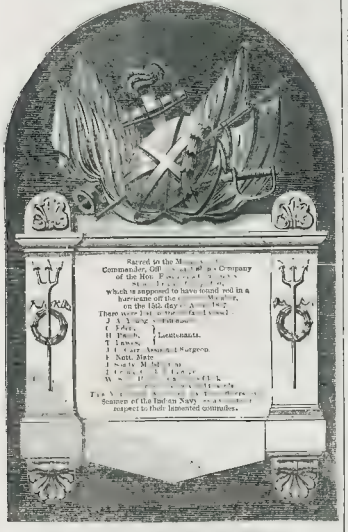
In the Illustrated London News for January 22 we described a cage of very choice domestic fowls, bred from stock imported by Mr. Burnham, of Boston, Mass., direct from China, and presented to her Majesty. We now Engrave, by permission, those beautiful birds. They very closely resemble the breed of Cochin-Chinas already introduced into this country, the head and neck being the same; the legs are yellow and feathered; the carriage very similar, but the tail being more upright than in the generality of Cochins. The colour is creamy white, slightly splashed with light red, with the exception of the tail, which is black; and the hackles, which are pencilled with black. The egg is the same colour and form as that of the Cochins hitherto naturalised in this country. These fowls are good layers, and have been supplying the Royal table since their reception at the Poultry-house, at Windsor.

SHANGHAE FOWLS PRESENTED TO HER MAJESTY.

MONUMENT TO THE COMMANDER, OFFICERS, AND CREW OF "THE CLEOPATRA."

This elegant memorial has been executed in white marble, by Mr. Bovey, of Plymouth, and has just been forwarded to Bombay, for erection in the Cathedral of that city.

Its design is simple and appropriate, and bears a gratifying testimony of that good feeling amongst the living, and of respect for the memory of departed comrades, which has long been a leading characteristic of every grade of the Indian navy.



MONUMENT TO BE ERECTED IN BOMBAY CATHEDRAL, TO THE MEMORY OF THE COMMANDER, OFFICERS, AND CREW OF THE STEAM-FRIGATE "CLEOPATRA."

FOUNDATION OF THE HOSPITAL DE LA PRINCESA, AT MADRID.

The magnificent ceremony of laying the foundation-stone of the Hospital de la Princesa was performed at Madrid, in great state, by her Majesty, Isabella II., on the 16th ult.

The outside of the Portillo del Fuencarral was the site chosen for the construction of this benevolent work, which reflects so highly on the philanthropy of her Majesty, who first originated the idea.

A little after four o'clock, the movement perceptible in the great crowds congregated near the spot announced the arrival of her Majesty, accompanied by her august Consort and her Royal Highness the Princess of Asturia, daughter of her Majesty. The cortège was also followed by the whole of the Royal Family, by the household, and the civil and military authorities.

On the band striking up the Royal March, General Roncali, Duke of Alcoy, Prime Minister of Spain, handed the Queen the trowel; and, the ceremony having been performed, a speech appropriate to the occasion was delivered by the General, amidst the acclamations of the crowd, and shouts of "Viva la Reina!" after which the concourse separated.

GENERAL RAPHAEL CARRERA,

PRESIDENT OF THE REPUBLIC OF GUATEMALA, IN CENTRAL AMERICA.

This chief, who has exercised during thirteen years an important influence in the destinies of his country, and whose political career has been altogether most remarkable, was born at Guatemala in 1814. He sprang from a respectable parentage; and, attached to military life, he served as a simple soldier in the war which Guatemala unsuccessfully maintained in 1838, in self-defence, against the other Central American States.

On the subjection of Guatemala, the youth Carrera retired to Matequescuintla, and occupied himself in agricultural pursuits. He there married a young woman of the place, of a singularly energetic and decided character; who afterwards accompanied her husband when the revolution called him forth to become the chief of a vast movement. The towns, exasperated at the disorder and misgovernment of the democratic party, which, during five years, had ruled the country, simultaneously rose, and resisted the authority of the ruling powers, sheltering themselves in the almost inaccessible mountains which constitute a principal feature of the Guatemala territory.

General Carrera at this time scarcely counted 24 years of age, and being almost involuntarily drawn forward by the revolution, he became, notwithstanding his youth, absolute chief of masses of undisciplined, but unconquered peasants. His name alone inspired the greatest terror throughout the country, from a belief that he was the enemy of order and civilisation.

His armed followers scoured the country; and although on several occasions they seemed to have been annihilated by the Government forces, Carrera soon reappeared with increased numbers at some distant point; tiring out, by his activity, the Government troops sent in pursuit of him, and defeating their combinations by the rapidity of his movements. The slight advantages which he gained from time to time over the Government troops, supplied him with arms, so that he soon found himself at the head of thousands of men armed with various sorts of weapons.

Meanwhile, the ruling party in Guatemala having separated into two parties, one considered it expedient to attract the support of the mountaineer insurgents; and in this way the Chieftain Carrera was called, in February, 1838, to occupy Guatemala at the head of six thousand armed Indians, to the terror of the city. Nevertheless, Carrera, by his extraordinary power over his followers prevented the excesses they were so prone to commit, and within a few days after his occupation of the capital, he compelled them to retire to their homes. Carrera then withdrew to Matequescuintla with the rank of Commander of the district forces, and subjected himself to the orders of the Government.

The dissensions between public men in Guatemala and those in the other states of Central America, now became so violent that in effect all legitimate authority disappeared. Then it was that Carrera, aroused by his own instinct in favour of order, and seeing the necessity of a strong organizing power, which he felt that he was destined to supply, occupied the capital on the 14th of April, 1839, since which date he has exercised absolute authority in the country. He at once organised a Government composed of men attached to the Conservative cause. For some years he ruled with the mere denomination of General-in-Chief of the Army. His energies were soon required for the defence of the territory of Guatemala against the invasion of the troops of the neighbouring states, under the orders of Morasan, chief of the ultra-democratic faction of Central America, and formerly President of the Federal Government of the Republic. In this encounter, Morasan was utterly routed, and was ultimately compelled to emigrate.

GENERAL RAPHAEL CARRERA, PRESIDENT OF THE REPUBLIC OF GUATEMALA.

General Carrera has had repeated successes in the defensive wars he has sustained, and generally with forces much inferior to the assailing parties. In 1848, after his election to the Presidency of Guatemala, he gained an important victory at Patgum, over a large body of insurrectionary troops: and, in February, 1851, with only 1500 men, he defeated entirely the combined forces of the States of Honduras and Salvador, amounting to nearly 6000 men, under some of the most celebrated chiefs of the country. This action, in which the intrepidity, coolness, intelligence, and personal courage of General Carrera were signally conspicuous, was, indisputably, the most remarkable event of this section of America; and the result has been to cement the independence of the Republic of Guatemala, and to check the advances of the neighbouring states.

General Carrera takes a perspicacious and correct view of administrative subjects, and he is wholly without prejudice and dislike towards any class of society; and he has ever shown himself superior to petty

PROCESSION OF THE QUEEN OF SPAIN TO THE LAYING OF THE FOUNDATION-STONE OF THE HOSPITAL DE LA PRINCESA, AT MADRID.

passions and the intrigues of party; and under his rule the industry of the country has received a great impulse.

Carveri is naturally cautious and calm. Although, for the establishment of his power in a country reduced to anarchy, he has occasionally been compelled to exhibit great energy and even severity, still he has frequently pardoned his enemies, and he has never occasioned unnecessary annoyance to any one. General Carreri is of middling height and of vigorous conformation; his colour is dark, and his features possess considerable intelligence and expression; his manners are courteous, and, on public occasions, highly dignified; he speaks with facility; and he has the enviable faculty of conversing with enemies into warm adherents; he rarely communicates to any one his plans before the moment of executing them; his courage and coolness are indisputable, for, on numerous occasions, he has exposed his life, and he has never eluded danger when it has been necessary to brave it. The troops place the utmost confidence in him, and the country people love and revere him; he favours foreigners, and has always sought to preserve the best understanding with England and other European nations. Such is the portrait, drawn by one who is well known to most of our readers, and who is one of the most remarkable amongst the rulers of the South American Republics.

CALENDAR FOR THE WEEK

SUNDAY, February 27.—Third Sunday in Lent.
MONDAY, 28. Montaigne born, 1533.
TUESDAY, March 1.—St. David's day.
WEDNESDAY, 2.—St. Chad. John Wesley died, 1791.
THURSDAY, 3. Boileau died, 1711. Otway born, 1651.
FRIDAY, 4. Saladin died, 1193.
SATURDAY, 5.—Battle of Barossa, 1811. Dr Parr died, 1825.

TO CORRESPONDENTS.

W. SYMONS.—There is some ingenuity in the arrangements of the proposed voltaic battery and the use of gutta percha, but we do not see any advantage either as it regards economy, or facility for use, over many batteries at present employed.

C. H. B., A LONG SUBSCRIBER, is informed that a photograph may be fixed the next day, or several days after it has been taken, but the sooner this is done the better, as the picture suffers from slow chemical action even in the dark. The second question can only be answered by experiment.

THE CENSUS OF 1851.—In answer to A. B. of Salop, and numerous other correspondents, we beg to state that a full and accurate abstract of the Census of 1851 is in preparation, and will be published with the ILLUSTRATED LONDON NEWS

AN OLD SUBSCRIBER. The oft-quoted line—

Men are but children of a larger growth,

is from Dryden's play of "All for Love."

ROYAL PRINCESS' THEATRE.—MONDAY, Wednesday, and Saturday MARIOTTE. Tuesday, Saturday 27, CUPID, or, Dorothy's Portrait; and SATURDAY EVENING NEXT, Tuesday, the CORSICAN BROTHERS, the SPITALFIELDS WEAVERS, and the PANORAMA over the Stage.

THEATRE ROYAL LYCEUM.—On MONDAY, FEBRUARY 28, will be performed A PHENOMENON IN A SMOCK FROCK. After which a new and original Fairy Extravaganza, entitled THE GOOD WOMAN IN THE WOOD. To conclude with LITTLE TODDLEKINS. Sole agent for Private Boxes, Mr. W ALLCROFT, of 15, New Bond-street

BARTLETT will, however, lecture on Monday Morning next, at Eleven o'clock, and Evening, at Eight o'clock. Admission, 1s., 2s., and 3s. 6d.—ST. GEORGE'S GALLERY, Hyde-park-corner.

ZOOLOGICAL GARDENS, REGENT'S-PARK, are OPEN to Visitors daily. The only living specimen of CHOIROPOTAMUS in Europe. Admission, 1s.; Mondays 6d.

AUSTRALIA.—GRINDLAY and CO. negotiate Passages by the Steamers and Sailing Vessels.
Steamer HELLESPONT for Port Phillip and Sydney, leaves London Feb. 28
Steamer ANTELOPE, for Adelaide, Port Phillip, and Sydney, leaves Liverpool March 2
Sailing-Vessels from London, Liverpool, and Southampton twice a Month, to the Australian ports
Dietary scales, plans of Cabins, and all other information can be obtained, free of all expense on application to Messrs. GRINDLAY and Co., 63, Cornhill, 121, Bishopsgate-street; or 8, St. Martin's place, Charing-cross

THE WELLINGTON VOLUME of the ILLUSTRATED LONDON NEWS is now ready. Price One Guinea. From July 3rd to December 25th, 1852. Containing all the SPLENDID ILLUSTRATIONS of the CAREER and FUNERAL of the late DUKE of WELLINGTON, &c.
COVERS for BINDING the VOLUMES, 2s. 6d. each.
Office, 198, Strand

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS PUBLISHED A SUPPLEMENT, GRATIS, CONTAINING A LARGE ENGRAVING OF THE FUNERAL PROCESSION OF THE DUKE OF WELLINGTON

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, FEBRUARY 26, 1853.

ALTHOUGH the new Reform Bill, which, after the greater question of the education of the people, Lord John Russell declares to be the nearest to his heart, has been postponed, by unanimous consent, until the session of 1854, the House of Commons has an opportunity of making a commencement of reform in the session of 1853. An unprecedented number of Parliamentary committees has been sitting during the week to investigate charges of bribery and corruption. Never, within memory, was there such a plethora of these cases. The elections of 1852 in the small boroughs of England appear to have been conducted almost openly, upon the principle of giving the representation to the man trembled with the smallest amount of conscience, and blessed with the largest amount of gold. Honourable candidates, and "they are all honourable men," scattered their bank-notes and sovereigns with a profusion without example in the annals of electioneering, and purchased at a dear rate the short-lived honour of sitting in the House of Commons. But of course all this was done by agents—not employed by them, but acting in their interest—volunteers in the cause, inspired by pure love, and not by lucre—and performing whatever had to be performed, not only without the authority, but without the cognizance of the aspirants for seats in the Legislature. But the scandal was too scandalous; the bribery was overdone; the corruption was too notorious. Committees of the House have already declared several of the seats gained by these means to be vacant, and in the course of the ensuing week will, doubtless, mete out the same measure of punishment to other members, elected under similar circumstances. But if the House be really in earnest in its desire to eradicate the unwholesome and disgraceful system, it must do more than this. To declare an election null and void for any of these paltry and peccant boroughs, and to allow new writs to be issued for them, is but to place new bribes in the pockets of the venal electors. Nothing is more to the taste of the purchasable voter than frequent elections; and to punish the briber by the loss of his seat, without punishing the bribee by the loss of the franchise, is doing much less than justice, and allowing the most guilty to escape. It is even worse than that, for it gives venality a new chance, and perhaps a brisker market. The briber who loses his seat and his money is not very likely to offend again immediately; but the bribee, who loses nothing but the services of the briber, is as ready to sin a second time as the first. Indeed, the more frequent opportunities he has for selling his country, the better he is pleased. So many fruitless efforts have been made to root out the scandal that it has become a general conviction throughout the country that the House does not in reality desire the prevention or the punishment of bribery at elections. One would think that it would be as easy to prove bribery as to prove robbery, or fraud of any other kind; and as easy to punish it, when clearly brought home to the perpetrators, as it now is to punish the thief and the receiver of stolen goods. But hitherto the House of Commons has not manifested the zeal of innocence. Members have been unseated, only to make room for members returned for the same places by the same means—with the only difference, that more careful and wary agents, made cunning by past experience, have managed the bribery without being found out. But the real remedy is by no means difficult, if the House do but wish to go the length of making the offer or the receipt of a bribe a felony, it can meet the justice of each individual case, and at the same time operate a beneficial and safe reform in Parliament by disfranchising every notorious borough, and transferring its privilege to one of the many new and populous towns and districts that are daily rising into importance in every part of Great Britain. While Hammersmith, and Kensington, and other outlying towns of the metropolis—besides such great and thriving places as Birkenhead and the Gorbals of Glasgow—are unrepresented, the House of Commons may deal with the bribery question in a manner to do substantial justice. But, if it be held unjust to punish the innocent voters of a corrupt borough—and there are high-minded and pure voters, who would scorn to take a bribe, even in such places as St. Albans and Sudbury, and the equally peccant places whose malpractices have been exposed during the present week—the only course left to Parliament, if it really desire to punish bribery, and to free the House of members returned by it, is to decree that the offer or the receipt of a bribe shall constitute a felony. But if something be not done in the meantime, perhaps Lord John Russell's measure of 1854 will provide a remedy for this crying evil.

THE long-desired treaty of international copyright between Great Britain and the United States of America is on the point of being exchanged and ratified. It appears that its provisions were drawn up, a few months ago, by the late Daniel Webster, and Mr. Crampton, the British Minister—that it was sent to London for the approval of the British Government—returned to Washington, with few or no amendments, for the final sanction of the Government of the United States—and that it now only awaits the ratification of the American Senate. The treaty has been founded on that for the same purpose which exists between Great Britain and France. Under its authority, the authors of "books, of dramatic works, of musical compositions, of drawings, of paintings, of sculptures, of engravings, of lithographs, and of any other works whatsoever of literature and the fine arts," published and copyrighted in the United States, will enjoy all the rights and privileges which an English copyright would insure to them in Great Britain; and in like manner, a British copyright will possess the same legal authority in the United States by an entry in the clerk's office of the district court, pursuant to act of Congress. The only conditions imposed on American authors are the registration of their copyright in Stationers' Hall, and a strict compliance with the laws of Great Britain in respect to the deposit of a copy of their work in the British Museum; while their English brethren must register at Washington, and deposit copies of their works in the institutions appointed by law to receive them.

There can, we think, be no doubt that the operation of this treaty will prove beneficial to English literature on both sides of the Atlantic, and tha it will more especially conduce to the interests of the living authors of England and America. The system of reciprocal piracy was destructive alike to authors, to booksellers, and to the public taste. It had recently arrived at such a pitch, that every popular or available work of living English writers had been printed and reprinted at a rate so cheap in America, as to deprive the American author of a market for his new works, and *vice versâ* in England: publishers on both sides of the water were vying with each other in the reproduction of old and worthless books, having no other merit in their own eyes, or in those of the public who purchased the commodity, than that of excessive cheapness. A book was a book, although "there was nothing in it," and was bought for its bulk and appearance, rather than for its literary excellence; and all the best writers of both nations, having little or nothing to gain by authorship in its old and legitimate sense, were devoting their time and ability to newspapers. The new treaty will remedy this evil, and many others of more consequence. It will at the same time elevate the literary *status*, by doing justice to literary men.

It now behoves the authors of England to remonstrate with and petition the Legislature to untax their labour, by untaxing the vehiculum by which alone their labour can be brought before the public. In America the author can make his new book known through the newspapers, without being mulcted of a heavy advertisement duty; and he can print his thoughts upon a material that is free from the visits and the demands of the excisemen. Unless the English author is allowed to do likewise, he will, if he know his own interest, cease to publish in his native country. By publishing originally in the United States, he will evade the mischievous Paper-duty, secure a larger class of readers, and deprive the paper-makers, compositors, pressmen, bookbinders, and other artificers of his own country, of their remunerative employment which he has been in the habit of affording them. Whether this result would be satisfactory to the Chancellor of the Exchequer and to hundreds of thousands of other Englishmen, is a question that the Government should take upon itself to consider with the least possible delay.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS,

TAKEN DURING THE WEEK ENDING THURSDAY, FEBRUARY 24

Month and Day.	Corrected Reading of Barometer at 9 A.M.	Thermometer. Highest Reading.	Thermometer. Lowest Reading.	Mean Temperature of the Day.	Departure from Average.	Degree of Humidity.	Direction of Wind.	Melted Snow and Rain in Inches.

Note.—The sign — denotes below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100

The mean reading of the barometer for the week was 29.444 inches. The highest reading took place about 6h P.M. on the 18th, and was 30.081 inches. During the week, the same severe weather has prevailed, as in the several preceding weeks, and the temperatures have been low, ranging from 21.7° on the 19th, to 44° on the 22nd; the average difference of temperature daily was 12.8°, being nearly 2° above the average of the seven preceding weeks: the mean temperature of the week was 41.9°, which is 7.7° below the average of thirty eight years, and 8.1° below the average of the seven preceding weeks; the mean daily temperature has been below the average on every day during the week except on the 7th, averaging 5.3° too little daily. Snow fell on the 18th, 20th, 22nd, and 23rd, which, together with the rain on the 22nd and 23rd, produced 0.10 in of water

Lewisham, February 25th, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending last Saturday, the deaths of 1231 children were registered in London; of these 850 were boys, and 731 were girls. This number exceeded the average of the corresponding eight years by 117. By reference to our weekly table it will be seen that on January 20, that the weekly temperature has been 42.8°, 38.7°, 36.8°, 37.0°, 31.1°, and 41.9°; and the mortality has been, according to the following numbers, 1001, 894, 1021, 1020, 1235, and 1328 respectively: thus showing the increased coldness of the weather to have been accompanied by a great increase of mortality. By the Registrar-General's report it appears that while persons of all ages have suffered from the severity of the weather, it has been most fatal to individuals at an advanced period of life: well-heated apartments, warm clothing, and comfortable lodging at night, at all times necessary in this climate, are indispensable at this season to the aged, who find it difficult to support life when the temperature has fallen below a certain point. Of the deaths, 391 are due to diseases of the lungs and of the respiratory organs—which is 100 more than 228; to old age, 93 are referred the average is 67; to hooping cough, 66—the average is 46; to consumption, 167 its average is 138, to violence, intemperance, cold, want of provision, 40 deaths are referred this week. On the 16th February an army pensioner died at the age of 102 years; and at 24, Duke-street, Aldgate, the widow of a fruiterer, at the great age of 104 years.

FIRE IN ST. PAUL'S CHURCHYARD.—At a quarter past two o'clock on Thursday morning, a destructive fire broke out at Messrs. Pawson and Co's, wholesale linendrapers, of St. Paul's Churchyard. We understand it broke out in one of the upper rooms, and in the course of a short time the whole of the upper part of the premises was in flames; but by the timely arrival of Mr. Braidwood, and the engines from the neighbouring stations, the fire was soon got under. The immense stock has been much injured: nearly £10,000 in ribbons alone, and, altogether, property to the value of 50,000 has been destroyed. The whole, fortunately, was insured

COURT OF COMMON COUNCIL.—A Court was held on Monday for the despatch of business, the principal matter being the report of the Improvement Committee on the Railway Terminus Company's bill, the discussion on which had been adjourned. Mr. Ubbard, the Deputy of Farringdon Without, ward, presented a petition, formally urging the Court to negative the report of the committee, and to support the bill, as calculated to be infinitely serviceable to the trade citizens of London, because of the extensive district which the terminus was intended to occupy. Considerable discussion took place, which ultimately was adjourned to Thursday, when the Lord Mayor presided. A long discussion took place, which ended by Mr. Benthall's announcement, "that the report be referred back to the committee, with instructions to confer with the Lords' committee upon the whole of the projected improvements in Holborn," being carried by 89 to 69. The Court then adjourned.

THE BALLOT.—MEETING IN THE CITY.—A preliminary meeting was held on Tuesday, at the London Tavern, the object being the organization of a society for the purpose of diffusing information on the subject of the ballot, and for the purpose of opposing public opinion in favour of that mode of voting. Several members of Parliament and other influential Reformers were present. The chair was taken by Mr. H. Berkeley, M.P. for Bristol, who explained the object of the meeting to be the formation of a society to carry out the great measure of vote by ballot. One of the resolutions appointed an executive committee; and another proposed that subscriptions should be raised.

THE ROYAL ASTRONOMICAL SOCIETY.—The Royal Astronomical Society have presented the gold medal annually awarded by that society to some distinguished astronomer to Mr. J. Russell Hind (of Mr. Bishop's observatory, Regent's-park), as a testimonial of their high appreciation of his merits as an astronomical observer and discoverer; and the National Institute of France have presented, for the third time to Mr. Hind, Laland's prize of about £300, with a medal for his discovery of the unprecedented number of four new planets during the past year

THE LONDON DISTRICT POSTMEN.—On Monday, eleven of the members of Parliament, with Sir Joseph Paxton, the representative for Westminster, waited upon the newly appointed Postmaster General, Viscount Canning, with reference to a petition from the London District Post letter carriers, for an increased salary. The deputation was favourably received by the right hon. nobleman

SEAMEN'S HOSPITAL SOCIETY. The anniversary of this society was celebrated on Wednesday evening at the London Tavern; Sir James Graham in the chair. The report of the committee states that the number of patients who were admitted on board the *Dreadnought* during the last year was 2,276. The amount of subscriptions received at the close of the year, 1852, was announced to be £711

SOCIETY OF ANTIQUARIES.—At the meeting of this society on Thursday, a paper was read by F. C. Lukis, Esq., M.D., on the monoliths of the Channel Islands, amply illustrated by drawings. As Dr. Lukis and his father have been engaged for many years in the examination of the megalithic remains of these islands, and also those at Carnac, much interest was felt on the subject.

PORTRAIT OF THE EMPRESS OF THE FRENCH.

THE *Times*, which, for some reason to us unknown, seems to feel itself called upon to correct, not its own errors, but the fancied errors of other journals, contained the following anonymous letter in its impression of Monday last:—

To the Editor of the "Times."

SIR, The ILLUSTRATED LONDON NEWS of this day publishes an engraving purporting to be a copy of a portrait of the Countess of Teba. I beg to observe for the sake of correctness, that the dress she is represented in is a mere fancy one, which may, perhaps, be worn in Sierra Morena, by the wife of a smuggler, but such a dress, I can assure you, has never been used either by the illustrious Countess or any Spanish lady, nor by any woman whatever, on the Prado of Madrid, where the police—who carefully attend that no mixed society enter that fashionable promenade—will not allow any person nor any horse in such attire, which is that used by our lower classes of society. Ladies in Spain wear always riding habits on the Prado. I apologise for my intrusion, and am, &c.

Your most obedient servant,

London, Feb. 19. A COUNTRYMAN OF THE EMPRESS.

As the accuracy of our Portrait, and of the costume worn by the Empress seems to be impugned, we have to affirm, in contradiction to the *Times'* correspondent, that both portrait and costume are strictly correct; and that they were copied by permission from a painting by M. Odier, executed for the Empress herself. We subjoin an extract of a letter from the artist in Paris, who copied the original drawing for the ILLUSTRATED LONDON NEWS, from which it will be seen that the *Times* correspondent has undertaken to write upon a matter of which he is either ignorant, or wholly misinformed:—

Je m'empresse de vous écrire un mot pour vous demander si vous voulez que je vous envoye un bois, représentant le portrait equestre de notre Souveraine Impératrice. Elle avait l'habitude en Espagne, où je l'ai beaucoup connue, de monter à cheval avec ses amis de famille, vetue en Maja, qui signifie la famille du Majo, c'est à dire artisan élegant d'Andalousie. M. Odier, notre peintre d'histoire, a fait d'elle un portrait grand comme nature, et à cheval, dans ce costume. Je viens vous proposer de vous dessiner un bois dans ce genre, et tache m'de la faire le plus ressemblant possible; car j'ai fait son portrait plusieurs fois à Madrid, et d'après nature

It is possible that the Empress may not have been seen on the Prado at Madrid, in the costume designed; but, whether or not, we vouch, on the authority of our Correspondent, that she has been publicly seen in that costume; and that the portrait, of which that in our last week's Number is a reduced copy, was painted by command.

(*To the Editor of the* ILLUSTRATED LONDON NEWS.)

I have read in the *Times* of the 21st a letter, in which "a countryman of the Empress" says, in relation to the portrait of the Countess of Téba published in your last Number, that the dress in which she appears, "*he can assure us, has never been used either by the illustrious Countess, or any Spanish lady.*" To this, I beg to state, that in March, 1850, I myself saw the "Condessita de Tebas," in Seville, in the genuine dress of "Maja contrabandista," in which she is represented in your Illustration.

Feb. 24. 1853. UN SEVILLANO.

(*Our Correspondent has inclosed his name and address*)

THE COURT.

The main incidents of the week have been the Court held by her Majesty on Monday, at which Lord John Russell resigned the seals of office as Principal Secretary of State for Foreign Affairs; and the investiture of the Knights of the Bath, held at Buckingham Palace on Tuesday.

On Saturday, the Queen and Prince Albert honoured the Baron Marochetti with a visit, at his studio in Onslow-square, in the afternoon, and spent some time in examining and admiring the works of this gifted artist in their several stages of progress. Her Majesty's dinner party in the evening comprised the Duke of Cambridge, the Duchess of Sutherland, the French Ambassador and the Countess Walewska, the Duke of Norfolk, the American Minister, Lord and Lady John Russell, Viscount and Viscountess Combermere, Lord Colville, the Hon. F. and Lady Anne Charteris, Sir George and Lady Grey, and Major the Hon. J. Macdonald.

On Sunday, the Queen and Prince Albert, the Prince of Wales, the Princess Royal, and the Princess Alice, attended Divine service in the Private Chapel of Buckingham Palace. The Hon. and Rev. Gerard Wellesley officiated.

On Monday, the Queen held a Court and Privy Council. The Earl of Aberdeen had an audience previous to the Council, and Lord John Russell resigned the seals of office as Foreign Secretary. At the Privy Council the Earl of Clarendon was sworn as Foreign Secretary, and Viscount Combermere took the oaths as Constable of the Tower of London. In the evening, her Majesty and Prince Albert, with their suite, honoured the Lyceum Theatre with their presence.

On Tuesday the Queen held an Investiture of the Order of the Bath, at which her Majesty, assisted by his Royal Highness Prince Albert, the Grand Master of the Order was graciously pleased to invest Lord Cowley, her Majesty's Minister Plenipotentiary and Ambassador to the Emperor of the French, with the ribbon and badge of a Knight Grand Cross (civil division) of the order: William Gore Ouseley, Esq., with the insignia of a Knight Commander of the Bath (civil division): Lieut.-General Charles Macleod, K.L.C., with the insignia of a Knight Commander (military division); and Retford Hinton Wilson, Esq., with the insignia of a Knight Commander (civil division): the three last gentlemen severally receiving the honour of knighthood from her Majesty previous to the Investiture. In the afternoon, the Queen and Prince Albert visited the Duchess of Kent, at Clarence House. The Royal dinner party included the Princess Adelaide of Hohenlohe, the Duke of Newcastle, the Belgian Minister and Madame Van de Weyer, Lady Fanny Howard, Viscount Drumlanrig, the Hon. Mrs. A. Gordon, Lord and Lady Wodehouse, and Lord Cowley, G.C.B.

On Wednesday Prince Albert rode out in the morning, on Norfolk, attended by Lieut.-Colonel the Hon. A. Gordon, and subsequently presided at a meeting of the Royal Commission for the Exhibition of 1851, held at the New Palace of Westminster. Her Majesty's dinner party in the evening consisted of the Duchess of Kent, the Duchess of Cambridge, and the Princess Mary, the Princess Adelaide of Hohenlohe, the Duke and Duchess of Argyll, Count Aleksandrowge, the Marquis of Anglesey, Lady Fanny Howard, the Baroness de Speth, Viscount and Viscountess Mandeville, the Earl of Mulgrave, Lord C. Lennox, the Bishop of London and Mrs. Blomfield, the Right Hon. E. and Mrs. Cardwell, the Rev. Mr. Bland, and Major Baron Knesebeck.

On Thursday evening, her Majesty and his Royal Highness Prince Albert, &c., honoured the Haymarket theatre with their presence. On the same day, the Right Hon. Charles Villiers, Judge-Advocate-General, had an audience with the Queen, and submitted to her Majesty the proceedings of the Courts martial.

HER Royal Highness the Duchess of Kent, accompanied by her Serene Highness the Princess Adelaide of Hohenlohe, and attended by Lady Fanny Howard, arrived at her residence, Clarence House, St. James's, on Saturday afternoon, from Frogmore.

THEIR Royal Highnesses the Duchess of Cambridge and the Princess Mary are on the eve of leaving their cottage, at Kew, on a visit to the Duke and Duchess of Beaufort, at Badminton.

THE Countess Waleswska was "at home" on Tuesday and Thursday evenings to select circles of the *corps diplomatique* and aristocracy, at the residence of the French Embassy, in Grosvenor-square.

THE Countess Colloredo's assembly on Wednesday evening, at Chandos-house, was the most numerously attended *reunion* that has taken place this season.

VISCOUNT STRATFORD DE REDCLIFFE has been giving a series of dinner parties, at his mansion in Grosvenor-square, preparatory to his departure to resume his diplomatic duties at the Ottoman Porte.

VISCOUNT and VISCOUNTESS MANDEVILLE have arrived in town, from Hanover.

THE Lady Louisa Spencer gave birth to a daughter, on Monday last.

A MATRIMONIAL alliance will shortly take place between Abel Smith, Esq., jun., of Woodhall-park, Herts, and Lady Susan Pelham, second daughter of the Earl of Chichester.

THE marriage of Captain Frederick Francis Maude, son of the Hon. and Rev. John Charles Maude, and nephew of Viscount Hawarden, with Miss Bishopp, sister of Sir George Cuncon Bishopp, Bart., and niece of the Baroness de la Touche, took place on Tuesday, at the parish church of Kensington, in the presence of a numerous circle of the friends of both families.

NELSON'S MONUMENT AT YARMOUTH.—The disgraceful state of dilapidation into which this noble column has been allowed to fall having been noticed, a committee has been appointed to take the matter into consideration and to report upon the best means of putting the monument into repair.

MRS. EX-PRESIDENT JOHN TYLER, FROM FAR OVER THE WATERS,

ADDRESSES THE WOMEN OF ENGLAND—WIVES, SISTERS, AND DAUGHTERS.

Now it appears to Mrs. Ex, that the Ladies' friendly Address
To the Women of America, is altogether a mess.
But some one must return an answer, from cabin, store, or hall,
Or, it is clear to Mrs. Ex, there will be no answer at all.
American women, you should understand, never interfere with their spouses,
But spend all their leisure time in looking after their houses.
They are always to be found, in the plainest vestments, at "hum,"*
Never going to a convention, nor even for the suppression of rum.†
They have an immense horror of aristocratic display,
It would not suit with looking after their negroes all the day:
These well-dressed, happy creatures, she would have you to know,
Will heap welcomes on you, to the States if you will only please to go:
But their mistresses are not such fools, you may be sure of that;
In what you have written "they see," or "fancy they see," a rat;
The Countess of Derby, Lady Palmerston, and Lady Carlisle,
Hide under their names a vast amount of political guile:
And the Duchess of Sutherland, all beauteous though she be,
Is but an agent of the *Times*, it is very plain to see.
They are not on by their husbands this dangerous course to steer;
Though for what purpose, to Mrs. Ex is not yet made very clear.

Women in the Southern States are the most educated on earth,
And know to how many hundreds of thousands their friends are giving birth;
And they know a great deal about leagues, and their thoughts wander far;
And so they use a great many long words to show how learned they are.

It seems this very slavery was on Britain once a blot.
So long ago that the date thereof is now remembered not;
But ancient Kings and Queens, and above all the blessed Anne,
Thought pocketing the price of men was a very knowing plan.
What, though England at a vast expense, and for a length of time,
Has seen the wrong, and sought by deeds to palliate her crime.
Though every one who bears her name or seeks her guardian care,
In life and limb, in wife and child, is free as her mountain air.
It may be she had failed to do what she considers right,
Had the grandpapa of Mrs. Ex been less plucky in the fight.
No doubt "distinguished husbands" will an explanation show,
And sentimental editors will feel a virtuous glow.
But if you think your Bishops, your statesmen, Peers, and prelates fine,
Your Kings, and Queens, and gentry have learned anything divine,
Mrs Ex, she begs to state at once, lest the subject be forgot,
She has looked into the matter, and she knows that they have not!

Thus the crocodile, good sisters, is a creature very vile,
Yet will he weep and tears, though he means to eat you all the while;
And some dealer in romance has begotten your hearts, I know—
You have read, no doubt, and have believed, the work of Mrs. Stowe.

So, you see, we are up to snuff, and I hope that you'll refrain
From putting forth your sentiments in such an odious strain.
We really are so proud, and in our morals so sublime,
That for coronets to lecture us is only waste of time.
So mind your own affairs for, somewhere, the other day,
I saw with shame you only give ten million pounds away.
Go, Duchess good, of Sutherland (a bright jewel you can spare,
I know, from your "enormous wealth," or some gem that decks your hair)
And seek the dingiest, saddest haunt that poverty may hold,
And hear some feeble wretch exclaim, "We are not bought or sold,
"We are no man's 'property' or 'wealth,' whatever ills we bear;
And the ties of husband, children, wife, spari no hand may tear."
And, Duchess fair, slack not your pace, but with your wondering stand,
Astonished at your errand, by the Admiralty go grand.
Collect your scattered thoughts—remember all your country's brawls,
And think about "poor Jack" and the "Nile," and "Nelson" and "St. Paul's!"
That "Magna Charta is a farce," and the "Prime Minister" a hum—
For if you go to speak to him, he will tell you to be dumb.
Should you ask about the "press-gang" he may think you rather slow,
For that was discontinued about fifty years ago.
Women of England, go to Ireland: its state is quite a shame,
And "avaricious landlords" are most horribly to blame
Did sympathising English hearts ever seek for Irish good,
Whilst we oped our granaries wide and sent them lots of food?
No tender charities are yours; and you'll hear with some amaze,
Religious toleration is an unmeaning phrase.

Now condescending Mrs. Ex has once been on English ground,
And viewed with great emotion the memorials scattered round;
She looked at Westminster Abbey, and thought it a great sight,
And at a great many other places, as well enough she might.
She herself is one of the purest Anglo-Saxon Celtic daughters,
And knows "Charlie over the Lea" and "Charlie over the Waters,"
And she belongs to two Scottish clans, who on an evil day
Were slain—and, what was worse, had their cattle all driven away.
But if England will send members of Parliament *quantum suff.*,
And write "homilies" on justice, humanity, and stuff!
If emissaries and nobles, who to the states have been,
Will persist in coming back, to tell what they have heard and seen,
Mrs Ex will visit England with anger the most abiding,
And stir up every mother's son to give it a good hiding

* *Vide* "The wide, wide world."
† The same paper that contained Mrs. EX-President John Tyler's Address gave an interesting account of a ladies' "Convention" for discountenancing the use of rum. Mrs Johnson in the chair. Meeting adjourned after several eloquent speeches had been delivered.

NATIONAL SPORTS.

The complete change which the weather has undergone have necessitated the postponement of the Lincoln, Hereford, and other meetings, and makes it doubtful if those appointed for the ensuing week will come off. The engagements to be decided, weather permitting, stand thus:—Steeple-chasing on Tuesday, at Carmarthen and St. Ives; and on Wednesday (the great event of the season), at Liverpool; and coursing on Tuesday and Thursday, at Altcar (the Waterloo meeting); and on Wednesday, at Everley.

TATTERSALL'S.

MONDAY.—Although a fair average amount of business was got through, the movements were confined to the further advance of Honeywood, and the decline of Chesea, for the Derby; and to a large outlay on Miss Mowbray and Bourton on the Liverpool Steeplechase. At the break up the quotations stood as follows:—

LIVERPOOL STEEPLECHASE

6 to 1 agst Miss Mowbray (t)	9 to 1 agst Bourton	12 to 1 agst Duc-au-Dibarras
9 to 1 —— Oscar (t)	11 to 1 —— Sir Peter Laurie	10 to 1 Ba.f-and-Half

METROPOLITAN HANDICAP.

6 to 1 agst Contentment (t)	16 to 1 agst Lanpedo	25 to 1 agst Terpsichore

CITY AND SUBURBAN HANDICAP.

12 to 1 agst The Wanrelat (t)	15 to 1 Lagst Julius	

NORTHAMPTONSHIRE STAKES.

10 to 1 agst Maria	14 to 1 agst Lanfrick	14 to 1 agst Hobby Horse

NEWMARKET HANDICAP.—5 to 1 agst Contentment (t)

ONE THOUSAND GUINEAS STAKES.—7 to 2 agst Bryony (t)

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

In reply to the Earl of Ellenborough, the Earl of ABERDEEN stated that it was intended by the Government to introduce a measure during the present session for the government of India. Until that measure was ready for introduction he declined to enter into details.

After a brief discussion in reference to the alleged grievances of India, arising from the presentation of a petition from the natives of the Madras Presidency, the subject dropped.—Adjourned.

HOUSE OF COMMONS.—FRIDAY.

Lord J. RUSSELL stated the intentions of the Government were to move the Ordnance Estimates on Monday, and the second reading of the Canada Clergy Reserves Bill on Friday.

THE NATIONAL DEFENCES.

On the question of going into Committee of Supply, Mr. RICH urged the expediency of gradually increasing the number and efficiency of the reserve force of Pensioner Battalions, without weakening the regular or militia forces. He thought that too little attention was paid to the reserve departments of the army. The military profession was not popular in this country, and he thought that unpopularity, if not removed, might at least be diminished by granting a small pension after ten years' service, and an increased pension to those who have served the whole period of twenty-one years.

Mr. SIDNEY HERBERT said that the military authorities were disposed to give the subject a full and fair consideration. Without concurring in all the views of the hon. member, he thought that soldiers ought to have a small pension upon leaving the army, after ten years' service, so as to give the Government a hold upon their future services, if required by circumstances.

Sir H. WILLOUGHBY, in moving for copies or extracts of any letters or communications having reference to the war in Ava, and the Annexation of Burmah, took the opportunity of condemning the conduct of Commodore Lambert, whom he charged as being the author of the war. He expressed his opinion that the continuance of the war was consonant neither with the dignity nor the interest of the country. He contended that the King of Ava had exhibited his desire for peace, and that the Governor-General should not have been armed with authority to make this aggressive war. The annexation of Burmah, instead of being a source of aggrandisement to the empire, would only entail trouble and expense, and bring us into close proximity to warlike enemies.

Sir C. WOOD stated that everything that could be done had been done to avert the war, but without success, and Commodore Lambert delayed taking hostile steps until the issues of the Court of Ava had become intolerable. The papers asked for would be produced.

Mr. HUME expressed his concurrence in the views of Sir H. Willoughby.

Sir J. HOGG defended the conduct of the Government and the Court of Directors in reference to this war.

After some further discussion the motion was agreed to.

THE CHANCELLOR OF THE EXCHEQUER.—The Right Hon. W. E. Gladstone was sworn in yesterday as Chancellor of her Majesty's Exchequer. The ceremony took place in the private room of the Lord Chancellor, at the House of Lords.

COLONEL FLEURY, Master of the Horse in the Household of the Emperor Napoleon, has arrived in London from Paris.

THE FUNERAL of the BISHOP OF SYDNEY is to take place in Canterbury Cathedral this day, at eleven A.M.

CAPE AND AUSTRALIAN MAIL.—The *Australian*, for the Cape, Australia, &c., sailed from Plymouth on Thursday evening. Two hundred mail bags were put on board the vessel on Wednesday. Every passenger berth is taken; and she has a full cargo and about £200,000 in specie. Among the passengers are the numerous staff of the Chartered Australian Land, Mining, Importing, and Refining Company, consisting of its general manager, Captain Baker, R.N.; the metallurgist and assayer, Mr. Watt and Mr. Braithwaite, and about twenty-eight engineers, assistants, and mechanics.

CHARING-CROSS-BRIDGE.—On Thursday the half-yearly meeting of this company was held at the offices in Villiers-street. Mr. R. Few in the chair. A dividend of 1s per share was declared; it being stated that every endeavour was about to be made to improve the approaches to the bridge.

A MEETING of STOKERS and COAL-TRIMMERS was held at Southampton on Thursday, for the purpose of considering the best course to adopt to obtain an increase of wages. After some discussion, it was determined that no strike should take place, the feeling of the meeting being evidently in favour of waiting to see the result of the seamen's strike.

LINCOLN CATHEDRAL.—The broad tower of Lincoln Cathedral was struck by lightning on Thursday evening, about five o'clock; but very trifling damage was done.

NORTHERN COAL TRAFFIC.—The dispute between the rival railway companies in this matter was temporarily arranged at Doncaster on Thursday. The Great Northern Company deposited the amount claimed by the South Yorkshire Company, subject to a future legal settlement. They also agreed to pay *ad interim* the additional amount claimed by the South Yorkshire for the Great Northern Company's coal traffic. The coal-trains, therefore, are working as heretofore.

THE SIX-MILE-BRIDGE AFFRAY.—The bills against the soldiers in the six-mile-bridge prosecution have been ignored by the grand jury of Clare.

THE WRECK OF THE "QUEEN VICTORIA" STEAMER.—The coroner's jury, on the case in connection with the unfortunate steamer *Queen Victoria*, has returned a verdict tantamount to that of manslaughter against the mate of that ship, and the coroner has committed him for trial. He has, however, been admitted to bail.

FOREIGN.

FRANCE.—On Thursday, the explanations given by Lord John Russell respecting the relations with France appear to be the chief cause of an improved state of the Money Market. Every thing was exceedingly firm upon the Bourse. The number of small investments was considerable; and this indicates a return of confidence. The Three per Cents closed for cash at 80f. 80c., and the Four-and-a-Half per Cents at 106f 20c.

158 more of the political prisoners sentenced to imprisonment or banishment by the Mixed Commissions have been set at liberty, by order of the Emperor.

By the decree of the 22nd of January, which confiscated the Orleans property, estimated at 10,000,000f., the Emperor has determined that 2,000,000f. out of that sum shall be employed in improving the dwellings of the working-classes.

THE INSURRECTION AT MILAN.—Orders have been issued to the householders to suspend, for the purpose of lighting the town, a lamp from the first-floor of every fourth house, which is to remain burning from six in the evening until daylight. In case of disturbance, the householders are to close their doors, and every man found in the street is to be treated as concerned in the affray. The inhabitants are forbidden to appear on the bastions from six in the evening till seven A.M. The Government continued to expel from Piedmont the most dangerous of the refugees.

The loan of two millions would be effected with the house of Rothschild at Paris.

AUSTRIA.—The Vienna journals of the 22nd state that the would-be regicide, Libemy, has been interrogated by the magistrates appointed to investigate the late attempt on the Emperor of Austria. He is described as being violent in his demeanour to the examining magistrates. He made furious declamations against the state of things in Hungary, and especially against the gendarmerie.

TURKEY.—A telegraphic despatch announces that the Ottoman Government has refused to accept the ultimatum presented to it by Count Lehungen in the name of the Austrian Government. Not only the Count, the Austrian Ambassador Extraordinary, but the whole of the Austrian Legation has left Constantinople. The Ottoman Porte immediately placed itself under the protection of England and France.

INDIA AND PEGU.—(*By Electric Telegraph from Trieste.*)—The *Adria* has arrived at Trieste, after a passage of 140 hours, from Alexandria; she brings the following news from India:—

The Burmese occupy the Aeng Pass with a large force. Pegu (the province, we suppose,) has been again occupied by a large force of Burmese. They ruined the siege of the town) on the 8th and 9th of January, and marched to the defence of Schoygyt upon learning that General Steel was advancing upon that place. The Burmese have retired from Prome and from Mendami.

It is said that a revolution has taken place at Ava, by which the old King has been deposed and driven out, and that the new King has recalled the troops to Ava, and desires peace. Fever and diarrhœa prevailed among our troops, and were increasing. The insurrection in China caused considerable devastation. The *Pottinger* has brought (to Suez) twenty-one boxes of gold dust from Australia.

SKETCHES FROM THE VICTORIA GOLD DIGGINGS.

GAOL AND COMMISSIONERS' STATION

SKETCHES FROM THE VICTORIA GOLD DIGGINGS.

BY J. A. GILFILLAN.

We have received from South Australia the following graphic Sketches from Mr. J. A. Gilfillan; a gentleman who, it will be seen, handles his pen and pencil with equal facility, and whose personal experience and enterprise enable him to offer one of the most faithful and interesting pictures of "Life at the Diggings" which have yet been presented to English readers.

Mr. Gilfillan left Melbourne for the diggings on the 28th of March, 1852. We regret we are unable to find room for his account of his journey, the features of the country he passed through, and the adventures which awaited him. It must suffice at present to say that, after some hardships, he arrived at the diggings on the Saturday following. Next day was Sunday, and here we take up his journal:—

Sunday.—What a contrast! After the first two or three hours of the morning, which throughout my stay at the diggings seemed devoted to felling trees, all is comparatively a dead calm during the entire day; nor did the law, at the time, have recourse to on the latter so strong a moral power as the latter think at least in Forest Creek a vast majority, exercise over the reprobate minority, that I did not witness a single instance of gross violation of the Sabbath, or wanton insult offered to the ministers of the gospel, who, preaching in the open air, generally obtain large congregations, and are listened to with becoming reverence. On one occasion an excellent example was set by the right rev. Bishop, Dr. Perry. Three times in the course of one Sabbath did he address large congregations on subjects suitable to their circumstances. Elevated above the mass by only the stump of a tree, did the worthy Bishop himself lead the psalmody in the soul-stirring strains of the "Old Hundredth." Many who chose not to attend divine service, lounge idly about their tents or make the rest day a day of visits to their friends at a distance, while a knot of Celestials, to the number of about a dozen and a half, who have congregated at the Golden Point, seemingly having cut "Joss" since they left China, and not yet being converts to any other faith, spend the day, as, indeed, they do the whole of their spare time, in gambling.

On Monday, I was deputed by our party to trudge to the Commissioner's for our licenses. On my arrival, I found a considerable crowd of applicants before me, ranged in Indian file along the rail surrounding the Commissioner's tent, each waiting his turn to be served; and by the time the Assistant-Commissioner arrived, the crowd had become excessively dense. After pushing and struggling for the whole day to tail on to the line, so slow was the forward movement, that on the [illegible] rising, I was compelled to return unprovided with my permit, and it was only by taking my station [illegible] that I succeeded on the following day. This delay is not occasioned by [illegible] the issues only, but from the weighing of the gold paid by the diggers, had an ounce of that metal being taken in lieu of thirty shillings, the price of the license. For the first ten days of each month—the time in which all the licenses must be issued—is the same scene exhibited. The same rushing, pushing, struggling, and mauling occur; some resorting to blows to place themselves on the file in advance of the weaker or more spiritless occupants, while beyond the reach of the rail, an anxious crowd dance attendance for hours, or even days. Many strange *rencontres* take place at this general rendezvous: old chums, friends who had parted years ago in their native land, recognise each other; relations long separated, unaware of their contiguity of residence and similarity of occupation, and who might, but for this opportunity, have continued so—for the digger, being a burrowing animal, spending two-thirds of the daylight beneath the surface of the earth, does not take much pains to discover who are his neighbours.

From the crowd one sample of the gold-seeker keeps aloof, and is only to be seen prowling about deserted holes, or after and before those legally working them are at their labours, gleaning gold, or committing acts of larceny in unprotected tents. They do not claim brotherhood in the guild, and, never arming themselves with a license, spend much time and ingenuity in dodging the police, who are known to them each at a distance by the particular [illegible] dress to distinguish them from the diggers themselves. These vagabonds are called "fossickers," a term [illegible] in origin.

The social state of the diggings so far as my own observation extended, as [illegible] from the testimony of those surveying other localities, has been greatly [illegible]. The various accounts of murders or [illegible] of [illegible] and unprovoked assaults are for the most part purely imaginative. The great [illegible] be, the amount of honesty and person[illegible]

SABBATH AT THE OLD POST-OFFICE, FOREST CREEK.—BISHOP PERRY PREACHING.

SKETCHES FROM THE VICTORIA GOLD DIGGINGS.

TRAVELLING TO THE DIGGINGS.

security that actually exists in a population plentifully besprinkled with lawless vagabonds from all quarters of the globe—Pentonville and Millbank "penitents," Vandemonian and other clerks of St Nicholas—whose very gait proclaims a certain knowledge of the gallows.

The most common kind of robbery is that of the diggers themselves robbing their mates. Parties are often formed of persons before unknown to one another. These ingenious co-partnerships are constantly being dissolved and re-formed, the less vigilant and more confiding members being duped by the more unscrupulous and designing. If, after the division of their gains has taken place, the portion of one be stolen by another, the thief, on detection, may be legally convicted and punished; but, if their united gains be stolen in mass, it is said the law takes no cognisance of it, owing to the difficulty of each proving his own property.

The necessity for the establishment of an adequate police force is much felt. A local court is also required at or near the canvas capital of the Victoria Diggings, to deal with the small-fry criminals at present entertaining or evading the penalties of the law. The digger's time is valuable; and, rather than become prosecutor, and be forced to dance attendance during the criminal session in one of the most expensive towns in Australia, and that, perhaps, just as some rich auriferous deposit has been lighted on, he suffers the criminal to escape. Misdemeanors of every grade were visited by a somewhat ludicrous species of durance, varying in duration according to the caprice or judgment of the police functionaries appointed for that duty by the Government. The digger caught without a license was chained to a gum tree, till he paid the sly grog-seller and the thief till an opportunity occurred of trooping them down to Melbourne. At last, however, a gaol, composed of logs, with a bark roof, has been erected, of which the annexed Drawing gives a view. The grand hardship falls to the lot of such as are merely incarcerated on presumptive evidence of guilt. Would not the appointment of a Circuit Judge cure this evil? The police force is inadequate, whether as regards the number or the zeal of its members. The difficulty of recruiting its strength among a population engaged in such profitable speculation renders it impossible to make a proper selection. One of the regular drivers of a spring-cart, carrying passengers only, was, on his way to Melbourne, stopped by three of the mounted police, handcuffed, and robbed of a considerable sum of money. With his wrists still confined in his new bracelets, he managed to ride to the Head Commissioner's station, where he lodged an information. The rascals were captured a few days afterwards, tried in Melbourne, and, I believe, condemned to work in irons on the roads.

The pensioners are very comfortably and rather tastefully clad, and, until near enough to examine the materials of which their dress and appointments are composed, have more the appearance of officers in undress than that of mere privates—as may be seen by the illustration. Little occurs to break in the even tenor of their days, except a parade or two a day, and a daily guard-mount, three sentries—one at the Commissioner's tent, one at the gaol, and a third at the guard-house door being deemed sufficient for the safeguard of the garrison and its occupants.

During the first five weeks of our labour, our party, consisting of three men and a boy, had sunk five holes varying from twelve to twenty-five feet in depth, in achieving which the most unremitting toil was necessary, having in one of them cut with pick and pick through solid rock eight feet in thickness, besides what is termed "driving," that is, excavating in a lateral direction in search of the precious metal, but with little success. Some parties were tolerably lucky, but in a vast majority of cases the want of water was much felt, and the soil, however richly impregnated with fine gold, lay useless around the pits, nuggets which could be detected by the naked eye being the only kind it was possible to collect; so that rain was anxiously desired.

There is no more common error among those who have not tried it than that of supposing gold digging to be mere child's play. I can assure them, from experience, that the very reverse is the case. He who would become instructed as to the excessive labour and frequent disappointment to which the gold-digger is subjected, should look at a professed well-sinker, on a piece of land the surface of which furnishes no sure indications of where a spring may be said to exist. Let him watch the labourer through every stage of the work; let him observe every muscle strained by the violent exertion required in removing huge masses of stones, heaving, as long as the surface remains within reach, spadeful after spadeful of earth, clay, or gravel, the matrix little less pervious to his tools than the solid rock, many feet of which he may have to cut through; let him mark the constrained position in the confined earthen cage down which he works his way, the streams of perspiration exuding from every pore of his body. But the regular well-sinker is from childhood inured to labour, while the gold-digger becomes crippled by the constrained position, and his hands

A WINTER JOURNEY TO THE DIGGINGS.

are blistered and cut by unpractised handling of the spade, against the jagged sides of the hole.

Some have been known to sink under repeated failures. Of this, one of the diggers in this locality furnished a singular example. The foolish fellow had sunk nineteen holes, in none of which had he found gold. In an evil moment, he swore that if the next turned out unproductive he would blow out his brains. The twentieth venture proved a blank also when, true to his vow, he deliberately loaded his pistol and put an end to his existence. He lies doubled up in a rudely-constructed box coffin-makers being scarce here—and, by a curious coincidence, his grave is in one of the very holes the fatal cause of his folly.

The truth appears to be, that in a vast number of cases, however un-

ESCORT OF GOLD.

remitting the labour bestowed—for science has very little to do with the matter—the gains are "nil." There are, of course, on so many gold-fields, new discoveries being constantly brought to light, and a great diversity in the amount of the diggers' gains. The facts, as far as I have been able to ascertain them on the spot are, taking the average say of a hundred persons: two, make two or three thousand pounds sterling sometimes, but very rarely, double that sum; ten accumulate a few hundreds; sixty eight earn treble mechanics' wages: the other thirty [illegible] make, or do not even pay their expenses. I am fully aware that these facts are not generally known, and will not easily be credited, so much have people been misled by the accounts of the interested, and the flaming descriptions of penny-a liners, who often, while they are unscientious enough to state no positive falsehood, lazon forth instances of extraordinary success, while all allusion to even the possibility of failure is suppressed.

[illegible] greater part of the earth thrown out of the hole contains no doubt a considerable quantity of gold; but it is concealed from the naked eye, and, there being no water to wash the ore, it lies near the pit, so much unprofitable dirt. The introduction of machinery, instead of the inefficient mechanical aids at present resorted to, would, no doubt, amply remunerate the capitalist who might have the courage to try the experiment.

[illegible] Scotland [illegible] become a regularly-built town, boasting of its municipal privileges, its town house, its theatre, and hotels. Already, besides the encampment, which bears the stamp of a military station, its garrison consists of 130 pensioners, and about a dozen rank and file, of the 11th Foot, commanded by a subaltern; it is the head-quarters of the horse and foot police. There are in its immediate vicinity many weather-boarded stores, some of them of large dimensions, and two large wooden edifices: the one intended as a new post-office, the other a barrack for the military and police.

The new post-office was much wanted; the old one, about five miles higher up the creek, being a private speculation, formerly kept for the convenience, and so wretchedly conducted as to give universal dissatisfaction. At the time it was abolished there were left on hand no less than 6000 undelivered letters, chiefly owing to the insufficient accommodation and mismanagement of the concern. Not only were those who had a right to apply for their letters often disappointed, receiving word that letters were known to have arrived, but letters were delivered without questions—thus risking, and, indeed, aiding frauds, which deprived many expectants of valuable news or remittances.

May 10. Everybody has been languishing for rain, none having fallen, except a few insignificant showers, for the last three months. We have now enough, in all conscience, of it. For two or three days past, storms, catarrh, and rheumatism prevail in all directions; the holes are brimful, and, for a time, unworkable; in many cases the dividing walls of earth giving way under influence of the wet. A week's rain has set this human ant-hill in a sad bustle, some pelting bark; others felling and splitting wood for slab huts; numbers quarrying and transporting stone for warm dwellings against the winter, each to be furnished with fire place and chimney.

May 17.—Another week, and stone, clay, and timber structures are far advanced. They vary from the rude primitive room, roofed with bark, up to a rough attempt at the more modern cottage ornée. I wish them all happiness in their new domiciles; but, having received more amusement than profit from my pursuits and labours, I for the present take my ease; but being, if not on principle, at least from habit (said to be second nature) a nomad, I may at some not distant date, become once more a digger.

The scenery on my recent journey presented a very different prospect to what it did on travelling up to Forest Creek. The rain had carpeted the earth with tender grass, freshen the verdure of the trees, and filled all my water-holes and [illegible] so as to give the most pleasant [illegible] to the whole, which on first passing seemed hideously arid and distressing to the eye.

On our return we passed one almost continuous stream of adventurers, who, in spite of wind and weather, were hurrying on to Forest Creek and Bendigo, accompanied by, or dragging and pushing before them, every known species of vehicle, except perhaps an ice-sledge. Some of the more unique I have selected as fit subjects for pictorial illustration, and let me assure the reader that I have not drawn on my imagination for a single illustration. When it is considered that the extraordinary vehicles which I represent have to travel from 80 to 120 miles to reach their destination, many may be apt to impute to me some exaggeration; but so great has been my forbearance that many a well-attested description of equally curious equipages I have forborne to illustrate because, not having seen them, I could not personally vouch for their truth. One of these is worth recording: that of a kind of hunter's cart, drawn by four white bulldogs, which, notwithstanding repeated bribs for a fight, in defiance of a stout whip, mercilessly exercised by their owner (a Yankee), resolutely reached the diggings, perfectly sound in wind and limb, on the fourth day from the moment of starting from Melbourne.

DREADFUL ACCIDENT ON THE GREAT WESTERN RAILWAY.

An accident occurred on Thursday morning, on the Great Western Railway to the up express train, near Ealing, supposed to be by the breaking of an axle. The train had just passed under the bridge on the London side of the station, when the travelling porter observed that the three first-class carriages were off the rails, and swaying to and fro in a very alarming manner. He instantly made this known to the driver, who shut off his steam and reversed the engine. The coupling chains between the second and first-class carriages gave way, and the two first of the latter ran up the embankment in a fearful manner. The first, on reaching the top, a height of about fifteen feet, toppled over and fell backwards upon that which followed, crushing three out of four of its compartments, and forcing it back on the next one, which, however, kept its rails. The third carriage did not leave the rails. The driver brought up his train as quickly as possible to the spot, where a fearful scene presented itself. The first of the carriages was turned completely over, and lying upon its roof—the several compartments being more or less rushed and the passengers huddled within. In the centre compartment of the second carriage had been seated four of the directors of the railway, on their way to the usual weekly board meeting. These four gentlemen were—Mr. R. Gosnell, of Gloucester; Mr. H. Simonds, of Reading; Dr. R. F. Smith, of [illegible]; and Mr. James Gibbs, of Clifton, near Bristol. The latter gentleman was killed on the spot. Dr. Prichard Smith sustained a dislocation of the shoulder, and had a rib fractured. Mr. Foster and Mr. Simonds were scarce y hurt. There were several other officers of the company, and general passengers in this carriage, but none of them sustained any severe injury. The passengers in the third carriage escaped with nothing more serious than the shock. One of the guards hastened back to the [illegible] station, and the other proceeded to London with the train. Mr. Saunders, without a moment's loss of time, dispatched Mr. Cresy, Mr. Hawkins, Mr. Alfred Keyser, Mr. Trevan, and Mr. Harper, to Ealing. On their arrival it was found necessary to break up two carriages to extricate some of the passengers who were still imprisoned. Among these a gentleman, Mr. Adam Dall, of Reading, had his head fixed so firmly into the hole through which the lamp is ordinarily suspended, that it was with the utmost difficulty he could be released. Many persons had their bonnets broken, but was not otherwise injured seriously. The body of Mr. Gibbs was got out as soon as possible and conveyed to the station. Among the other passengers were Mr. Miller, of Birmingham [illegible] whose forehead was seamed with a terrible gash; Mr. Ormerod, of Birmingham [illegible] Mr. Hall, of Birmingham [illegible] Mr. [illegible] He is stated to be doing [illegible] favourably. Mr. Miller is also down [illegible] the accident is supposed to have originated in the breaking of one of the "spoil irons," or "spring hangers," attached to the near landing-wheel of the front first class carriage. The consequence of this breakage would be to set the axle-box free, thereby giving the wheel a play which would necessarily in a very short time throw it off the line. It is suggested that the extraordinary variations in temperature during the previous [illegible] hours may have led to the fracture described, no imperfect on being visible in the iron. A coroner's jury, no doubt, will be immediately empannelled.

The Young Earl of Shrewsbury.—The Lord Chancellor, on Saturday, appointed Captain Bedingfield to be guardian of the Earl of Shrewsbury during the remaining few months of his minority. This appointment was in entire accordance with the personal wishes of the youthful peer, who is the heir of large property, as well as of ancient titles.

Copyhold Enfranchisements.—The eleventh report of the Copyhold Commissioners has been printed. They expect many enfranchisements under the extension act of last year. From 1st to 1852, inclusive, the enfranchisements and commutations were 446; of which 165 were clerical, 149 collegiate, and 134 lay.

Election Committees. A large number of the late elections are petitioned against, and several committees have been appointed to decide on the merits of parties petitioning and those defending their seats.

Cork Town: In this case the committee have decided that Mr Gibbs and the Hon. B. Johnstone are not duly elected, through bribery on the part of their agents.—*Tamworth*. Here Mr. J. Carter has been unseated, for want of the proper qualification, and Mr. R. J. Phillimore takes his place.—*Lancaster*: R. B. Armstrong has been elected, and the election declared void through bribery.—*Blackburn*: Mr. W. Eccles has been unseated, not being duly elected; and the committee state that they "had come to resolutions (not trusting had extensively prevailed at the last election, though it was not proved that W. Eccles, Esq., was a party to the same."

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—Monday.

The [illegible] was given by commission to the Transfers of Aid Bill, the Victoria Act, the Naturalization Bill, and the Stamp Duties on Patents for Invention Bill.

The Earl of Cardigan complained of the intention of the Government to procure some of the soldiers for the past taken by them in the late occurrences at Six mile Bridge.

The Earl of Aberdeen replied that if the law was to be respected in Ireland, it must not be restrained in the case of soldiers, and as long as he was connected with the Government of Ireland, he was determined that justice should be administered as equally as possible, whether as regarded the priest, the soldier, the peasant, or the peer. Bills would also be proceeded with against the priests who were engaged in the disturbance as well as against the soldiers.

HOUSE OF COMMONS.—Monday.

Chairmen of Election Committees reported that Mr. Armstrong was unseated for Lancaster, for bribery and corruption committed by his agents; that Mr Samuel Carter had not proved his qualification; and that Dr. Phillimore was duly elected for Tavistock; that Mr. R. Plumptre Capper and Mr Butler Johnstone were unseated for bribery, committed, with their knowledge, by their agents, at Canterbury. The issue of the writs for Lancaster and Canterbury is suspended until after Easter.

Mr. Cardwell stated that the Government did not intend to introduce, during the present session, any measure giving limited liability to public companies. They proposed to issue a commission to inquire into the whole subject.

Lord Palmerston said, he hoped, in the course of the present session, to introduce a measure to render the inspection of mines more efficient, and in some degree to provide a means for the prevention of accidents. The noble Lord also stated that there was no intention at present to appoint a public prosecutor.

Lord John Russell said, the British Minister at Florence was still engaged in trying to persuade the Papal Government to mitigate the sentence of persons imprisoned for which had been [illegible] Mr. Murray. Mr Murray was born of British parents; he could not be a Neapolitan subject. In answer to Mr. G. H. Moore (who said it was the duty of the Irish members to oppose any Government which did not declare its intention of legislating on the Established Church in Ireland, except on the basis of perfect religious equality), the noble Lord said that it was not the intention of the Government to interfere in any way with the Established Church in Ireland.

Mr Bright drew attention to the case of parties in the country who had been prosecuted for publishing placards dissuading from enlistment in the militia. These placards had a pictorial illustration at the head representing a soldier undergoing the punishment of being flogged. The Illustrated London News and *Punch* were prosecuted from entering France, not because of what was said in the letter-press, but because of their illustrations, which, it was said, every one could read, and which were, therefore, calculated to create discontent. But it was monstrous in a country pretending to have a free press, that persons should be liable to have a charge of sedition brought against them for circulating such placards.

Lord Palmerston animadverted with great severity upon the conduct of those who circulated the placards in question. He said the reason why he had directed the prosecutions to be dropped was, because, whatever the intentions of these parties, they had wholly failed (Cheers). The good sense and patriotic spirit and feeling of the British people had induced them to treat those who recommended them to abandon the cause of their country with the contempt they deserved (Cheers). The noble Lord proceeded to read a letter from Mr Somerville, protesting against the use made of his name in the placards of the Peace Society, as calculated to place him in a false and odious position, he being a literary man, earning his bread and that of his family by his pen, and eating it only by favour of the public, who bought his productions. Lord Palmerston also read a letter from Mr. Scoresby to Mr. Hindley, complaining of the offensive placards, because his opinion was in favour of voluntary enlistment in the militia; because he did not believe that militiamen were likely to be flogged, and because his book was lauded as a work of science, and not entering into any way not to connect themselves with politics, as he unfortunately did (Cheers). The noble Lord said in conclusion:—"I look upon the Peace Society as a society of very well-intentioned fanatics (Laughter)—much too good to be entrusted with any political functions in this wicked and sinful world (Laughter); and I would urge and entreat my hon. friend to use his influence, as a man of great respectability and practically conversant with public affairs, to induce his peace-preaching colleagues in the society to be a little less pugnacious than they show themselves" (Great laughter)

The House went into committee on the Naval Estimates, when the several votes were agreed to.

HOUSE OF LORDS.—Tuesday.

Lord Brougham, in moving the second reading of the Law of Evidence (Scotland) Bill, said, the Faculty of Advocates were now concerned in the beneficial operation of the Law of Evidence Act, which had recently come into operation in England, and the provisions of which it was proposed by this bill to extend.

Lord Campbell said, the Faculty of Advocates had no occasion to be ashamed of the doubts which they had entertained; for, in the whole history of jurisprudence, no instances had occurred, until the Law of Evidence Act came into operation recently, of a plaintiff or defendant being allowed to give evidence in his own cause. Even the Roman civil law, which was the most comprehensive code that ever had existence, did not grant this privilege. He had himself reason to be perfectly satisfied with the working of the system.

The Lord Chancellor said, he was glad his noble and learned friend had gone somewhat further in the present bill, and proposed to protect husbands and wives from exposing matters which passed between them in confidence. He (the Lord Chancellor) had previously opposed such a clause, but his opinions had since changed.

The bill was then read a second time.

HOUSE OF COMMONS.—Tuesday.

Mr Phillimore took the oaths and his seat for Tavistock.

A discussion took place on the second reading of Her Majesty's Theatres Association Bill. Some gentlemen had formed an association to carry on the Opera at the Haymarket. They have subscribed for £200,000, and the principal purpose of the bill is to limit the liability of each subscriber. The Board of Trade refused to grant a charter; and there was therefore nothing for the promoters but to come to Parliament for an act. It was argued by Mr. Prinne and Mr M. Milnes that nearly every Government in Europe encouraged the opera, and supported it in their capitals; that private enterprise was unequal to the gigantic task of carrying on the Italian Opera upon a scale commensurate with the wants of this great capital; and that the promoters of the bill were private gentlemen of high standing and unstimulated character, whose motives were not private profit, but the furtherance of musical art. The second reading, on the other hand, was opposed by Mr. Hume, Mr. Cardwell, and other members, who argued that it was not the province of Parliament to grant the question of limited liability was about to be investigated by a Royal Commission. Mr. Henley, late President of the Board of Trade, had refused to certify for a charter, and he believed with justice. He had given Mr. Lumley an interview of upwards of an hour, he was of opinion that the decision of his predecessor was correct, and ought to be sustained. He attached the high standing of many of the persons who formed this association, but the law of England recognised no distinction of persons.

The House then divided, when there appeared—for the second reading, 79; against it, 150: majority, 91.

The bill was accordingly thrown out.

COLLEGE OF MAYNOOTH.

Mr. Spooner moved that the House resolve itself into committee on the Acts of Parliament regulating the College of Maynooth, "with a view to the repeal of those clauses of the said acts which provide money grants in any way to the said college." When in the last Parliament he moved for a select committee, he was prepared to prove that the education given at Maynooth was injurious to society, detrimental to morality, subversive of due allegiance to the Sovereign, and antagonistic to the Holy Word of God. He was not now, a single denial; and, with these premises, he felt no necessity for further inquiry. As fruits of the doctrines inculcated at Maynooth, he referred to the violent part taken by Roman Catholic priests at the late elections. He contended that the Maynooth Grant had failed in converting the Irish priesthood into the friends of the Imperial Government, and he therefore implored the House to put down this establishment, because if this were not done, the Roman Catholic priests would become the masters of the country.

Mr James M'Gregor seconded the motion.

Mr. Scholefield proposed an amendment, with a view to the consideration of "all enactments now in force whereby the revenue of the State is charged in aid of any ecclesiastical or religious purposes whatsoever, with the view to the repeal of such enactments.

The original motion was opposed by Sir W. Clay, Col. Greville, and Mr. Duffy. The amendment was supported by Mr. Miall; while Mr. Spooner's motion found supporters in Mr. E. Ball and Mr. B. Stanhope.

Sir J. Young, the new Secretary for Ireland, opposed the motion on behalf of the Government, on the ground that it would answer no useful purpose, that it could not fail to prolong religious excitement and discontent in England, and add to those sectarian animosities which had been productive of such frightful consequences in Ireland. He called upon the House of Commons to abide by the principle of toleration, to avoid even the appearance of persecution, and to reject Mr. Spooner's motion by a large majority.—The debate was then adjourned.

HOUSE OF COMMONS.—Wednesday.

Mr. M. Gibson moved the second reading of the County Rates and Expenditure Bill, the object of which was to give to rate-payers in counties a control over the expenditure of the county, giving at the same time to the justices a voice in that expenditure.

Lord Palmerston, without pledging himself to the details of the bill, supported the second reading.

After some discussion, the bill was was read a second time, with the view of being adapted to the views of the Government.

Maynooth.

The adjourned debate was then resumed by Mr. Fagan, who opposed both the amendment and the original motion.

Mr. Mills opposed the grant, not only because the system taught at Maynooth was politically and morally mischievous, but because it was not founded upon the principle of religious toleration.

Mr. J. Ball warned the House of the feelings of disaffection which discussions like the present, offensive to the feelings of the Roman Catholics, were calculated to create in Ireland.

Lord Lovaine felt bound to vote against the motion, which abolished a grant in which he believed the honour and good faith of the Legislature were involved, unless it was shown, that the endowment that it ought to be withdrawn.

Mr. Spencer entreated representatives of Protestant constituencies to reject such irritating motions as this, and to forward the great question of religious equality.

Lord Stanley observed that the intention of Sir R. Peel was that the settlement of 1845 should be permanent and unconditional, and that it would be impossible now to replace the question in the same position as that in which it stood previous to 1845. He then argued against the amendment, which opened a question too wide and important to be discussed as an amendment. Had the motion been for inquiry, he should have supported it.

Mr. Lucas was opposed to both the amendment and the original resolution. The former was as objectionable to those who shared his religious opinions as the latter; he considered it, indeed, the same in a different shape, and dictated by the same feeling of religious bigotry. Let the amendment include all religious endowments in Ireland, of whatever kind, including the just sacrifices of the endowments conveyed in fraud and brought forth in robbery—the Established Church in Ireland, and he would support it.

Mr. Drummond said, his constituents had desired him to vote against this grant; but he had refused; offering, however, if a case was made out, and an inquiry was asked, to vote for it. He exposed the dangerous doctrines of the Jesuits, which were now, for the first time, he said, authorised by the Catholic Church. He wished to treat this not as a religious question, but as a question of a conspiracy of these men against the rights of mankind.

Sir R. Inglis remonstrated strongly against the expressions used by Mr. Lucas with reference to the Established Church of Ireland.

Mr. Serjeant Shee declared that Mr. Lucas did not speak for him on the subject of the established Church in Ireland.

Sir J. Shelley denied that, in voting for the amendment, he was actuated by religious bigotry.

An attempt was made to adjourn the debate, which failed, and the House divided upon the question whether the words in the original motion proposed by the amendment should be left out about to be retained, which was negatived by 192 to 162. This destroyed the vitality of Mr. Spooner's motion; and it being now six o'clock, the amendment could not be put, so that the main question remains to be disposed of.

HOUSE OF LORDS.—Thursday.

The following bills, on the motion of Lord. st Leonards, was read a second time, with a view of their being referred to a select committee, viz, the Suitors in Chancery Further Relief Bill, the Lunacy Regulation Bill, the Bankruptcy Bill, and the Criminal Law Amendment Bill.

THE WAR IN BURMAH.

The Earl of Ellenborough rose to ask whether the Government had any objection to produce a copy of a letter from the secret committee of the East India Company to the Governor-General of India in Council, dated 7 September, 1852, giving instructions as to the mode of conducting any future war in Ava. He should also pay papers explanatory of the present objects of the war with Ava, and the measures now being taken to effect such objects.

The Earl of Aberdeen had no objection to produce the documents asked for; also a statement of the expenses of the war as far as it had gone. He had great reliance in the prudence and ability of the Governor-General of India, and considered that all the measures he acted on him were judicious.

The Earl of Derby said that the late Government were not responsible for the commencement of the present war; but he had no hesitation in saying that it had not commenced without just cause. It was not for an hour, indeed, but for a succession of hours of encroachments, whereby this country was prevented from reaping the advantages of the successes of the previous war, that the present operations were commenced.

After a few words from Lord Wharncliffe,

Their Lordships adjourned.

HOUSE OF COMMONS.—Thursday.

In answer to a question from Mr. Cayley, Lord J. Russell said that the Earl of Clarendon was the Secretary for Foreign Affairs, and he (Lord J. Russell) held no office in the Ministry.

Mr. Cayley gave notice that he would move on an early day that a salary should be attached to the office which the noble Lord (Russell) held as leader of the House of Commons.

AUSTRALIAN COLONIES.—TRANSPORTATION.

Sir J. Pakington called the attention of the House to the state of the Australian colonies, and the question of transportation. He referred at some length to the policy of the late Government with respect to these prosperous colonies, and asked whether the present Government intended to follow up that policy, or to deviate from it, and if so, to what extent? In the course of his statement he referred to the late gold discoveries, declaring his belief that, within a year from the time these notes began to be worked, £10,000,000 in gold had been raised. He concluded by moving for copies of the despatch from himself to the Governors of New South Wales, Victoria, and South Australia, dated December 15th, 1852; and of his despatch to the Governor of Van Diemen's Land, of the 14th December, 1852.

Mr. D. Peel said he did not see what purpose was to be answered by the late Government with regard to these colonies, but he had no hesitation in stating the views of the present Government with regard to the complaints embodied in the petitions from the Australian colonies. Since the change in the commercial policy of the mother country it had no longer any interest in the appointment of the Custom-House officers at the ports of those colonies, although the Government had a parental patronage in the colonies, the complaints of the colonists were unreasonable and unfounded. While paying due attention to the legitimate claims of the colonies, the Government did not think they were entitled to the changing and rapidly-progressing condition of the colonies, it would be better to allow them to vote their own civil list, and to make their own provision for carrying on the government of the country. As to the question of the waste lands of the colony, the Government were not unprepared to adopt the suggestions of their predecessors. In reference to the important question of transportation, it was the intention of the Government to put an end to the existing system of transportation. Western Australia would absorb all the convicts that had recently been sent out; but no more convicts were to be sent to Van Diemen's Land.

Mr. Adderley expressed his satisfaction generally at the announcement of the Government on the subject.

After a few words from Lord J. Russell in explanation, and Mr. Hume, the motion was agreed to.

ADMISSION OF JEWS TO PARLIAMENT.

Lord John Russell then moved that the House resolve itself into Committee, for the purpose of considering certain civil disabilities affecting the Jews. He suggested that the House should at once go into committee, and he could then move his resolutions.

Sir H. Inglis, having, however, protested against this course,

Lord J. Russell proceeded. What he proposed by this measure was to allow to the Jewish subjects of her Majesty the same rights and privileges as were enjoyed by the Protestant Dissenters and the Roman Catholics. He trusted to the generosity of the House, if these claims were founded in justice, and if they were based upon the great principles of civil and religious liberty, that they would disregard all minor considerations, and give their assent to the measure. Having referred to that part of the oath "on the true faith of a Christian," he reminded the House that the oath was directed against certain Roman Catholics in the time of James II. No reasonable apprehension could be entertained, that, if the Jews were admitted to Parliament, they would make use of any political privilege to weaken or injure the religion of the country as by law established. Having pronounced a high eulogium upon the Jews in their private and social character, he called upon the House to do away with the last remaining disqualification, which they could safely do on the grounds of truth and justice.

Sir R. H. Inglis repeated those objections against the admission of the Jews to Parliament which he had made on several former occasions. He trusted that the House would reject the motion of the noble Lord

A discussion then arose, in which Sir R. Peel, Mr. Napier, Mr. Wigram, and Colonel Sibthorp spoke against the motion; and Viscount Monck,

Viscount Bruntisfield, and Mr. Maurice O'Connell argued in favour of it.

Upon the division the numbers were—

For going into Committee	.. .. ..	231
Against it	.. .. ..	258
Majority	.. .. ..	27

The result was received with loud cheers from the Opposition.

The House then went into committee, when a scene of some confusion arose. The resolution affirming the propriety of relieving the Jews from their disabilities was then agreed to, Mr WALPOLE having observed that he thought it would be useless to take another division on the question.

The House having resumed, soon afterwards adjourned.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Venerable H. Cotton, of Christ Church (Archdeacon of Cashel), to be chaplain to the Lord Lieutenant of Ireland. The Rev. A. M. Wyatt, to the rural deanery of Aldersbury. *Rectories:* The Rev. J. Wenham, to West Chandon, Surrey. The Rev. W. D. Anderson to Milton Damerel, Devonshire; the Rev. J. O Ryder, to the Isle of Elmley Kent; the Rev. W. R. Parker, M.A., to Willingrale Spain, Chipping Ongar; the Rev. A. Bayman, M.A., to Charlton, Wiltshire. *Vicarages:* The Rev. J. F. Thrupp to Barrington, Cambridge; Rev. Alfred Kent, M.A., to Haresfield, Gloucestershire, the Rev. Richard Holmes, M.A., to Hapstinburgh, Norfolk; the Rev. Robert Reid Hall, to Uffington, Berks; the Rev. Robert Woolmer (Jury, M.A., to Horsey, Norfolk; the Rev. M. Onslow, M.A., to East Peckham, near Tunbridge; the Rev. R. W. Cory, M.A., to Horsey-next-the-Sea, near Yarmouth. *Incumbencies:* the Rev. George Poole, to Hanmerwich, Staffordshire; the Rev. F. Williams, to Saltley; the Rev. G. Purdue, B.A., to East and West Challow, Berkshire.

NEW CHURCH AT NORTH BRIXTON.—A very handsome and commodious church has been erected in some fields at North Brixton, known as the Angell Town Estate. It is built chiefly of Kentish rag stone and Portland stone, in the old English style of architecture. It consists of a nave, chancel, and two aisles, and the western entrance is surmounted by a handsome square steeple, beautifully ornamented, and capable of containing a peal of eight bells. Near the edifice is a commodious house, with the requisite offices, for the minister. Further beyond, near the old station house, very neat and extensive school-houses have been built, under the superintendence of the Government Inspector of Schools, which will accommodate four or five hundred children. They are built of red brick, and have a very handsome appearance.

ORDINATIONS.—The Archbishop of Canterbury, the Bishops of Chester, Oxford, Peterborough, Ripon, Worcester, &c., held ordinations on Sunday last.

TESTIMONIALS.—On February 16th a silver pencil-case was presented to the Rev. W. C. Adamson, curate, by the West Witton (Yorkshire) church choir. The Rev. J. Kirkman, late curate of Seagrave, Leicestershire, a presentation of valuable books, from the inhabitants of that parish.

UNIVERSITY OF LONDON.—A deputation from the senate of the University of London, consisting of the Earl of Burlington, Chancellor of the University, with Lord Monteagle, Mr. Lefevre, and Mr. Warburton, members of the senate, had an interview with the Earl of Aberdeen, on the 18th, at his official residence in Downing-street.

UNIVERSITY COLLEGE.—The annual meeting was held on Wednesday, in the Botanical Theatre of the University, for the purpose of receiving the report of the council, to elect officers for the year ensuing, and on other business; H. C. Robinson, Esq. (in the absence of Lord Brougham) in the chair. The report having been read and adopted, the president (Lord Brougham), vice-president (Earl Fortescue), the treasurer, council, and other officers were re-elected; and the meeting separated.

THE BISHOP OF LLANDAFF.—In consequence of the Bishop of Lincoln's death, the Bishop of Llandaff will accede to a seat in the House of Lords, but the new Bishop of Lincoln will not be entitled to a seat in Parliament until a vacancy shall occur in the episcopal bench, other than the archbishops of Canterbury and York, the Bishops of London, Durham, and Winchester. This arrangement takes place under the provisions of the act constituting the new bishopric of Manchester.—*Globe.*

A LETTER we have received this (Wednesday) morning, dated "Lincoln, Tuesday afternoon," says "Dr. Hook's is the only name currently reported in the diocese as likely to succeed Dr. Kaye in the see of Lincoln. It would, we believe, be a very good appointment if a working bishop is so much needed." In London Dr. Jacobson and Dr. Jelf are freely named, but of course without any authority. It is considered probable that Dr. Tyrrell, Bishop of Newcastle, will be raised to the metropolitan see of Sydney.—*Guardian.*

EDUCATION AND THE CHURCH.—A deputation of schoolmasters, consisting of Messrs. Dixon, Farnham, Gwallim, Ray, Marshall, Reid, Scott, and Stevenson, waited on the Lord President of the Council on the 11th inst., on a memorial against the assertions made during the last year in the minutes of the Committee of Council on Education on the subject of schools. After reading the memorial, Lord Granville observed that very shortly Lord John Russell would lay before the House of Commons the intentions of the Government. He hardly considered that it was the duty of the Committee of Council to listen to any grievances from schoolmasters, being fully assured that they would not base them on any frivolous grounds. His Lordship regretted that any difference should arise to make the clergy less anxious in assisting to carry on the work of education; and he thought it due to the schoolmaster, in the laborious duties he had to undertake, that the Government should assist in every way they could to raise his social position.

NAVAL AND MILITARY INTELLIGENCE.

THE GRENADIER GUARDS.—HIS Royal Highness Prince Albert, as Colonel of the Grenadier Guards, has expressed his intention of increasing, at his own expense, the band of this fine regiment from the present number (thirty-two) to the complement of sixty, in order that it shall be equal in strength to most of the Continental bands. It is gene rally known that the expenses of the bands of the British army are defrayed entirely by the officers (Government allowing only fourteen men to be taken off duty for the purpose of forming the band); so that this Liberal act of the Prince Consort will be highly estimated by his regiment.

WOOLWICH ROYAL ARSENAL.—Lord Raglan, G.C.B., Master-General of the Ordnance; H.R.H. the Duke of Cambridge, and Lord A. Fitzclarence, arrived at Woolwich at ten o'clock on Wednesday. The Royal and distinguished visitors proceeded to inspect the new machine for making Minié musket-balls, at the rate of 10,000 per hour; and the principle of the machine, and the mode of manufacture, were explained by Mr Anderson, the inventor; and its simplicity, and the perfect nature of the balls made by it, elicited the highest approbation of the visitors. The new smoke consuming apparatus was afterwards inspected; and then the newly-purchased horses for the Horse Artillery were paraded for inspection there being 1260 now with the batteries.

MAJOR-GENERAL SIR ROBERT NICKLE, accompanied by the officers of his staff (Captain King, 3rd Regt.; Mr. Wallace, Coldstream Guards), has embarked in the *Australasian* steamer, to assume the command of the troops in New South Wales.

THE "WINDBOUND."—Notice has been give that the Admiralty have despatched her Majesty's steamers *Vulture* and *Magicienne*, with stores, to cruise in the chops of the Channel, for the purpose of relieving such of the homeward-bound vessels as may be detained by the adverse state of the wind, and which may also be in want of provisions and water.

A HINT TO LORD HARDINGE.—On the celebration of the next birthday of her Majesty, it would not, perhaps, be inappropriate if the General Commanding-in-Chief were to give orders for field-days to take place throughout the United Kingdom on that occasion. The whole of the troops of the Line, Militia, and Enrolled Pensioners, and, in fact, every portion of the disposable force of the country, might be brigaded together where practicable, thus combining a suitable ceremonial and compliment with objects of instruction.—*United Service Gazette.*

ORDNANCE ESTIMATES.—The Estimates for 1853-4 have been published, and, as anticipated, considerably exceed those voted for the current year, 1852-3. The amount voted for the present year was £7,752,000, the amount required for the next year is £8,465,797; an increase of £713,797.

NEW LIFE-BOATS.—On Thursday some interesting experimental trials were made at Limehouse with two new life-boats, on the design of Mr. Peake, of her Majesty's Dockyard, Woolwich, built by the Messrs Forrestt, for the National Institution for the Preservation of Life from Shipwreck, to be placed at Whitehaven and Budehaven, Mr. Peake, the designer; Captain M'Hardy, R.N.; Captain Ward, R.N., the life boat inspector to the society, and several other gentlemen, were present on the occasion. The result of these trials was highly satisfactory.

TAX ON COALS.—It is shown by a Parliamentary paper printed in the present session, that in the year 1851, the duties on coals brought by land, at the rate of 1s. 1d. per ton, produced in the port of London, after the expense of collection, £12,971 5s. 7½d.; and on seaborne coals, £166,401 1s. 3d. The commissioners had ordered that allowances and the manner in which the said duties are levied.

THE TITHE COMMISSION.—The report of the Tithe Commissioners for 1852 have been issued. The commissioners, at the close of last year, had confirmed 13,711 distinct mergers of tithes or rent charges. Before the tithe commutation can be completed, the commissioners require additional powers.

CHESS.

TO CORRESPONDENTS.

H—BATH, Lansdown.—Your signature is quite unintelligible. We know nothing of the silly game called "Chess for Four." Be satisfied with Chess proper, and we shall be happy to [illegible].

G. W., Luton.—If Black's Kt were 1/2 node we solved in four moves, it would be worthless. You have not yet managed it, even in the

ALEXANDRINA, Islay.—No. You must play the King.

J. W. I., Shrewsbury.—Apply to Mr. King himself, at the Chess-rooms, 458, New Oxford-street.

A. A. W.—Any approved [illegible] will be given. In our Number for October 7th, 1852, is without [illegible]

JIM.—Your [illegible]

A. B. W.—Many thanks; we are right.

W. L. S., H. A. Mitchell, Plymouth.—Letters are at address, and shall be forwarded.

T. L. S., H. A. Mitchell, Plymouth.—Letters are at the Standing Chess [illegible] him to [illegible] particular occasion. 2. We never heard of such a thing as [illegible] having the King and Queen's pawns on the adversary's King, and neither party [illegible] Queen. 3. [illegible] Why—you not remember some parliamentary treatise, and [illegible] Lord Chesterfield, before attempting [illegible]

BRITISH [illegible]—The Secretary of the Edinburgh Chess-club is thanked for the [illegible] and also pledging soon us

L. [illegible] MEETING.—The account of this interesting anniversary gathering of the [illegible] shall be attended us, we regret to say, too late [illegible]

RICARDO.—They shall be reported on next week.

H. F. N., E. H.—You mistake: there is no Rook on the board in Enigma No 78.

READING AND BERKSHIRE CHESS-CLUB.—The annual dinner and meeting of this society is supposed to take place on the 9th inst. The Rook of Reading, and the 6th, and 7th, as we were erroneously informed

SAINT MUNGO.—We are desirous that our list should comprise every Chess society, large and small, public or private, in the kingdom. Secretary of the newly-made Rebel "St Mungo Chess-club," Glasgow, should therefore send us the particulars forthwith

C. and R., Liverpool.—They shall be examined, and our opinion given next week

W. H., Ross-hall.—The first two games of no Match have duly reached us

MAGOR [illegible], St. Petersburgh.—Your last batch-letter despatch has not yet arrived, and is [illegible]

T. [illegible].—The article is too long for our columns, and in other respects is unsuitable [illegible]

D. B. [illegible].—Will you favour us with a carefully-drawn diagram of the position, with the alterations suggested?

SOLUTION OF PROBLEM No. 473, by A. L. M., St. Cecilia, G. T. O., Ken-st, Adelphi, F. R. S., Alexander Maulens, Ostrea, X. Y. Z., L. S. D., A. M., G. W., Caxton, Palmerston, Tyro Blue, Miss A. P. Q. R., the old English style of architecture. It consists of a nave, chancel, and two aisles, and the western entrance is surmounted by a handsome square steeple, beautifully ornamented, and capable of containing a peal of eight bells. Near the edifice is a commodious house, with the requisite offices, for the minister. Further beyond, near the old station house, very neat and extensive school-houses have been built, under the superintendence of the Government Inspector of Schools, which will accommodate four or five hundred children. They are built of red brick, and have a very handsome appearance.

ORDINATIONS.—The Archbishop of Canterbury, the Bishops of Chester, Oxford, Peterborough, Ripon, Worcester, &c., held ordinations on Sunday last.

TESTIMONIALS.—On February 16th a silver pencil-case was presented to the Rev. W. C. Adamson, curate, by the West Witton (Yorkshire) church choir. The Rev. J. Kirkman, late curate of Seagrave, Leicestershire, a presentation of valuable books, from the inhabitants of that parish.

UNIVERSITY OF LONDON.—A deputation from the senate of the University of London, consisting of the Earl of Burlington, Chancellor of the University, with Lord Monteagle, Mr. Lefevre, and Mr. Warburton, members of the senate, had an interview with the Earl of Aberdeen, on the 18th, at his official residence in Downing-street.

UNIVERSITY COLLEGE.—The annual meeting was held on Wednesday, in the Botanical Theatre of the University, for the purpose of receiving the report of the council, to elect officers for the year ensuing, and on other business; H. C. Robinson, Esq. (in the absence of Lord Brougham) in the chair. The report having been read and adopted, the president (Lord Brougham), vice-president (Earl Fortescue), the treasurer, council, and other officers were re-elected; and the meeting separated.

THE BISHOP OF LLANDAFF.—In consequence of the Bishop of Lincoln's death, the Bishop of Llandaff will accede to a seat in the House of Lords, but the new Bishop of Lincoln will not be entitled to a seat in Parliament until a vacancy shall occur in the episcopal bench, other than the archbishops of Canterbury and York, the Bishops of London, Durham, and Winchester. This arrangement takes place under the provisions of the act constituting the new bishopric of Manchester.—*Globe.*

A LETTER we have received this (Wednesday) morning, dated "Lincoln, Tuesday afternoon," says "Dr. Hook's is the only name currently reported in the diocese as likely to succeed Dr. Kaye in the see of Lincoln. It would, we believe, be a very good appointment if a working bishop is so much needed." In London Dr. Jacobson and Dr. Jelf are freely named, but of course without any authority. It is considered probable that Dr. Tyrrell, Bishop of Newcastle, will be raised to the metropolitan see of Sydney.—*Guardian.*

EDUCATION AND THE CHURCH.—A deputation of schoolmasters, consisting of Messrs. Dixon, Farnham, Gwallim, Ray, Marshall, Reid, Scott, and Stevenson, waited on the Lord President of the Council on the 11th inst., on a memorial against the assertions made during the last year in the minutes of the Committee of Council on Education on the subject of schools. After reading the memorial, Lord Granville observed that very shortly Lord John Russell would lay before the House of Commons the intentions of the Government. He hardly considered that it was the duty of the Committee of Council to listen to any grievances from schoolmasters, being fully assured that they would not base them on any frivolous grounds. His Lordship regretted that any difference should arise to make the clergy less anxious in assisting to carry on the work of education; and he thought it due to the schoolmaster, in the laborious duties he had to undertake, that the Government should assist in every way they could to raise his social position.

NAVAL AND MILITARY INTELLIGENCE.

THE GRENADIER GUARDS.—HIS Royal Highness Prince Albert, as Colonel of the Grenadier Guards, has expressed his intention of increasing, at his own expense, the band of this fine regiment from the present number (thirty-two) to the complement of sixty, in order that it shall be equal in strength to most of the Continental bands. It is generally known that the expenses of the bands of the British army are defrayed entirely by the officers (Government allowing only fourteen men to be taken off duty for the purpose of forming the band); so that this Liberal act of the Prince Consort will be highly estimated by his regiment.

WOOLWICH ROYAL ARSENAL.—Lord Raglan, G.C.B., Master-General of the Ordnance; H.R.H. the Duke of Cambridge, and Lord A. Fitzclarence, arrived at Woolwich at ten o'clock on Wednesday. The Royal and distinguished visitors proceeded to inspect the new machine for making Minié musket-balls, at the rate of 10,000 per hour; and the principle of the machine, and the mode of manufacture, were explained by Mr Anderson, the inventor; and its simplicity, and the perfect nature of the balls made by it, elicited the highest approbation of the visitors. The new smoke consuming apparatus was afterwards inspected; and then the newly-purchased horses for the Horse Artillery were paraded for inspection there being 1260 now with the batteries.

MAJOR-GENERAL SIR ROBERT NICKLE, accompanied by the officers of his staff (Captain King, 3rd Regt.; Mr. Wallace, Coldstream Guards), has embarked in the *Australasian* steamer, to assume the command of the troops in New South Wales.

THE "WINDBOUND."—Notice has been give that the Admiralty have despatched her Majesty's steamers *Vulture* and *Magicienne*, with stores, to cruise in the chops of the Channel, for the purpose of relieving such of the homeward-bound vessels as may be detained by the adverse state of the wind, and which may also be in want of provisions and water.

A HINT TO LORD HARDINGE.—On the celebration of the next birthday of her Majesty, it would not, perhaps, be inappropriate if the General Commanding-in-Chief were to give orders for field-days to take place throughout the United Kingdom on that occasion. The whole of the troops of the Line, Militia, and Enrolled Pensioners, and, in fact, every portion of the disposable force of the country, might be brigaded together where practicable, thus combining a suitable ceremonial and compliment with objects of instruction.—*United Service Gazette.*

And wins.

(c) Now that Mohochunder seems thoroughly to have mastered the European openings we may look for sterner contests between him and his great opponent than they have yet exhibited.

(b) Mr. Cochrane remarked, truly enough, when making this move, that it was not the best. He should, of course, have played his K P to Q 4th.

It is the opening then obtained for the Rook which renders White's 7th move so injudicious.

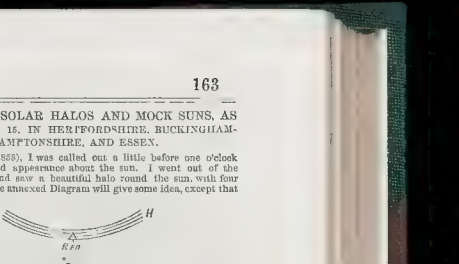
NORTHERN AND MIDLAND COUNTIES CHESS ASSOCIATION.—The great gathering of the members of this association, which is expected to be the largest chess meeting ever known, is arranged to take place at Manchester early in April. Full particulars may be known by application to the honorary secretary, Mr. A. Fisher, Kennedy-street, Manchester

MR. MATTHEW NOBLE, whose bust of the Duke of Wellington (engraved in the ILLUSTRATED LONDON NEWS of September 25) has been so much admired for its truthfulness of expression, has been commissioned by the East India Company to execute a statue of the lamented hero for their Court-room.

BRITISH TELEGRAPH COMPANY.—The wires of this company are in operation along some of the Scotch lines of railways, and will shortly be completed to Carlisle, when, by the Lancashire and Yorkshire Railway, a direct communication will be made by this company, between the capital of Scotland and the manufacturing districts of England and the port of Liverpool.

REMARKABLE SOLAR HALOS AND MOCK SUNS, AS SEEN ON FEB. 15, IN HERTFORDSHIRE, BUCKINGHAMSHIRE, NORTHAMPTONSHIRE, AND ESSEX.

THIS day (Feb. 15, 1853), I was called out a little before one o'clock P.M. to look at an odd appearance about the sun. I went out of the house accordingly, and saw a beautiful halo round the sun, with four parhelia, of which the annexed Diagram will give some idea, except that



the two faintest parhelia are not shown. The true sun was seen at A, and at a distance of 24 deg nearly (as measured roughly with a sextant); on each side a mock sun (B and C) was seen, displaying the prismatic colours, and having a tail, like that of a great comet darting out in an horizontal direction. Each tail was bright near the mock sun to which it belonged, but gradually faded away to a narrow white band; each white band running round a hemisphere of the heavens, *parallel to the horizon*, and meeting a little to the east of the north point; a fainter continuation of these white bands, uniting the mock suns B and C with the real sun A, was seen, as shown at B A, C A. The mock suns B and C had each a radiation extending downwards (in a circular direction to a small extent, but extending upwards to a much greater extent, and meeting at E, forming (as might be seen on a careful inspection), a complete semicircle, which was intersected at and near E by a wavy prismatically-coloured line D E F, shaped somewhat like a pair of bird's wings extended, and in the set of flying No mock sun was, however, seen at the point of intersection E. Above this, at a further altitude of about 21 deg. (or 45 deg from the sun), and not far to the south of the zenith was a beautifully-coloured segment of a circle, like the central part of an inverted rainbow (3 in) having *the red band* (as it is believed all the other coloured forms had also) *turned towards the sun.*

On the white horizontal belt before spoken of, two other mock suns, of a pale white or grey colour, were visible at the E.N.E. and N.W. points, being apparently equi distant from the sun. A similar appearance was looked for in the N.N.E., but could not be distinguished, although the belt there could be clearly traced.

The above appearance lasted, gradually growing fainter, till about 1.40 P.M.; after which it faded almost entirely away. It was never, however, quite lost, and became pretty visible at times till about 3.30 P.M. I saw all I had before seen (except the segment near the zenith, and the horizontal band with its two pale suns) pretty clearly at three P.M.; B was then well defined and coloured

I am told the phenomenon became visible at 12 10 P.M., or thereabouts, and that its greatest beauty was over when I first saw it at 12 57 P.M.

There were very few clouds about at one P.M., and what there were were principally *cirri*. The sun bore a considerable power, and the ground was quite thawed where its rays fell. The preceding night had been very cold and frosty. The wind at the time of the phenomenon was W.

Royston, Herts. HALE WORTHAM.

I enclose you a slight sketch of the beautiful phenomenon of last Tuesday, the 15th instant, as seen at Castle Ashby, Northamptonshire.

The day was frosty, and a few misty clouds were scattered over the sky. A little before twelve there appeared four distinct parhelia, all at the same height above the horizon as the real sun. The first two, distant from it on each side about 30 deg., were brilliant and almost dazzling, of small size, and tinged on the inside with orange or red passing to yellow colours. Some of us thought we traced the green on three prismatic colours on the other side, but these were certainly less distinct.

The second pair of mock suns were of a pale white light, not unlike small clouds in appearance; they were as large as the real sun, and situated 120 deg. from it, on a long line of similar light, which, streaming from the inner parhelia, extended a short distance beyond those last described.

There was also visible a small prismatic bow, forming, perhaps, a quarter of a circle, with its centre at or near the zenith, and its red convex side towards the sun, and at about 30 deg. from the latter above it. A small line of pale light, which might be either a part of a second bow round the first, or else part of a halo round the sun; but from its indistinctness it was impossible to decide which. It seemed about half way between the sun and the brighter bow.

The angles between the sun and parhelia were measured by lines on the snow, and are accurate within three or four degrees. The orange colour in the inner pair had a somewhat elongated appearance, as the three might have been parts of a halo, but this was not sufficiently distinct to admit of certainty

It is impossible in a sketch to give an accurate idea of an appearance extending over the whole sky; what I send you may be considered as what an observer might have seen, lying on his back, and looking at all parts of the heavens at once.

The phenomenon lasted about an hour and a half, possibly longer.

I remain, your obedient servant,

ALWYNE COMPTON.

PHOTOGRAPHY.

AT this season of the year, when clouds and fogs obscure the source of actinic energy, there is little to record in the way of progress. Abroad, as at home, photographers appear resting from their labours, anxiously awaiting the return of sunshine. We hear of several very interesting experiments in progress, the results of which, we hope very soon to be in a position to communicate.

THE PHOTOGRAPHIC SOCIETY. This society had its first ordinary meeting on the first Thursday in the month, when, after an address from Mr. Fenton, the secretary, a paper was read from Dr. Percy, on the Waxpaper process, in which he confined himself to pointing out the advantages of waxed paper in warm weather. Sir William Newton gave some account of his positive process; and Mr. Vignolles spoke of the engraving advantages which he derived from photography; as he, by its agency, obtained his copies of maps in reduced size, and of the sulphate of quinine in diluted sulphuric acid, exhibited this in a very remarkable degree, and it was found that by the last-named solution, a set of rays far beyond the ordinary rays of the spectrum, and connected with the chemical rays were rendered visible. If this result be confirmed it will materially facilitate the improvement of lenses for photographic purposes.

MODEL APPARATUS FOR EXHIBITION.—A request having been made to the Lords Commissioners of her Majesty's Treasury for a model apparatus for decomposing water, with the necessary chemicals, &c., arrived by the steamer from Antwerp, to be admitted entry free of clearance for duty, the same being intended for exhibition in this country, their Lordships have directed the authorities of the revenue to permit the admission of the machine in question, on bond being given for its re-exportation in a certain time from this country.

PRECIOUS METALS.—The imports of the precious metals last week were only to the extent of £11,350; whilst the shipments were even larger than usual for the last few weeks, and making nearly £650,000, of which £450,000 went in coin to Australia, and the remainder to the East Indies, principally silver. The shipments to the Continent appear to have ceased.

EXHIBITION OF THE BRITISH INSTITUTION.

THIRD NOTICE.

F. Goodall exhibits a single specimen of his powers, and that, in many respects, a very pleasing one, entitled "The Tired Gleaners." Here we have a group of children returning from the field of their labours, and laden with the spoil of the day; one chubby little fellow is leaning against a stile, whilst two girls are reclining upon a bank. The attitudes of the latter are, perhaps, a little artificial, more after the drawing-room fashion than the corn-field; but, barring this point, we have no other objection to make against this performance. The landscape is delicately painted in, and the tone agreeably autumnal

E. A. Goodall presents us with three of his nicely studied and nicely finished interiors. "The Interior of a Fisherman's Cottage, Brittany," is highly characteristic, the figures of the fisherman's family being evidently taken from the life. "The Sister of Charity" represents one of those pious females in the execution of her functions in the sick-room. The best of the trio, however, is unquestionably that entitled the "Grandfather—Britanny," introducing a girl at a spinning-wheel, the outer light being admitted upon the quaint apartment through a single square window of small dimensions, pierced through a thick wall.

H. L. Rolfe places upon the canvas a few of the finny tribe from the "soft-flowing Avon;" whose moist and glittering coats show they have not been long out of water. The votaries of the "gentle art" and the lovers of still-life subjects will find much to admire and little to find fault with in the dish here set before them.

In the department of landscape, Linton claims notice for two productions, both very mannered in treatment, but each with a peculiar character In the "Ferry" the clear crisp surface of the water, and the luxuriant foliage of the rocky shore at first command attention, and hold out inducement to a closer scrutiny. Closer scrutiny, however, reveals the trick of art with which these effects intended for a "respectful distance" have been obtained; the colours laid on in abrupt and heavy dabs, after the fashion of scene-painters. In the view "On the Thames near Windsor," the same style of handling is practised, and carried even to greater extent; the intended effects being neither quite so obvious nor so successfully realised. There is, probably, a notion of following the example of Turner (in his later day) in these experimental efforts; which, however, we cannot lend ourselves to encourage.

By poor Allen, whose sudden and lamented death we have lately had occasion to announce, there is in the present Exhibition one modest, but genuine, specimen of English landscape, exhibited by his widow, entitled "Early Morning in Swaledale, Yorkshire." This is, we fear, the last exhibition of modern artists in which we may expect to admire the labours of this very promising and much-respected artist.

Of philosophic, poetic, or sentimental subjects there are varieties in the present Exhibition. R. G. Kelly paints the horrors of "An Ejectment in Ireland" in a manner to move the sympathies of the sternest political economist, if not to gratify the sense of the critical observer. Ruthless policemen swaggering over kneeling and imploring females; whilst old men and infants are scattered helplessly in the *mêlée*. In a word, the subject is vulgarly treated, and, artistically, is of very inferior merits.

As a companion piece, we light upon T. Brooks's "Want and Abundance," exhibiting the interior and exterior of a nobleman's mansion on a cold winter's day. The canvas is divided into two compartments. In the one we behold the fat porter of the house, seated half asleep in the hall chair, with a handkerchief comfortably tied over his head. At his feet is a copy of *Bell's Life in London*, which reveals the nature of his accustomed studies, and the cause, perhaps, of his accustomed mid-day nap. In the other compartment are a widow and we forget how many children crouching within the portico of the great man's door. A carriage driving up, with two footmen behind it, gives indication that our interesting vagrants will soon have to remove from the position which they have taken up. The execution of this work presents no feature of merit to compensate for its inherent bad taste.

"Beware!" by H. Fitzcook, is a pleasant, and, in some respects, successful realisation of the heroine in Longfellow's lines:—

I know a maiden fair to see:
Take Care!
She can both false and friendly be:
Beware! Beware!
Trust her not:
She is fooling thee!

She gives thee a garland woven fair
Take care!
It is a fool's cap for thee to wear:
Beware! Beware!
Trust her not.
She is fooling thee!

Miss A. S. W. Daniel has a very clever *chiaroscuro* study of a female head, with a sable head-dress, described as "Her frolic Grace, Fitzfulke," and illustrating the well-known lines in Byron's "Don Juan."

Beneath "the doorway stood
The sable friar in his solemn hood"
"The ghost, if ghost it were, seem'd
a sweet soul
As ever lurk'd beneath a holy hood."

J. A. S. Mann has a fanciful subject, "The First Ear-rings;" representing a young girl, playfully decorating her ears with bunches of cherries, the effect of which she appears to admire greatly in the glass.

J. W. Glass's picture of "The Night March" occupies a conspicuous position in the middle room, and commands attention by its strong effect of light and shade, and the generally spirited character of the design (*See Engraving*). We have here a group of horsemen in armour crossing a ford; the rays of the moon falling coldly, and with mystic effect, upon their helmets and shoulders The execution, throughout, is entitled to high praise.

As a contrast to the cold aspect of the last-mentioned, we turn to G. E. Hering's masterly "Sunset in the Mediterranean." Here all is dippped in sunlight, and imbued with the warm and golden tints which the sun, even in its hour of setting, can bestow upon all within its range. The craft introduced upon the bright surface of the "French Lake," as the Mediterranean is called by some authorities, give life and character to the scene.

"THE NIGHT MARCH."—PAINTED BY J. W. GLASS.

DIORAMA ILLUSTRATIVE OF THE LIFE OF NAPOLEON.

A new historical diorama, or panorama, and purporting to be illustrative of the lives of Napoleon Bonaparte, Nelson, and Wellington, was opened to private view at 69, Regent's quadrant, on Monday evening. On attending, by invitation, we found that the description was a misnomer; the whole of the *tableaux*, with two exceptions, the battles of the Nile and Waterloo, being illustrative of the triumphs of Napoleon Bonaparte, a man who, the lecturer stated, was now "lamented and admired by all the world." The incidents of that man's career, though exciting enough at the time they occurred, have left no trace behind them; and their amplification at a moment when a better spirit pervades even the common herd of society than to admire empty deeds of martial daring, regardless of the wrong and suffering they entail, was an unprofitable labour. Many of the *tableaux*, executed, we believe, by Mr. Marshall were extremely cleverly painted, introducing occasionally striking effects. Amongst the most successful were the siege of Toulon—the battle of the Nile (before and after)—the retreat from Moscow the view of St. Helena, with the French fleet, under the command of the Prince de Joinville, awaiting the remains of Napoleon—and the grand ceremony of their re-interment in the chapel of the Hospital of the Invalides.

"SUNSET IN THE MEDITERRANEAN."—PAINTED BY G. E. HERING.

REMARKABLE ANTIQUARIAN DISCOVERIES AT CUMA

(From our own Correspondent.)

NAPLES, Feb. 14th.

No ancient city of Italy is more interesting to the antiquary than that of Cuma, the seat of Pelasgian, Tyrrhenian and Phœnician art and learning, when transplanted from the East to the shores of the Mediterranean. The extensive necropolis of the once important city of Cuma has, during the last few months, attracted unusual attention, from the fact of H.R.H. the Prince of Syracuse having there carried on extensive excavations with a perseverance and personal cost, for which the archæological world must be ever grateful

The tombs recently discovered have contained painted vases, scarabei ornaments of gold, combs, and glass objects; but the most remarkable discovery took place a short time since. In a Roman tomb were found two skeletons, with wax heads.* One of the wax heads (of which I send you a Drawing) is very complete, but the second had crumbled away. The remains are now in the Royal Museum of

WAX HEAD DISCOVERED IN A ROMAN TOMB, AT CUMA.

Naples, and furnish the only example yet known of a wax head being substituted in the tomb by the ancients for the natural cranium.

The question is, why were these two bodies buried with wax heads, no remains whatever of the bones of the real heads being found? Professors Fiorelli, Minivini, and Quaranta have discussed the question, and it appears to me that Fiorelli's view of the question will hold good. In the tomb, where these skeletons were discovered, a coin of Diocletian was found, which fact induces M. Fiorelli to suppose that the bodies were those of Christian martyrs of the third century; and that the wax heads were substituted by Christian friends after decapitation

The Roman law *secari percutere* did not allow the burial of criminals; but, then, it is observed, so far from Rome this regulation might have been evaded, and that the heads alone were claimed by the law. If such be the case, Christian friends are supposed to have taken casts from the heads of these victims, as there can be little doubt but that the drawing which I send you is a portrait. Such are the speculations of the antiquarian world here; probably, further reflection and study will throw new light on this interesting subject.

A very fine Temple, of the best period of Greek art, has also been discovered at Cuma, an engraving of which will shortly be published, by order of H.R.H. the Prince of Syracuse.

E. W. B.

* It should be observed that the eyes are of glass, and admirably executed.

KNEBWORTH, HERTS, THE SEAT OF SIR EDWARD E. L. BULWER LYTTON, BART.—GARDEN FRONT.

"MACBETH" AT THE PRINCESS' THEATRE.

THE success of the splendid revival of "Macbeth" at the Princess' is as indisputable as well-merited—it continues, and is likely to continue, to gratify her Majesty's liege for many an evening to come. We have already described the magnificent arrangements and accessories of the banquet scene; and now give an Illustration which will realise the scene to the sight as well as to the mind. The point of time taken is that when the ghost of the murdered *Banquo* appears in the centre of the table. *(See Illustration).* The effect of the apparition is, perfectly novel, as far as our experience of stage matters extends, and has evidently been inspired by a poetical feeling. There is something more than mere melodramatic mechanism in the invention and contrivance of such an incident. The dazzling illumination of the head avoids much that is unpleasant in the usual representation of the "gashes" on the brow, and preserves the sublimity and terror proper to a supernatural appearance. It is altogether in good taste. The acting of this scene, also, was superior. The great agitation of *Lady Macbeth*, while her guilty husband was suffering from the appalling nature of the vision, and the compunctious visitings of his conscience, and that remorse which clings to the murderer's memory in spite of himself, was finely interpreted; while Mr. Kean's apostrophes to the *Ghost* were rendered with great power and beauty.

The general accessories of this scene are as excellent as the particular device to which we have referred. The gallery of bards, and the groups of guests, in their peculiar costumes, rude and grand as they are, take the mind back to the period of the action of the play, and add an antiquarian value to the presentment, which may assist the serious student, as well as attract the amusement-hunting playgoer The performance is, indeed, full of the best instruction.

Altogether, the management have done well; and it is but justice to award them all possible commendation.

KNEBWORTH, HERTS.

THIS ancestral home of one so various and accomplished as to unite in himself the characters of the dramatist and poet, the novelist and statesman, will, doubtless, prove a welcome scene to every one of our readers. The abodes of men of genius have ever possessed great attraction for cultivated minds; and when to this living interest is added the historic vista of centuries, in the transition from the hill fortress of the Norman period to the castellated mansion of the Elizabethan age, much may be expected from the olden story of such an abode, and its eventful associations; as well as from the instant interest which attaches to the present distinguished owner. Such is Knebworth, in Herefordshire, the seat of Sir Edward Earle Lytton Bulwer Lytton, Bart., who, succeeding to the Knebworth estates by the will of his mother, took the surname of Lytton by sign-manual

Knebworth, which is placed upon the highest elevation in the county, was held as a fortress by Eudo Dapifer, at the time of the Norman Conquest. In the reign of Edward II. (says Mr Burke, in his recently published "Visitation of the Seats and Arms of the Noblemen and Gentlemen of Great Britain") it was possessed by Thomas de Brotherton, fifth son of King Edward I. His eldest daughter and coheiress, Margaret, brought the lordship of Knebworth to the celebrated Sir Walter Mauny, Knight of the Garter; and at his decease she continued to hold it under the title of Duchess of Norfolk. From her Kneb-

"THE BANQUET SCENE" FROM "MACBETH," AT THE PRINCESS' THEATRE.

worth pastel to her daughter and heir, Anne, wife of Richard, Baron Lord Earl of Pembroke. It was then sold to Sir John Motoft, treasurer of the household to Henry VI. From him it went to Sir Thomas Bourchier (son to Sir John Bourchier), Knight of the Garter, and was purchased of him by Sir Robert Lytton (of Lytton in the Peak), a Knight of the Bath, Privy Councillor to Henry VIII., keeper of the wardrobe, and under-treasurer. Sir Robert Lytton immediately set about enlarging the fort; and the work was continued by his successor, Wymark de Lytton Governor of Boulogne Castle and was completed in the reign of Elizabeth by Sir Rowland de Lytton, Lieutenant for the shires of Hertford and Essex at the time of the Spanish invasion. Queen Elizabeth frequently visited Sir Rowland at Knebworth; and the room in which she slept at the time of the Armada is preserved, and named "Queen Elizabeth's Chamber." This house many, in some measure, be attributed to Sir Rowland's relationship to the maiden Queen, by his marriage with Anne, daughter of Oliver Lord St. John of Bletsoe, and great granddaughter of Margaret Beaufort (grandmother to Henry VI.), and cousin to Queen Elizabeth. The present distinguished possessor derives the Knebworth demesne from his mother, sole heiress and representative of the families of Lytton and Robinson, or Norreys de Glaersvit in Denbighshire.

Knebworth, thus an ancient and castellated mansion of early Tudor character, was a large quadrangle with outer walls and court, the east front or gateway having in truth been a portion of the ancient fort. For many years it was but in part inhabited; till, in 1811, Mrs. Bulwer, the mother of Sir Edward, commenced the restoration; which three sides were, of necessity, removed, and the fourth side built by Sir Robert de Lytton, in a style resembling Richmond Palace, and erected in the same reign was restored its embattled tower and turrets are seen from the Stevenage station of the Great Northern Railway, from which Knebworth is about two miles south, lying about 29 miles from the metropolis. The accompanying View is taken from the garden, and shows one of four faces, the chief entrance to the mansion being on the opposite side. The mansion originally extended to the village church, a hove-stone distant.

The principal apartments are the banquet-hall, the oak drawing-room, the library, and the great drawing-room or presence chamber. The hall ceiling is of the age of Henry VII., the room, Elizabethan; the chimney-piece in the style of Inigo Jones; and the walls are hung with suits of armour. A door leads to the capacious cellar, whither, in the olden time, it was customary for the gentlemen to adjourn after dinner from the hall, to finish their potations. Another door leads to the oak drawing room, where, *temp.* Charles I., the great Parliamentary leaders—Pym, Elliot, and Hampden met their foretch supporter, the Sir William Lytton of that day. The library, fitted up in the style of Henry VII.'s reign, contains two bronze candelabra, with lamps of bronze inlaid with silver, dug up in Apulia, on the site of the palace of Manfred, Queen of Naples, and supposed to be genuine Roman antiquities. The room has a fine ancient chimney piece

A double flight of stairs leads to the state-rooms; the carved balustrades supporting the lion rampant, one of the ancient family crests. The staircase is hung with armour and trophies, and family portraits; and the windows are blazoned with descents from the alliance with Barrington and that of the St. Johns.

The first state room has stamped and gilt leather hangings, carved panels, and an armorial ceiling. The long ante-room is hung with bugle tapestry (very rare). Hence an oval drawing room conducts to the old presence-chamber (now the oak drawing room), with armorial ceiling and windows charged with ninety nine quarterings. The furniture includes items of the 7th and 8th Henries' reigns, portraits of rare historic interest, as one from the Crusades to the Civil Wars; and some fine specimens of Italian and Dutch art. Over the hall is the music-gallery, communicating with the Round Tower chamber; whence a corridor leads to the Hampden chamber, where John Hampden once slept; and beyond it is Queen Elizabeth's room.

The out door demesne of Knebworth is stately; the gardens are environed with a deer-park of 400 acres, interspersed with avenues of aged limes, chestnut, and oak. The owners of Knebworth have a right of free warren over the surrounding districts, granted to them in the time of James I.

MUSIC.

NOTES OF THE WEEK

The fine performance of Handel's "Messiah" at Exeter-hall, by the Harmonic Union, last Monday night, under Benedict's direction, will increase the reputation of the new society. The solo singers were Mrs. Mims Reeves, Miss Dolby, Mr. Sunderland, Miss Dolby, Messrs. Lawler and Phillips; with Mr. Morgan as organist.

The English Glee and Madrigal Union (Mrs. Endersohn, Miss Williams, Messrs. Lockey, Hobbs, Foster, Barnby, and Phillips) held their third meeting, at Willis's Rooms, last Monday evening.

On Tuesday night, Mr. Sterndale Bennett gave his second performance of classical pianoforte music, at the Hanover-rooms, assisted by Pratti, Molique, Baumann, Hagye, Williams, Nicholson, and Miss Dolby. The interesting items in the scheme were Mr. Bennett's masterly sonata for pianoforte and violoncello, and Mozart's quartuor for piano and wind-instruments.

The sixth of Mr. G. Forbes's St. John's-wood subscription *soirées* took place last Tuesday, with the co-operation of Madame and Signor F. Lablache, Mr. Benson, Misses Messent and Ransford.

On the same evening Mr. T. Williams gave another of his now musical and anecdotal entertainment, "English Music and English Musicians," at Camberwell Hall, introducing notices of Bull, Barnett, Macfarren, &c.

An evening concert was given on Tuesday, at Crosby-hall, Misses Poole, Messrs. St. Jacob, Lindsay Sloper, Lockey, Bodda, Dando, Case, Benjamin, and the Distins being the principal artistes.

Mr. Lucas, the composer and violoncellist, commenced his annual series of of agreeable musical evenings last Wednesday, aided by Herr Pauer, Sainton, Cooper, and Hill.

On the same night Mr. C. Salaman, the pianist and composer, began his series of *soirees* of classical pianoforte music; Piatti, Blagrove, and Miss Birch being the chief artists.

On Thursday Mr. Lindsay Sloper had his second pianoforte *soirée* at the Queen Anne-street Rooms; Misses Dolby and Ransford, Messrs. Bodda, Dando, Pratti, and Benedict afforded their valuable aid.

The performance of "Handel's "Judas Maccabeus" at Exeter-hall, on the 18th inst., has met with universal approbation; Costa conducted the forces of the Sacred Harmonic Society with the greatest amount of skill. The principal vocalists were Miss Dolby, Miss Deakin, Miss F. Huddart, Mr. Sims Reeves, Mr. T. Williams, and Mr. Phillips. The oratorio, which seems to grow in public favour Like the "Israel in Egypt," is to be repeated next Friday. The third Mr. Ella's Musical Winter Evenings will be given next Thursday. The announcement of the Harmonic Society this season are more than ordinarily interesting. Many novelties are promised, and the engagements of Viardot, Madame Castellan, Mdlle Clara Novello, Madame Frezzolini, Mdlle Dulcken, Miss Williams, Lablache, and Belletti will render the vocal department of the highest importance. Mr. Costa is the conductor of the eight concerts

The *Museum des Arts* held their first meeting on Wednesday night in Harley-street

The fifth monthly concert of the Whittington Club took place on Thursday evening, under the direction of Mr. G. A. Cooper. The following were the artistes—Miss Alyn Stewart, Miss Rose Stewart, Mr. Cooper, Miss C. Felton; Messrs. A. St. Albyn, G Ferren, Aynsley, Herr Jongmans, Herr Stebling, and Herr Anschuss (conductor).

The Greenock Philharmonic Society brought their concerts to a close on Friday week. The season has been a satisfactory one in every respect, its success being principally owing to the unwearied exertions of the secretary, Mr. T. R. Lamont, to whom the musical lovers of the west of Scotland are under great obligation for originating the idea and carrying out the plan of these concerts in such a liberal manner. The last concert on the following artists:—Vocalists—Mrs. Newton, Misses Stewart and Thirlwall, Messrs. Locke, Thirlwall, and Pratten Soloists: I. Harper (trumpet), C. Harper (horn), Nicholson (oboe), Hausman (violoncello), F. E. Pratten (flute), F. Pratten (contra bass), Thirlwall and Watson (violins), Maycock (clarionet), Galloway (pianoforte), Larkin (bassoon), Horton (trombone).

Mdlle. Cruvelli, at the Italian Opera-house in Paris, has been at law with her manager; but, after a hard battle, the *prima donna* has promised to give up "sudden indispositions," and the director has pledged himself that the visits to the treasury shall be duly honoured

Madame Castellan has arrived in town from Lisbon, for her engagement at the Royal Italian Opera.

Madame Medten (a native of Germany), who is a very clever singer of Russian, Swedish, Hungarian, and Danish melodies, is now in London

FOREIGN WOOLLENS.—The Customs authorities have, with reference to the 39th section of the Act 5th and 6th Vict. chap. 81, allowed plain woollen foreign shawls to be taken out of bond for the purpose of being bleached, dyed, and printed, upon security being given to return the goods into warehouse within six months; an account of the lengths, qualities, and descriptions of the shawls being taken before removal from the warehouse in a book to be kept at each station, for the purpose of identifying the goods on their return, agreeably to the regulations of April, 1850, respecting silk goods

SPECIE AND BULLION IN THE BANK.—From a Parliamentary paper printed on Monday, the specie and bullion in the Bank of England amounted, on the 5th of January last, to £20,817,062, the largest amount for a long time. On the 8th of January, 1852, the amount was £17,567,561.

THE ILLUSTRATED LONDON NEWS.

THE THEATRES.

GENERAL REVIEW OF THE DRAMA.

On the present occasion we are called on for a more extended review of recent dramatic proceedings than usual, not only as occupying a longer period, but on account of the importance of the topics. *Apropos*, too, we have received a "Dramatic Register for 1852," full of statistical facts in relation to the drama, and of much utility for purposes of reference

The chronicler's survey extends over twenty-seven theatres. The records during the twelvemonths the production of 226 pieces by 122 authors! The result, we confess, astonishes us. Fifty three pieces by, in some measure, playwrights, also, are to be added to the sum total of stage *littérateurs*. This is a goodly amount of labour, and a goodly number of labourers. Add to the latter the multitude of performers, and the theatres will be found to constitute a large commercial interest, hitherto much misesteemed, and too much neglected. The fact that all the theatres have been let, and in a flourishing condition, testifies to the existence of dramatic appetition in the masses: nor are we without evidence that even at the cheap theatres the public taste is good, sterling, and true. At the CITY OF LONDON Theatre the legitimate drama has been much more frequently performed than melodrama; and at the STRAND, where melodrama is encouraged, we find it recorded that Mr. J. W. Wallack received £60 a-week for performing in Shakspearian and other five-act plays. Add to these facts, that SADLER'S WELLS—another cheap theatre, though not so cheap—lives on the legitimate drama, and a fair case is made out, we think, in favour of the popular taste

The last-mentioned theatre was the arena where one of the anonymous authors above enumerated asserted his claims. His production was a five-act play of specific structural merits, though in other respects deficient. It presented the skeleton of a drama, calculated to stay rate to excite curiosity, if not to challenge sympathy. In the early acts of "Might and Right," a series of problems was given for solution, and successively resolved it. The mind of an audience is unquestionably interested by such a movement; but it should be ancillary to higher purpose, and not principal. It may be made the vehicle for high poetical expression, for intense feeling, for tragic emotion more or less profound. But, in itself, curiosity is too mean a passion to support a prolonged dramatic interest on its own account. It requires that we should be strongly concerned beforehand in the characters and situation of the piece; that we should be justified by the importance of the argument, and elevated by its associations. But it is impossible to create such an interest by mere sketches of character—by a sudden introduction of them in *medias res*, without imparting a knowledge of their antecedents, and cunningly providing an element for the development of their passions. Even the most artistic structural arrangement of given materials, without such provisions in the conduct and prior form, will not be found to constitute a sufficient method for a true dramatic work of art, extending to the length and elaboration of five acts. Shakspeare's dramas, deficient as they are in the mechanical arrangements in which modern play-writers, learned in the French school, are adepts, present, nevertheless, the best models for the requisite organic life, without which those arrangements are merely clever formulæ, convenient enough for the due marshalling of topics already furnished, but fatally deceptive when applied as substitutes, as they too often have been, for either story, subject, or character. These remarks hold good against the foreign original of "Might and Right." To the translator appertain only the short-comings touching poetic diction, which is too scantily supplied to the dialogue, whether for the support of the sentiment or the expression of the emotion. The praise, however, cannot be bestowed on the novelty of the argument and scene—important items, which make the experiment highly meritorious; and we can only regret it was not more permanently successful than it is proved to have been.

The PRINCESS'S Theatre has delineated, this season, to outline all contemporary efforts in the spectacular revival of Shakspeare. The resources brought to bear on the production of "Macbeth" are enormous, both intellectually and pecuniarily. It is obvious, however, that if Shakspeare's plays can receive the distinction of these funereal and gorgeous adjuncts, their performance under ordinary circumstances is rendered impossible. Who will pay for seeing the mere setting of *Macbeth*, after having seen it as a stage play in the Princess's, as well acted as it can be, with scenic and spectacular appointments that defy competition. It is due to the name and genius of Shakspeare that these honours should be rendered to him; but, under these conditions, he can but rarely be performed. In the meantime, an interval is thus created for the introduction of new pieces, which must attract by their novelty at least as much as by their accessories. It is to the credit of this management that their present revival runs concurrently with Douglas Jerrold's performance of a new piece of no slender merit as a literary composition Never was Mr. Douglas Jerrold more happy in his dialogue than in his "St. Cupid; or, Dorothy's Fortune." There is a delightful harmony of modifying the style of the wit, and restraining it within due limits, that adds to the enjoyment of this drama during the perusal. It is, undoubtedly, delightful reading. While acted as it now is, it is also delightful acting to listen to the literary dialogue of the work rather than the dramatic, and who compound for action in favour of truth, point, and delineation of character

On the score of its literary merits, the drama of "Masks and Faces," at the HAYMARKET deserves to have frank acknowledgment. The joint production of Mr. Tom Taylor and Mr. C. Reade, it was composed with more than ordinary care. The writers have also written a novel on the same theme, and including much of the dialogue of the play therein, therefore, much casting and recasting of the argument. The narrative portion, the story, had been well considered; and the relations which the work bore to the closet were as much regarded as those it bears to the stage. The aim also is high, and there are care and finish in the details not often met with in the domestic drama. The piece, though divided into two sections, is as long as some five-act plays; and in its style and character merits to be accepted as a first-rank comedy, without regard to the number of scenes or acts. The true legitimacy of a play is irrespective of such considerations. It may fall short of or exceed the pentad, according to the exigency of the subject or treatment, and yet preserve the title to legitimate drama. Now that the stage is free, there is no necessity for the poet, painter, or sculptor to compress with a mere act-of-parliament definition. The cause is altogether removed into a higher court of criticism, and the merit of pieces is to be ascertained by the amount in them of intelligence, art, and literary research. The form, indeed, of every good work is according to its inner spirit, and grow out of it. Where this is the case, there have we a legitimate product, whatever its length, and whatever the number of its links. And in every such play there may be scope for the best and greatest acting; and the highest artist may make or mar, increase their reputation in it, without regard to the mere formal limitations, wherever such scope is afforded. It is, therefore, a real benefit to the stage whenever such a piece as "Masks and Faces" is produced. By setting an example of moral elevation in such a drama, an improved standard is secured for the workers in its walk, and those who are ambitions of a loftier level are compelled to yet more arduous efforts to secure the coveted distinction. Regnier's group—real, living, human, familiar, yet unique; common, yet picturesque. Other portraitures are mere sketches—but such sketches: including *Sir Charles Pomander*, *Mr.* and *Mrs. Vane*, *Colley Cibber*, *Quin*, and the critics. The old stage-apology is dashed off to the life—the man himself stepping from a picture-frame in appropriate costume—a record of the past age of gallantry, full of self-conceit, and conscious that he is its representative. Of *Miss Clive* we do not think so highly. The authors have evidently leaned to make too much of her, lest they might interfere with their portraiture of the heroine. It was a wise caution: such prudence is not to be censured

The principal author in the composition of the above drama has also lately distinguished himself by a five-act drama produced at DRURY-LANE. The failure of Mr. Fitzball's second version of "Uncle Tom's Cabin" made room for Mr. C. Reades's "Gold." In this drama the author had free scope to develop his theme without any reticence or mental reservation. The play just mentioned gives rise to important reflections. One thing is generally desired: that ideal; which, after all, still haunts this real life of ours, and in its most populous thoroughfares "moves like a ghost." Even the Australian scenes depicted in the drama of "Gold" testify to the yearning after the ideal. The activity with which books of travel, discovery, and adventure are devoured by the general reader, witness to the same principle. The distant, and even the past, accordingly, might be put upon the boards in the newest, freshest, and most graphic manner, and the imagination thereby and thereby thrown on ancient cities and seats of power by modern investigators. Here is a wide field open for the ideal. The sentiment, moreover, might be appealed to in conjunction with the real, in the revelations of the past, the recent Assyrian explorations being rendered palpable and visible. Let the dramatist appeal to these sources of information and interest, and thus bring the ignorant playwright to a discount, and place upon the national stage the living wonders hitherto confined to the archives of the learned in the libraries of the wealthy and intellectual. This would be the way to transfer the audiences of the lecture room and the Mechanics' Institute to the theatre. To some extent this object was effected by the production of "Gold." But the fortunes of the theatre are now on the decline. M. Casimir Delavigne's "Louis XI." was injudiously placed on the stage, and scarcely lasted a week, as might have been expected. Original, and not translated works, are those which should be found on the stage of the national theatres.

The OLYMPIC has produced, since our last resumé, two pieces in chief—"Lilian Gervaise," a version from the French—and an imitation of Mr. Reades's "Gold," under the title of "Life in Australia." The first is brief, but not a success; the second, long, and the latter is little more than a piece of stage spectacle.

The LYCEUM has depended on its extravaganza, in the pictorial illustrations of which it has exceeded all its competitors. The audiences, however, during the last week or two, have fallen off.

Irrespective of any theatre, though produced at the Haymarket, the comedy of the "Guild of Literature" deserves separate consideration, as a purely literary work for a literary purpose, originally performed by literary men, and scarcely elevated by its transference to a public stage In some particulars, the performance of Sir E. B. Lytton's "Not so Bad as We Seem" is improved by professional acting; but the difference, except in two instances, is not extraordinary. In two instances, also, we prefer the original representatives; and in the remaining parts the effect was about equal. Acting, as an art, is no doubt difficult; but an aptitude for acting is almost universal. This was, indeed, remarked long ago, by Aristotle, who pointed out the tendency of the child to imitation. The "little actor," as Wordsworth calls the infant, continually "cons another," and yet another "part;" and as "all men and women," according to Shakspeare, "are merely players," so is not imitation common to wonder at. The rage of private theatricals are among the many proofs of the growing taste of the times in favour of dramatic exhibitions.

OLYMPIC

This theatre, following the example of its larger neighbour, has ventured upon an emigration piece, entitled "Life in Australia, from our own Correspondent." The heroes are two Irish brothers and a [illegible] rivals in love, become exiles in consequence of one because he thinks he has committed fratricide, and the other because he has escaped stabbing, but not from the malice of enterprise. The first acts the part of a moonlighter, and the second assumes that of a digger in the police. The journalist, to witness a dance of the natives, disguises himself as a female. Both it and the aforementioned "Lilian Gervaise" have been found to depends for success, but on its Australian tableaux, representing the joyousness and other picturesque incidents of the diggings. They were sufficient to procure for it the requisite applause

ST. JAMES'S.

M. Raval took his benefit on Wednesday in "L'Etourneau" and "La Rue de la Lune;" and performed *Pelit* and *Bernard* with his usual talent and humour. But the last appearance of this great actor is restricted to this evening, the pieces being "York" and "Le Chevalier des Dames."

DIED, on the 20th inst., in Sloane-street, at the residence of her son (Mr. Henry Mornecastle, of the Lyceum Theatre), Mary Hornecastle, in her eighty-third year, universally beloved and respected by a numerous circle of relatives and friends. She was the widow, first, of Mr. George Hornecastle and Mrs. W. Watson, formerly of Covent-garden and Drury-lane Theatres, and both deceased

WHAT IS A NEWSPAPER?—The Society for the Abolition of Taxes on Knowledge have taken a bold step, in order to test what it is that constitutes news. Their secretary Mr. Dobson Collett, has issued a weekly paper, unstamped, to be entitled weekly, called "The Fetters' Free Press." In the first number, the secretary, in a "leader," signed with his name, dated from the office of the paper, and addressed to the Board of Inland Revenue, thus states the case:—"After four years' study of the question, 'What is news?' I find myself unable to understand what is the rule acted upon by the authorities. From the severity used by your non-board towards the *Newark Reformer*, and the *Wakefield Examiner*, I should say that 'News is something that must not be published unstamped out of London.' From the peculiar style of the judgment in the Court of Exchequer, I should imagine that 'News is something which Mr. C Dickens does not publish;' but what this something is I am unable to discern. It is not the record of Parliamentary proceedings; Hansard publishes that every week. It is not the account of such events as the Duke of Willington's funeral; that was chronicled in the *Builder*, which also contains many excellent law reports. It is not the status of matters in the north; Newmarket and Epsom; both are reported in the *Racing Times* and the *Racing Telegraph*. It is not on account of the proceedings of associations of working men; these appear weekly in the *Reasoner*. Information on foreign affairs is to be found in the columns of *Punch*." He then places himself under their surveillance, feeling assured that he is acting illegally, they will stop him; but expresses a hope that the board will not let older offenders off without punishment.

DIETARY OF THE GREENWICH PENSIONERS.—A new dietary has recently been introduced for the veterans in Greenwich Hospital, at the recommendation of Dr. Sir John Liddell, C.B. The changes throughout the week, from simple boiled meat and broth, have been as follows, and received the following is the scale now adopted:—Sunday: baked beef (equal to roast beef), Yorkshire pudding, and potatoes. Monday: boiled mutton, rice broth, and potatoes. Tuesday: corned pork, pea soup, and potatoes. Wednesday: baked mutton and Yorkshire pudding. Thursday: corned beef, carrots, and potatoes. Friday: boiled beef and macaroni soup. Saturday: same as Tuesday. The pensioners have a daily allowance of a quart of good beer

THE DETECTIVE SYSTEM IN OUR POST-OFFICE. Letters continually pass through the post-office offices to test the honesty of employés when suspicion attaches to such offices. These letters are called trap and sometimes detective letters. No one is allowed to send these but with the direct sanction of the Postmaster-General. A short time since a detective letter was sent to an office in the country, and it not being forthcoming at the proper time, the whole staff were rigidly but privately watched without any clue to discover as to what had become of the letter. It turned out, however, that the trap letter had arrived at the suspected office but had been mis-sent with other letters to another office previous to the search for the missing made

THE WEATHER.—The frost which set in last week continued up to Wednesday morning, when a thaw commenced, but, by six o'clock in the evening, severe gusts of wind again brought on very sharp freezing. The various pieces of water in the Parks have been crowded, and several accidents took place—on the whole, with little loss of life; the principal loss being three men drowned in Sir John Duckett's Canal, near Victoria-park, and one in the Serpentine.

SALE AND PURCHASE OF LAND BILL.—This bill, which has been introduced by Mr Henry Drummond, provides machinery for the registration of titles, and for the manner of conveyance, future sales, a simple transfer. A title once on the register shall be held as real property.

CUSTOMS.—Mr. Lushington, [illegible] one of the commissioners of Customs, recently deceased, was the oldest member of the existing Board of Customs. Mr. Lushington had suffered from severe illness for a long time, and [illegible] retired from the public service. His post as Commissioner had not been filled up.

PROVINCIAL INTELLIGENCE.

REFORM DINNER AT BANBURY.—The annual dinner of the reformers of Banbury took place on Tuesday last, at the Black Horse Hotel; T. R. Cobb, Esq., the well known banker, in the chair. Amongst the gentlemen present were H. W. Tancred, Esq., M.P., the member for the borough; the Mayor of Banbury; Aldermen Goss, Payne, and Stevens; R. H. Rolls, Esq.; F. Francillon, Esq., &c.; also William Little, Esq., and Edward Watkin, Esq., of London. After the usual loyal toasts, the health of Mr. Tancred was drunk; and, after various toasts and sentiments, the freedom of the press was given, in connection with the health of the strangers present. The chairman paid a very high compliment to the ILLUSTRATED LONDON NEWS, stating that paper to have done more to hold up to the public reprobation the iniquities of Continental tyrants, than any other journal, and that its circulation one of the best and soundest of the existing means of popular education.

A SUBSTITUTE FOR CHURCH-RATES.—The Rev. W. E. Bennett, the Vicar of Frome, in his sermon on Sunday evening, announced his intention, for the future, in lieu of Church rates, to have a collection in his church, with the o ory, every Sunday morning; also a collection at the Sunday evening service once a month; by which he hopes to raise a sufficient fund for all the Church purposes in his district, including schools, library, &c.

THE LARGEST VESSELS EVER BUILT IN DUNDEE.—There are now in process of building two of the largest vessels ever built at Dundee. In Mr Stephen's yard, where the *Marmion* was built, a vessel of about 1000 tons is being built under cover, which will entitle her to class higher at Lloyd's; and the Ivy Ship-building Company are also building a vessel of upwards of 900 tons.

MELANCHOLY AFFAIR.—A Southampton solicitor, named Phillips, has been missing for nearly a fortnight. It was stated that his mind was affected. The general impression was that he had been murdered while wandering about, and his body concealed. Intelligence, however, concerning him has been received; a policeman arrived last week with the news that the unfortunate gentleman had been found in an outhouse at Droxford, in Hampshire, about sixteen miles from Southampton, perishing from cold, hunger, and distress of mind.

FORGERY AT LIVERPOOL.—A young man, named Josiah Wilberforce Bell, clerk in the office of Mr. M. H. Marrypriest, merchant, of Liverpool, has been charged with having presented a forged cheque at the Royal Bank in the name of his employer, and obtaining upon such cheque the sum of £91 16s. 7d. He was committed for trial at the assizes.

THE TEN HOURS' AGITATION.—A great meeting of the factory operatives of Royton, near Oldham, has been held in the large room of the Temperance Hall, which was crowded to excess, on the subject of the Ten Hours' Bill. Many parties were unable to obtain admission, owing to the greatness of the number present. The meeting was of a most cordial and enthusiastic character. Henry Cooper, Esq., the most extensive manufacturer in Royton, was the chairman.

THE DEVONPORT SHIPWRIGHTS.—Some shipwrights, mostly young men, recently went to the agent of one of the passenger ships about to sail for Australia, and paid portions of their passage-money for that colony. In consequence of an order of the Admiralty for some years' standing the leading men of the shipwrights have been liable to have their pay less when the dockyard is slack, and they are working on job and task, although the men themselves should have an increase of wages. This was considered a great hardship. The leading men of shipwrights having joined these matters before the Lords of the Admiralty, their Lordships have replied, conceding the prayer of the petition to relieve the leading men from any deduction of wages in consequence of the work of the yard being by job and task instead of day work.

DESTRUCTION OF WHITBY THEATRE.—On Thursday night week the theatre at Whitby, with the adjoining tavern, were destroyed by fire. There had been no performance in the theatre for some weeks, and the fire is stated to have originated in the bar of the tavern.

THE SNOW ON DARTMOOR.—On Thursday week a farmer, who was looking for some lost sheep, stumbled over a box of jewellery, and, on searching beneath the snow, found the body of its owner, a Jew pedlar, about thirty years of age. He had perished during Tuesday night, the warders of the prison heard frightful screams for assistance, but did not go out, it being contrary to their instructions. Convicts have been occasionally employed in clearing the road over the moor, which is, on an average, fourteen, and in some parts twenty, feet deep.

SNOW STORM IN SCOTLAND.—The snow storm in the north of Scotland has been unusually severe. The trains to Aberdeen have been shut out of time, and the mail to the north of Aberdeen have been mostly carried on horseback. In the higher districts the snow is lying from ten to twelve feet, and it is to be feared that many sheep have perished on the hills.

DUBLIN SCHOOL OF DESIGN.—The annual distribution of prizes to the most successful male pupils in the School of Design took place in the Board-room of the Royal Dublin Society on Monday evening. The Lord-Lieutenant presided; and after addresses from Mr. H. Kemmis, Q.C., and Dr. W. Barker, his Excellency delivered the prizes to thirty-seven, who had excelled in their respective departments.

THE GREAT WILL CASE.—Judgment has been given in the Review Court, Dublin, in the apparently interminable will case of Kelly appellant, Thewles respondent. Baron Pennefather pronounced the unanimous decision of the Court in favour of the respondent, thus affirming the will of the late Mr. Edmund Kelly, of Rockwood, Roscommon; and reversing the decision of the Court of Delegates, before which the case was heard on a former occasion. By this decision property to the extent of over £300,000 reverts to the appellant.

SLANDER.—The Court of Common Pleas, Dublin, has been occupied nine days with an action for slander, in which two clergymen of the Established Church (the Rev. Mr. Mardorough, curate of Skull, Cork, being the plaintiff; and the rector of that parish, the Rev. Mr. George, the defendant. The case was tried before Chief Justice Blackburne and a special jury. The evidence adduced in the assembly state of affairs between the parties On Saturday the Chief Justice charged the jury, who returned a verdict for the plaintiff, with £200 damages and sixpence costs.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Rather a large amount of business having been transacted in the National Securities, both on public and private account, the Consol Market has ruled firm during the whole of the week, and prices have been on the advance. Some parties appear to have great confidence as respects the future; but not a few persons entertain the opinion that the directors of the bank of England will hardly advance the minimum rate of discount to 3½ per cent. It is true that bullion is still rapidly flowing out, but we have reason to believe that the Continental demand has nearly ceased for the present. No doubt, heavy shipments will continue to be made to India and Australia; but, as it is known that large quantities of gold are on passage from Sydney, Port Phillip, &c., we do not anticipate any material decline in the present supply of the precious metals.

From a return lately issued, it appears that, since the year 1846, the Bank of England has had nothing to do with purchasing either silver bullion or foreign silver coin. The year 1852 was by far the most active as regards the purchases of gold bullion and coin—over £15,000,000 being the amount; whereas, in 1851, it was less than £7,000,000; and, in 1850, under £2,500,000. The increase in the supply of bullion in the vaults is, therefore, wholly in gold.

The Consol Market on Monday was tolerably firm, at full prices The Three per cents Reduced were 100½ ⅞; the Three per Cent Consols, 99½ ⅞; the New Three-and-a-Quarter per Cents, 100½ ⅛; and the Three per Cents of the Bank Stock was done at 228. Long Annuities were 6⅞. India Bonds, 5s.; and Exchequer Bills, 17s. to 19s. premium. There was a slight upward movement in the quotations both on Tuesday and Wednesday. The following are the official prices on Thursday: Bank Stock, 227½ to 228½; Three per Cents Reduced, 100 ⅛ ⅜; Three per Cent Consols, 99 ⅜; New Three-and-a-Quarter per Cents, 100½ ⅜; Long Annuities, 6⅞; Consols for Account, 100⅜. Exchequer Bills ranged from 8s. to 17s pm.

There has been rather an extensive demand for money, hence the rates of discount have somewhat improved. Even first-class acceptances cannot be taken under from 2½ to 3 per cent per annum.

As might be expected, the Exchequer Bill Market has been in an uncertain state. Prices have fluctuated daily, and, on one or two occasions, March securities have sold as low as 10s. premium. It would appear that the March bills represent about nine millions sterling; hence it follows that the annual saving to the country from the reduction of the interest to one penny per diem will be somewhere about £58,000; the assuming state of matters will be the par value of the bills, £2 5s. 7d. per annum. The economy, upon the face of it, is trifling; but the principle involved in it is important, because it cannot be denied but that it is the duty of Government to provide for the wants of the service at the lowest possible charge consistent with safety and credit. We are told that a large portion of the bills will be paid into the Treasury in the shape of taxes, and that numerous persons will take money for those now issued to them We much doubt the correctness of these assertions, unless we are plainly shown what available channel is to be met with to invest £9,000,000 sterling, or even one-half of that amount, and that, too, for temporary purposes.

Foreign Bonds have been in very moderate request. In prices, however, no material change has taken place. Swedish scrip has sold at a heavy discount; whilst the Turkish loan has commanded a small premium. On Thursday, Brazilian Four-and-a-Half per Cents, New, were 97⅛; Mexican Three per Cents, 24¾ 25¾ 24; Ditto for the Account, 24; Spanish Three per Cents, New, Deferred, 23⅜; Dutch Four per Cents, 99⅛ 89; Swedish Loan, 1⅛ dis.; and Turkish Scrip, 1½ prem.

Miscellaneous securities have been to crably firm. Australian Agricultural have marked 20s to 25s; Peel River Land and Mineral, 7½ to 8 prem.; Van Diemen's Land, 18 to 21 prem; Scott. Australian Land, 58 to 60; Scott. Aban Coal Mining, ½ to ¾ prem; North British Australian, ½ to ¾; South Australian Investment, 1½ to 1¾ prem; United Bank of Australia, 72½ to 73; Bank of Australasia, 86 to 87; London Chartered Bank of Australia, 5¾ prem.; English, Scottish, and Australian Bank, 1¼ to ½ pr.; Bank of India, China, and Australia, 1½ to 1¾ prem., Commercial Bank of London, 31; London and County Bank, 50½; London Joint-Stock Bank, 1⅛ to 3/8; Provincial Bank of Ireland, 29; Crystal Palace, 8¼; General Screw Steam Shipping (£12 paid), 12¾; Peninsular and Oriental Steam, 80½ to 87; ditto (£25 paid), 50¾; Chartered Bank of Asia, 2 to 2 5/8.

Water-works Stocks have been thus quoted:—East London, 136; Grand Junction, 69; Kent, 64¾, New-river Company, 60; Southwark and Vauxhall, 80; West Middlesex, 111¾ ex div.

Upwards of £300,000 in gold and silver has been forwarded to India and Egypt, and £200,000 in gold coin to Australia. From the latter colony, £211,200 has come to hand.

On the whole, a steady business has been doing in Railway Shares, the value of which has been fairly supported. The following are the official closing prices on Thursday:

ORDINARY SHARES AND STOCKS.—Aberdeen, 31; Ambergate, Nottingham, and Boston Junction, 68; Bristol and Exeter, 105⅜; Caledonian, 76; Eastern Counties, 13⅜; Eastern Union, 11¼; Ditto, B. and C., 8¾; Edinburgh and Glasgow, 78; Edinburgh, Perth, and Dundee, 92½; Great Northern Stock, 81; Ditto, A. Stock, 85; Ditto, B. Stock, 124; Great Southern and Western (Ireland), 109; Great Western, 87; Lancashire and Yorkshire, 78; Ditto, Fifths, 10⅜; Leeds, Northern, 147; London and Blackwall, 9; London and Brighton, 104 ex div.; London and North-Western, 121; Ditto, Fifths, 10⅛; London and South-Western, 82½; Manchester, Sheffield, and Lincolnshire, 30; Midland, 72⅜; Newport, Abergavenny, and Hereford, 15; Newry and Enniskillen, 23; North British, 30⅜; North Eastern, Berwick, 12⅜ ex div.; North and South-Western Junction, 14; Oxford, Worcester, and Wolverhampton, 47; Scottish Central, 100; South Devon, 22; South Eastern, 58½; South Wales, 37½; West Cornwall, 9½; York, Newcastle, and Berwick, 71; Ditto, Extensions, 13; York and North Midland, 69½.

LINES LEASED AT FIXED RENTS.—Ambergate Junction, 54; Manchester, London, and Matlock, 3; Northern and Eastern, 65½; Wear Valley, 7½ xd.

PREFERENCE SHARES.—Aberdeen, 97; Ditto 7 per Cent, 4⅜; Caledonian, 103⅜; Great Northern, Five per Cent, 128; Ditto, Four-and-a-Half per Cents, 3⅜; Consolidated Bristol and Birmingham 147½ ex div.; South British, 108; South Eastern, 3½.

FOREIGN.—East Indian, 28½; Great Indian Peninsula, 7; Grand Junction, 6; Paris, 11½; Luxembourg, 6½; Northern of Paris, 17⅝; Paris and Lyons, 29⅜; Paris and Strasbourg, 22½; West Flanders, 6; Western of France, 10½.

Mining Shares have been steady. Agua Fria have sold at 5⅞; Australian, 1⅞; Cobre Copper, 42½ ex div., Colonial Gold, 4¾; Copper Mines of England, 62; General, 21; Great Nugget Vein, 5⅝; Great Polgooth, 45; Mexican and South American, 6⅞; Port Phillip, 2⅜; Tin Croft, 10; United Mexican, 6⅝ ex div.

FRIDAY EVENING. Consols have been steady to-day, at full prices. The Three per Cents—Money—have been done at 99⅝⅞; and for the next account, 99⅝. The Three per Cents Reduced are 100⅝⅜; and the New Three-and-a-Quarter per Cents, 100⅜⅝. Bank Stock, 227. India Bonds, 6s. premium. Exchequer Bills—June—have been done at 12s. to 17s. premium. Foreign Bonds and Railway Shares have met a moderate demand.

THE MARKETS.

CORN EXCHANGE, Feb. 24. The present week's return of English wheat constrains has been very moderate, viz., 2,200 quarters, almost wholly from Essex, and in fair average condition. Fresh up to this morning's market the receipts by land carriage were small, hence the show of samples was limited. The attendance of buyers was by no means numerous, yet the demand for all kinds of wheat of home produce ruled steady, at Monday's prices. For forward delivery very little was doing. The imports of foreign wheat are only 950 quarters, the same quantities sold steadily, at full currencies. In other kinds very little was doing. Floating cargoes were much neglected. The show of barley being only moderate, that article moved off by, and late rates were well keep ried. We had a good demand for malt, at extreme currency rates. [illegible]

Beans, peas, and flour were in full sale, at late quotations. [illegible]

AVERAGES. English wheat, 34s; barley, —; malt 3[illegible] oats; 9; flour, 10[illegible]. Irish barley, 600 oats, 700. Foreign: wheat, 1,950 oats, 870, flour, 1700 sacks.

ARRIVED.—Wheat, from Essex and Kent, red, 40s to 42s; white, 40s to 43s; Norfolk and Suffolk, red, 38s to 40s; white, 40s to 42s; rye, 28s to 30s; grinding barley, 24s to 27s; distilling ditto, 28s to 30s; malting ditto, 36s to 38s; Lincoln and Norfolk malt, 56s to 58s; brown ditto, 52s to 54s; Kingston and Ware, 56s to 58s; Chevalier, 60s to 62s; Scotch and Lincolnshire feed oats, 18s to 20s; potato ditto, 21s to 23s; Tonghal and Cork, ditto, 19s to 20s; ditto, white, 19s to 21s; Dublin and Belfast ditto, 20s to 21s; potatoes, 90s to 95s; maple, 34s to 36s; white, 38s to 40s; beans, 30s to 32s; tick beans, 28s to 30s; harrow ditto, 30s to 32s; Suffolk, 28s to 30s; mixtures and Tares, 30s to 32s; flour, per sack, 38s to 40s; per barrel; 22s to 24s.

IMPORTS.—Wheat, 48s; barley, 30s; oats, 18s; rye, —; beans, —; peas, —.

Flour.—For all kinds the demand is in a very inactive state, at barely stationary prices. Considerable parcels of foreign have been sold at 20s to 20s 6d per barrel. Very good parcels of American have sold at 21s to 21s 6d per barrel.

Sugar.—A full average business is doing in this market, at very full prices Crystallised Demerara, 50s to 70s 6d; low to middling yellow Barbadoes, 32s 6d to 37s 6d; good, 38s 6d. Low to fine Mauritius, 32s 6d to 38s 6d; fine to superfine, 39s 6d to 40s 6d; Bengal, 30s 6d to 38s 6d; fine grocery yellow, 40s 6d to 41s 6d; middling grey Madras, 31s 6d to 32s 6d per cwt. Refined goods more enquired for, and from 42s 6d to 44s 6d per cwt. The total clearances to the 19th inst were 262,832 cwts, against 252,233 duty in 1852.

Coffee.—About 5000 cwts go out of native hands since our last market, and from 40s. to 46s. 6d. per cwt. All other kinds of coffee are quite as dear as last week.

Rice.—The demand is heavy, yet prices are supported.

Provisions.—Good and fine qualities of Irish butter move off steadily, at very full prices Low parcels are dull inquiry. Foreign butter has advanced 4s to 6s per cwt., and English is again dearer, the new make Dorset having realised 112s per cwt. Bacon steady, at from 58s to 60s. for Irish, and 52s to 56s. for Hamburg. Hams are quoted at 54s., and cheese, 52s to 54s. per cwt.

Spirits.—Per rum the demand is somewhat firmer, and prices are well supported. Proof Jamaica is 1s. 10d. to 1s. 11d.; fine India, 1s. 10d to 1s. 10½d; and Demerara, 1s. 9d. to 1s. 10d per gallon. In brandy very little is doing, on somewhat lower terms. Genevas and Hollands are without alteration.

Cattle Trade.—Plumstead, 25th inst.: Canaap, 220; Stewart's, 20; Hilton, 21s.; Lumbleon, 15; 60 per cwt.

Hops (Friday).—The show of new hops continues limited, and the demand is steady, at in full prices. Choice Sussex are in request. Old parcels are dull sale. Pigs sold briskly, at our quotations. Milch cows very quiet, and from 14l to 17l each.

Per 8lbs. to sink the offals—Coarse and inferior beasts, 3s. 4d. to 3s. 8d.; middling, 3s. 10d. to 4s. 2d.; prime large oxen, 3s. 8d. to 3s. 10d.; prime South., &c., 4s 6d to 4s 8d; coarse and inferior sheep, 3s. 10d. to 4s. 2d.; middling, 4s. 4d. to 4s. 6d.; prime large or small-woolled ditto, 4s. 8d. to 4s. 10d.; prime South Down sheep, 5s. 0d. to 5s. 2d.; large coarse calves, 3s. 8d. to 4s. 2d.; prime small ditto, 4s. 4d. to 4s. 8d.; large hogs, 3s. 10d. to 3s. 2d. neat small porkers, 5s. 2d. to 5s. 6d.; sucking calves, 19s. to 24s.; and quarter-old store pigs, 20s. to 25s. each. Total supplies—Beasts, 764; cows, 120; sheep, 3600; calves, 192; pigs, 260. Foreign Beasts 220; sheep, 2670; calves, 90. Scotch Beasts, 160.

Newgate and Leadenhall (Friday).—The trade ruled steady, and prices were well supported.

Per 8lbs. by the carcase.—Inferior beef, 2s. 6d. to 2s. 10d.; middling ditto, 3s. 0d. to 3s. 2d.; prime large ditto, 3s. 4s. to 3s. 6d.; prime small ditto, 3s. 6d to 3s. 8d.; large pork, 3s. 4d. to 3s. 8d.; inferior mutton, 3s. 4d. to 3s. 8d.; middling ditto, 3s. 8d. to 4s. 0d.; prime ditto 4s. 2d. to 4s. 6d.; veal, 3s. 8d. to 4s. 4d.; small pork, 3s. 8d. to 4s. 2d. ROBERT HERBERT.

THE LONDON GAZETTE.

TUESDAY, FEB. 22.

BANKRUPTS.

W. BRYAN, Gilbert-street, Oxford-street, baker. E. PRICE, Birmingham, livery-stable and horse-keeper. C. DAVIES, Warwick, ironmonger. W. MORRITT, Leeds, cloth printer. A. LOVE and G. KEYS, Liverpool, looking-glass manufacturers. E. JONES, Bury, Lancashire, ironfounder.

At Mount-pleasant-terrace, Tyrrwhitt, John Erskine Kirk, Esq., of [illegible]

[illegible] Bennett, in his 82nd year.

At Cheltenham, [illegible] Rev William Court, Lord R[illegible] of Sydney and Vicar of Avening, Gloucestershire.

At Torquay, Marianne, wife of the Rev Lewson B[illegible] Hamilton, and daughter of the Rev. A. J. Meade, Vicar of Castle Cary, Somerset, aged [illegible].

CONVOCATION OF THE CLERGY.

A STRIKING and impressive Court spectacle took place at Buckingham Palace on Wednesday the 16th inst., when her Majesty received upon the throne the loyal address of the Convocation of the Clergy of the province of Canterbury. The address, as we stated last week, was carried up to the throne with unusual solemnity. Nine bishops, and between seventy and eighty of the dignitaries and inferior orders of the Church—all in full convocation robes—formed the procession from Queen Anne's Bounty-office, Dean's-yard, to the Palace. The members of Convocation were received with all the respect which Court ceremonial and a brilliant attendance of officers of state could confer. The occasion derived additional interest from the circumstance that this was the first full Court held since the accession of the present Ministry to power. The Earl of Aberdeen, in his own attendance and that of several members of his Cabinet, seemed gladly to avail himself of this opportunity of testifying his attachment to the Church, and his desire to increase its efficiency, and to promote harmony among its members

The members of the Convocation arrived at Buckingham Palace at a quarter before one o'clock, and were conducted to the Green Drawing-room.

Her Majesty being seated on her throne, his Royal Highness Prince Albert standing by her side, the Convocation was ushered to the Throne-room by Sir William Martins and Mr Henry Greville. The Gentlemen Ushers in Waiting. The name of the Prince of Wales does not appear in the *Court Circular*, but the youthful heir-apparent was present, and appeared to take an intelligent interest in the proceeding.

The members of the Convocation entered in the following order

The Archbishop of Canterbury.

The Rev. John Thomas, chaplain to his Grace.

The Bishops Twisse, the Vicar-General of the province of Canterbury.

Francis Hart Dyke, Esq., Registrar.

Felix Knyvett, Esq., Appar tor-General.

The Bishops of London, Winchester, Salisbury, Oxford, Chichester Llandaff, Peterborough, and Worcester

The Rev Dr. Peacock, dean of Ely, Prolocutor.

Mr George Burchett, Actuary of the Lower House of Convocation

And a numerous body of members of the Convocation, including the Rev. Dr. Wilson, Archdeacon Harrison, Archdeacon Hale, Rev. John Jackson, Rev. Rev. Russell, Lord Stanley's Sche, Rev Dr. Wordsworth, the Dean of Worcester, the Dean of Norwich, the Dean of Bristol, Rev. Mr. Vaughan, Rev. Dr. Pusey, the Dean of Winchester, Archdeacon Denison, the Archdeacon of Bath, the Rev Dr. John Yardley, the Rev. J. Hutchinson, the Rev. Henry Arthur Woodgate, &c.

When the members of Convocation were ushered into the presence of the Queen the scene became most picturesque and imposing. They found her Majesty surrounded by the full splendour of the Court. Her Majesty was attended by the Duchess of Sutherland, Mistress of the Robes; the Marchioness of Ely, Lady in Waiting; the Earl of Aberdeen K.T., First Lord of the Treasury; Viscount Palmerston, K.G., Secretary of State for the Home Department; the Marquis of Lansdowne, K.G.; Earl Granville, Lord President; the Duke of Argyll, Lord Privy Seal; the Duke of Newcastle, Secretary of State for the Colonies; the Right Hon. William Ewart Gladstone, Chancellor of the Exchequer; Sir William Molesworth, Chief Commissioner of Works and Public Buildings; the Duke of Norfolk, K.G., Lord Steward; the Marquis of Exeter, K.G., Master of the Buckhounds; the Duke of Wellington, Master of the Horse; Viscount Combermere, G.C.B., Gold Stick in Waiting; Lord Foley, Captain of the Honourable Corps of Gentlemen at Arms; Viscount Canning, Captain of the Yeomen of the Guard; the Earl of Hardwicke, Treasurer of the Household; Lord Ernest Bruce, Vice Chamberlain; Lord Drumlanrig, Comptroller of the Household; Lord Rivers, Lord in Waiting; Sir Edward Bowater, Groom in Waiting; Colonel F H Seymour, Groom of the Robes; Colonel Rouverie, Silver Stick in Waiting; Lord Alfred Paget (Clerk Marshal), Equerry in Waiting; Colonel Colville, Field Officer in Brigade Waiting; and Messrs. George Gordon Murchison, and Henry Farquharson, Pages of Honour in Waiting. Prince Albert was attended by Lord George Lennox, Lord in Waiting; Colonel Wylde, Groom in Waiting, and Lieutenant-Colonel Hon. Alexander Gordon, Equerry in Waiting.

All the Cabinet Ministers, great officers of state, and officers of her Majesty's household wore the uniforms of their rank; and their rich costumes of scarlet, blue, and gold, seen by the side of the Convocation robes of bishop and clergy, made up a picture, the brilliancy of which the illustration in our next page will enable our readers without much difficulty to realise.

On entering the presence-chamber, the Archbishop and the members of the Upper House took their station at the right hand of the Queen, the Prolocutor and members of the Lower House standing on her Majesty's left hand.

The Archbishop, having advanced near the Queen, read the loyal address agreed upon by Convocation on the 17th of November. The Archbishop then, kneeling, presented the address to her Majesty.

Her Majesty returned the following most gracious answer

"I receive with cordial satisfaction the assurances of your loyal and affectionate attachment to my throne and person.

"It is my earnest desire to promote the welfare and happiness of all classes of my subjects, by continuing to them the blessings of peace abroad, and by assisting to extend at home the holy influence of religion, which is the only sure foundation on which national prosperity can permanently rest.

"I thank you for the sympathy which you have expressed in my sorrow for the recent loss of the most distinguished of my subjects, and I appreciate the value which you attach to that high sense of duty by which he was invariably inspired.

"I rely with confidence on your assurances of your desire to preserve harmony in the Church, and to increase its efficiency, while maintaining its doctrines and my supremacy unimpaired; and I pray that the blessing of God may attend your endeavours to extend widely throughout all classes of my people the inestimable benefit of pure and deeply-felt religion."

The Archbishop of Canterbury and the Rev. Dr. Peacock, Dean of Ely, the clergy's Lord, the latter kneeling, was also present.

A guard of honour of the Scots Fusilier Guards, with the band of the regiment, was on duty on the Palace lawn.

The members of Convocation having quitted the Palace, [illegible] gratified with their reception, returned to their respective places of meeting—the Upper House to the Bounty-office, Dean's-yard; and the Lower House to the Jerusalem-chamber

Both Houses were shortly afterwards prorogued by the Archbishop until the 14th of August, by which time it is, of course, supposed that Parliament and the Houses of Convocation will have been prorogued by her Majesty in the usual form.

PRESENTATION OF THE ADDRESS OF THE CONVOCATION OF THE CLERGY TO HER MAJESTY, AT BUCKINGHAM PALACE. (SEE PRECEDING PAGE.)

THE NATIONAL GALLERY;
ITS FORMATION AND MANAGEMENT.*

THE National Gallery, after a struggling and precarious existence of very nearly thirty years, the victim of habitual official neglect, and occasional amateur jobbing, is at length beginning to attract to its affairs an amount of attention in high quarters which we hope may ere long place it on a very different footing to that it has hitherto occupied; a footing of importance justified and rendered necessary by the increasing influence of the fine arts upon the intellectual and industrial character of the age, and the universal consent with which the force and value of that influence are admitted. In the tardy progress which has hitherto marked its history, this National Institution of Painting has only too truly followed in the beaten course of other National Institutions appropriated to the especial use and enjoyment of the community at large. Like very many of them, including the British Museum itself, the first foundation of it was the result of the zeal and patriotic munificence of an individual; all the rest, which fell to the part of the public or its servants, having been slowly and grudgingly, and, we fear, we must add, neither very conscientiously nor successfully done.

It was long after the private galleries of England had, under favour of the French Revolution and its consequent troubles, become enriched by the acquisition of the treasures of the Orleans and other continental collections,—acquired at prices ridiculously below what they now bear, that any thought of the British public being entitled to have a picture gallery entered the mind of man; and the man into whose mind the idea so entered was Sir George Beaumont, himself an artist and a liberal patron of art, who, in 1823, announced his desire to present his valuable collection of pictures to the British Museum, then the only receptacle for curiosities of all kinds which might fall to the share of the nation. About the same time, Mr. Angerstein, a Russian merchant, who had brought together a small but choice collection of pictures (most of them individual specimens from the dispersed foreign collections alluded to), expressed his readiness to dispose of them in a lump, and offered them to the Government of this country, failing whose acceptance of the offer, the collection would probably have gone abroad. Fortunately, the opinions of Sir Thomas Lawrence and other eminent critics of the day prevailed, and the Angerstein collection was purchased for £57,000, and formed the nucleus of the National Gallery; to which were successively added the collections of Sir George Beaumont, and of the Rev. Holwell Carr, besides other smaller lots by the liberality of individual possessors, and several pictures by purchase. The last, and, in some respects, most interesting, gift has been the large collection of works of the British School, formed by the late Mr. Vernon, for which, however, space has not been found on the walls of the mean apartments allotted to the national collection, in the building pretending to have been erected for its use in Trafalgar-square. It is now, as our readers are already aware, a question with the public property of turning out, and seeking new lodgings; but this is a matter which we shall not discuss at present, we shall rather restrict our observations to what more properly concerns the management of the gallery in an artistic point of view; and which is discussed at considerable length, and with some ability, by Mr. Dyce, in a pamphlet in the form of "a letter, addressed by permission," to Prince Albert, which has just come before us.

We may observe that whilst occupied with the perusal of this *brochure*, we see it stated in the columns of a contemporary that Mr. Dyce is about to succeed Mr Twiss, in the office of keeper of the institution whose concerns are thus brought under our consideration; and if this announcement be authentic, it will necessarily invest observations coming from him, and addressed to the high quarter already indicated, with more weight than they might otherwise have commanded.

Mr. Dyce addresses himself to his subject in the tone of a sweeping and uncompromising reformer. He complains of the incompleteness and purposeless character of the collection, and, as a very natural *sequitur*, denounces the incompetency of those who have hitherto been concerned in its management and interests. Finally, he develops his own views of what the national collection should consist of, and how it should be managed. In all these observations Mr. Dyce seems to assume to exist, and to have always existed, a serious intention on the part of the governing authorities to undertake the formation of a national collection, in extent and character adequate to the requirements of a school of study, and to provide the necessary funds for the purpose; and upon this assumption he visits the whole sin of the failure of a magnificent undertaking upon the trustees appointed to preside over it.

"Twenty-eight years have elapsed," Mr. Dyce writes, "since the commencement of the Gallery, and yet the question which, one would have thought, must have met the trustees *in limine*, at the very threshold of their duties, remains undecided. They have not yet determined what their labours tend to; what it is they are to accomplish. They have never informed the public what they conceive the National Gallery ought to be; what it is to consist of; how it is to advance towards completion; how it is to be arranged; what is to be its purpose. Yet these, surely, were matters of preliminary consideration."

We apprehend that the trustees were not expected to do anything of the kind here set forth; to them no questions *in limine* were submitted; with them were no matters for "preliminary consideration;" they were simply appointed custodiers of certain pictures purchased by Parliament, and others, added from time to time to their number; but had no recognised powers, no definite means at their disposal, to frame the schems for a National Gallery such as it ought to be, nor to carry to completion such plan when adopted; neither was there any regular medium or process by which they could inform the public of their notions on the subject. On the contrary, the preliminary considerations, not only as to the purchase of the original collection, but of each subsequent addition

* The National Gallery; its Formation and Management considered, in a Letter addressed, by permission, to His Royal Highness Prince Albert, by W. Dyce, Esq., R.A.—Chapman and Hall, 1853.

RESPECT TO THE MEMORY OF THE LATE DUKE OF WELLINGTON IN INDIA.

The impressive ceremony here illustrated shows the Parade of the Ramghur Local Force, under the command of Major W. Pitt Robbins, at Dorundah, paying the last tribute of respect to the memory of the late Field-Marshal the Duke of Wellington, on the morning of the 2nd of November last, by order of the most noble the Governor-General of India in Council.—The Sketch by Mr. Grant, Ramghur Bati.

—the preliminary considerations as to the arrangements of the building appropriated to the Gallery, and all subsequent arrangements involving expenditure of money—have been the province of the Lords of the Treasury for the time being; the trustees having no further powers in the matter than that of recommending purchases. Of the blunders which have resulted from this "division of labour" and of responsibility (supported and advised by "eminent judges," themselves picture dealers and collectors), as evidenced in the disposition of the funds which have been doled out from time to time by Parliament for the purchase of pictures, it is needless now to speak. Certain it is that the system has not worked advantageously; and, under the circumstances, it is, perhaps, fortunate that the public money disposed of under it has hitherto been but limited in amount.

Admitting fully that amateurs and unpaid committees for the management of public institutions are a mistake, we cannot consent to lay to the door of the National Gallery the sins of the whole Board of our past misdeeds, neither do we see in Mr. Dyce's proposal for the appointment of a single paid keeper or director a guarantee against other, and perhaps larger, errors in future. We agree in the force of the remark quoted from Sir Harris Nicolas, when speaking of the British Museum in 1836-7:—"that the position of men of science and literature in this country is very unlike their position in every other country of Europe; and, perhaps, the most forcible illustration of that fact is, the extraordinary circumstance, that, for the last forty years, they have been entirely excluded from the government of the only literary institution which is supported by Parliament;" and we agree, also, that the same remarks apply to the National Gallery: and no one can doubt that the deduction to be arrived at is obvious, namely—that, from amongst the men of eminence in literature, as in art, should be formed the governing body of those institutions, in the useful influence of which they are respectively most interested. The formation of such a governing body for the National Gallery would, perhaps, owing to the uncertain relations between artists, and the jealousies resulting from such uncertainty, be at the present moment a matter of some delicacy and difficulty. But, at the same time, it is an object worth trying for; and it would be one of the happiest results of a good understanding in the brotherhood of artists that it should become possible to form from amongst their whole body a directorship to an institution so important and so interesting as a National Gallery of art; a directorship in which the opinion of each member should have its due share of weight, the experience of all contribute to the correction and ripening of opinion amongst them, and of the public whose taste would be mainly subject to their influence.

We submit these observations with the more earnestness because, believing that a change is about to take place in the management of the National Gallery, we are sure that it should be a change for good; and because we cannot believe that such would be the effect of substituting for the present system, however imperfect, one which should vest the whole management of the institution in the discretion of a single individual—a discretion controlled by the authority of a Government department; or, in the words of Mr. Dyce, "an officer appointed for that purpose, to be under the immediate control of some one department of the Government, without the intervention of any committee; and we cannot avoid expressing our surprise that, with the prospect before him of occupying the office of Keeper to the National Gallery, Mr. Dyce should have allowed himself to contemplate with complacency a position of intense anomaly "as one department," which he must be fully convinced could have no pretensions to offer even an opinion on the subject to which his duties would relate, and for which his professional acquirements should eminently qualify him.

With many of the points discussed in this pamphlet—as the importance of making the collection much more comprehensive in character, as well as historical in its arrangement, as regards works of painting; and also as to the addition of the sister arts of Architecture and Sculpture—and even of what come within the scope of the absurdly misnamed "Department of Practical Art" (as if all art were not practical)—we fully concur; and, upon the whole, have to thank the writer for the publication of a pamphlet, the impartial and careful consideration of which cannot but assist those interested in the matter in arriving at a decision upon it.

WESTMINSTER HALL.

To the Editor of the ILLUSTRATED LONDON NEWS.

In the descriptive notice which accompanies the representation of the new work in Westminster Hall, given in your last Number, it is stated that this magnificent edifice "was built as a dining-hall by Richard II." This statement, it is perhaps hardly necessary to say, is erroneous. It is well known that Westminster-hall was originally built by William II., and that its actual fabric is in many parts nearly three centuries older than the time of Richard II., and its purpose even more illustrious than to be a dining-hall for Kings. It may certainly almost be said to have been rebuilt in A.D. 1395, for Richard II. caused it to be repaired in walls, windows, and roof, with marvellous work (says Stowe) and great cost. He made the legal antiquarian write with pride that for seven centuries and a half this eminent building, "the very Pretorium or Hall of Justice for all England," has been applied to legal uses. We learn from the "Saxon Chronicle," that at Christmas, A.D. 1099, William Rufus held his court in this his new building for the first time; and from that period its associations, recal to the mind the august celebrations it has witnessed on high festivals, the ornaments that have assembled in its precincts, and the times when our kings here presided in judgment. Yet its memories are more associated with these events than (in the language of Mr. Fos-) "with the high legal purposes to which it has for centuries been devoted, with the glorious succession of venerable men who have administered justice within its walls, and with the eminent advocates to whose eloquence its roof has resounded." Your readers do not need to be reminded that this magnificent Hall was originally a part, and is now the only remaining part, as I believe, of the Royal Palace of Westminster, which was accidentally burned down in the reign of Henry VIII., and has been the scene, not merely of Royal festivities, amidst a brilliant concourse, but of the entertainments which, on solemn festivals, were occasionally given by the Monarch to the poor. Thus, for example, in the 18 Hen. III. (A.D. 1243), his treasurer was commanded to feed 6000 poor people on the Feast of the Circumcision of our Lord, at the Palace of Westminster, for the good estate of the King and Queen; and the weak and aged filled the great Hall. So, too, on the anniversary of Alianore, the King's sister, as many were to be fed as the great Hall and the lesser Hall (the House of Commons after the fire of 1834) would contain.

In the repairs of the building, which were in progress under the direction of Sir Robert Smirke, in 1835, the work of the two Kings (William Rufus and Richard II.) was clearly distinguishable, many features of which the Norman architecture of the original Hall were discovered. For instance, an arcade of small arches connecting the range of windows in what may be called the clerestory, purely Norman in character, were discovered. They had been continued on both sides the whole length of the Hall, and opened into a mural passage running along the sides of the building, like that in the keep of Rochester Castle, which was breached, probably, by that Norman staircase in the south-east angle of the Hall, which was altered by King Richard II. On the great alterations made by that severe gn at the close of the fourteenth century, the materials of many of these arches are described to have been used as ashlar work. Two of the original Roman windows are (or lately were) visible within the Hall on each side of the great window; and distinct remains were found of Norman doorways on the level of the lower and story of the old Palace, which doorways gave access to the Hall from the outer part of it "begins" (in the form of the Norman roof, and the mode in which it was supported, nothing is known, but that this roof was not similar to the present one (says Mr. Sydney Smirke) is indisputable. The famous roof was nearly of the same date as the roof at Eltham. It is erroneously supposed (he remarks) to be the widest in Europe without any intermediate support; for, notwithstanding the enormous span, which averages sixty-seven feet, there are two examples in Italy which surpass it. The contract for mason work of the roof, on the alterations in the roof, dated in 1396, may be seen in Rymer's "Fœdera," vol. vii. p. 794, and on the Rot. Pat., 17 Richard II., No. 1; and Cart. 18 Richard II., are records of the work of the period. The present pavement was laid on the level of the floor of Purbeck stone which formed the level of the Hall in Richard II.'s time. The work called the Gallilee (abutting on the southern end of the Hall), which was erected about the 12th of Edward III., was adapted by Richard II., by a flight of steps, to the approach from the Great Hall to the Chapel of St Stephen, and the principal chambers of the Palace. It is seen that the communication of the Great Hall is to be referred to at least two very distinct periods, and it is not improbable as suggested by Mr Rose, that on the works in 1799, the taste of the celebrated William Wykham, Bishop of Winchester, may have been put in requisition. A description, by Mr. Willement, of the heraldic decorations of the corbels upon which the great curved number ribs appear to rest, and of the string-course that connects the trusses, is given in the "Collectanea Topogr et Gen.," vol. iii., page 55; and a valuable account of the architecture of the Hall, and the discoveries made during the works of 1835, was communicated by Mr S. Smirke to the Society of Antiquaries of London, and will be found in the "Archæologia," vol. xxvi., p. 406, 414, and vol. xxvii., p. 187: from which communications I have derived several of the facts stated in this letter; which may, I hope, be acceptable as a pendant to the interesting article in your last Number. I am, sir, your very obedient servant,

Newcastle-upon-Tyne, Feb. 14th, 1853. W. SIDNEY GIBSON.

Literature.

MY NOVEL, by PISISTRATUS CAXTON; or, Varieties in English Life. 4 vols Blackwood and Sons 1853

The prior work of Sir Edward Bulwer Lytton history, poem, drama, novel, essay, in all their varieties—had already made his name a household word wherever the English language is spoken, and not an unfamiliar sound in those countries in which any portion of our literature has been made known by the translator. But we may say, without exaggeration, that, if that long and varied series of works which have hitherto proceeded from his hand were now destroyed, and if nothing of his remained in prose save this one book which lies before us—the loss, indeed, to literature would be great; and that more distinctive character of his mind the diversity and universality of its range—would be hidden from posterity; yet he would be certain of imperishable fame.

Mr. Macaulay has remarked that a great author's former are, in one sense, the enemies of his later productions. When a masterpiece has appeared, so much is expected by the public from that time forth, that it is difficult to write again and not excite disappointment. Viewed from this point of view, the work before us suggests the remark that Bulwer Lytton's contributions to English literature have been so manifestly progressive in their merits, that all men of sound judgment are agreed in esteeming his later far beyond his earlier productions. He had, therefore, little to fear if this last book had come before the world in the ordinary way. But here a peculiarity is to be noted, which, not then for the first time, signalised the publication of what he has written. The same concurred in the case of the "New Timon," a satire which may well take rank with the most classic specimens of that form of literature given to the English public during two centuries. It appeared anonymously. Whatever advantage might have been gained by the avowal of the author's name, was purposely relinquished as factitious. The book was to be judged by its intrinsic merits, and not by any prepossessions arising out of the great celebrity of the writer. People who might have felt disposed to say at once—"Oh, it is Bulwer Lytton's; there must be something in it," were left to give a fairer verdict; and, as Fielding says, "to damn their dinner without control." He put up his visor before presenting himself at the barriers, and entered the lists like any young and nameless adventurer. He threw away all that the past had won, and began *de novo*. Not only, however, did the "New Timon" successfully sustain the ordeal to which its author subjected it, but the author himself was ultimately discovered through internal evidence. Not even Mr. Colburn's "authoritative" denial shook for a moment the conviction of critics worthy of the name.

That which happened in the instance of the poem happened again in the publication of the remarkable fiction of which "My Novel" is a sort of sequel. "The Caxtons" appeared in *Blackwood's Magazine* anonymously, but it might as well have borne the writer's name. The public were not long mystified; and it was settled that the "Family Picture" in question was by Bulwer Lytton, and, further, that it was the best work of fiction which he had yet composed. This last surpasses it as much as "The Caxtons" surpasses its predecessors. It is a greater attempt: the canvas is far larger, the whole scheme and plan of the work are colossal, and the details infinite.

"My Novel" is, in every respect, a work of genius; it is a repertory of truthful portraiture, of searching and profound remark, of finished narrative, of simple and manly energy, of unaffected humour, of exquisite originality, of coherent plot, of scholarship without pedantry, of eloquence without declamation, of passion without rant, and of keen yet genial satire.

In a design of so much breadth and boldness, a certain rudeness of execution would have been forgiven. But the execution is the most scrupulously finished that can be conceived. It is as if we beheld united the conception and the freedom and the flowing grace which belong to Italian or Spanish art, with the conscientious minuteness of a Dutch miniature. Such a peculiarity is hostile to quotation; and, indeed, we are debarred from it effectually. Our purpose is to give a just idea of the character and the merits of the work; and no extract could serve that end. It is level. All must be read, or nothing will be understood; and we may safely say that whoever reads it once will read it again. Nor can it be read with that perfunctory despatch which we are apt to use in hurrying through certain novels, even of great novelists. We do not here mean, what is perfectly true, that every page either contains matter for "sweet and bitter" rumination, or offers a group and incident and picture on which the mind wishes to loiter; but we mean that the book—the brute sense of the word, is a very big book indeed. We believe that the bookselling trade was inclined, at first, to scratch its head in the perplexity of plenty, and muttered, "What on earth is to be done with four volumes?" Meantime, the four volumes, though hardly issued and issued, be it remembered, under the disadvantage of having already been published in a magazine, are fast exhausting their first edition, and leaving vacant place for a second.

Having described the general qualities of this fiction, let us look at it in a more technical or artistic light. From this lower point of view, its character breaks upon us in distinct outline. We question whether, in the narrower sense, that is, considered as a novel proper, a more complete specimen exists in any language. Very few persons have realised, or have cared to realise, a true idea of what a novel ought to be. A mere story is not a novel. The "Exiles of Siberia" is a charming story, if called a novel, it would be found very defective. It would still, of course, have that merit which it possesses as a narrative, and which is all it requires for its pretensions; but narrative merit, which is almost everything in a mere story, is but one out of many things in a novel. A novel is a higher work in itself; and when you say that such a man is as good a novelist as such another is a story-teller, you say virtually that the former has given evidence of far higher and more varied qualifications. One great end of the novel is to portray men in communities; and thus by far the finest part of "Robinson Crusoe" is excluded from the category. Giving to the drama a similar function, a play has been not badly defined a story in action. And, in like manner, we may define a novel a *drama in narrative*. Tested by this criterion, there never was a finer novel than the one before us; for never was there a sweeter or a richer narrative—never a narrative more faithfully portraying society—and never a narrative in which the number of characters and the range of social manners and passions taken into the picture, were more extensive. The bulk and weight of the machine are prodigious, and yet the lightness of its motion, and the mastering hand of the spirit which guides its march, are perceptible throughout.

"Gil Blas" is a wonderful book, and will be read and admired for ever. It has, however, one obvious blemish amidst a blaze of beauties; and that is a disjointed and transitional action. It is a bundle of episodes. From that defect "My Novel" is entirely free, while it conspicuously possesses those very qualities which make "Gil Blas" immortal—complete knowledge of the world, sustained humour, and elegant simplicity of style. We must add, that it has, besides, many beauties to which "Gil Blas" can make no pretension—heart, passion, and eloquence. Nor is this all. There are passages in "Gil Blas" unfit to read aloud before women; whereas "My Novel" is a pure and refined book, as pure as the family circle itself. Bulwer Lytton differs advantageously from many great writers in this—that, while he paints manners as well as they do, he also paints what they forget—motives and the inner life. For this reason he will never grow obsolete. His characters will speak from the page to living characters for ever. Flesh and blood will be responsive to his delineations in every age. His works have that superiority over some even celebrated novels which a statue has over a dressed figure in an exhibition of wax-works. Trappings go out of fashion, and seem uncouth to the next generation; but proportions will always remain.

An author has his own times and conjunctures for developing secrets of character, the progress of his characters themselves, and the incidents of their fate; he does not tell at the beginning what he tells at the end. Why, then, should the critic tell it for him? Indeed no person who respects art, or understands its necessary and natural laws, interferes thus; and reviewers who can find no other resource in their own minds for rendering an account of a great work, do no good to literature, and are incapable either of awakening an appreciation of it, or of promoting its real cause. The principle is almost universal. He who tells you that Demosthenes said such and such things, without showing in what order, and in what manner, conveys to your mind no idea of one of the Philippics. A report of a peroration, per example, is always a sort of summary; containing, in rapid and fiery and allusive condensation, all that has been said before in the speech: yet, whoever reads first the peroration of the finest speeches, will find that he is more likely to be moved to laughter than to persuasion or delight. And the more truly perfect the speech, the more certain is this to be the case.

For the development of the design of "My Novel," a plot is adopted of which, on purpose, we speak thus vaguely. Sufficient to say that all the characters belong to this plot; that it consists of their career: and that the various incidents recorded are not irrelevant, but help steadily to carry on the current of the narrative, and to promote the catastrophe.

We have left ourselves little space to particularise the characters which most adorn the work. We think the best are the Squire, the Parson, Randal Leslie, Dr. Riccaboca, Audley Egerton (the statesman), Lord L'Estrange, Richard Avenel, and the Jew Baron and money-lender. We might select more than one portrait quite as fully finished as Addison's Sir Roger de Coverley. And yet here is no isolated work, monopolising the powers of the author; but a mass of beings sharing his divided attention, and each issuing forth "*omnis, teres, et rotundus.*"

Let us hope that the next work of the gifted author will surpass "My Novel," as much as that matchless fiction surpasses its brilliant predecessors. The task will be difficult even for the genius of Sir Bulwer Lytton.

LARES AND PENATES; or, Cilicia and its Governors. By WILLIAM BURCKHARDT BARKER, M.R.A.S., many years resident at Tarsus in an official capacity. Edited by WILLIAM FRANCIS AINSWORTH, F.R.G.S., F.G.S. Ingram, Cooke, and Co.

The names of the author and editor of this volume are a sufficient guarantee of its scholarship and accuracy. Cilicia is a spot crowded with associations. The Heathen, the Christian, the Mohammedan, have all impressed their signatures on the soil, the people, and the edifices. The history of its governors is almost the history of the world, and furnishes a series of innumerable narratives to the first thirteen chapters of this work. These are most elaborately compiled, and though very concisely treated, form a body of charming and instructive reading. They are introductory to the more especial subject of the book, the discovery by Mr. Barker, of the Household Gods and Guardians (the Lares and Penates) of the Ancient Cilicians; and which were destroyed or broken up by them on their conversion to Christianity. Of what remains of these reliques of classic religion, the author brought with him to England as many as he could.

The Lares, our critical readers are not to be told, were, with the ancients, the guardian spirits of the domestic hearth, which was regarded as their altar—their shrine, as it were, being the chimney-piece. As ornaments of the latter we sometimes now use copies of them; but in the old Pagan world whatever was ornamental was also religious. Art, in its higher and lower forms, was consecrated to spiritual powers. The Penates were more than mere spirits: esteemed as divinities, they were worshipped in the interior of the house; from which practice, indeed, their name is supposed to be derived—*quia coluntur in penetralibus*. They are repeatedly seen, we are told, on the walls of the Pompeian houses—for instance, in kitchens, bakehouses, and over street-doors, standing in pairs; one on each side of an altar, in the same attitude and drapery. Great houses, it is added, and persons of wealth had their Larariæ—a sort of shrine, small chapel or apartment, where the statues of the Lares, as well as of other sanctified or deified personages, were placed and worshipped. A beautiful superstition, certainly; and one which maintained in perpetual presence the moral relations of the human family, and admonished the rich and the respectable of the duties and rites of hospitality, of which they were the emblems. Crowned with chaplets, with a drinking horn in their hands, they gave a cheerful welcome to every guest.

We have no space to go into the various mythologies, which every creative fancy, whether in the person of the professional poet or the credulous believer, from time to time invented for these household gods and familiar spirits. The reader will find full particulars of all this in the present book. The fundamental idea rightly appreciated will suggest the probable detail. From their Assyrian origin (if that is to be granted) to their latest application, they bear a general family relation—their domestic character is not to be mistaken.

Mr. Barker made his discovery in 1845, on the site of the old city of Tarsus, the foundation of which, the inhabitants of the present town were in the habit of digging up for their own purposes. The wall of the city was thus carried away stone by stone, until a secant of the hill, which is stated to have leaned upon it, became exposed to view, by that time we give in the words of the book:—

In the centre of this secant it was that I first discovered these precious objects; and by beating the earth down the hill, I had it well examined; and carried off, as I imagined, every thing worthy of notice, until no more objects were exposed to view by working in the hill. The curiosity excited by this discovery was naturally great, and it was impossible to prevent the inhabitants from crowding to the spot. They were all mu h pleased with the images found among the rubbish, all of which were more or less perfect, and in a state ready for use; these I could not prevent them carrying off; but as they took no interest in anything else (heads being perfectly useless to them), and as they were always aware that I would have purchased all that were presented to me, I have every reason to believe that nothing of any consequence escaped me except these lamps, of which however, I secured a great many, rejecting a number of common terra-cottas, or devoid of interest, from their having no basso relievo or inscription to recommend them to notice. It was thus that I obtained this unique collection of ancient ceramic art.

At first I imagined that I had lighted upon the site of a ceramicus, and that the mound might have been formed of the waste of a manufactory, or what is commonly called "sherdwreck," many of which are now accumulating, and will disclose their secrets to some future generation. But, on further examination of the locality, I have no doubt that Mr. Abington's suggestion will be found correct, that these precious vestiges are the Penates of the ancient Cilicians, and consequently of a much more interesting character, inasmuch as they will have been put by and testify to the triumphs of Christianity over the superstitions of the Gentiles.

A head of Pan and of Jupiter, an incense-burner, a head and statue of Diana, a Juno, a winged Apollo, a Mercury, and a head of Messalina—all more or less injured—are among the precious fragments.

This question now rests on—Was this casting away of idols the act of private individuals, clearing their habitations of these abominations, at the risk of persecution from the authorities, and burying them outside the gates? or was it a general cleansing of the city by the force of public opinion, such as is described in Acts xix. 18-20? In either case, we find here accumulated every variety of idol, including the compound worship which had been carried on for years by Assyrian, Egyptian, Syrian, Grecian, and Roman mythology—this combination, no doubt, arising from the local position of Tarsus and its commercial connexions; and if some person competent to the study were to take up the subject, I feel persuaded that much might be elucidated of further interest to the archæologist and to the divine, which would bring us to the firm persuasion, that during the purposes predestinated and thrown away were to be attributed to the influence of apostolic missionaries of the Christian faith in the first century of our Lord.

Here is certainly opened an interesting argument. Our author is convinced that the religion of Tarsus, previous to Christianity, was a compound of all the existing creeds. Further:—

A large portion of these terra-cottas are of a sacred character, but they are not of a magnitude or material to make us suppose that they could have taken place in the public temples. They must have been for use in domestic lararia, or chapels, or rather oratories. It is like, that the owners did not restrict the honour of a place there to one or two deities, but that people of opulence had a number of such as had been duly consecrated by the priest, which were all honoured in turn, or as their special help was required.

Heads of emperors and ladies of distinction were sometimes copied for those of the deities. It was a mode of complimenting the great without offending their piety. In process of time the artist became bolder, and the man and woman were unhesitatingly deified. Instances of both practices are found among the newly-discovered terra cottas. Vestiges of passed-away manners like these are not only highly instructive, but exceedingly suggestive. They are more valuable in their distant application, than in their direct testimony.

With regard to the date to which we should attribute these interesting remains, I must remark, that as the coins found with them were struck from 150 to 200 years B.C., and as we see from No. 29, where the female

THE FUNERAL PROCESSION OF FIELD-MARSHAL THE DUKE OF WELLINGTON, NOVEMBER 18, 1852

THE MILITARY PROCESSION AT THE FUNERAL OF THE LATE DUKE OF WELLINGTON.

THE funeral of the late Duke of Wellington was the only instance on record in which men of every arm and from every regiment in the service were assembled together; and thus, apart from the graver interests which occasioned her so assembling, afforded an opportunity, not easily to be forgotten, of seeing how much variety of uniform, of contrasting the varied accoutrements and manly bearing of our brave defenders in every clime. Considering the event as one of historical interest, we, in the present Supplement, fulfil a promise made some little time back, of giving accurate representations of the several regiments that appeared on the day in question, together with notes of their respective uniforms, the inscriptions on their colours, &c.; also their stations, whether at home or abroad, at the period of the funeral, and the dates of their last return from abroad, as we find them recorded in Hart's *Army List*.

1*st Regiment of Life Guards.*—"Peninsula," "Waterloo." Scarlet, blue facings. Returned from France, January, 1816

2nd Regt. of Life Guards.—"Peninsula," "Waterloo." Scarlet, blue facings. Returned from France, February, 1816.

THE ILLUSTRATED LONDON NEWS

No. 611.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MARCH 5, 1853. [SIXPENCE.

DIMINUTION OF PAUPERISM.—SOCIAL WELFARE.

THE annual return usually made about this period of the year of the number of paupers in receipt of relief in England and Wales, has just been laid before Parliament, and we announce with satisfaction that the number continues to decrease. There were in all the unions under the Poor-law Commissioners on the 1st of January:—

	Paupers of all classes.	Able-bodied Paupers
1852	845,360	127,318
1853	7 ,443	12 ,22
Decrease on Jan. 1, 1853	39,917	11,698

Of the paupers of all classes the decrease per cent was 4.3, of able-bodied paupers 8.1. This would be gratifying if it stood alone; but our readers can scarcely require to be informed that the number of paupers of all classes, and of able-bodied paupers, was less on the 1st of January, 1852, than on the same day in 1851; and less then than on the same day in 1850, when it was also less than in January, 1849. So there has been since 1848 a successive and a continual reduction in the number of paupers, and this improvement is happily still going on. As a contrast, we state the numbers on the 1st of January.—

	Paupers of all classes.	Able-bodied Paupers.
1849	940,851	201,844
1853	799,443	126,220
Decrease in four years	141,408	75,424

In the four years, then, the whole number of paupers has decreased 15 per cent, or one-sixth; and, when it is considered that many of the paupers are fatuous, or widows or orphans, this decrease may be considered very large; but in the still larger diminution of able-bodied paupers—no less than 37 per cent, or more than one-third, which is the drying up of a large source of pauperism—lies the ground of our brightest hope. Already, since 1848, more than one-third of the pauperised labourers of England have been raised from a condition of degradation to be independent men. Instead of being housed, fed, and clothed by the public, they feed, house, and clothe themselves; and contribute, by their payments for sugar, tea, beer, spirits, &c., their quota to the public taxes. They now perform the duties, and have acquired the political rights of other citizens, which they had lost as paupers; and may exult in their new and improved condition.

We regret that this diminution of pauperism is not equally spread over all the country. In the general reduction of the last four years, the agricultural counties have shared, but not equally, with the manufacturing counties. In Bedford, Berks, Cambridge, Dorset, Gloucester, Hereford, Herts, Huntingdon, Norfolk, Somerset, Sussex, and Warwick, and in several of the Welsh counties, there is an actual increase of able-bodied paupers in the year 1852. This is, perhaps, the temporary consequence of a very wet autumn, which has impeded all kinds of agricultural labour. In Flint, the increase is as great as 8 per cent, which is the largest; in Gloucester, where it is least, it is 0.9 per cent. In all the other counties the decrease is considerable, being equal to 27 per cent in Lancashire; 18 per cent in Rutland, the next highest; and only 0.4 per cent in Northampton, where the decrease has been the least. The agricultural and all the counties will, however, speedily feel the advantage of the general decrease of pauperism; and the whole community cannot fail to derive great advantages from the gradual conversion of able-bodied paupers into independent and industrious men.

Such an improvement is not isolated. It is well known that the great majority of all crimes punished by the laws are crimes against property. It is pretty certain, as the facility of getting employment and subsistence is increased—which is plain from the reduction in the number of able-bodied paupers—that the temptation to steal is lessened; and we know from the criminal returns that the number of commitments has latterly decreased very considerably. We have not yet seen the official returns for 1851 or 1852; but it strikes us that we have heard latterly much less of numerous gangs of poachers than in former years; and we believe that increase of employment, at good wages, has given a great check to poaching. At any rate, it is quite certain that the number of commitments has decreased very much since 1848; up to which time, except for the interval between 1843-47 it had continually increased. Though there are differences of opinion as to the causes of this diminution of pauperism and of crime—as the criminal laws and as the Poor-laws have not been materially altered within the period—there can be no difference as to the conclusion, that some circumstances in the social condition of the people are more powerful than harsh Poor-laws to discourage pauperism, and than severe penal laws to diminish crime.

If we were to say, with the Protectionists, that Free-trade policy has had no influence in improving the condition of the people, and that it is all due to the discovery of gold in Australia and California, that would still justify the same conclusion. The gold discoveries, if we admit that they influence the social condition of the labourer, have been more efficacious in reducing pauperism and preventing crime, than the wisest and best meant legislation. Probably, there are many other gold mines yet awaiting discovery, and working, which will have as beneficial effects as the discoveries of the mines on the shores of the Pacific Ocean. Any one can see by looking at the trade returns, which are published monthly and annually, that the value of the exports last year exceeded the value of the exports of the

SAINT DAVID'S DAY (MARCH 1).—BY GEORGE THOMAS.—(SEE NEXT PAGE.)

previous year by £2,897,947, and that the exports of 1851 exceeded still more the exports of 1850. If we go back to the year 1842, we find that between that and the year 1852 the exports have increased no less than £30,000,000. In the vast increase which has taken place within that period of the exports of metals, cottons, woollens, machinery, silks, &c., many persons at Merthyr Tidvil, and Birmingham, and Manchester, and Macclesfield, and Leeds, have found very valuable mines, from which they have extracted, year after year, increasing quantities of gold. There is a probability, according to the geologists, of the Californian and Australian gold mines being soon worked out; but there is no probability that the mines of our manufacturing districts, seated in man's own skill and industry, and increasing year by year, will ever be exhausted. Every part of society teems with valuable mines, discovered day after day by science and art, and, even on the Protectionist theory, if men be only permitted to work them, they will give a continual impulse to the progress now so happily commenced—lessening every year pauperism and crime.

A curious fact, showing the mode by which the mines seated in the skill of the people are made to yield gold, is mentioned in the American papers received on Tuesday last. There is a remarkable falling off in the first month of 1853, of immigration into New York, as compared to the corresponding month of 1852. This is partly accounted for by emigration from England being directed to Australia; but it is also justly accounted for in part by the American journalist, when he says:—

American prosperity has *erected upon the Old World*, has given employment to the suffering classes, and, of course, has removed the chief inducement to leave the country of their birth. The cotton of the South, the meats and breadstuffs of the North, and the gold of California constituting the surplus wealth of the American Union, have gone to England, and have been distributed thence over the Continent. These commodities have furnished not only food and raiment to the destitute, but have opened new channels of industry which have given employment to the idle. When mankind can find work and subsistence, instinct keeps them stationary.

These remarks are confined to the United States; but we are also informed that the Brazils and various other parts of South America are yearly sending increasing quantities of wealth to Europe, and especially to England, which have been paid for by a large increase in the exports of English goods. Nobody cares much for gold for its own sake: it is chiefly valuable for what it will buy; and North and South America, with many other countries, give us, in exchange, much useful wealth equivalent to gold, but preferred to it, for the productions of Manchester and Birmingham. The yield of our mines depends, therefore, in part, on the increase of people and of wealth in the great continent of America, and, in fact, in the whole trading world. As the people there continually increase, and as our skill increases, it becomes more productive; and human imagination cannot see any limit to that prosperity which grows as skill and population increase. A Protectionist objection to Free-trade is, that it increases the wealth of other countries; but the American journalist shows how that increase flows back on ourselves. Free-trade thus indeed confers a double blessing: it enriches all who buy and all who sell.

ST. DAVID'S DAY.

BY MRS. T. K. HERVEY.

[On the day of St. David, the Patron of Wales, the Welsh gained a victory over the English. In the battle, every man distinguished himself by wearing a leek; and the leek is still worn by Welshmen on the anniversaries of St. David, in memory of their conquest]

Ye is the day of battle won,
The good St. David's Day,
When Britons chased, at set of sun,
Their Saxon foes away!
But why, where Victory weeps her pain,
Should verdure wreathe the brow?
The record of the conquered plain
Should be a withered bough!

Such days are fled: Time grows too old
His out-worn sword to wield;
And braver words than e'er were told,
Show graven on his shield.
Now, round his temples bare he binds
A crown that saints might wear;
And, casting down the laurel, winds
The olive in his hair.

Now, by the leek the red rose flowers,
And hate and strife are o'er;
A better, nobler badge is ours
Than e'er St. David wore!
Each quaint device the warrior wears
The warrior's arm may serve—
Give me the princely brow that bears
The beautiful "I SERVE."*

O! Love's is still the gentler yoke!—
Fools storm at heaven's gate;
But they, "I serve," the Blind Lord spoke—
"Who only stand and wait."
Old Chivalry, with lance in rest,
The soul no longer warms;
His earlier task was still the best—
To watch beside his arms.

So let us stand, and watch, and wait
God's call in this our day,
Nor force upon the old blind Fate
The wreath nor of the bay
So shall a higher, Loftier will
Our hearts within us nerve,
While bearing for our motto still
The beautiful—"I SERVE."

* *Ich dien*, or "I serve," which is the motto still borne by our English Princes of Wales, was that of the King of Bohemia, who was at the Battle of Cressy. It was first adopted by Edward the Black Prince, in commemoration of that event. Historians relate that the King of Bohemia, being blind from old age, and therefore no longer able to take an active part in the engagement, yet feeling called by duty to be present on the field, ordered his horse to be laid to the bridle to the horse of two knights of his train. His dead body, together with those of his two companions, was afterwards found among the slain; the three horses standing quietly by them in that order. The crest of the Bohemian King was three ostrich feathers.

ST. DAVID'S DAY.—On St. David's Day (the 130th anniversary of the establishment of the Royal Welsh School, Gray's-Inn-road), the children of the Ancient Britons were regaled with a substantial dinner, and afterwards proceeded to St. James's Church, Piccadilly, when prayers were read in Welsh by the Rev. E. Edwards, M.A., and a sermon preached by the Lord Bishop of Peterborough.

DUBLIN GARRISON.—Some rumours floating on the surface of military society have been occupying our gossips here. It is said that the Duke of Cambridge is shortly to succeed Sir Edward Blakeney in the command of the Forces; that a battn. on of the Foot Guards and the Blues are to be brought that Colonel the Hon. Earl of Cardigan has offered to bring them over at his own expense—that the occasion of the exhibition will be marked for a grand military display in the Phœnix-park—that the Queen is coming and that altogether we may expect something very grand in a military point of view.

THE ILLUSTRATED LONDON NEWS.

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The arrival of the *mi-carême* brings a momentary return of the gaieties suspended since the Carnival; and the tailors and *inquisitive*, the *modistes* and milliners, are all at work for the ball of the *Corps Législatif*, and the other *fêtes* with which Paris proposes to keep itself in training for the Easter festivities, before entering upon the stricter exercises of the latter half of Lent. Nothing can exceed the magnificence of the preparations for the public ball above alluded to; and, as experience gives wisdom, the various *désagrémens* that attended the ball of the Senate have acted as a warning, and stringent measures are being adopted to avoid the great evil of the *fête*, namely, the admission of a number of persons, more especially of the *beau sexe*, through the unjustifiable transferring of cards, whose presence in such an assembly was most objectionable. In order to prevent a recurrence of these accidents, it is intended that every person obtaining a ticket shall give a receipt in his or her own name, and thus render himself or herself responsible for the career thereof; that on the ticket shall be inscribed the fact that the name of the bearer shall be announced on entering; while, moreover, to render assurance doubly sure, a committee of ladies shall be appointed to inspect the parties as they arrive; so that it will be indeed difficult for any unwarranted interloper to enter the precincts reserved for the veritable *élites* of the august body. Of course, however, crowd, heat, thirst, and fatigue will, as heretofore, bid defiance to these and all other rules of exclusion; and, though the ball may be more select than that of the Senate, it will probably not be one whit less exhausting. In order further to gratify the public, who, on that occasion, complained that but comparatively few of the guests could have a view of the Empress, it is arranged that two thrones shall be placed in different *salons*, so that their Majesties shall pass from one to the other, and dance in each.

A rumour that has long existed, and often been repressed, begins again to acquire additional force: I mean the mental condition of one of the most decided Bonapartists of the Ministry, whose conduct has on several occasions of late been, it is said, so extraordinary as to lead to the conclusion that it can proceed from but one cause. If such be indeed the case, the Bonaparte cause will lose one of its most earnest and determined supporters.

The change of temperature, so keenly felt from its succeeding so long a period of mild weather, has wholly failed to produce the favourable effect anticipated for the health of Paris. The contrary, at no period of the winter has so much serious illness prevailed as at present. The influenza or *grippe* (know, gentle readers, that they are one and the same thing) takes most formidable proportions; and, instead of being the simple cold or catarrh, which in our early days only required a warm foot bath, a little gruel, and an extra supply of pocket-handkerchiefs, but which in no wise hindered our usual occupations or amusements, this terrible descendant of that comparatively harmless malady, seizes us by the head, by the throat, by the body, by the limb—maltreats us in every possible way—burns us with fever, makes our teeth chatter with cold shivers; and, after submitting us to a series of real and unreal severe suffering, leaves us weak and prostrate to meet the bitter winds of March, in every gust of which lurks a malady. Typhus fever rages with extreme violence, as it usually comes in the suite of *grippe*, so that, altogether, the sanitary condition of the centre of civilisation, *laisse beaucoup à desirer*.

Earnest and sincere are the regrets of all parties and all classes for the loss of one who, for a period of thirty two years, has, with an energy, a nerve, a fertility, and a success rarely equalled, laboured for their pleasure and amusement. M. Bayard, at the age of fifty-six, the author of more than two hundred pieces—all more or less successful—all marked with the same cachet of wit, of interest, of elegance, and of happy style and selection—has left behind him more than one *chef d'œuvre*, more esteem, more affectionate sympathies, and fewer jealousies than often follow any public character. Of such he had become, to the grave, less all by amiable, generous, and kind-hearted, he ever, in the midst of his own incessant labours and successes, found time and inclination to lend a willing and valuable assistance to his fellow *confrères*, whose day was gone by, to his younger ones, whose turn was not yet arrived: not only did he afford them counsel and encouragement, but often did he bestow hours of actual labour on a piece which entered his hands weak, dull, faulty, absurd even, and came forth sparkling with wit and interest, and appeared under the one name, and for the sole benefit of the writer who had conceived only the first crude, poor, unpresentable idea of it. The only claim requisite to obtain his aid was to stand in need of it; and it was ever the poorer and most helpless of his brethren that had his earnest attention. Excessive mental labour is supposed to have caused his death, which occurred at the close of a ball given by him on his daughter's birthday, where he had presided with his usual frank, joyous, and kindly hospitality. On the following morning he was to have attended the rehearsal of a new piece; in same no; and, after long waiting, a messenger was despatched to know the cause of the delay; the reason was but too soon explained—he was dead!—dead since one of the directors of the theatre, then present, had shaken hands with him at six o'clock that morning at the conclusion of the *fête*!

We predicted that the arrival of the Empress would "clear the Court" effectually. We prophesied truly: the clearing process has commenced in most vigorous guise. Two ladies of high rank—one having been, up to the period of the Empress's marriage, a constant guest at the Elysée, the Tuileries, and of the party at Compiègne—have, we are assured on competent authority, received intimation that their presence at the Court will in future be deemed *de trop*, in consequence of certain expressions made use of by them at a late reception; while a personal favourite and *protégé* of Louis Napoleon has fallen into marked disgrace, in consequence of his active interference in behalf of one of these ladies, who had desired to obtain a place about the person of the Empress. We will not comment on the measure itself; but we may remark that the conduct and conversation of the ladies in question have long been the subject of severe criticism; and that the fate of either of them holding an official position at Court—mentioned, though never seriously contemplated—was regarded as calculated to produce the worst effect.

The Emperor presided on Tuesday at a meeting of the Council of State, in which the discussion of the budget was terminated. It is believed that the navy estimates have been reduced by four million francs, and a considerable reduction in public works has also been made.

All the prisoners arrested on February 9th have been set at liberty; all hope of establishing a case of conspiracy having been abandoned, though most of them have been called upon to find bail.

Great moderation has been shown by the French Government in meeting the views of Russia relative to the Holy Shrines. The Emperor possesses no small influence at the Papal Court, which might be turned to account whenever the question of the Pontiff's presence at the French Coronation is again agitated. The effect on the Sacred College of Austrian diplomacy is already known; and it is considered well to have a good word from a powerful friend when the moment comes to turn it to advantage. The desire to see the Pope in Paris is much stronger than any that exists with reference to the Holy Shrines. Letters from Rome are said to contain the news of the approaching journey of the Pope to France, and of his residence at Compiègne. This journey is the great subject of conversation at Rome, and it is said there that his Holiness will remain two months in France.

The Bourse was agitated on Wednesday and the Three per Cents., which opened at 81f. 50c., fell to 80f. 60c., on a report that the windows of the residence of the Earl of Westmoreland, the British Ambassador at Vienna, had been broken by the mob.

ITALY

Milan continues quiet. It is said that the city, which has already been mulcted in upwards of 1,000,000 of francs, is to have a weekly contribution of 50,000 f. Among the wounded soldiers in the Hospital at Milan are twenty-four who were stabbed in the back. As many of the wounds were inflicted with fine ground to a point, they are particularly painful and dangerous. A proclamation has been issued by Count Gyulai that persons circulating false news and alarming reports, are to be tried by Courts-martial. Arrests still continue. The church bells are still mute.

Mazzini has published a letter, which has been elicited by Kossuth's public disavowal of the proclamation, which appeared in our columns. Mazzini says that the original, signed by Kossuth, in his own handwriting, is in his hands. Mazzini's letter admits the active share he has had in instigating the late outbreaks in Milan. He says

It was sent to me by Kossuth, at my own request, during the last month of his sojourn at Kutayah, for the express purpose of being published in the case of an insurrectionary movement in Italy. It was never afterwards returned.

"When action was decided upon by heroic, though now misjudged men, and on a scale which nobody who was not concerned in the scheme has a right to measure, a very few days before the one appointed, the Directing Internal Committee thought they were entitled to print it, and they did print it, in an Italian town. The date of February was inserted, and two paragraphs, indicating, I think, the more remote date, were omitted.

AUSTRIA

The silly resolution has been taken by the Austrian aristocracy to admit no Englishman into their houses, in consequence of the attack upon the Emperor's life. Englishmen are told:—"A handful of grasseless foreigners have openly preached insurrection and assassination, and the British nation countenances them, if not their doctrines." The Austrian *Lloyd* openly defends the petty persecution, and says:—"If Messrs. Ledru Rollin, Kossuth, and Mazzini continue to enjoy the hospitality of Britons, the generous hosts cannot longer enjoy ours. We can as easily dispense with the visits of the sons of Albion as with those of the people of Ithino." The importation of English goods is not indispensable." &c. Some of our fellow-countrymen feel annoyed at being "sent to Coventry;" but the public at home will hear of the slight offered to the English nation with extreme composure and indifference. There is a rumour that the windows of the British Ambassador have been broken by the indignant mob.

The would-be regicide, Libeny, was executed on the morning of the 26th. As the city is in a state of siege, the authority of General Kempen was sufficient; and the Emperor was still in ignorance of the fate of his assassin, which has been concealed from him, at the wish of his medical men. Libeny, in his last moments, said that, being dissatisfied with the political and administrative institutions recently introduced into Hungary, "his object was to free his native country from the Imperial supremacy." The instrument employed is described as a "knife, about ten inches long, with a strong wooden handle, ground sharp on the back, so as to form a dagger." When Libeny was seized, he shouted, "*Eljen* for the Free Republic, and for Kossuth!" The condemned man, who was taken to the place of execution in a light open waggon, was seated with his back to the horses. The vehicle, which also contained the confessor, the provost, and a priest, was surrounded by a detachment of mounted gendarmes, and followed by a squadron of cavalry. As he sat wrapped in a cloak, with uncovered head, composed, though deadly pale, the snow fell heavily on his long hair, which was tossed about in wild confusion by the violent and piercingly cold wind. On his arrival at the gallows-tree, the lengthy document containing the sentence was read aloud to him, from beginning to end, by the provost, who had the greatest difficulty in keeping the paper from being torn to pieces by the wind. The miserable man met his fate with calm courage.

The Emperor's health has excited great misgivings, and at one time rumours of a contretemps and a physical prostration caused great consternation in the capital. The bulletins twice make mention of unusual and increasing warmth in the fore part of the head. The Emperor's sleep has been disturbed, and he has been by no means out of danger. It is considered imperatively necessary to guard against all mental excitement, and therefore no one is admitted into the Emperor's room excepting the medical men, Count Grünne, and, as a matter of course, the Archduke Francis Charles and the Archduchess Sophia (father and mother of the Emperor). His latest bulletins are

Feb. 26, four P.M.—His Majesty has felt considerable alleviation since the morning, as the inflammatory symptoms of yesterday are the last night have not returned.

Feb. 27, 6 o'clock A.M.—The important alleviation made known yesterday continued during the whole evening, and his Majesty enjoyed a tranquil sleep of some duration

If the public could read "improvement" instead of "alleviation," their apprehensions would be less.

The news that all the conditions exacted by Count Leiningen were agreed to by the Porte, arrived most opportunely on the Vienna Bourse, where a complete panic existed on Saturday. London was at 11f. 6 c., and Napoleons in proportional shares. In the course of an hour, fell from 225 to 212; but on the arrival of news of the success of Count Leiningen's mission, they rallied to 217.

The discontent in Hungary has found vent in a formidable conspiracy within the walls of Comorn, the fortified fortress in the Austrian dominions. The agent between the political prisoners and those outside was the provost, who, it is said, was hanged six hours after the guilt came to light. In the mattress of one of the prisoners a large sum of money in ducats, and a variety of correspondence, were found. The place was to have been set on fire in different places, and during the confusion the numerous prisoners were to have been set at liberty. It is whispered that the ramifications of the conspiracy extended to Pesth, where the Neugelände, a large building serving the double purpose of prison and arsenal, was to have been stormed, and the arms distributed. A letter, addressed to the *Augsburg Gazette* on the 19th, says:—"All possible precautionary measures are taken. Strong detachments patrol the streets, the advanced men with muskets cocked. Numerous arrests take place. Kossuth proclamations, printed on handkerchiefs, are posted up. The cannoneers stand with matches lighted near a battery in the Neugebäude, where the political prisoners are confined. An artillery company has come from Comorn, and the garrison is to be reinforced by two regiments." There was to have been an insurrection at Agram, like that at Milan. In Prague unusual symptoms of ferment have also been observed, and many persons have been arrested.

PRUSSIA.

The trial of Professor Gervinus for "exciting to treason, &c." commenced and terminated at Mannheim on the 14th, but judgment was deferred.

A telegraphic despatch from Berlin announces that the Grand Duke of Oldenburg died suddenly on Sunday morning. The Grand Duke Frederic Augustus was in his 70th year. He was father to the Queen of Greece, who, we may remark here, has given the nation hopes of a direct heir to the Crown. The Grand Duke's successor is his son, the Grand Duke Frederick Peter, who is 26 years of age, and was married in 1852 to the daughter of the Duke of Saxe-Altenburg.

TURKEY AND MONTENEGRO

We hear from Constantinople that the Turkish Ministers, yielding to the counsels of the French Ambassador, acceded to the demands of Austria, conveyed through Count Leiningen. They made reserves only on what relates to the dispute of the Lords of Albania and Suturnia, insisting on this question being submitted to the decision of France and England. Count de Leiningen informed the Porte that he should take his departure, when M. de Lacour, Colonel Rose interdict, and induced the Austrian General to wait twenty-four hours longer. The Porte eventually acceded to all the demands of Austria; and thereupon the Count left to announce the satisfactory termination of his mission at Vienna.

While these negotiations were going on, the war was renewed in Montenegro. It appears that on the 7th ult., Osman Pacha, with 6000 men, crossed the Suutzara, and effected his purpose with a loss, as it is said, of 100 men and 50 horses. Omar Pacha, on the 8th, suffered a defeat. He had sent 600 men across the Zetta Bridge; but during the night the water rose and carried it away, and the detachment, being separated from the main corps, was obliged to surrender at discretion. During the same night Omar Pacha received an unexpected visit from 5000 Montenegrins, and the surprised Turks retreated in the greatest disorder to Spuss. The trophies of this victory consist of 500 prisoners, a considerable booty in the shape of horses, and seven pieces of cannon, even the military chest. The Turks had 400 killed and wounded. By this time all hostilities have no doubt ceased. In respect to Montenegro the *status quo ante bellum* has been demanded by the Austrian Government, and not the recognition of its independence, as this would place it too much in the hands of another power.

AMERICA.

By the *Atlantic* we have advices from New York to the 12th ult. The President had sent a message to the Senate announcing that England had made a proposition to refer to the Supreme Court of the United States, to withdraw her protection from Mosquito, and make Grey Town a free city. The President sent a form of the Senate of a proposition for a canal across the Isthmus by both Governments. The International Copyright Treaty had been signed, and sent to the Senate for confirmation. The House of Representatives had passed the bill appropriating 18,000 dollars to release Colonel Fremont from certain debts and damages and bail in England.

CAPE OF GOOD HOPE

The *Indiana*, which sailed from Cape Town on the 24th of January, brings us intelligence of the most sanguinary skirmish which has yet illustrated the gloomy annals of the Kaffir War.

General Cathcart had made an expedition into the Orange River Sovereignty, for the purpose of checking the depredations of the Basutos chief, Moshesh. The demand of the Governor was the paymentin three days of ten thousand head of cattle in full of all demands of the British Government. Moshesh came to the Governor's camp, and used every argument which Kaffir diplomacy could suggest to him to avoid the demand. He did not know where to get the cattle from; the time was short and the cattle many; he had not control enough over his people to induce them to give up so large a prey. The Governor, however, was inexorable The only relaxation he could be induced to make was that the day on which the interview took place should not be counted as one of the three. On the third day, 3500 cattle were sent in, under the care of Moshesh's son, Nehemiah, but no further payment was made within the three days, and an advance was determined on.

On the 20th of December, Moshesh fought with General Cathcart, an action which really seems to deserve the name of a battle, and to have been contested on the part of the enemy with great courage and resolution. This action took place at a spot called Thabe Bossigo. The battle lasted from sunrise till eight o'clock in the evening, and ended in the defeat of the enemy, with the loss of from 600 to 700 men, the Minie rifle, as we are told, making terrible havoc among them. On our side we lost one officer, Captain Fraser, four non-commissioned officers, and thirty three privates killed and fifteen wounded. We took, besides, a large number of cattle, though not so many as the ten thousand we had demanded. The next day Moshesh sued for peace, and a proof of the vigorous resistance we had met with is afforded by the fact that Gen Cathcart was content to abate his demands, and take the number of cattle remaining in his hands in full satisfaction of the original ten thousand. As an instance, however, of the sincerity of Moshesh's submission, it is stated that the week after the battle, one of the assistant-commissioners, Mr. Owen, had an interview with that chief, who assisted him in burying the officers and soldiers killed on that occasion. General Cathcart returned to Graham's Town

In a despatch, dated Graham's Town, January 13, and received at the Foreign office on Monday, General Cathcart says.—

The Orange River territory is at peace, as well as the whole extent of the frontier, 400 miles of which I have traversed on my return.

And, referring to certain terms he had offered to the chief Kreili beyond the Kei, General Cathcart adds —

These, I have no doubt, he will willingly subscribe to, and I think they will complete the final accomplishment of the task imposed on me when I assumed this command —that of the reduction of the rebellious Kaffirs and Hottentots, their complete submission, and the restoration of permanent peace and security to the colonial frontiers.

The list of casualties which accompanies the above news is long and melancholy. At Riet Fontein Lieutenant Wright was dangerously wounded in a skirmish with forty or fifty Kaffirs. Two farmers named Dupré were killed between Port Elizabeth and Somerset, and their waggons plundered. The leader of a party that went to their rescue was also killed. The same party had a few days before murdered a farmer and plundered eleven waggons. In an encounter in the Fish River Bush, five Englishmen were killed on one side and eleven Kaffirs on the other. The spirit of the Kaffirs has been by no means broken, and we are her hope, than anticipate, that the next mail will bring us intelligence of the entire submission of the enemy and the pacification of the colony.

THE WAR IN AVA.

By the Overland Mail, which left Bombay on the 29th January, we have news from Burmah. The Burmese occupied the Aeng Pass with a large force. The province of Pegu had been again occupied by the Burmese. They raised the siege of the town of Pegu on the 8th and 9th of January, and marched to the defence of Schoygett, upon learning that General steel was advancing upon that place. The Burmese have retired from Prome and from Meaoung. It is said that a revolution has taken place at Ava, by which the old King has been deposed and driven out, and that the new King is disposed to treat with us and to dismiss peace. General Godwin's despatches concerning the relief of Pegu are severely criticised. The general impression regarding the General's manœuvres before the town is, that, notwithstanding the absence of artillery and cavalry (for which deficiency he was himself only to blame), he could have brought on a close action, in which the Burmese would have suffered severely, had it not been for the indecision he manifested in altering his plan of attack two or three times within 400 yards of the enemy. In military circles, Major Hill's defence of Pegu is spoken of as the only brilliant exploit of the war. Fevers and diarrhœa are on the increase among our troops

From the Presidencies, we learn that Mr. Wyatt, of the Bengal Civil Service, Judge of Rungpore, has been suspended for corrupt practices. The Rungpore Court has for years had the credit of being venal and corrupt. General interest is excited by the discussions in Parliament, and relative to the renewal of the present charter. The feeling is said to be general among all classes, in the service as well as out of it, that the charter of the last twenty years is altogether unsuitable to the present advanced and advancing state of India; and some disappointment is likely to be expressed at the Premier's declaration, that the present system, with some modifications, will be adopted and continued in the new charter.

A letter from Hong-Kong, dated Jan. 11, announces that everything remains quiet at Canton. The reports concerning the disturbances are meagre and contradictory. From Amoy the last date is to the 6th inst. All was quiet there. The emigration of labourers was going on extensively. The emigrants were anxious to leave, and, coming from a district of sugar cultivation, they promise to be very beneficial to the West Indies.

CENTRAL CRIMINAL COURT.

"*Captain*" *Johnson* was called upon his recognisances to take his trial, but did not appear, so his recognisances were estreated, and a warrant issued for his apprehension.

William Hobson Pulsor, described as a botanist, was tried for manslaughter, by having administered lobelia to Charlotte Cardewell. He was acquitted, Mr. Justice Maule observing, "that it was admitted that the constant use of lobelia in cases of asthma, and that it was frequently attended with some good effect. There was no proof that he had administered any excessive quantity, neither did it appear that he could have had any reason for knowing that her lungs were in such an inflamed state as had been represented."

Mary Ann Oldham (the nurse in Greenwich Workhouse) was acquitted, on trial, for the manslaughter of John Gaywood, a child six years old, by placing a red-hot coal in the hand, the jury observing, "he had attentively read the evidence, and it appeared to him that there was nothing in it to connect the prisoner with the death of the child. On the contrary, the medical men stated that they could not trace the death to have any connection with the wound in the hand."

Charles Saunders (after a defence on the plea of insanity) was found "Guilty" of the murder of Mr. T. S. Teller, near Ilford, on the 6th of February last; and sentenced to be executed at Chelmsford.

In an action on a builder's account at Winchester Assizes, on Tuesday, the following written agreement was put in:—"I Hear a Gree to Bild 7 Cottages—to Be Good substanchell Bilt Buildings. The Red rooms papperd and Cubbords in them all. Privys to catch. Chimley pots to all chimles. Rooms catch to the same size. Money to be paid when Finisht and a Proved by Both. any thing forgoten and Nessery to done is a Gree to Do it."

CAMP ON ASCOT-HEATH.—Captain Higginson, of the Grenadier Guards, has been engaged in taking a survey of Ascot-heath, for the purpose of selecting a position for an encampment of 7000 of the household brigade and regiments of the Line in May and June next. Surveys have also been made in the Great Park, Hounslow, and at Bagshot-heath, where it is intended to encamp at the same time as many regiments as can be spared from all the military stations in the country.

AMERICAN WHALING.—The operations of the American whaling fleet in the Pacific have been very successful: 275 ships had touched at the Sandwich Island group during the year. The average value of the catch to each of the whalers is estimated at 20,547 dollars. The value of the products is thus stated, as compared with 1850, which was a remarkably successful year:—

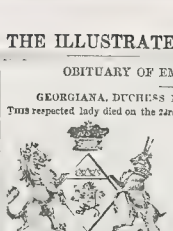
	1850	1852
Sperm. oil, barrels	15,106	17,247
Whale oil, ditto	2,238,488	4,1,585
Bone, lbs.	2,621,000	3,7,3,7
Value, dollars	5,408,217	8,414,017

Showing a balance in favour of 1852 of 2,940,800 dollars.

OBITUARY OF EMINENT PERSONS.

GEORGIANA, DUCHESS DOWAGER OF BEDFORD

THE respected lady died on the 23rd ult., at Nice, after a short illness



Her Grace was a younger sister of co-heir of George, fifth and last Duke of Gordon; and sister also of Charlotte, late Duchess of Richmond; of Susan, late Duchess of Manchester; and of Louisa, late Marchioness Cornwallis. At the period of her decease the Duchess was in her seventy-second year She became the second wife of John, sixth Duke of Bedford, 23rd June, 1803; and was left a widow 20th October, 1839. With seven sons and three daughters. Of the former, the survivors are Lords Wriothesley, Edward, Charles James Fox, Francis John, Cosmo George, and Alexander George; and of the latter, Lady Georgiana Elizabeth, late widow of Charles Romilly, Esq.; and Lady Louisa Jane, the second, of the present Marquis of Abercorn. Lord John Russell and his elder brothers—Francis, Duke of Bedford, and the late Lord George William Russell, G.C.B.—were sons of John, sixth Duke of Bedford, by his first wife, the Hon. Georgiana Elizabeth Byng

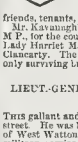
The beautiful residence of the deceased Duchess at Camden-hill has long been the resort of the fashionable world

LADY DOHERTY.

RACHEL SOPHIA, Lady Doherty, died, deeply lamented, at Lansdowne-crescent, on the 21st ult. Her ladyship's daughter of Augustus Anderson Lefroy, Esq., M.H.A. of Warwick park, Jamaica, derived her paternal descent from one of the oldest families in England, and her maternal from that of the Counts of Montmorency, one of the most illustrious of the French nobility, and was married in 1815 to Major-General Sir Richard Doherty, a descendant of the princely Irish family of O'Doherty.

CHARLES KAVANAGH, ESQ., OF BORRIS, COUNTY CARLOW

THE Kilkenny papers of the 23rd ult., announce the death of Charles Kavanagh, Esq., of Borris, from the effects of the injuries the lamented gentleman received by the accidental taking fire of his dressing-gown on the preceding Sunday. Mr. Kavanagh, who had only just completed his twenty-fourth year, had recently succeeded to the family estates, by the decease of his elder brother, and was to have been married on Easter Monday to a young lady residing in the county of Meath. In ancient times, the ancestors of the Kavanaghs, of Borris, were Monarchs of all Ireland, and, at the period of the invasion of Henry II., were Kings of Leinster. The gentleman, whose death we record, was universally admitted to have been the heir and representative of the MacMorroughs, in whom the sovereignty of Leinster finally vested; and his mortal remains were consigned to the grave at the cemetery of St. Mullins, from time immemorial the burying place of the MacMorroughs, attended by a long train of friends, tenants, and clansmen



Mr. Kavanagh's father was the late Thomas Kavanagh, Esq., of Borris, M.P., for the county of Carlow; and his mother, who still survives, the Lady Harriet Margaret Le Poer Trench, daughter of Richard, Earl of Clancarty. The family possession now derive on the deceased's only surviving brother, Arthur Kavanagh, Esq., born March 25, 1831.

LIEUT.-GENERAL SIR WILLIAM SAMPSON WHISH, K.C.B.,

OF THE BENGAL ARTILLERY.

This gallant and distinguished General died on the 26th ult, in Brook street. He was born in 1787, the son of the Rev Richard Whish, Rector of West Watton, and Vicar of Wickford, Essex. In 1804 he entered the military service of the East India Company, in the Bengal Artillery, and, after nearly fifty years' service, became a Major-General in 1851. He was present at the sieges of Hatrass and Bhurtpore, and, for his conduct at the latter, was given the Companionship of the Bath. The more recent events of his distinguished career was his successful siege of Mooltan, and the check he gave to the enemy at the fords of the Chenab, at Wuzeerabad a move effected against the Commander-in-Chief's orders, but all important with reference to the preservation of Lahore and to the destruction of plans, which, once prosperous in the commencement, might have shaken our empire in India General Whish subsequently received the thanks of Parliament, as well as the East India Company, for "his eminent services in conducting to a successful issue the siege of Mooltan and fort of Mooltan" and likewise "for his indefatigable zeal and exertions at the Battle of Goojerat." Sir William married, in 1809, the daughter of George Dixon, Esq.

LIEUTENANT-GENERAL SIR ANDREW PILKINGTON, K.C.B.,

COLONEL OF THE 20TH REGIMENT OF FOOT.

The decease of this veteran soldier one of the oldest officers in the army occurred at Castlefield-place, Sussex, on the 23rd ult. Sir Andrew served on board the Channel Fleet in 1793-4, and, in Lord Howe's action of the 1st June, received two splinter wounds. Being at the taking of Martinique he was in the West Indies, and was present at the capture of Trinidad. In 1798 he shared in the suppression of the Irish rebellion and in 1799 and 1800 served on the expeditions to the Helder. In 1801 he was employed at the reduction of the Swedish Island of Swaborg. In 1808 he was actively employed in the Peninsular campaigns, from 1809 to 1815 was Deputy Adjutant General to Nova Scotia. His commission of Lieut. General bears date in November, 1841. In that year he obtained also the Colonelcy of the 82nd Regiment; from which he was removed to the 20th, in 1850.

Sir Andrew married a daughter of the late Right Hon. Sir Vicary Gibbs.

DEATH OF DR. OXENBEG.

—At the meeting of the Royal Geographical Society, on Monday evening, at the Royal Institution, the president, Sir Roderick J. Murchison, directed attention to a bust of the lamented African traveller, Mr Richardson, which was on the table, accompanied by two volumes descriptive of his last explorations in the interior of Africa, where he fell a victim to disease. It was most satisfactory, however, to geographers, to know that her Majesty's former Secretary of State for Foreign Affairs, Lord Aberdeen, had procured a pension for the widow of our deserving countryman. Sir Roderick then alluded feelingly to the great loss which the expedition had since suffered in the recent death of Dr Overweg, the geologist, and the only surviving member of the scientific party. Dr. Barth had started full of hope on a fresh journey from Kuka, near Lake Chad, to Timbuctu; and hoped, on his return, to set about his ultimate great purpose—a journey across Africa to the eastern coast. Happily, this brave man will not now be left alone; and, when joined by Dr Vogel, of whom he (the President) had expressed so high an opinion at the last meeting, there was every reason to expect that the fresh encouragement just given to this enterprise by her Majesty's Government, would lead to results highly important in a commercial as well as a scientific sense. Dr. Barth's map of the country visited by him had been received at the Foreign Office.

WILLS.—The will of Viscount MELBOURNE, G.C.B., was proved on the 16th of February, by Baron de Mauley and the Right Hon. Edward Ellice, the executors. The personalty is sworn under £160,000. To his Lady (formerly Countess de Mauley) he leaves a life interest in £37,000, from family estates; also £700 a year, payable from the person holding the inheritance of the entailed estates, and in possession of Brocket Hall and Melbourne Hall. All other freeholds and leaseholds, and the residue of the personal estate, he leaves to the Viscountess. There are a few legacies, and a sum of £200 to be distributed among certain poor cottagers. The will bears date in July, 1851.—The will of the Rev. EDWARD RICE, D.D., late Head Master of Christ's Hospital, was duly executed by him on November 6, 1844, and a codicil October 4, 1852 (his sudden death occurred on January 26, inst). He has devised his freehold estates at Alverstone and Wellsbourne to his eldest son, and has settled the leasehold estates among those his property in the Equity to his two daughters. His youngest son, being amply provided for, has a reversionary interest in a portion of the leasehold estate in the widow. He has appointed as executors Rev. John Smith, of the Mercers' School, and the Rev. William Webster, of Christ's Hospital. The personalty was estimated at £2000

ST. PAUL'S, COVENT-GARDEN.—On Wednesday a very liberal supply of tickets for coals, bread, meat, and potatoes was distributed among the necessitous poor of the above parish by the rector, the Rev. Henry Hutton, and the churchwardens.

CHURCH, UNIVERSITIES, &c.

TESTIMONIALS.—The Rev. Irwin Lloyd, M.A., curate of St. Peter's Church, Du B auvoir Town, Kingsland, was presented, on February 22nd, with, a handsome dressing case, by the members of his Bible class, "as a token of their sincere regard for the kind attention and valuable instruction which they have received from him." This is the sixth testimonial of esteem which the rev. gentleman has received within a period of three years.

PREFERMENTS AND APPOINTMENTS.—The Rev. H. J. Glyn, M.A., to the Rural Deanery of Bradford.—The Rev. J. H. Dobson, B.A., to the Rectory of Elsworth, Cambridgeshire. The Rev. P. Read, M.A., to the Vicarage of Bringham, near Stocksbridge. The Rev. Thomas Peckover, M.A., to the incumbency of Par-stone, near Poole. The Rev. J. Knapp, B.A., to the incumbency of St John's Chapel, Preston.

The Rev. J. H. Todd, fellow of Trinity College, Dublin, has been appointed one of the Chaplains to his Excellency the Lord-Lieutenant of Ireland.

THE NEW BISHOP OF LINCOLN.—We consider the appointment of Canon Jackson to the Bishopric of Lincoln, vacant by the decease of Dr. Kaye, as a most judicious one. The Canon of Christ Church on the selection of the Rev. John Jackson, Rector of St. James's, to fill the vacant see of Lincoln. Mr. Jackson will come to his new and arduous office the writer and distinguished friend and supporter of his patron, the Bishop of London, the testimony of an enlarging and devoted experience, a style of preaching singularly simple and impressive, a single mindedness, activity, and practicality, as proved in the duties of a large and important parish, that cannot but warrant the highest anticipations of his future career.—*Times*. Mr Jackson's name appears in the first class "in Literis Humanioribus" in the Easter Term of 1830, along with those of Mr. sergeant Gaselee; Dr. Jelf, Principal of King's College, London; Mr. R. Lowe, Secretary of the Board of Control; Mr. H. Halford Vaughan, Regius Professor of Modern History. And, in 1834, Mr. Jackson obtained the Ellerton theological prize for the best essay, the subject being "The Sanctifying Influences of the Holy Ghost is indispensable to Human Salvation."

IT is somewhat singular that the two last rectors of St. James's, Westminster—the Rev. J. G. Ward and the Rev. John Jackson have become Bishop and Dean of the diocese of Lincoln.

OXFORD.—Disputations for the Degree of Bachelor of Divinity will be held in the Divinity School, on the 7th and 8th of March, by the Rev. F. Metcalf, M.A., and the Rev. T. E. Espin, Fellows of Lincoln College.

THE RESPONSION LIST.—The examination for the responsions closed on Wednesday, when out of the largest number of candidates ever before known—viz., 268—230 passed their examination. Fifty-three were sent back, or, in common parlance, were plucked, and fifteen took their names off

BALLIOL COLLEGE.—The master and fellows of this college will meet on Friday, the 18th of March, for the purpose of electing a visitor in the place of the late Right Rev. Dr. Kaye, Bishop of Lincoln. The master and fellows, by their statutes, enjoy the singular privilege of electing their own visitor. The Bishop of Lincoln, in his own right, is visitor of Lincoln and Brasenose Colleges.

FUNERAL OF THE LATE BISHOP OF SYDNEY.—On Saturday morning the mortal remains of the Right Rev. W. G. Broughton, D.D., late Lord Bishop of Sydney and Metropolitan of Australia, were consigned to the tomb with due solemnity in the metropolitical church of the province of Canterbury, in the presence of a vast number of persons, and their own relatives. The Bishop of Lincoln, in his own right, is visitor of Lincoln and Brasenose Colleges.

A NEW ROMAN CATHOLIC BISHOP.—Cardinal Wiseman arrived in Nottingham on Monday last for the purpose of presiding over the consecration of a new bishop of Nottingham, to succeed Dr. Hendren. It is not known, as yet, who is elected; but among others named are the Very Rev Canon Cheadle, Canon Waterworth (of Newark), Dr. Manning, and Drs. Moore and Weedall (of Birmingham).

A BURMESE STOCKADE.

THE latest advices from the seat of war inform us that Major Mailing, who was observing the Burmese force in the Aeng Pass, was unable, with every effort to occupy the enemy's attention until reinforcements arrived, which will enable him to force it. The strength of the Burmese stockades was well known to our troops when the war broke out; and some anxiety existed as to the success of the storming parties against posts which in a military point of view are capable of making a very formidable defence. One of the strongest of these stockades will have to be encountered by Major Mailing and his troops.

The Burmese force occupying the Aeng Pass is stockaded on a ridge said to be 4000 feet in height, the only access to which is along a narrow spur completely commanded by the fire of the stockade, and with precipice and dense jungles on each side. The Burmese have two guns in position, and are expecting nine more. Their position is impregnable except by a sieling. Major Mailing made an attempt to turn it, but after two days' efforts he found the jungle too dense to be practicable. Meanwhile his little force is suffering very severely from jungle fever. The Governor-General is, however, shortly expected at Arracan, and will doubtless despatch the artillery that Major Mailing requires.

The following description of a Burmese stockade (which we accompany with a sketch of the stockade at Martaban, by an officer of the Indian army) will be read with interest at the present moment:—

Conceive a row of upright timbers extending for miles, as they do round the entire place, except in parts of the north and east sides, each timber fit to be the antenna of a ship, these timbers three deep, and so close to each other, that a walking-stick could not be passed between; behind these upright timbers is a row of horizontal ones, laid one above the other, and behind all is a bank of earth twenty-four feet broad on the ground, forty-five feet at the base; the height of the top of the upright timbers from the ditch in which they are deeply planted, is several, fourteen feet. The upper part of the ditch, and that nearest the stockade, is filled with a most formidable *chevaux de frise*, in the shape of the pointed branches of trees, stuck firmly into the earth, and pointing outwards; beyond the is the deep part of the ditch, which, in the rains, is of course filled with water. The upright timbers are strengthened with connecting planks, the ends of which are inserted on their tops, the other end of the plank being similarly secured by strong wooden pins in each case. As they are of an enormous massive thickness, that firing at the face of a stockade would be a throwing away of powder.

THE LATE FRAMJEE COWASJEE, ESQ., OF BOMBAY.

THE subject of the present brief sketch was, in many respects, a most remarkable man. Born and educated in the strictest principles of one of the most peculiar sects of India—the Parsees, or Fire-Worshippers—he nevertheless so far subdued the prejudices by which he was surrounded as to become one of the brightest ornaments of the sphere in which he moved. Mr. Framjee Cowasjee, whose recent decease is deeply regretted both by the European and native community of Bombay, belonged to the family of Banajee, which, with that of Wadia and Dad, sett, have long been celebrated for their wealth and commercial enterprise, as well, as for their charity and benevolence. Although Framjee Cowasjee Banajee was not rich, he possessed, in an extraordinary degree, a zeal for urging forward any means proposed for the mental culture and improvement of his countrymen. From the earliest moment, when the genius of Mr. Elphinstone endeavoured to move the upper classes of the natives to take measures for the introduction of national education, Framjee Cowasjee became a most active promoter of this praiseworthy object. He was an original member of the Elphinstone Institution; and it was only the increasing infirmities of age which induced him to retire from being their representative, a post of honour to which he was always unanimously elected.

Framjee Cowasjee was the first Parsee gentleman who distinguished himself from the thraldom of his sect, and educated the females of his family. Who can foresee the incalculable amount of good which may result from this one circumstance? As a Justice (for Framjee Cowasjee was one of the twelve natives who first had the honour of the peace) he was conspicuous for his independence and impartiality. With the assistance of his brothers, he raised a Fire Temple, in order to facilitate the worship of the Deity after the manner of their fathers; also the Tower of Silence, to be a receptacle for the body after death. These two buildings cost two lacs of rupees; and remain as memorials of the respect he entertained for the usages of his ancient religion. But this excellent man was no bigot. To the best of his ability he lent a helping hand to all, whether members of his own fraternity or otherwise. The waterworks tank, and the reservoir on the Obelisk-road, filled with water from an estate in Girgaum, the produce of which he reserved so as to ensure a constant supply, are monuments of his liberality.

In order to perpetuate the memory of a man so distinguished for his social virtues, it has been proposed to establish a museum by the name All classes have expressed a wish to assist in the undertaking; and amongst the list of subscribers may be seen Englishmen, Mussalmen, Hindoos, and Parsees. It has been resolved—

That the funds should be set apart for the establishment of an annual

prize in connexion with the Elphinstone Institution, to be called the Framjee Cowasjee Prize, to be awarded annually to the best essay in the vernacular languages, on any subject proposed by the professors of the institution. To give equal advantages to the Hindoos as well as the Parsees, students as well as ex-students of both these castes shall have a right to compete, and the prize to be given to the best essay in Goozrathee or Marathee every other year.

At a meeting of the friends of the late Framjee Cowasjee, at the Elphinstone Institution, to consider the best mode of applying the sums which have been raised to perpetuate his memory, the chair was filled by P. W. Le Geyt, Esq., who proceeded at great length to dwell upon the many good qualities of his lamented friend, with whom he had been acquainted for upwards of thirty years. He read an extract from the report of the Board of Education, notifying to Government Framjee's resignation of his seat at the Board, and also the eply of Government. We copy a portion of the latter,

THE LATE FRAMJEE COWASJEE, OF BOMBAY.

contained in Mr. Secretary Lumsden's letter:—"In conclusion, I am instructed to observe that the tribute which the Board have paid to the late Framjee Cowasjee, Esq., has been very properly rendered on this occasion to an excellent and deserving man. The Right Honorable the Governor in Council gladly avails himself of this opportunity again to express the high opinion entertained by himself and his predecessors of the worth of the deceased, as one who perceived that he could best serve his country by encouraging education, and who acted up to his persuasion." The chairman, resuming his address, said, "This is the first instance that has been known in which persons of all classes and denominations (Natives and Europeans) have come forward to raise a posthumous testimonial in honour of a native of this Presidency."

Professor Patton detailed at great length his views upon the mode of applying the funds already raised, which will be best explained by the resolution intrusted to him. It is as follows:—

That the funds which have been already collected, and such others as may be subsequently added, be appropriated to the formation of a Museum in connection with the Students' Literary and Scientific Society; and that the meeting unite with them in requesting Government to erect a building, to contain a lecture-room, a laboratory, museum of arts and industry, and library, and to permit the building to be called the "Framjee Cowasjee Institute."

The Hon. Sir Erskine Perry seconded this resolution, and, in an exceedingly appropriate speech, bore ample testimony to the many excellent virtues of Framjee Cowasjee.

Several other speeches and resolutions followed, and the meeting terminated.

Framjee Cowasjee was eighty years of age when he died; he leaves a widow and numerous relations to lament his loss.

The accompanying Engraving is from a lithograph published in Bombay, and is considered an excellent likeness of Framjee Cowasjee.

BURNING OF THE SHIP "BRITISH MERCHANT," ON HER PASSAGE FROM COCHIN TO LONDON.

BURNING OF THE SHIP "BRITISH MERCHANT."

INTELLIGENCE has just been received of the loss of the ship *British Merchant*, of Newcastle upon-Tyne (Anderson, master), on her passage from Cochin for London, with a cargo of oil, coir-fibre, pepper, &c., on the 17th of January, in lat. 16 23 S., lon. 5 02 W. The details of the catastrophe are as follow:

On the 11th of January, in lat. 24 32 S., lon. 5 13 E., about 4 P.M., smoke was first perceived issuing from the hold into the cabin. All hands were called, the half-deck hatches were taken off, and some bags of pepper rescued, when the smoke rose in suffocating volumes from the hatchway. A great quantity of water was hove down the hatchway, to no advantage, as the smoke continued to increase. The half-deck hatches were forthwith battened down again, subsequently the companion skylight, and every aperture where air could pass, and the deck kept constantly wet with water, to keep the fire down. During the 12th, 13th, and 14th, the fire evidently gaining strength below the decks, the smoke continued to burst from the ship's side; the water from the tank below became quite hot, and the planks of the deck rose in places three-quarters of an inch above each other, the oakum having been burnt out of almost all the seams of the port side of the quarter-deck. Meanwhile the fire was hourly gaining strength, and all labour appeared in vain. On the 15th and 16th the fire increased rapidly. On the 17th, at daylight, the smoke rose through the waterways, quarter-deck, and all over the ship's sides, in large quantities. At ten A.M. the fire appeared through the water-ways and part of the deck, but it was still kept down by an increased supply of water. At this time, the boats were got over the side in readiness. About eleven A.M. a ship providentially hove in sight promptly bore down, and proved to be the *Roxburgh Castle*, Hight, from Port Phillip, for London, who immediately sent two boats. About noon, part of the *British Merchant* gave way. The flames, flying upwards forced the master and crew into the boats, without saving anything belonging to them: they were, however, fortunately received on board the *Roxburgh Castle*. In about half an hour after leaving the *British Merchant*, the mizen-mast went over the side, and, about twenty minutes afterwards, the mainmast. The ship had burned down nearly to the water's edge abaft, and in a solid body of fire as far forward as the fore hatchway, when Captain Hight, of the *Roxburgh Castle*, bore away at three P.M.: St. Helena bearing about N W., distant about sixty miles.

Captain Anderson bears grateful testimony to the kind and considerate treatment received by him on board the *Roxburgh Castle*, from Captain Hight, his officers, and passengers.

THE BURMESE WAR.—TEMPORARY STOCKADE, MARTABAN.—(SEE PRECEDING PAGE.)

PLATE PRESENTED TO CAPTAIN PATEY, R.N., LATE HEAD EMIGRATION OFFICER AT LIVERPOOL.

PRESENTATION OF PLATE TO CAPT. PATEY, R.N.

The Liverpool merchants trading to Australia have just testified their sense of the valuable services rendered to the emigration trade of the above port by Captain Patey, by presenting him with three pieces of silver plate, manufactured by Mr. Mayor, silversmith, Lord street. First, is a large centre table ornament, in the form of an oak tree, upon a tripod base, whereon stands a female figure, holding a wreath of oak, which she is about to carry away; indicative of the movement of emigration, and the planting of a branch of the old family stock in the new colony. Next is a Claret Jug, of an elegant form, and very richly chased, in high relief, with four compartments, containing emblematic designs of the four seasons, with their characteristic accompaniments of fire, air, earth, and water; and the third piece is a large waiter, the border of it composed of vine leaves and grapes. On each of the pieces is engraved the arms of Captain Patey; and the centre-piece bears on the front of the base a view of George's Pier, on the River Mersey, with the great Landing stage; and at a distance from it is an emigrant vessel ready for sea, lying in the river, towards which a boat is nearing, filled with passengers about to embark; one of the other sides contains the following inscription:—

Presented to
Charles George Edward Patey, Esquire,
Captain R.N.
Head Emigration officer at
Liverpool,
from the Shipowners connected with
Australian Emigration
at that Port.

The Plate was accompanied by an address, engrossed upon vellum, and signed by the Liverpool merchants, testifying to the firm and impartial spirit in which Capt. Patey has carried out the requirements of the Legislature for the comfort and safety of the emigrants, as well as the desire he has always evinced to prevent unnecessary trouble or delay to the shipowner. "We cannot but feel (continues the address) that the circumstances under which you have had to exercise your duties, as chief of the Government Emigration Department at this port, have been attended with peculiar difficulty, calling for the exercise of qualities which it has been your good fortune to possess in an eminent degree, and which necessarily makes us regret your leaving us at so important a time, although the command of so fine a frigate as the *Amphion*, to which you have been appointed, is no doubt a subject for our united congratulations."

The Plate, with the address, enclosed in an oak chest, has been forwarded to Captain Patey, on board H.M.S. *Amphion*, at Sheerness. The Captain has, in a well-graced letter, acknowledged the munificent gift, which he admires as well for its intrinsic value as being commemorative of his connection with the shipowners of the great and influential port of Liverpool.

THE ABERDEEN CLIPPER "CAIRNGORM."

This new vessel is stated to be the finest specimen of the clipper build yet produced in Scotland; and is offered as a match for any American clipper now in the China trade. It will be recollected that, when the sailing qualities of the Oriental and other American clippers, whose voyages from China to London introducing a new era in the history of the London and China trade, were first recorded, some of the British shipowners were very much displeased. They had so long been accustomed to boast of their mercantile marine, that they imagined it impossible for Brother Jonathan to outrun their swiftest vessels: but others took a more liberal and practical view of the subject; and, instead of complaining, set themselves right manfully to the task of meeting the Americans by fair and honourable competition. Availing themselves of the superior advantages of a new model, known by the name of the "Aberdeen build," the invention of Messrs. J. and W. Hall, shipbuilders there, several owners both in London and Liverpool, together with one or two local owners of spirit and enterprise, had a number of these clippers built, and put into the trade; and, so far as experience yet goes, they have had no reason to regret having entered on this generous rivalry. But, while the passage to China has thus been greatly shortened, and teas are now brought from Shanghae in ninety-eight days, instead of four or five months, which used to be the ordinary length of the voyage, it was still felt that the Americans had a great advantage in the large size of their clippers, some of them being double the registered tonnage of the largest of the British ships. To meet this objection, the Messrs. Hall resolved to lay down a clipper of larger size and finer lines than had been previously built in Scotland; and to construct her so that any purchaser might challenge in good faith the fastest of the American fleet. This vessel was brought under the notice of the house of Jardine, Matheson, and Co., through the enterprising commander of their *Stornoway* clipper, Mr. Robertson, and purchased for them to bring home the new teas. She has been launched under the name of the *Cairngorm*; and she sailed from Aberdeen on the 24th ult., for London. The vessel has been greatly admired by judges as perfect in symmetry and workmanship. Her dimensions are—Length of keel, 185 feet; length on deck, 215 feet; depth of hold, 20 feet; extreme breadth, 35½ feet; and she measures 1250 tons old, or 938 tons by the new system of measurement. She has a great rise of floor, followed in the cross section from end to end; and is drawn out so fine, both fore and aft, that her sailing qualities cannot but be of the highest order. The main deck beams and half of the hold beams are all of patent iron, thus adding considerably to her capacity for stowage. She has a light poop, but no forecastle; and her cabins are being fitted up in the most tasteful style.

THE ABERDEEN CLIPPER "CAIRNGORM."

PARLIAMENTARY PORTRAITS.

MR. ROBERT LOWE, M.P. FOR KIDDERMINSTER.

Mr. Robert Lowe, M.P. for Kidderminster, and Joint Secretary to the Board of Control, presents a remarkable instance of Parliamentary success and its results. He was returned to Parliament in July, 1852; addressed the House, on the "Courts of Law (Ireland) Bill," for the first time, on the 29th of November; for the second time, on "Limited Liability and the Law of Partnership," on the 7th of December (on both occasions briefly, but with marked success); and, for the third time, on the 13th of December, in opposition to Mr. Disraeli's Budget; when he

MR. LOWE, M.P. FOR KIDDERMINSTER.

achieved a signal triumph—receiving not only the compliments of the most distinguished men on both sides of the House, but had the honour of a large space in the reply of the brilliant Chancellor of the Exchequer.

On the 27th Jan. Mr Lowe was appointed one of the Secretaries of the Board of Control. This success, achieved by a man whose claims are based upon neither wealth nor aristocratic connexions, has not been won without long and hard probation. Mr. Lowe's reputation dates from successful career at a public school, and at the University.

Mr. Lowe is the son of the late Rev. Robert Lowe, Rector of Bingham, Notts (who was the subject to a series of virulent attacks in Cobbett's *Register*, in consequence of his having originated in his own parish the principle of Poor-law administration, since adopted by the Poor-law

countess-dowager (for the whole kingdom), by Ellen, second daughter of the Rev. Penyfield Pynder, rector of Madresfield, Worcestershire.

The subject of our memoir was born at Bingham, Notts, 1814, educated at Westminster, and University College, Oxford, where he was a contemporary of the Duke of Newcastle, Messrs. Gladstone, Cardwell, Sidney Herbert, Roundell Palmer, and others who have since distinguished themselves in various walks of life. At the Union Debating Society he was one of the most vehement and successful orators on the Liberal side. In 1833, being then in his twenty-second year, he took his degree, standing first class in Classics, and second class Mathematics. In 1835 he was elected a Fellow of Magdalen—the wealthiest college in the University; celebrated for its fine gardens, its deer park, and other luxuries for resident Fellows, with great prizes in store for those who, adopting the Church as their profession, are content to wait their turn, in luxurious, lettered ease, until one of the many good livings in the gift of the College falls vacant. The indolent a College Don was not the choice of the future senator. In 1836 he resigned his Fellowship, and married Georgiana, second daughter of late George Orred, Esq., of Aigburth House, near Liverpool. After obtaining a high reputation in Oxford as a private tutor, in 1842 he was called to the bar at Lincoln's-inn; and, in the same year, sailed for Australia—a step which most of his friends considered a great mistake. By a curious coincidence, the ship in which he sailed carried out the act of Parliament creating the Representative Assembly for New South Wales, in which he was destined to play an important part. This Representative Assembly, or Legislative Council, which consisted of twenty-four elected, and 12 members nominated by the Governor, superseded despotic rule which had necessarily prevailed so long as New South Wales was a mere convict colony. Mr. Lowe commenced practice at Colonial bar, and early attained a lucrative practice as an advocate, and as a chamber counsel.

In October 1843, the Governor, the late Sir George Gipps, nominated him one of the Legislative Council. In the same year he was a member, and took a large share in drawing the report of the committee "on the Land Question;" a question which ever since the time when Mr. Gibbon Wakefield succeeded in inflicting his system of "protection to landed capital against labour" in Australia, has been the ceaseless cause of discord between the colonists, their Governors, and the Home Government. But his first important work was the Committee on Education, of which, as chairman, he drew the report, a remarkable document, well worth the study of educators in all countries in which great diversity of religious opinion prevails. Before Mr. Lowe's report was published there had been chiefly valued in New South Wales, as a means of proselytism. One-half of the colony professed the tenets of the Church of England, one-fourth were Roman Catholics, and the rest were chiefly Wesleyan Methodists and English and Scotch Presbyterians. According to the system promised by the Lord Bishop and the Roman Catholic Archbishop, either there were no public schools, or there were four. No school did any one individual set up a school in a village of fifty families than these other religious bodies followed the example, all claiming aid from the Government funds. At Camden (the village where wine culture was first commenced), there were three schools, none of which had more than twenty scholars. Mr. Lowe's committee reported in favour of what is known as Lord Stanley's, or the Irish National System, with well-trained masters, under the control of an unpaid board, with a paid secretary. The execution of this rational and truly Christian scheme was delayed, and temporarily defeated by a union of the bigots of all sects and parties. But it has since formed the basis of the educational system adopted in every part of Australia, except the city of Sydney.

In the latter end of 1844, finding it impossible to yield that passive obedience to the views of the Governor which was expected from a nominee, Mr. Lowe resigned his seat in the Council, feeling, to use his own words, "a repugnance to vote systematically against the person to whom he owed his seat, and being firmly determined not to injure the country from which he held it."

In April, 1845, he was elected for the counties of St. Vincent and Auckland, for the latter province that had conferred on the Council The following year was occupied with a Parliamentary struggle of the most important to the best interests of New South Wales as our contest with Charles I. on the subject of ship-money. Sir George Gipps claimed the right of Royal prerogative to levy rent and taxes from the persons

THE COURT.

BUCKINGHAM PALACE.—The [illegible] of the Court have been entirely unemployed during the week.

On Monday, the Queen and Prince Albert accompanied by the Princess Royal, and attended by the Countess of Desart, Lord A. Fred. Paget, and Lieutenant-Colonel the Hon. A. Gordon, inspected Bridgewater House, where her Majesty was received and attended by Viscount Brackley. The Prince of Wales and Prince Alfred, attended by Mr Gibbs and the Hon and Rev. Gerald Wellesley, went to Apsley House, in the morning, to see the collection of memorials of the late Duke of Wellington. In the afternoon, has Royal Highness Prince Albert rode out on horseback, attended by Lieut.-Colonel the Hon. A. Gordon. In addition to the Duchess of Kent and the Princess Adelaide of Hohenlohe, the Earl of Aberdeen, the Earl of Eastnor, Earl De Grey, Lady Fanny Howard, Baroness de Speth, Lord Overstone Lady Caroline and Miss Barrington, and Mr. Hallam, dined with her Majesty and the Prince Consort.

On Tuesday the Royal dinner party included her Royal Highness the Duchess of Kent, her Serene Highness the Princess Adelaide of Hohenlohe, the Baron and Baroness De Cetto, and the Prince and Princess D. Varni.

On Wednesday his Royal Highness Prince Albert held a Levee, by desire of her Majesty. In the evening, the Queen and his Royal Highness, with three of the youthful members of the Royal family, honoured the Princess's Theatre with their presence, to witness the performance of "Macbeth."

On Thursday intelligence was received of the death of his Serene Highness Prince Reuss Ebersdorff which took place at Dresden, on the 16th ult. Her Majesty, his Royal Highness Prince Albert, and the Royal family will go into mourning for a week. The deceased Prince was first cousin, once removed, to her Majesty and his Royal Highness, and first cousin to her Royal Highness the Duchess of Kent.

The Marquis of Breadalbane and Mr O'Ferrall have relieved Lord Rivers and Sir R. Bowater in their duties as the Lord and the Groom-in-Waiting on the Queen. Colonel Bouverie has relieved Lord De L'Isle (Carb-Marshall) in a duty as Equerry-in-Waiting to the Queen, and Captain the Hon. Lindsay de Ros has relieved Lieut.-Colonel the Hon. A. Gordon in his duty as Equerry-in-Waiting to his Royal Highness Prince Albert.

THE LEVEE.

His Royal Highness the Prince Albert held a Levee (the first this season), by desire of her Majesty on Tuesday afternoon, in St. James's Palace. His Royal Highness arrived from Buckingham Palace, shortly before two o'clock, escorted by a detachment of the Royal Horse Guards, and was received by the great officers of State.

His Royal Highness the Duke of Cambridge (attended by Lord William Paulet) and his Serene Highness Prince Edward of Saxe-Weimar attended the Levee.

The diplomatic and general circle were very fully attended A number of presentations were made in the Corner. The following were among the more noticeable presentations in the latter:—

[illegible] of Wemyss, on his marriage, by the Marquis of Breadalbane.
[illegible] Figueira, on coming to the [illegible] and upon appointment as A.D.C. to the Queen [illegible] Middle service, by Colonel Wood.
[illegible] Baker, by the Earl of Aberdeen.
Mr Sheriff and Alderman Carter, and Mr. Sheriff Croll, by Lord Palmerston.
Mr Bruce, the M.P., on appointment as Under Secretary of State for the Colonies, by the Duke of Newcastle.
Colonel Richard Airey, on appointment as Military Secretary, by General Viscount Hardinge, G.C.B.
[illegible] Holland, on his appointment as Physician in Ordinary to her Majesty, by the Earl of [illegible]
[illegible] Gordon, on being appointed Commander-in-Chief at Portsmouth, by the Duke of [illegible]
[illegible] promotion, and on re-appointment to her Majesty's yacht, by [illegible]

The Countess Waleswska held a "reception" on Saturday evening at the residence of the French Embassy, in Grosvenor-square.

We regret to learn that the Earl Fortescue has been very seriously indisposed, at his seat, Castle Hill, Devon.

L. [illegible] Russell, [illegible] Palmerston, M.P. for Tiverton, which has to have taken place on Wednesday last, was postponed in consequence of the death of the Duchess Dowager of Bedford.

The Right Hon. the Speaker gave his second Parliamentary banquet, on Saturday last, at his residence, in Eaton-square. The first levee held by the right hon. gentleman will take place this evening (Saturday).

PROVINCIAL INTELLIGENCE.

POSTAL COMMUNICATION WITH THE MANUFACTURING DISTRICTS.—Arrangements are now completed for effecting an important acceleration of the day mail to Manchester, Liverpool, Edinburgh, Glasgow, and Aberdeen, and the intervening towns. Since Tuesday last this mail reached Manchester about three hours earlier, and Aberdeen about three hours later. A similar improvement on the Midland line will [illegible] must be divided into the boxes between six o'clock the previous night; but at the offices at Charing-cross, old Cavendish-street, and the Borough, the boxes will be open in the morning till a quarter past seven, and at St. Martin's-le-Grand and Lombard-street till three-quarters past seven.

STATE OF TRADE.—The accounts received from the manufacturing districts of the United Kingdom report trade to be temporarily dull, as usual at this period of the year, but the spring trade has not nearly commenced. At Manchester there is little doing in either yarn or cloth, and purchasers of the manufactured articles [illegible] the [illegible] ed for the manufactured articles. The late [illegible] ...ctive just at the present, but in expectation [illegible] of mesnils is beginning to tell upon some trades, as buyers object to pay the [illegible] ed for the manufactured articles. The late [illegible] ...ctive just at the present, but in expectation [illegible] of mesnils is beginning to tell upon some trades, as buyers object to pay the [illegible] ed for the manufactured articles. The late [illegible] ...ctive just at the present, but in expectation [illegible] of mean

EXHIBITION OF THE BRITISH INSTITUTION.

(THIRD NOTICE.)

E. W. COOKE, always] successful with his sea-pieces, exhibits three on the present occasion; all charmingly painted, under different atmospheres. In the view of "Sant' Elena, Venice, just after Sunset, looking East," the sky is warm and clear, the water smooth, and translucent as glass. In the view of "Bragozzi," on the Lagune of Venice, the aspect of the elements is tranquil also, but the tone cooler; whilst in "Dutch Finks off Kalwyk," we have a brisk, cold breeze springing up, and curling the surface of the water on an exposed sea-board. The various craft introduced are admirably real in form and colour, and have an appearance of substantiality and lightness combined, which calves shipping rarely presents.

Copley Fielding's view in "Eskdale, Dumfriesshire," with the Gilnockie Tower and Bridge looking over Kirk Andrews and Netherby, to Skiddaw, with other mountains in the extreme distance, is, upon the whole, a very successful effort of landscape-painting: the central portion, where the course of the stream leads the eye to the extreme distance, is very skilfully treated. His view of "Snowdon" is a very genuine work

H. J. Boddington treats us to three of his pretty little "nooks;" one a nook on the "Thames," the other two on the "Loddon," under different aspects of sky. In these latter, the one with the nice effect of sunlight dappling the foliage with various tints we like the best. It bears evidence on the face of it of having been, as described, "painted on the spot."

S. P. Jackson next claims attention, for his clever coast scenery. Beginning with the last on the list, we find "The Wind Freshening" under a murky sky, and giving unmistakeable warning of what sailors call "dirty weather." The view of "Plymouth, from Mount Edgcumbe," is executed with great delicacy of outline, but is rather cold and unsatisfactory in tone. "The Coast Scene, Morning," is very different in character from either of the above. Here the artist's painstaking handling, as respects outline, is improved by the quiet warmth of the rising sun. A light mist, however, still hangs over the calm surface of the waters, through which the forms of fishing-boats are indistinctly visible. This very pleasing production we have engraved.

Jutsum gives evidence of continued advance in the right path in the landscapes which he this year exhibits. His style is honest and true, and happily free from adventitious aids. The view of "A Stream in Berwickshire" presents a delicious shady retreat, in a romantic and picturesque country. "Glen Rosa, in the Isle of Arran," and "A Cottage Home in the Highlands" are wild mountain scenes in the former are some sheep, &c., cleverly painted by F. W. Keyl.

G. Jones, whose large historical pictures of the Battle of Waterloo are so well known—contributes a small well-painted view of "The Village of Waterloo, in 1815," with the exterior of the roadside inn in which the Duke of Wellington slept the night before and the night after the battle.

W. E. Jones has a clever piece—"Repairing a Stranded Vessel by Fire-light;" one side and the extreme distance of the picture being coldly lighted by the moon, whilst the other is illumined with the lurid glare of the coal fire, &c.

The "Aërial Combat," by Wm. Huggins, is a spirited little picture, illustrative of the lines in Shelley's "Revolt of Islam:"—

A course precipitous of dizzy speed,
Suspending thought and breath; a monstrous sight!
For in the air do I behold indeed
An Eagle and a Serpent wreathed in fight:—
It seemed that this fair shape had looked upon
That unimaginable fight.

The group of the "Serpent and Eagle" is boldly conceived and well executed; and the attitude and expression of the female figure, looking upon astonishment at the fray, assist in realising the situation

G. Smith has three very pleasing domestic subjects, of one of which in particular we can speak very highly. It is entitled the "Reading Lesson," and represents a fond young mother hanging over her child, who is taking a first lesson out of his "horn book." There is an expression of tender affection and earnest solicitude in the female face which it is impossible not to admire; the child's, also, is an interesting head; and there is nothing that savours of affectation or vulgarity about either of them. "The Old Lace-maker" is an undoubted reality; good in expression, but we fancy we have seen her portrait before. "Chimney Corner" represents an interior—a brick floored room, with a wide chimney, with a woman nursing a child in one corner, a young girl in that opposite, and a boy in the centre looking on at both a quiet group, quietly painted, but a little too scattered

"Delight" is the expressive name given to a pleasing picture, by C. Brookes, representing a mother playing with her chubby infant, whose ear she gladdens with the twanging tones of the instrument whose call to the trough. The "Head of an Old Man," by the same artist, is a study of unquestionable merit—the flesh being flesh-like in colour and texture; the florid complexion and clear eye betokening a healthy subject.

"A Fix. Black to Move," by W. Hemsley, represents a little incident, the humour of which will be relished by all draught-players, and all who can enter into the feelings of a man who finds himself out-generalled at a game of skill by a mere child. The "posed" look of the former, and the uncontrollable delight and triumph of the latter, which is participated in by his younger sister, are capitally hit off. The execution of the various details is minute and accurate. Our readers will thank us for engraving this telling little morceau.

Alexander Johnston exhibits two female studies, very different in character and treatment, but both works of considerable merit. The first, "Geneva," is illustrative of Byron's lines:—

"THE PAIL."—PAINTED BY GEORGE LANCE.

"[illegible] PAINTED BY W. LEMSLEY.

EXHIBITION OF THE BRITISH INSTITUTION.

hrough thy long dark lashes low depending
The soul of melancholy gentleness
Gleams like a seraph from the sky descending,
Above all pain, yet pitying all distress;
At once such Majesty with sweetness blending,
I worship more, but cannot love the less.

The lady is represented sitting in a pensive mood, looking out upon a cold blue sky, with a single bright star illumining it. The hair is of a golden hue; her dress pale drab; and her head rests on a puce-coloured velvet. The peculiarity of the work is chiefly in the colouring, which deals largely in pale and mixed hues; but the effect is not disagreeable. The flesh, and that of the hands especially, is very nicely painted. The other picture represents a bold, but honest-looking, dark-haired lassie, coquettishly tricked out in a loose jerkin and yellow head-gear, and carrying a flower in her hand, looking round with an arch expression, according with Burns's lines:

Owre my left shouther I gae him a blink,
Lest neebors might say I was saucy.

The whole is very life-like, and the colouring throughout full-toned and harmonious.

Lance's fruit pieces are a *spécialité*, in which the artist is almost without a competitor; and industriously does he labour in a line of business which, we believe, to be as profitable as it is ornamental. Whatever the feast of art, which each succeeding season prepares for us; whatever the merit of the more substantial dishes set before us, the banquet is never complete unless Lance provide the dessert. We have already, at different times, transferred to wood some of these gorgeous and tempting groups—in diversifying the composition of which the artist shows as much taste as he does skill in the accurate production of the details; and those which we engrave on the present occasion are as fresh and as real as if they had been the "first-fruits" of his talent. They are respectively described in the catalogue under the title, "The Hall" and "The Out-house;" titles easily appreciable on reference to the style and material of furniture employed in the two cases.

"THE OUT-HOUSE."—PAINTED BY GEORGE LANCE

AMERICAN INDUSTRIAL EXHIBITION.

The Crystal Palace in New York, which is promised as one of the "lions" of the coming spring, and which really seems to be in a state of considerable forwardness, has received a new impulse in this country through the arrival of Colonel Hughes, of Maryland, a gentleman of high standing in the United States, who is on a visit to the various European capitals, where he intends to treat with the different Governments. He has already, we understand, had interviews with Prince Albert, and some of those chosen nobility, who in this country represent the aristocracy of talent as well as of wealth; and the result seems highly satisfactory.

The European potentates appear to have entered with considerable zeal into the notion of making the products of their industry known on the other side of the Atlantic. The porcelain of Sèvres, and the Gobelins and Beauvais tapestry, bear world-wide reputation, as far as the Old World is concerned; but the Emperor Napoleon III. has determined to extend their fame, and has already given orders that specimens shall be sent to the Crystal Palace at New York. The Pope, also, is about to send contributions to the Great Continent of Protestantism; and the Sultan of Turkey will, it is said, employ a national war-steamer to convey his specimens of Oriental industry to the New World's bazaar. Thus are the East and the West shaking hands with each other.

It should be understood, with respect to this Western Crystal Palace, that although it is building in New York, and the association to which it belongs has been incorporated by a charter, granted by the New York Legislature, it is not intended to represent the feeling of that particular State only. The citizens of the United States generally take an interest in its promotion; and it is only on account of the restrictions imposed on the Federal Government that the Exhibition is undertaken by a private association, and not, as in England, by the central power. Indeed, it seemed at first doubtful whether some great manufacturing locality, such as Boston or Philadelphia, would not most properly have been selected as the site of an Exhibition professedly industrial; but the reflection that the object of the scheme was less to display American industry in particular, than the world's industry in general, caused the decision to be made in favour of New York, as the chief *entrepôt* of European goods, and the principal financial centre of the Union.

Royal Porcelain Collections.—In order that the instruction which the public were deriving from the inspection of the Queen's Porcelain, at Marlborough-house, might not be interrupted, her Majesty has been graciously pleased to permit a second series of specimens to be made from the Collections at Buckingham Palace, and exhibited at Marlborough-house. This series is more numerous and varied, and in some respects even finer than that recently removed. It consists chiefly of old Indian of the highest order, and of an extensive series of Sèvres, illustrating the styles of different epochs of that Royal manufactory. Among them will be found a curious dejeûner service, produced immediately after Napoleon's expedition to Egypt, in which the forms of porcelain decoration is altogether superseded to an affectation of forms and ornaments belonging to the age of the Pharaohs, [illegible] jewelled cups, and a superb bowl of harlequin pattern, which was executed expressly for Louis Seize. Lord Hill's Apsham has also sent to Marlborough-house some of his turquoise Sevres porcelain for exhibition.

Egyptian and Assyrian Builders.—Mr. Layard, in his "Discoveries in the Ruins of Nineveh and Babylon," just published, observes: "The masses of solid stone moved by the Egyptians far exceeded in weight any sculpture that has yet been discovered in Assyria, or any monolith on record connected with that empire, with the exception, perhaps, of the celebrated obelisk which, according to Diodorus Siculus, was brought by Semiramis from Armenia to Babylon. It is a singular fact, that whilst the quarries of Egypt bear witness of themselves to the stupendous nature of the works of the ancient inhabitants of the country, and still show on their sides engraved records of those who made them, no traces whatever, notwithstanding the most careful research, have yet been found to indicate from whence the builders of the Assyrian palaces obtained their large slabs of alabaster. That they were in the immediate neighbourhood of Nineveh there is scarcely any reason to doubt, as strata of this material, easily accessible, abound, not only in the hills, but in the plains. This very abundance may have rendered any particular quarry unnecessary, and blocks were probably taken as required from convenient spots, which have since been covered by the soil. The alabaster now used at Mosul is cut near the Sinjar gate, to the north-west of the town. The blocks are rarely larger than can be carried on the backs of horses. These quarries also supply Baghdad, where this material is much prized for the pavement of baths and serdaubs, or underground summer apartments."

COAST SCENE: NORMANDY.—PAINTED BY T. D. JACKSON.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—FRIDAY, FEB. 25.

A discussion upon Indian administration, commenced by Lord ELLENBOROUGH, elicited from the Earl of ABERDEEN the declaration that the Government intend to propose, in the present session of Parliament, a bill for the future government of India. It will be founded, with some modifications, upon the system now existing—Lord CAMPBELL bore testimony, derived from his experience at the Privy Council, to the mode in which justice was administered in the higher courts of India. But as regarded the administration of justice in the inferior courts, no language could be too extravagant in describing its enormities.

HOUSE OF COMMONS.—FRIDAY, FEB. 25.

Mr RICH brought before the House the expediency of gradually increasing the numbers and efficiency of the reserve force of pensioner battalions Our army would be more popular but for the long period of twenty-one years' service; and he wished to see soldiers enlisted for ten or twelve years, and then entitled to a smaller pension, on condition that they should be liable to be called out on any national emergency.

A short debate upon our hostilities with AVA occurred, upon some remarks by Sir H. WILLOUGHBY; but, as the papers were not yet in the hands of members, it was felt to be premature.

Sir J. W HOGG congratulated the House that the Marquis of Dalhousie, though having strong *private reasons* for wishing to return to this country, had acceded to the wish of the Directors not to regard the usual period of five years as the termination of his Government. India, therefore, would continue to benefit from the noble Lord's able administration.

The House then went into Committee of Supply, in which

Mr S. HERBERT moved the Army Estimates. He said, that by the efforts of his predecessors at the War-office, we were able to maintain a larger force at a less expense than in former years. The year 1853 was in some respects a pattern year for economy: but we now maintained 21,000 more men than in 1835 for a less sum. At no period had the soldier been more comfortable than at the present moment. The recruiting for raising 50,000 men was never more easy, and never produced a better class of recruits Good conduct pay, barrack libraries, regimental schools, and military savings-banks were all tending to promote the comforts of the service, and to raise the moral standard of the army. The great diminution of corporal punishments in the army was a subject for congratulation, and so was the health of the army, which was never so good as at present. The fault in our military system had been to spread our army in small detachments all over the country, as a police force, in aid of the civil magistrate The men had thus no opportunities for field practice, or to see two regiments brigaded together, so as to acquire a knowledge of manœuvres upon a large scale. This very great defect he proposed to remedy.

In the summer it was proposed to form an encampment somewhere in the country, whither various regiments would proceed for the purposes of that instruction in which our troops were at present deficient This measure would be attended with very slight additional expense; the movement of troops to the encampment involving no more outlay than the ordinary change of troops from one station to another. The increased wear and tear, and the additional allowances to officers and men—the main sources of greater outlay—would bear no proportion whatever to the public benefit of the result. As to arms, Lord Hardinge had for some time past been taking the greatest pain to procure the most effective weapons that science could invent; he had sent to America, and to various parts of the Continent, for the most approved specimens of arms, and he had applied all the knowledge, experience, and science at his disposal to test their various merits, and ascertain their comparative effects. As the result of this investigation, he had now full confidence that he should be shortly able to place in the hands of our soldiers a weapon quite as light as the musket, or lighter, and still more efficient, in every respect, than the Minie rifle A very an all sum would suffice to provide a station where there could be ball practice with the Minie rifle, or its substitute; non-commissioned officers, and a certain proportion of men from each regiment would there be enabled to acquire the practice of rifle firing at various distances, and, with this practice thoroughly attained, would then return to their respective regiments, and communicate their acquirements to their companies. The whole army would thus by degrees be brought into one system of effective firing.

The Government would bestow special attention upon that invaluable arm of the service, the artillery, and he believed the British army would thus be rendered more thoroughly efficient than it had ever been.

The question that 102,283 men be granted for the service of her Majesty for 1853-4 was then put and agreed to: as was also the vote of £3,625,783, for defraying the charges of the land forces in Great Britain and Ireland

The remaining votes were agreed to with so little objection, and passed so quickly, that Mr. WILSON PATTEN left the chair amid the cheers of the Ministerial benches.

HOUSE OF LORDS.—MONDAY.

The Earl of DERBY presented petitions from various congregations of the Scotch Church in Canada, praying that the arrangement of 1840 upon the subject of the Clergy Reserves might be kept inviolate.

A discussion ensued, in which the Bishops of Exeter and Oxford opposed, and the Dukes of Argyll and Newcastle supported the Government bill, which leaves the colony at liberty to legislate upon the Clergy Reserves.

HOUSE OF COMMONS.—MONDAY.

Chairmen of Election Committees reported that Mr Matthew Wilson was unseated for Clitheroe, for bribery and treating committed by his agents; that Col. Boyle was disqualified from sitting for Frome, inasmuch as he held the office of Secretary to the Order of St. Patrick, "an office or place of profit under the Crown;" and that Sir Robert Pigott was unseated for Bridgnorth for bribery committed by his agents. The new writ for Frome was immediately issued, but the issue of the writs for Clitheroe and Bridgnorth is suspended until after Easter.

A Select Committee was appointed to inquire into the circumstances attending the withdrawal of the petition against the return of the sitting members for Norwich; and Mr. Russell Dickson, one of the unsuccessful candidates, having denied that he was a party to the withdrawal, which, he said, was the act of Mr. Brown, the Parliamentary agent, to whom the money was entrusted,

He re going into committee on the Ordnance Estimates,

Mr. HUME stated that a select Committee appointed in 1837 had only consented to leave the Duke of Wellington in possession of his full emoluments as Colonel of the Grenadier Guards, in consideration of his great and glorious military services, and they were of opinion that the future emoluments of the Grenadier Guards should not exceed £2000, instead of £4500; and that the colonels of the Coldstreams and Fusiliers should receive £2000 respectively. The committee consented to this arrangement on the distinct understanding that the commander of these regiments should be given such reasonable and distinguished military services He complained that, in defiance of this understanding, the Grenadier Guards, vacant by the death of the Duke of Wellington, had been given to Prince Albert, and the Coldstreams to the Duke of Cambridge. He also complained that no attempt had been made to carry out the recommendation of the Committee, that the Ordnance Department should be brought under the control of the Horse Guards.

[An explanation on the subject of the Colonelcies, given by Mr S. Herbert, will be found under Tuesday's proceedings.]

The CHANCELLOR of the EXCHEQUER said the subject of the amalgamation of the Ordnance with the Horse Guards should be considered. Much of the almost practical objection to this proposition had disappeared. A proposal for the purchase of the Russian canal had been struck out by the Government, who thought the Canadian Legislature ought to prevent this canal from becoming a permanent charge upon the British people. The Government also intended to abolish the small ordnance stations in the West Indies, and to concentrate these establishments in the principal islands, by which the public money would be saved.

The House then went into committee, and

Mr HONSELL moved the Ordnance Estimates, which, although large in amount and in excess of previous years, had been prepared with every regard to economy. The artillery service was never more effective, and foreign officers of rank expressed their high opinion of its organization and efficiency. The improvements to which the Secretary-at-War adverted on Friday as having been effected will, respect to the horse-ball also, to a considerable extent, been carried out in the Artillery. [Hear.] There had been no corporal punishment in the Artillery during the last [illegible] the principal portion of the increase in the estimates was [illegible] the necessity that existed for putting the defences of the country on a respectable footing. The hon. gentleman concluded by moving that the number of officers, non-commissioned officers, and men for the Ordnance be 21,758.

The vote was agreed to.

The sum of £667,567 was then voted for the pay, allowances, and contingencies for the said 21,758 men; and also the sum of £813,317 for the commissariat and barrack supplies for her Majesty's land forces, great coats for the army, clothing for the militia, &c. The other votes were also agreed to.

Some discussion took place upon the retiring pension granted, as an examiner of the Court of Chancery, to Mr. C. P. Villiers, M.P., who at present holds the office of Judge Advocate-General, and who, consequently, waives his right to receive the retiring pension. Mr. MULLINGS wished to insert a clause in the Office of Examiner Bill, expressly prohibiting the hon. gentleman from receiving the allowances of both offices; but the amendment was withdrawn upon Mr. VILLIERS assuring the House that, upon the day on which he resigned his office, he placed a document in the hands of the solicitor of the fund, which precluded him from receiving the retiring allowance, while he held the office of Judge Advocate General.

HOUSE OF LORDS.—TUESDAY.

The LAW of Evidence (Scotland) Bill was read a third time and passed.

The Earl of MALMESBURY moved for certain returns relating to railway accidents during the past year, the number of which had been so great as to create a general opinion that the lines of railway were in a dangerous state.

Lord STANLEY of Alderley had no objection to the production of the returns, which were accordingly ordered.

Lord CAMPBELL, in the course of some conversation upon transportation, expressed a hope that the punishment of transportation would be continued. He took on himself to say, as a judge, that if he pronounced sentence of imprisonment for life in England the sentence proceeded no such effect as if he had said that the prisoner should be transported beyond the seas. If a period of imprisonment in England were to be substituted for transportation, it would be a miserable failure. It was of vast importance to find some quarter of the globe where criminals should be employed, and become useful members of society. In the colonies there were now many thousands who had been transported as convicts, and who were earning their bread by honest labour, honourably maintaining their families, having their children well educated, and being themselves useful members of society. Had it not been for the punishment of transportation, not one of those persons would have been reformed.

The Earl of HARROWBY thought the Falkland Islands a suitable receptacle for criminals.

Lord MONTEAGLE said, we must look carefully to the punishment which was intended to be substituted for transportation. Profiting by the experience of foreign countries, we must consider well what was likely to be the consequence of letting loose those men upon the country after a certain time, and what sort of class that would be likely to form. They might have certificates of good conduct from keepers of penitentiaries; but would any one give employment to them while there were in his neighbourhood men untainted with crime seeking work and not able to obtain it?

Lord BROUGHAM observed that a committee of the House was appointed, which sat for many weeks. Although many members of the committee entered upon the inquiry adverse to transportation, and desirous of its being abandoned, yet the more the committee inquired into the matter the more clearly were they of opinion that we could not for the present, at least, dispense with transportation The difficulties were enormous both of continuing transportation and of giving up transportation; and he (Lord Brougham) protested he hardly knew whether he did not consider the difficulties on the one side pretty nearly balanced by the difficulties on the other. He would not say that secondary punishment might not be so framed as to meet the principal objections to the Continental system of the galleys.

Lord WHARNCLIFFE considered that transportation had lost much of its terrors, and that, with respect to a great number, the prospect of a free passage to the neighbourhood of the gallows, with the chance of an escape or the hope of an early release, was at this moment rather an attraction than the contrary.

HOUSE OF COMMONS.—TUESDAY.

The West London Waterworks Company's Bill was read a second time

The Chairman of the Cambridge Election Committee reported that Mr. Kenneth Macaulay and Mr. J. H Astell, the sitting members, were unseated, for bribery committed by their agents. The new writ in this case also is not to issue until after Easter. In the case of Canterbury there is to be a motion for a commission of inquiry similar to that which sat for St. Albans.

Mr S. HERBERT explained, with reference to the Colonelcies of the Foot Guards, that, although the select committee might have been of opinion that these regiments ought to be reserved as the rewards for distinguished military services, yet this did not appear among their recommendations. The fact was that it had been the practice, from time immemorial to give the colonelcies of these regiments to members of the Royal family. Since 1815 there had been ten vacancies in the colonelcies of the three regiments of Guards, and out of these only four had not been bestowed on members of the Royal family — the Duke of Wellington, who held one of those commands, being, of course, an exception to all rule.

Mr. HUME repeated that the intention of the committee at that time had been violated by allowing Prince Albert and the Duke of Cambridge to fill these appointments. In making these observations, he had not intended to throw any reflections upon either of their Royal Highnesses.

Mr S. HERBERT said the intentions of the committee were only to be judged of from their recommendations.

Mr. HUME replied that they had had the authority of the Secretary-at-War of the day (Mr. Ellice), who had concurred in the opinion he had expressed.

FOREIGN REFUGEES.

Lord D. STUART, in reference to a prevailing rumour, which had obtained extensive credence abroad, wished to know whether there was any foundation for the report, that a demand had been addressed by the Continental powers for the removal of the political refugees who now found shelter in this country, or that it was the course it was intended to be pursued should such an application be made?

Lord PALMERSTON (in the absence of Lord J. Russell, who was not present in the House in consequence of the death of the Duchess Dowager of Bedford) in reply to the question, he said:—

In answer to the question of the noble Lord as to whether an application has been made by foreign powers to the Government of this country for the expulsion of foreign refugees now living in the United Kingdom, I have to state that no such application has been made. In reply to the other question of the noble Lord, as to what course would be pursued in the event of such an application being made, I can only repeat that which I think has been the constant course pursued by this House, that any such application would certainly be met by a decided refusal. [Hear, hear.] It is, indeed, obvious that it must be so, because no such measure could be taken by the Government of this country without fresh powers by Act of Parliament, and I apprehend that no Government could, even if they were so inclined—and the present Government are not so inclined—apply for such a power with any chance of success (Loud cheers and "Hear"); Inasmuch as no Alien Bill, I believe, within the course of this century has been passed giving to the Government the power of expelling foreigners, except with reference to considerations connected with the internal safety of the country (Hear). The British Government has many undertaken to provide for the internal security of other countries: it is sufficient for them to have the power to provide for the internal security of their own. But I cannot confine my answer simply to that question. I will say, on the one hand, that the British laws and the spirit of the British constitution give to foreigners, of all political opinions and of all categories, a secure and honourable shelter within our dominions; and I think that those foreigners who avail themselves of the hospitality of England are bound by every principle of honour (Cheers), as well as by every regard, not only to international law, but to the law of the land, to abstain from entering into any machinations, or from pursuing any courses intended for the purpose of giving annoyance to foreign Governments, and of disturbing the mutual tranquility of friendly countries (Cheers).

Mr. W. WILLIAMS called the attention of the House to the injustice of exempting real property from paying probate and legacy duties, while personal property of every description was subjected to the payment of those duties. He moved a resolution that such property should be made to pay the same probate and legacy duties as are payable on personal property. If his motion were carried a source of revenue amounting to about £2,000,000 would be opened up.

The CHANCELLOR of the EXCHEQUER opposed the motion. There were burdens upon real property to the extent of about £12,000,000, of which personal property knew nothing at all. He did not deny that the law required to be altered; that the scale, which was most unsatisfactory, should be reconstructed: but the question whether land ought to be subjected to the legacy and probate duties should be deferred until the House had adopted some fixed views regarding our general taxation, and particularly as to the Income-tax, which must be the pivot upon which the whole would turn.

Mr. Hume, Mr Bright, and Mr. Wilkinson, supported the motion, which was opposed by Mr. Henley, and, on a division, negatived by 124 votes against 71.

On the motion of Mr MONTE, a select committee was appointed to inquire into the petition of M. Bonsciech, relative to the seizure of the ship *Nautilo*.

The grievances and wretched remuneration of the letter-carriers were brought under the consideration of the House by Mr. T. DUNCOMBE, who moved a resolution that their salaries were insufficient. Int consented to withdraw it on an assurance that the matters in question are under the consideration of the Postmaster-General.

Mr. COLLIER moved for a select committee to inquire whether the Ecclesiastical Courts might not be abolished, and the jurisdiction of the Court of Admiralty transferred to local tribunals. He dwelt upon the insecure custody of wills in the Prerogative-office, notwithstanding the enormous sums received by the registrar; and upon the defects of the ecclesiastical testamentary jurisdiction, part of which might be conveniently given, he thought, to the County Courts, and the remainder, beyond a certain amount, transferred to the courts of common law.

The SOLICITOR-GENERAL, the ATTORNEY GENERAL, and Lord PALMERSTON, respectively opposed the motion, which the House divided on—For the motion, 101; against it, 152: Majority against the motion, 51.

HOUSE OF COMMONS.—WEDNESDAY.

The adjourned debate on Mr. Spooner's motion against the Maynooth Grant was resumed to-day. Several speakers addressed the House; but, as the public out of doors fully participate in the general feeling of hon. members, that the Maynooth Grant has been sufficiently debated, we abstain from particularizing the arguments adduced, which were, indeed, mainly a repetition of those advanced in previous debates. Mr. W. J. Fox taunted the Roman Catholic members with inconsistency in not voting for Mr. Scholefield's amendment, which is directed against all Parliamentary grants for religious purposes; and Mr. LUCAS and the Roman Catholic members, on the other side, complained of those Evangelical Dissenters who had pandered to the religious bigotry of their constituencies by voting in favour of Mr. Spooner's motion. After a short reply from Mr Spooner, the House divided on Mr Scholefield's amendment to the original resolution, when there appeared—For Mr. Scholefield's amendment, 68; against it, 262: majority, 194.

HOUSE OF LORDS.—THURSDAY.

THE REGISTRATION OF ASSURANCES BILL.

The LORD CHANCELLOR, in moving the second reading of this bill, said that it was of paramount importance to the landed interest, and would add materially to the transferable value of land. It was said that the bill did not go far enough, and he was far from saying that more might not be done, but that the bill would be a sure, solid, and safe foundation for future legislation. At present there was no such thing as absolute security for the purchaser of land, but he would so secure it under this bill.

Lord ST. LEONARDS moved that the bill be read a second time that day six months, and stated a series of objections which he had against the measure

After considerable discussion the bill was read a second time.—Adjd.

HOUSE OF COMMONS.—THURSDAY.

In reply to Sir J. Pakington, Lord J. RUSSELL said, the opinion of the law officers of the Crown had been asked in reference to the legal powers of the committee appointed by the Upper House of Convocation on the 10th February, but that opinion had not as yet been received.

In reply to Mr. Baillie, Lord J. RUSSELL repeated what had been already stated by the noble Earl at the head of the Government, that a bill would be introduced during the present session for the future government of India

MONTENEGRO.

Lord D STUART called attention to the affairs of Turkey, in reference to the present contest now proceeding in Montenegro The noble Lord took occasi n to charge Austria and Russia with playing a double game, in stirring up the Montenegrins to rebel against Turkey; and he praised the mild toleration of the Turkish code as far as Christian subjects, as contrasted with the general conduct of the Governments of Austria and Russia In reference to the prevalent reports regarding a partition of Turkey, he expressed a hope that the British Government would state their views on the subject, so that the country might know whether England was to maintain her old policy of upholding the independence of Turkey. During the last twenty years our trade with Turkey had nearly quadrupled, while with Russia it had not doubled. In conclusion, he moved for copies of any correspondence which might have passed between Austria or Turkey and this country, having reference to the present war in Montenegro.

Mr. M. MILNES seconded the motion.

Lord J. RUSSELL hoped the motion would not be pressed, because the negociations entered into upon the subject had not been brought to a close. He concurred in the importance of preserving the independence and integrity of Turkey, which had been guaranteed by a general congress of the great powers of Europe. In his opinion, no power could attempt the dismemberment of Turkey without causing a great breach of faith with Turkey, and committing a violation of all the laws which bind nations together. If Turkey fell to pieces by her own weakness, as might be the case, it appeared to him to be a subject of such grave importance that he could not look at it without exciting fears of a European war. The noble Lord then proceeded to give a brief history of the Republic of Montenegro, and ended by expressing his satisfaction at the successful result of the mission of Prince Leiningen to the Porte, and a hope that all danger in respect to hostilities in that part of Europe had passed away.

Lord D. Stuart then withdrew his motion.

JUDICIAL OFFICERS.

Lord HOTHAM, in moving for leave to bring in a bill to disqualify certain judicial officers from sitting and voting in that House, pointed out the great impropriety of those officers having to undergo the unpleasant and contested election and the great interest arising out of the [illegible] to which they were subject. He proposed to include in the measure the Master of the Rolls, the Judges of the Ecclesiastical Courts of Canterbury and York, and the Judges of the Admiralty Court, and of the Prerogative Court in Ireland.

Viscount PALMERSTON would not oppose the motion, but would reserve to the Government the right of expressing their opinion upon the bill during the second reading.

Leave was then given to bring in the bill.

THE TARIFF.

Mr. HUME moved a series of resolutions for the purpose of abolishing the Customs duties at present payable on various foreign manufactured articles. His object in bringing forward this motion was fairly to carry out the great principle of Free trade which had already been adopted in the case of foreign corn and foreign cattle.

Mr. MITCHELL seconded the motion.

Col. SIBTHORP opposed the motion, stating that old birds were not to be caught with chaff; and that he could not follow the hon. member in that instance any more than he had followed him when he had destroyed the agricultural interest.

The CHANCELLOR of the EXCHEQUER said that he could not assent to the motion, which would involve a sacrifice of revenue to the amount of £1,300,000, without providing any substitute for the deficit which would thereby be created

After some further discussion, in which Mr. DISRAELI charged the Government with inconsistency and indiscretion in the course adopted by the Chancellor of the Exchequer, the House divided, when the numbers were—For the motion, 101; against it, 152: Majority against the motion, 51

After the disposal of some of the business on the paper, the House adjourned.

RAILWAY INTELLIGENCE.

ABERGATE, NOTTINGHAM, AND BOSTON AND EASTERN JUNCTION.—The ordinary half-yearly meeting of the proprietors of this company was held on Monday at the London Tavern; Mr. Wilkinson in the chair. The report was read; and, the chairman, after alluding to the retirement of the late chairman, stated he had most perfect confidence in the directors of the Great Northern Company, and they would carry out their engagements in a spirit of the greatest liberality.—Mr. Bishop objected to the paragraph in the report stating that no other proposal had been made to lease the line; whereas one had been made in April or May last, by the Midland and London and North-Western Companies.—The chairman explained that no such proposition had been before the special meeting, and the board had declined to entertain any other offers, but he distinctly stated that no such proposal had been made.—Mr. Collins handed in the following letter, and stated that it embodied the sentiments of 200 shareholders representing 30,000 shares:

"1, Argyle-street, Strand, Feb. 28, 1853.

SIR,—I regret to find, from the report of the directors, that the proposal of the Ambergate Company are to receive only 5 per share from the unexpired guarantee of the Midland Company, for the three years which, in common with a large body of their proprietors, I consider the views which, in common with a large body of their proprietors, I consider the views which, in common with a large body of their proprietors, I consider the views

THE EMPRESS OF THE FRENCH, IN HER BRIDAL COSTUME.

PARIS FASHIONS FOR MARCH.

THE Wedding of the Empress and the Senate Ball have furnished a variety of elegant novelties in costume. We have already described, at page 117, the Empress' bridal costume: and proceed to detail a portion of the Imperial toilettes made by the celebrated Palmyre. First, are gold blonde flounces, the edge denteled, and the pattern an eagle.

The effect of three rows of this blonde on cherry velvet is magnificent: the body as well as the sleeves being trimmed with it. The sleeves are very short, have a white satin puff, and above it a velvet puffing; over which falls the blonde, fixed between by a gold ribbon knot. This fashion of very short sleeves is not graceful, even for pretty arms.

Another dress is entirely covered by nine flounces of point lace: the pattern is of the richest kind, and the flounces are combined so as to diminish in width from the first to the last. The petticoat is beautiful, and tastefully trimmed with lace; all the flounces being put on net, which preserves their lightness. A white brocatelle, a thick and rich material, in which silver is woven in the pattern, but with moderation, has three flounces of pinked stuff applied on net flounces; generally, the light flounces are put over the stuff; here, on the contrary, the edge of the net flounces is bound with silver braid; the body with drapery.

One of the ball dresses has a deep puffing of net, sprinkled with violet bouquets, mingled with gold and silver. This puffing reaches to the knees; the remainder of the petticoat being striped with ribbon, on which are embossed gold and silver bees and violets.

The dress which most attracted attention was of a white-ground material, very thick and supple in texture, embroidered by hand, with twisted or half twisted silk in bouquets of flowers of a thousand hues from which a slight spray passes over the whole ground. This pattern is not very close and does not cover the material.

The front of the dress is an apron puffed with white net, bows of very narrow ribbon with the same bound the flowers of the dress, woven with gold and silver, and over the apron.

Dressed white lamark and groseille flours, others, where gold and silver intercept the groundwork, complete the appointed number.

Among the most costly items is a point-lace trimming, of beautiful workmanship; of which we cannot give a better idea than by mentioning that the trimming of the dress was to cost 35,000f.

For the ceremony at the Cathedral, the dresses were extremely elegant; but they were all morning toilettes, with bonnets. The Princess Mathilde wore a remarkable costume. On a white petticoat was thrown open a dress of Nuncrat velvet, with high open body: head-dress, the Princess' crown of diamonds. Nearly all the bonnets were white, trimmed with flowers or plumes.

Lace mantelets were numerous; others were made of warmer materials; scarf-shaped being the most elegant and dressy.

At the Senate Ball the richest and newest toilettes were to be seen in great profusion, but the crush was fatal to the ornaments of the dresses and the puffings of the skirts.

The hair is worn very low behind, whatever mode be adopted for dressing it; the long wreaths falling on the shoulders; tufts on each side of the head; the hair raised *à l'Impératrice*, in which are lively-coloured ribbons, mixed with gold and silver. Indeed, each lady dresses her hair as most becomes her, without restriction to a fashion for the whole. Everybody gains by this.

What made this ball an event was the compulsory Court costume for the gentlemen, and many were the discomfitures. Extreme elegance consists in a slim figure, which does not suit the official or Court dress. The attachés and statesmen, who were brilliant but yesterday, no longer possessed their wonted ease and self-possession. The demand for dresses hired at Babin's the celebrated Court *costumier*, was enormous.

The *Journal du Puy de Dome* says:—"The Empress has very graciously received the present of lace which a manufacturer at Puy sent her immediately after her marriage. The Emperor has just transmitted through the Mayor a large order to the manufacturer in question. Among other articles are a large shawl, similar to the Alençon lace; several lace flounces; a quantity of rich black guipure, for the manufacture of which Puy is famous; and a quantity of white blonde, which is also made there in great perfection. The manufacture of lace at Puy occupies no less than 30,000 work-women."

THE ILLUSTRATIONS

A robe of white taffetas; the slip with two *volants* of English lace, each having at the top a fringe of white silk. The *corsage* is almost covered with rows of lace crosswise; a *berthe*; coiffure *à la Grecque*, with flowers in bunches round the back of the head, and two ribbons over the crown.

Robe of *lampas*, worked in gold and silver; *corsage à châle*, with three rows of Alençon lace; and balloon sleeves, very short.

Gentlemen's civil costume: large sleeves and short skirts, white waistcoat, and cravat.

PARIS FASHIONS FOR MARCH.

THE FANCOURT TESTIMONIAL.

THIS characteristic Testimonial has just been presented to Colonel Fancourt by the inhabitants of Honduras. It consists of a handsome silver

THE FANCOURT TESTIMONIAL TO COLONEL FANCOURT, K.H.

centre piece manufactured by Mr. C. F. Hancock, 29, Bruton-street, the design consisting of trees and birds peculiar to the country of Honduras. The sides of the base are ornamented with richly-worked bas-reliefs, representing the cutting of the mahogany tree, and carrying it by torchlight; the other sides are charged with the arms of Colonel Fancourt, elaborately engraved, and also the names of the subscribers, with the following inscription:—

Presented to Colonel Charles St. John Fancourt, K.H., by the public officers and other inhabitants of British Honduras, as a testimony of the regard which they entertain for him as a man and a gentleman, and the admiration which they feel for his skilful administration of the affairs of that country, during a period of eight years, under circumstances of more than ordinary difficulty.

MR. FRITH, R.A.

MR. WILLIAM POWELL FRITH, the newly-elected Royal Academician, was born in 1819. He commenced his career about fifteen years

MR. W. P. FRITH, THE NEWLY-ELECTED R.A.—(FROM A DAGUERREOTYPE BY CLAUDET.)

go, when he entered the atelier of the late Mr. Sass, where he passed the preliminary labours usual before entering the schools of the Royal Academy. After two or three years' close application, Mr. Frith produced and exhibited his first picture at the Society of British Artists, in the Suffolk-street Gallery—the subject, "Madge Wildfire" and "Jeannie Deans." From that time to the present moment, the artist has been continually before the public; and whether his theme was the immortal page of "Goldsmith," the quaint and sparkling humour of Molière, or the oft-represented Sir Roger de Coverley in the Spectator, we find him always agreeable, and often highly successful.

In 1846 his election as an associate of the Royal Academy was secured, by the exhibition of his picture, called the "Village Pastor," a scene from the "Deserted Village," representing the good parson leaving the church, surrounded by his rustic congregation:—

E'en children followed with endearing wile,
And plucked his gown to share the good man's smile.

His election as associate gave fresh impetus to the efforts of the painter, and not a year has passed without striking evidence of his perseverance. In 1847 "The Old English Merrymaking," recently engraved and presented to the subscribers to the London Art-Union, was exhibited. In 1848 he produced "An Old Woman accused of Witchcraft," a picture of considerable merit. In 1849 "The Coming of Age" was exhibited; and, in 1850, a scene from "Don Quixote," and also one from Goldsmith's "Good-natured Man." In 1851 "Hogarth tried as a Spy before a French Court of Justice;" and, in 1852, "The Quarrel of Pope and Lady Montague," and a picture of "Evening Prayer"—both of which were much and deservedly admired.

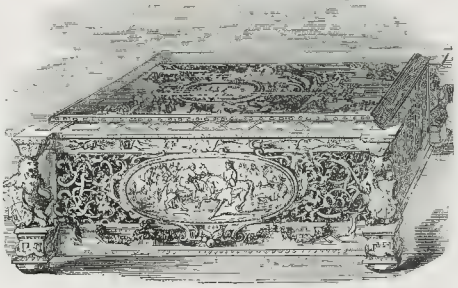
Mr. Frith may be said to excel in the representation of character and humour, but especially in the delineation of female beauty; his colouring is considered excellent, and the execution of his pieces is always facile in the extreme.

THE BROWNLOW TESTIMONIAL.

A VERY gratifying Testimonial has just been presented to the Earl Brownlow by the magistrates and deputy-lieutenants of Lincolnshire, on the occasion of his Lordship's retirement from the Lord-Lieutenancy of that county. The noble Earl had held that distinguished office for the long period of forty-three years, having received his commission from the hands of King George III., in 1809. In the autumn of last year, finding, from declining health, that he was no longer equal to the duties of the situation, increased as those duties had been by the revival of the militia force, his Lordship decided to resign the honour of the Lieutenancy into her Majesty's hands. Upon his retirement from the anxieties of public life, the gentlemen of the county, with one accord, hastened to convey to his Lordship their unanimous sentiments of respect and personal esteem; and at one of the largest meetings ever held in Lincoln Castle, the magistrates and deputy-lieutenants resolved to present an address to his Lordship, expressive of their admiration of "the strict integrity, the unwearied diligence, and the steady and scrupulous impartiality," that had uniformly distinguished his public career. And at the same time, "in order to perpetuate the recollection of his Lordship's public services to the county," it was resolved to place a copy of his portrait, by Sir Martin Shee, in the County-hall at Lincoln. This was done on Friday last, and during the holding of the present assizes the Address and the magnificent Coffer containing it, forming the Testimonial, have been publicly exhibited in the grand jury room.

The Address is in the form of a book (royal 4to), and the vellum leaves are emblazoned in the ancient manner, and splendidly bound in crimson velvet, mounted with silver-gilt decorations. On the front are the arms, supporters, coronet, and crests, of the Earl; and, on the reverse, the cipher, coronet, crests, &c., surrounded by the Guelphic Order; the corners are richly embossed in the Cinquecento style.

The illuminations and binding are by Messrs. Rivington, of Waterloo-place, and the decorations also the coffer, by Messrs. Hunt and Roskell, from designs by Mr. Alfred Brown. The coffer, containing the address, is a richly-wrought silver, the perforated work displaying the ebony case that forms the background. The cover of the lock is formed of a block of plate glass, and around the sides, in the four compartments, are represented, in *basso-relievo*, incidents in the history of his Lordship's family. The first portrays Sir Richard Cust, the zealous supporter of Constitutional principles, expelled by Cromwell from the Parliament in which he ought to have sat as Knight of the Shire for Lincoln. The second represents Sir Purey Cust at the head of a troop of horse, which he had raised at his own expense, welcoming William of Orange, afterwards king of England, on his landing in the West, in 1688.



TESTIMONIAL PRESENTED WITH THE ADDRESS TO EARL BROWNLOW.

The third is the marriage of Sir Richard Cust to Ann, heir to the Viscount Tyrconnel; and the fourth represents Sir John Cust, as Speaker

M. RAVEL.—(FROM A DAGUERREOTYPE BY CLAUDET.)

of the House of Commons, which office he filled from 1709 to 1770, with great ability and devotion to his country's service. The moulding above is formed of various military trophies, &c., with shields bearing the arms of the county, &c.; beneath are festoons of fruit, and, at the four angles, the lion supporters, holding the shield of the Cust and Brownlow arms.

The address is signed by the noblemen and gentlemen of the county; and, in acknowledging "this flattering proof of their kindness," his Lordship speaks of it as "thus permitting him, at this period of his life, 'inter antesatæ vitæ haud inamœnas recordationes, interque amicorum amplexus, honorifice consenescere!'"

ST. JAMES'S THEATRE.—M. RAVEL.

THIS highly popular *comédien*, who has just been re-engaged at the St. James's Theatre, is a native of Bordeaux, and, when very young, was placed by his father in a notary's office. He soon left this employment, and roamed about the country, with eight or ten young associates, in search of an engagement, till they came to Château Thierry. Here they found an indifferent theatre; but Ravel, from this moment became an actor for life. During his provincial engagements he had the pleasure of playing in a comedy with Mdlle. Mars. His début in Paris was at the Théâtre du Vaudeville, in the popular piece of "Le Tourlourou:" but his fame was chiefly earned at the Palais Royal, the company of which he subsequently joined, and has remained the principal actor to the present day.

His personal appearance is thus sketched by Mr. Charles Hervey, in a work on the theatres of Paris, published in 1846, by Mitchell: "Ravel is short and slight in figure. He has a peculiar elasticity of step, and a droll fidgety manner of treading the stage, the ludicrous effect of which is heightened by his comical

CURLING, AT CROXTETH HALL.—(SEE NEXT PAGE.)

self-sufficient air, and by the no less comical intonation of his voice. His eye is marvellously expressive, and never idle; and accompanies every joke and repartee with a knowing smirk, à la Buckstone, which makes his audience roar they cannot tell why!

In addition to the re-engagement of M Ravel at the St. James's Theatre, we have a new débutante in the person of Mdlle. Luther, from the Gymnase, who made her appearance on Monday, in two pieces—"Les Incertitudes de Rosette," by M. Ernest Servet; and "Livre III., Chapitre I.," by MM. Eugène Pierron and Adolphe Laferrière. The last is well known to the English public, in a version produced at the Haymarket Theatre, under the title of "A Novel Expedient." Mdlle. Luther was eminently successful in both pieces. The first affords but slight opportunity, in the person of one *Rosette*, a young maiden, with three lovers, who gives her hand to the one who refuses to submit his claim to the chance of a lottery, seeing that no acceptance should be the result of choice.

M. Ravel performed, on Wednesday, the part of *Sylvain Berthault*, in "Qui se dispute, S'Adore." In this simple and lively *proverbe* M. Ravel has to sustain the part of a husband who shows not the degree of his affection for his wife until about to part from her. The lady, too, *Rosine* (Mdlle Luther), makes a similar mistake concerning her lord; and both suffer their fancies to wander on other objects. The original cause of separation is the wife's prominent love for millinery, and the husband's for cigars. For this state of disquietude a friend perceives that a proposal for a separation is the only remedy; she tries it, and succeeds. The name of this judicious acquaintance is *Gympse*, well played by Mdlle Lutzenberg. The best qualities of M. Ravel's acting came out in his delineation of *Sylvain Berthault*. The double strain of feeling which he has to exhibit in his perception of the necessity of the proposed separation, and his dislike of the bitter medicine which it involves, gave occasion for some fine situations of by play and perplexed movement that were exceedingly effective. The piece is by MM. Henri de Kock and C. Potier. The audience were numerous, fashionable, and delighted.

CURLING IN LANCASHIRE.

GREAT MATCH BETWEEN THE LIVERPOOL AND MANCHESTER CLUBS.

THE game of Curling has been long a winter pastime in Scotland. Of late years, when ice could be found, it has also been played in some of the northern counties of England. Several clubs have been established in those counties in connection with the Royal Caledonian of Scotland. Of these, the Liverpool and Manchester Clubs have probably attracted most notice. The Liverpool has the advantage of the kind patronage of the Earl of Sefton, who, besides allowing the members and their friends access to the ice on the ornamental water at Croxteth Hall, mingles with them, and dispenses his hospitality in the genuine spirit of a noble country gentleman.

Croxteth is situated near West Derby, about five miles from Liverpool. The curlers are chiefly Scotchmen, connected with the trade of the latter town, who have brought from their native ice the science and the love of this game. The illustration is a correct view of the pleasure-grounds and hall of Croxteth. The game is in progress with one "rink" of curlers. A "rink" comprises eight persons, each of whom has two curling stones and a besom. The distance played over is usually about forty yards, sometimes more, but seldom less. The point to be gained is called a "tee." The adversaries play man and man alternately. The object of the present player is to dislodge the stones on or near the "tee," laid there by the preceding or some previous adversary. Should now he falling, or water coming through the ice, the brooms are applied with great vigour by those friendly to the progress of a coming stone, should they have any doubt of its not coming far enough. If it passes the "tee," the adversaries of that stone always try for it, as the further it goes the better does the game stand for them. Finally the adversaries reckon the number of "shots," and thus decide who are winners. But no brief description, such as we are limited to, can acquaint the uninitiated with this game. It must be seen, and, when seen, the player must be expounded while the play proceeds, to be thoroughly understood.

As there was no ice in 1851 nor 1852, and February of 1853 being far advanced before the first frost came, several challenges of previous remained undecided in all parts of the kingdom. The Liverpool had lost to the Manchester Club in 1850; the former now challenged the latter to play them on a sheet of ice on the estate of Cornwall Legh, Esq., near Newton-in-the-Willows, half-way between the two towns. The enthusiasm of the "keen, keen, keen curlers" (such is the professional phrase) may be judged of from what follows:—

By a change in the address of the Manchester secretary, the letter of challenge despatched from Liverpool on Wednesday did not reach him until Friday afternoon. He had then to run, or ride, or drive, or send to and fro, through Manchester and Salford, to summon twelve "keen, keen, keen curlers," to be at Newton on the following morning by eight o'clock. Those found for the challenge accepted, and several messenger was sent to Liverpool, who found three of the curlers at half-past nine at night. No answer to the challenge having arrived sooner, the Liverpool players had left their curling stones and other curling implements at Croxteth-park. These, weighing about 9 cwt. had to be sent for during the night. Twelve of the best curlers in Liverpool, some of whom resided beyond the Mersey, with one or two extra, in case of non-appearances, had to be summoned during the night.

By half-past six o'clock on Saturday morning, February 19th, while it was still moonlight, the Liverpool forces assembled at the Lime-street station of the London and North-Western Railway, only two absent. A truck was attached to the train to carry the curling stones, brooms, &c., and one man left to bring up the missing men by the next train. In due time the signal was given, the train started, and having cleared the dismal tunnel, it scoured over the icy rail in the direction of the fresh air of day. The cloudless sky, keen frost, and joyous conversation of the "keen, keen, keen curlers," gave token of a day's sport that would give a zest to the "beef and greens" (the standing dinner for curlers), when the game was over and the medal won.

Arrived at Newton, the Liverpool gentlemen, each with a broom over his shoulder, marched into the centre of that ancient borough, much to the astonishment of the inhabitants, who were then opening their window-shutters. Presently the twelve from Manchester arrived in like manner. Preliminaries were arranged at the hotel, as to what players should be together in each of the three "rinks" of eight men each. One gentleman and the landlord went as a deputation to Squire Legh, to claim leave to use the ice in his private park or lake. Others obtained conveyances for the curling stones. Leave to play being courte usly granted by the Squire, a pleasant walk of a mile and a half brought all to the banks of a splendid sheet of ice, as smooth and as bright as a mirror.

The "rinks" having been measured off, "tees," "hog scores," and such like technical marks made, an umpire appointed to give the time to begin and leave off, the game began at the half-past ten clock. At half-past three the umpire proclaimed that time was up, the play was over; upon which the roaring of the stones and the tumult of voices ceased. The game stood thus:—No. 1 rink: Liverpool, 30; Manchester, 25. No. 2 rink: Liverpool, 30; Manchester, 15. No. 3 rink: Manchester, 20; Liverpool, 23. Majority for Liverpool, 28.

The day was beautiful. Many gentlemen and elegantly-dressed ladies came to the ice, and never per haps were present; and at the conclusion of the game received a vote of thanks amid a burst of cheers, which made the wild woods ring. The young gentleman replied on behalf of his uncle and himself—that the curlers of Liverpool and Manchester, and others seeking healthful recreation and rational amusement, would always be admitted to their grounds. To this Mr Legh also bowed her assent.

The curling dinner of "beef and greens" (and sundry things besides) having been dispersed of, and the stones again consigned to the railway trucks, the players posted by their respective trains about eight o'clock.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Although the actual investments in the Consol Market this week have been by no means extensive, prices have ruled tolerably firm. A slight check has been given to an upward movement in the quotations from the news at hand from Australia, stating that the produce of the gold districts was falling off. We have reason to believe, however, that the yield in the wide e of the colony was upwards of £600,0.0 per week. The quantity on passage to England is immense; whilst nearly one million sterling, in d.st, has been imported into London since we last wrote. The improved tone of the Paris Bourse has given confidence to the holders of stock. There has been an active demand for money for commercial purposes, and the rapid extension of our trade with Australia and the United States is decidedly in favour of the present rates of discount being supported. In Lombard-street, first-class bills have been done at from 2½ to 2 per cent per annum. The premium on Exchequer Bills has continued low, but not lower than many parties had anticipated We may, we conceive, conclude that but a comparatively small number of the present holders will demand cash when the new bills are issued. Should a large supply be prese ted for payment, Government, with the aid of the Bank of England, will no doubt, be prepared for the emergency.

On Monday Bank Stock was done at 2.5½, the Three per Cents Reduced were marked 96½ ¾; the New Three per Cents, 99¾ ¾; Three-and-a-Quarter per Cents, New, 103¾ ¾; and Consols for Account, 97¾ ⅝. India Stock was 263½; India Bonds, 40s.; and Exchequer Bills, 17s to 12s. pm. Very little change took place on the questions, either on 'Change or Wednesday. The market on Thursday ruled steady. Bank stock was 258. The three per Cents, Reduced, were 96¾ ¾; the Three per Cent Consols, 97¾ ¾; New Three-and-a-Quarter per Cents, 103¾ ¾; Consols for Account, 97¾ ⅝; Long Annuities, 6¾; India Bonds, 45s. pm.; Exchequer Bills, £500, 12s. to 17s.; ditto, £500, 12s.; Small, 12s.; and Advertised, 3s. premium

In addition to the import of gold above noticed, we have had an arrival of nearly 300,000 ounces from New York. The direct shipments to the Continent have taken off, but large supplies of gold and silver—nearly £300,000—have been forwarded to India, Egypt, and Australia; hence the stock of bullion in the Bank of England has not increased. The last return showed it to be £18,814,617.

On the whole, the Foreign House has been tolerably firm. Amongst the leading features in the Government Securities is the new loan contract ment to contract a new loan of £2,000,000, at 85, bearing interest at 4½ per cent. The first payment of 20 per cent is advertised for the 9th inst On all payments in full a discount of 4½ per cent will be allowed. The loan is for the purpose of paying off the Six per Cents, the holders of which will receive £118 10s of the new stock. A sinking fund of £52,000 per annum is to be established, with the surplus revenue, which will be applied to pay off the whole amount in ten years. The amount of the Active Debt is about £1,800,000; hence the New Debt, at 85, would be nig £662,000 to the Peruvian treasury. The actual sinking fun will be about £10,000 per annum; but we find that the contractors will realise £36,400 as commission by the "new job." The New Scrip has been dealt in at from 4 to 5 premium. Turkish Scrip has been nearly at from 1¼ to 1½ pm; but Swedish has ruled very dull. It is stated that a new Spanish loan of £6,000,000, at 40, will be brought forward, and in which the Spanish Committee's certificates will be received at a low rate. The new Prussian loan of £750,000 has been completed at Berlin; and the remainder of the Tuscan loan of £300,000 has been taken by Messrs. Rothschild, at 99½ ½ pm. Brazilian Bonds, 95 to 96; Great Nugget Venture, 2¾ to 3 prem.; Nova Scotia Mining, 2¾ to 2¾ prem.; London and Westminster Bank, 35¾; Oriental Bank Corporation, 5⅝ to 5¾; Provincial Bank of Ireland, 49¾; Victoria Docks, (45 paid), 6¾; Australian Royal Mail Steam (£6 paid), 9¾ ex div.; British American Land, 63 to 65; Crystal Palace, 5¾ ⅝; Peninsular and Oriental Steam (£25 paid), 49; General Steam Navigation, 21; General Screw Steam, 12 to 12½; Royal Mail Steam, 83¾ to 85; and Submarine Telegraph, 1 to 1⅛.

There has been a steady, but by no means active, inquiry for Railway Shares. The supply of Scrip in the shares is rather less than for some time past. The amount of "calls" for the present month is £478,656; of which, £56,400 is for f reign companies. The following are the official closing prices on Tuesday:—

ORDINARY SHARES AND STOCKS.—Aberdeen, 30¾; Amb rgate, Nottingham, and Boston Junction, 6¾; Caledonian, 64; Cork and Bandon, 7½; Eastern Counties, 2¼; Edinburgh, Perth, and Dundee, 74¼; Edinburgh and Glasgow, 77; Edinburgh, Perth, and Dundee, 32. The Mining Market has been tolerably firm. Aqua Fria Shares have marked 1¾; British Iron, 8; Great Nugget Venture, 3¾; Great Polaski, 4¾; Linares, 16; Mexican and South American, 6¾; Nouveau Monde, 2¾; Rhymney Iron, 23; West Mar.posa, 1¾.

THE MARKETS.

CORN-EXCHANGE.—During the present week, the arrivals of English wheat up to our market, coastwise and by land carriage, have been on a very limited scale, hence the show of samples has continued small. For all kinds of wheat, the demand has ruled very dull. Free arrivals from the exports of wheat have fallen off, nevertheless, ad descriptions have sold nearly at barely previous rates. Flour and grinds have met a dull trade. Barley the few qua of which have been sold—has sold readily, at extreme currencies. Malt steady and quite as dear as last week. Beans have been a moderate inquiry for, at late figures. Peas, peas, flour have met a dull sale.

English.—Wheat, Essex and Kent, red, 42s to 45s. ditto, white, 45s to 48s; rye, 28s to 31s; grinding barley, 24s to 28s; fine malting ditto, 29s to 30s; rinsing ditto, 26s to 28s; Lincoln and Norfolk malt, 54s to 56s; brown ditto, 48s to 50s; Kingston and Ware, 52s to 56s; Chevalier, ditto, to 60s; Yorkshire and Lincolnshire ditto, 50s to 52s; harvey ditto, 48s to 50s; Scotch and Irish oats, 20s to 24s; ditto, white, 22s to 24s; tick beans, new 34s to 36s; ditto, old, 36s to 38s; grey peas, 32s to 36s; maple, 32s to 36s; white, 32s to 36s; Indian corn, 28s to 30s; per quarter. Town-made flour, 45s to 48s; Suffolk, 35s to 38s; Stockton and Yorkshire, 34s to 35s, per 240 lb. *Foreign.*—American flour, 23s to 26s. per barrel; French, 36s to 42s. per sack.

Seed Market.—Our market is in a very sluggish state. In prices, however, we have no clear ge to notice.

Linseed, English, sowing, 50s. to 56s.; Baltic, crushed, 38s. to 40s.; Mediterranean and Odessa, 36s to 38s.; Bombay, 37s to 38s per qr. Rapeseed, English, 30s to 32s per last; Foreign, 30s to 32s. Mustard-seed, 7s to 9s., white ditto, 7s to 10s.; tares, English, 36s to 40s per bushel. English rapeseed now, £21 to £22 per last. Linseed cakes, English, £9 to £9 10s; Foreign, £8 10s to £10 5s. per ton. Rape cakes, £5 0s to £5 5s per ton. Canary, 38s to 42s. per quarter

Bread. The prices of wheaten bread in the metropolis are from 7d. to 8d.; of household ditto, 5d. to 6d. per 4lb loaf.

Imperial Weekly Average.—Wheat, 42s. 2d.; barley, 31s. 3d.; oats, 19s. 6d.; rye, 28s. 4d.; beans, 34s. 8d.; peas, 33s. 7d.

The Six Weeks Average.—Wheat, 43s. 3d.; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Bath [illegible] wheat, 43s. to [illegible]; rye, 31s.; beans, 34s.; peas, 34s.

Bristol [illegible] at, a very limited supply of wheat being on sale. The demand for all kinds of grain is in a very dull state, and prices have ruled nearly 1s per qr. lower than on this day last week. Barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Cambridge.—Wheat, 43s. to 45s.; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Cardiff.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Chester.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Cork.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Dublin.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Exeter.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Leeds.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Liverpool.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Malton.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Newcastle.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Norwich.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Wakefield.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Waterford.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Wexford.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Yarmouth.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Yeovil.—Wheat, 43s. to [illegible]; barley, 31s. 2d.; oats, 19s. 4d.; rye, 31s. 8d.; beans, 34s. 6d.; peas, 33s. 7d.

Hops.—Our market continues very active, and prices have further advanced 3s. to 4s. per cwt. East Kent pockets are selling at from 112s. to 160s. per cwt.

Wool.—The public sales—at which rather over 40,000 bales were disposed of—were brought to a close on Wednesday. Prices ruled from 1d. to 1½d. per lb. higher than at the previous sales.

Potatoes.—The arrivals are but moderate and the trade is steady, at very full prices. York Regents are worth 125s. to 130s. per ton.

Smithfield.—The general demand has ruled steady, at very full prices:—

Beef, from 3s. 6d. to 4s. 10d.; mutton, 3s. 10d. to 5s. 2d.; veal, 3s. 2d. to 4s. 8d.; pork, 2s. 6d. to 4s. per 8lb.; lt. stck the offals.

Newgate and Leadenhall.—Each kind of meat has sold freely, as follows:

Beef, from 3s. 4d. to 5s. 2d.; mutton, 3s. 6d. to 4s. 6d.; veal, 3s. 8d. to 4s. 6d.; pork, 2s. 6d. to 4s. per 8 lb.; by the carcase.

THE LONDON GAZETTE.

FRIDAY, FEB. 25.

BANKRUPTS.

NORTON, Bridge-street, Pimlico, [illegible]-merchant. T. L. ARKWRIGHT, Woodstreet Cup, Barrow-upon-Soar, Leicestershire, J. WARD and T. SHOWDON, Leeds, tar and naphtha manufacturers. G. MOODY, Chesterfield, Derbyshire, coal-dealer. J. TAILOR, Newcastle-upon-Tyne, common brewer.

BIRTHS.

On the 27th ult., at Hazelby, Lady Louisa Stewart, of a son.

On the 27th ult., at 28, Merrion-square North, Dublin, the Lady Georgiana Croker, of a son.

At Balham Rectory, Reading, the wife of the Rev. H. H. Barthorp, of a son.

MARRIAGES.

On the 1st inst., at St. George's Robert Ley, Esq., to Eglantine Charlotte Louisa, third daughter of the late Lieut.-Gen. sir Balfour, of Balbarnie, N.B.

On the 26th ult., at Queenstown, the Rev. Thomas Wilson, H.M.S. *Ajax*, to Louise, eldest daughter of the late Rev. William Fraser, vicar of Cloghleen, and widow of the late A. Grant, Esq., of Coolville, county Tipperary.

On the 1st inst., at Walter Hindmarsh, Esqre, by the Rev. E. Thomas, Cornelius Surgey, Esq., of Wey-mouth, Belgrave, to Elliot Anne, eldest daughter of W. Wright, Esq., of Ryton-hall, near Sudbury.

DEATHS.

On the 25th ult., at Zonaftjes, Pas-de Calais, France, Sarah Burton, the wife of the Hon. Matthew Rodney, aged 64.

On the 26th ult., at Radstock Rectory, Somerset, the Rev. Richard Rodde, having been Rector of that parish upwards of 54 years.

On the 25th ult., at Ingestestone the Rev. John Lewis, nearly sixty years rector of that parish, aged 87.

On the 30th ult., at Ventnor, Isle of Wight, Spiridion Kosmo Otho, son of Count George Metaxa Assanate, of the Island of Cephalonia, and of the Countess Metaxa, of Gobbestier-place, Portman-square, aged 12.

TOTAL DESTRUCTION OF ST. GEORGE'S CHURCH, DONCASTER, BY FIRE.

On Monday morning, about one o'clock, the inhabitants of Doncaster were suddenly aroused by a great alarm of fire. It was soon discovered that the fire old parish church was in flames. From St. George's-gate, the whole of the lower part of the sacred edifice, from the west end of the nave to the opposite extremity of the chancel, was one bright sheet of flame. Crowds of people were on the spot, and the engines were actively playing on the fire, but useless for any other purpose than that of saving the surrounding houses

Meanwhile the fire raged in the church with fearful devastation. The north and south galleries afforded fuel for the flames, which soon extended them to the top of the tower of an hour from the commencement, more than half of the church was totally consumed. At about two o'clock the roof of the nave fell in with a tremendous crash, and with it fell also the upper part of the west end of the building, and the Perpendicular window, executed by Backman one of the finest in England, and only within the last six months filled with stained glass, at a cost of £700, in perpetuation of the memory of the late Mr. William Cooke, of Wheatley, a benefactor to Doncaster. Over the beautiful south porch was the church library, containing many rare and valuable ecclesiastical works. The flames reached this part of the building soon after the fire broke out. When the roof of the nave fell, the flames from the lofty tower went, and with an up ful light into the air.

About a quarter-past two the south side of the chancel dropped through, so that the flames rose above the battlements from end to end, in one uninterrupted line, with the exception of the tower. The lower part now became ignited, and the fire was seen through the windows shooting up towards the belfry floor with irresistible fury. For a few minutes the fire was impeded by the belfry floor, and the flames then burst through the windows, and the fire glaring within looked like a furnace. A little time and the belfry was in a blaze; and now the lofty tower was ignited, from the base to the roof, flames shooting through the latter like a volcano. The scene at this time was incurably grand. Several of the bells were heard occasionally glowing with one continuous mass of flame, from the centre of which rose the tower, projecting its flames high above the topmost pinnacles, and illuminating the firmament for miles around.

Soon after two the roof of the tower fell in *en masse*; the greater portion of it, however, lodged in the belfry, among the strong beams and framework. The flames, therefore, continued to ascend, the conflagration presenting a spectacle of awful grandeur. The beautiful peal of eight bells, weighing six tons, continued suspended for some time on their supporters, but ultimately they dropped down one after another, or, at least, such portions as were not melted—into the burning mass beneath.

When nearly three o'clock arrived, efforts were made to save the parish registers, which were kept in an iron safe in the vestry, at the south-east corner of the church. Mr. Waits (auctioneer) and Mr Johnson (of the Great Northern locomotive department) distinguished themselves in this luminous duty, and succeeded in rescuing the greater part of the books, though much burnt, and also the communion plate. Near the vestry was the celebrated organ by Harris, which was in course of re-erection, having been removed from the west end in order to facilitate the several improvements lately made in the interior. Every particle of this valuable instrument was consumed, as also every scrap of wood and metal in the building So intense was the heat that the piers and arches of the nave were reduced to powder, and nothing was left but the outside walls.

At half-past three o'clock the flames were nearly exhausted and began gradually to subside, and by four o'clock were reduced to the *debris* on the floor of the building, and to the joints on the ruins.

At five o'clock two engines arrived from York, having been summoned thence by electric telegraph: they played vigorously on the burning mass, and prevented further damage. They continued their labours until about eight o'clock in the morning, when the water thrown upon the calcined buttresses of the tower reducing the limestone of which they were composed to powder, the walls gave a loud crack, and in a few moments two sides of the tower fell down with an appalling crash. Twenty men were employed on the ruins at the time, and, fortunately, every one escaped without injury. The fall of the tower had been expected; and the vicar, whose house is very near, had removed his household to a place of safety, and was in his garden at an early hour. The immense mass fell almost perpendicularly, leaving only the east face of the tower standing. About ten o'clock a corner of the west end of the nave was pulled down by ropes. Considerable portions of the remaining wall of the tower fell during the forenoon, and the whole of it was pulled down on Tuesday. The view of the ruins, engraved upon the last page, is from a sketch by Mr. H. Tilbury, of Doncaster. The view showing the interior of the church, *without the galleries*, was drawn by the Rev. James Bell, the curate. Next week we shall engrave a view of the exterior before the fire

With regard to the origin of the fire, nothing, as yet, has been satisfactorily ascertained. The person who first discovered it was a policeman, who saw smoke and flame issuing from the south-west corner. The rapid spread of the fire was at first attributed to the ignition of the gas-pipes, which, melting swiftly, would greatly accelerate the progress of the flames. It has since been distinctly ascertained, however, that all the main taps were turned off at the time of the fire. A searching investigation into the cause of the fire has been commenced before the borough coroner, Mr. J. Lister.

The oldest portion of the edifice was built about the year 1070; the tower is referred to the time of Henry III., and the nave to a somewhat earlier period. It was in the form of a Latin cross, the length 154 feet, breadth 68 feet, height of nave 78 feet, height of tower 141 feet.

Thus, in three short hours, this handsome edifice, regarded as a type of parish churches of the Perpendicular style, and for centuries the pride of Doncaster, was reduced to a heap of ashes. Within the last two years a very considerable outlay has been made in restoring and decorating the interior. The Cooke memorial window, quite recently inserted, has already been mentioned. On the south side of the chancel

(Continued on page 193.)

ROBERT BARNETT.

AMUSEMENTS, &c.

FRENCH PLAYS, ST. JAMES'S HALL.—Monday, Tuesday, Thursday, and Friday, Macbeth and An Unfortunate Property. Wednesday, Romeo and Juliet and An Unfortunate Property. Saturday, Macbeth and An Unfortunate Property. Saturday, St. Cupid, An Unfortunate Property, and A Rebuff for an Officer.

SACRED HARMONIC SOCIETY, EXETER HALL.—Conductor, Mr. COSTA.—FRIDAY NEXT, March 11, will be made performed Haydn's first in a HYMN of PRAISE, with Mozart's REQUIEM. Vocalists—Miss Birch, Miss M. Williams, Mr. Lawler, and Mr. Weiss. The orchestra will consist of nearly 700 performers. For a description of the room, and other particulars, see Programme, which may be had at the Hall, and of the principal music-sellers.

MUSICAL UNION.—H.R.H. PRINCE ALBERT, Patron.—Members having nominations are requested to forward the names and addresses of their visitors to the Director as early as convenient. Tickets will be issued in the order they are received. The Subscription for the Season (eight Matinées) is Two Guineas each person. Visitors' tickets, Half-a-Guinea each. Programme for Tuesday next, March 8, at Three o'clock precisely. Quartet in E flat, Op. 74, No. 3, Beethoven—Mr. Sloper, Herr Ries, Herr Goffrie, and Signor Piatti. Sonata in A minor, Op. 105, for Violin and Pianoforte, Schumann—Herr Joachim and Mr. Charles Halle. Quartet in C minor, Op. 18, No. 4, Beethoven—Herr Joachim, Herr Ries, Herr Goffrie, and Signor Piatti. Sonata in B flat, for Pianoforte alone, Beethoven—Mr. Charles Halle. Quartet in A minor, Op. 29, Mendelssohn—Herr Joachim, Herr Ries, Herr Goffrie, and Signor Piatti. Sonata in B flat, for Pianoforte alone, Beethoven—Mr. Charles Halle. Quartet in A minor, Op. 29, Mendelssohn—Herr Joachim, Herr Ries, Herr Goffrie, and Signor Piatti. Sonata in B flat, for Pianoforte alone, Beethoven—Mr. Charles Halle. Quartet in A minor, Op. 29, Mendelssohn—Herr Joachim, Herr Ries, Herr Goffrie, and Signor Piatti.

ROYAL PRINCESS' THEATRE.—Monday, Wednesday, and Friday, Macbeth and An Unfortunate Property. Tuesday, Romeo and Juliet and An Unfortunate Property. Thursday, A Rebuff for an Officer, and last time of the Farmer's Wife and An Unfortunate Property. Saturday, St. Cupid, An Unfortunate Property, and A Rebuff for an Officer.

GEORGE GUTCH, Honorary
CHARLES PUGGIN, } Secretaries.

THE CRYSTAL PALACE COMPANY.—Notice is hereby given that an EXTRAORDINARY GENERAL MEETING of the Shareholders of this Company will be held at the LONDON TAVERN, Bishopsgate-street, on THURSDAY, the 24th instant, at Twelve o'clock precisely, for the purpose of altering the Deed of Settlement of the Company, so as to enable the Directors to purchase the Crystal Palace Railway Company.

By order, C. GROVE, Secretary.
3, Adelaide-place, London-bridge, March 1, 1853.

ROYAL ASYLUM of ST. ANN'S SOCIETY.—By voluntary contributions, affording a Home, Clothing, Education, and Apprenticeship to Children of those once in prosperity, orphans or not. Subscriptions and donations gratefully received by Messrs. Atkinsons, and Co., Lombard-street; or by the Secretary,

Office, 9, Charlotte-row, Mansion-house. EDWARD FREDERICK LEEKS, Secretary.

GENERAL DOMESTIC SERVANTS' BENEVOLENT INSTITUTION, 32, Sackville-street, Piccadilly. [illegible] Patronage of Her Majesty the Queen, and Her Royal Highness the Duchess of Kent, and Members of the Royal Family. Four Guineas [illegible] Life Subscription, or Ten Guineas for Five Years, entitles the Subscriber to recommend one candidate for election on the Funds of the Institution. Subscriptions and donations will be thankfully received by the Secretary, at the Office, 32, Sackville-street, Piccadilly, and by the Bankers, Messrs. Drummonds, 49, Charing-cross. Messrs. Coutts and Co., 59, Strand; Messrs. Hoare, 37, Fleet-street; by the Rev. H. Moncreiffe, Vicarage, St. Martin's-le-Grand; by H. Hutton, Hanbury, Corner-gardens; and through all the provincial bankers.

By order of the Committee,
[illegible] JOHN BOWEN, Hon. Sec.

FREEHOLDS for ALL CLASSES in ALL COUNTIES.—The CONSERVATIVE LAND SOCIETY, 29, Norfolk-street, Strand.—The 29th, 30th, and 31st Periodical Sales [illegible] Tottenham Al. persons desirous [illegible] by paying 2s. shares at 1l. per share, and all who join, by payment of the first month's subscription and fees. The 6l. for one share, or for three Five Guineas; the 11l. of March. All parties in the advantageous terms of the public, letting for rights a clothes on this next or other persons of the Society at the Freemasons' Tavern, Great Queen-street, on March 17, at Three o'clock precisely. Second Saturday in each month. Second Quarterly Meeting of the Conservative [illegible] Wednesday, March 9, at Eight o'clock precisely. Central and Eastern Counties Railway [illegible] Chelmsford, Colchester, Ipswich, Norwich, Yarmouth, Lowestoft, Cambridge, Ely, Bury St. Edmunds, Newmarket, Hertford, Bishop's Stortford, &c. [illegible] Fenchurch-street, and Bishopsgate-street. [illegible] Shoreditch, Hackney, Stratford, Romford, Brentwood, Epping, Ongar, Harlow, Bishop's Stortford, Saffron Walden, Newport, Audley End, Dunmow, Braintree, Witham, Maldon, Kelvedon, Tiptree, Coggeshall, Colchester, Manningtree, Harwich, Ipswich, Woodbridge, Saxmundham, Yarmouth, Lowestoft, Beccles, Bungay, Harleston, Diss, Thetford, Brandon, Swaffham, Downham, Ely, Cambridge, Newmarket, Bury St. Edmunds, Sudbury, Hadleigh, Stowmarket, Needham, Eye, Wisbech, Peterborough, Stamford, Spalding, Boston, Sleaford, Lincoln, Gainsborough, Retford, Doncaster, Selby, Leeds, Bradford, Halifax, Huddersfield, Dewsbury, Wakefield, Pontefract, Castleford, Normanton, Derby, Nottingham, Grantham, Newark

REMAINS OF ST. GEORGE'S CHURCH, DONCASTER, BURNT ON MONDAY LAST.

(*Continued from page 190.*)

three smaller stained-glass windows had only just been completed. A great part of the nave had been re-stalled within the past twelve months, and a new pulpit and reading-desk added. The total loss of property by this calamity is estimated at £100,000, and no part of the sacred edifice is insured.

Such a sad catastrophe has excited the most painful interest among the inhabitants, Doncaster being the "mother church" of an extensive district. Crowds of persons have visited the ruins. The loss is, in many respects, irreparable, and that which may be replaced will require more money than a town like Doncaster can hope to realise out of its own resources. We have called the building the parish church, but it was more correctly called St. George's, inasmuch as a considerable portion of the town was constituted, under one of Sir R Peel's acts, a parish district within the jurisdiction of the incumbent of Christ Church, and the funds of St. George's being diminished by the alienation of its tithes at the Reformation, a supplemental endowment of £200 per annum was added to the income of the vicar, the Rev. J. Sharpe, D.D., who is much afflicted at the loss his parish has sustained; and evinced, during the progress of the fire, intense grief at so melancholy a calamity.

The Town-council held a special meeting in the afternoon, at which the Mayor and Vicar were requested to name fifteen gentlemen to act as jurors in the inquiry before the borough coroner as to the origin of the fire. The Mansion house, the Guildhall, and the Grammar-school, have been offered as a place of Divine worship until better accommodation can be provided.

On Tuesday, a narrow strip at the north-east angle, supporting the belfry staircase, being considered dangerous, was removed by means of ropes, so that all that is left of this once fine edifice is a portion of the nave and chancel walls and the south porch

Great numbers of visitors, especially clergymen, have inspected the ruins, and one and all participate in the feeling of sorrow which so disastrous an event has created. Besides the property destroyed, there is a beautiful stained glass window at the east end of the chancel, which was put up towards the end of last century, at a cost of 1000 guineas. Several small chantries and many monumental tombs have also been destroyed.

At a meeting of the incumbent (the Rev. C. R. Alford), church-wardens, and seat-holders of Christ Church, the use of the latter on alternate Sunday mornings and evenings was offered to the vicar and congregation of the edifice destroyed

The fine old church just destroyed was in course of restoration; the committee appointed to conduct which received a report from Mr. Ferrey, the architect, in Dec. 1841, detailing the various necessary works required to put the building in good condition The report dwelt particularly upon the necessity for removing the unsightly galleries, by which the fair proportions of the church were injured It was the intention of the committee to have these obstructions removed, but other works required more immediate attention. Had these galleries not existed, there can be little doubt but that the church could have been saved In pursuance of Mr. Ferrey's report, a considerable portion of the nave had been reseated, with handsome solid oak open seats, with panelled ends, &c. One of the next works contemplated was the removal of the peal of bells to a higher position in the tower, agreeably to the recommendation in the report of Mr Ferrey, who, speaking of the tower, remarks: "This may more properly be termed a lantern. The large windows in the design of the upper part could never have been intended to light the belfry; only for such a purpose they would have been out of all character. The well-executed finials of the ogre-headed labels over the tower arches, the figures carrying shields with armorial devices, now intercepted by the ringing-floor, all prove that these ornaments were intended to be seen; but at present they are completely concealed by the ringing loft. It would give great dignity to the church if the ringing-floor were removed, and the fine tower windows permitted to shed their light into the centre of the transept. The large bells now filling the tower are of later date than the tower itself, and are not fitted for such a structure; they might, however, easily be raised; and I would suggest the construction of a corbelled stone gallery, similar in effect to that in the centre tower of Durham Cathedral. This would afford sufficient space for the ringers, and permit the handsome windows of the tower to be visible from the body of the church."

There is much relating to this magnificent church in Southey's wonderfully amusing book, the "Doctor," and particularly referring both to the bells and clock—all which will now be read with melancholy interest.

INTERIOR OF ST. GEORGE'S CHURCH, DONCASTER.

OLD HOUSES IN CHANCERY-LANE.

Such of our readers as note the antiquarian aspects of the metropolis, will recollect that at the entrance from Fleet-street to Chancery-lane, on the left, were, not many years since, a few houses with projecting windows, overhanging stories, and gabled fronts, nearly two centuries and a half old. Two of these structures have been removed within the past month—Nos. 130 and 131. They scarcely bore any particular feature in the way of carving. There is one point, however, which renders them of interest, namely, the finding a positive date (1611) during the progress of demolition. It appears in a sunken shield, about five inches high, by about four inches wide, the figures being raised, and placed in two lines. This date had been long hidden from observation by a modern piece of wood-work. One of the old corbels must almost have touched the spot or jamb upon which this date is carved. The lower corbels were of lead, and the two upper ones of oak. The rooms were very low, and the staircase from basement to the upper floors very narrow. It has been erroneously stated that one of the houses just demolished was the residence of Izaak Walton; whereas he lived in what was then the seventh house from the corner of the lane, as verified by Sir Harris Nicolas from the rate-book of the parish.

OLD HOUSES, IN CHANCERY-LANE, JUST TAKEN DOWN.

THE ILLUSTRATED LONDON NEWS.

No. 612.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MARCH 12, 1853. [SIXPENCE.

THE PROSPECTS OF THE OTTOMAN EMPIRE.

RECENT events occurring in the east of Europe—threatenings of national movement and territorial change—have been, for the last few weeks, naturally and earnestly exciting the attention and the interest of the English public. The question, although at present newly agitated, is an old, and has been a frequently-discussed one. We have had Russian panics, as well as French panics; and England has been startled by the confident prophecies of alarmists, that, one day or other, the Russians, tired of being cooped within their icy bounds, would come thundering, in all the power of the North, along the Dardanelles. That the Czar exercises a more cautious mode of progression—that he unites with Austria in a half diplomatic, half military league, with the intention, daily becoming more apparent, of overawing the all but defenceless Porte by vast displays of military force, and then gradually penetrating into the heart of the Ottoman Empire;—that this has been the line of policy long adopted, and recently pushed vigorously forward, by the Councils of St. Petersburg and Vienna, is none the less dangerous to the integrity of the Turkish empire than would be the impetuous descent of the united Russian and Austrian armies upon Constantinople.

The latest accounts from the seat of Turkish power represent the Sultan, after an unavailing resistance to a first and second ultimatum, proposed by the Count de Leiningen, as having at length yielded, and given up to Austria—as we presume he will also do to Russia—the full demands of the cabinet of Vienna There can be no question that, unsupported by France and England, so far, at least, as regards these claims, it was not only the best but the only policy of the Porte to submit. The highly organised military force which the allied European powers of the north and east could pour upon the half-disciplined and undisciplined levies of the Turks, would have rendered all attempt at resistance nugatory and vain. The Porte has been obliged once more to give way—once more to surrender tracts of its ancient dominions once more to contract the circle of its ancient rights. It has seen Egypt virtually lost to it, and the Crimea occupied by a European race. It has perforce allowed Russia to establish a protectorate in the two provinces lying nearest its western frontiers—Moldavia and Wallachia. It has beheld Greece wrested from it, and witnessed the extinction of its naval power at Navarino; and now it has been called upon, and has been obliged to make, still further concessions upon the Black Sea, to prevent what was demanded by diplomacy, and perhaps more with it, from being seized by force.

Such being the state of Eastern matters, the question comes plainly to be—are the two great Western Powers to oppose themselves resolutely to the further dismemberment of the Ottoman Empire? It has lost much. are they to permit it to lose all? Are Russia and Austria to be allowed to extend their already swollen dominions, at the expense of the balance of European power? We acknowledge that, in this matter, we have but little confidence in the sincerity of the professions of friendship of the French Government towards the declining star of the Porte; the Emperor is too anxious to wheedle himself into the good graces of Austria, and to curry the favour of the Czar, to be likely to take any really energetic step to stop the western progress of either the one or the other. Besides, France has—since the day of the Battle of the Pyramids, had its eyes fixed upon Egypt and the Nile, possession of which, in homely phrase, would infallibly kill two birds with one stone, by giving Louis Napoleon, on the one hand, ample facilities for seizing the whole African coast—including Tripoli and Tunis, west to the French settlements in Algiers; and, on the other, by effectually cutting off our means of overland communication with India. It is evident, therefore, that of all the Western Powers we are by far the most deeply interested in preserving intact what is left of the Ottoman empire. Left to itself, there is the certainty of its being pulled to pieces by Russia and Austria. Bankrupt, barbarous, bigoted—stubborn in its wretched fatalism—Turkey is totally unprogressive, and apparently totally incapable of progression. As the Greek empire lost its energies by a gradual, but fatal decay, until it invited the Turks in the middle of the fifteenth century to drive out the cross and rear the crescent over Constantinople, so it would appear that the Turks, pampered by their faith and sodden in their sullen notions of fatalism, are now doomed to undergo a like fate at the hands of more civilised invaders. The stagnant lifelessness of the Turkish empire need hardly be dwelt upon. Its corrupt administration—its insolvent treasury—its undisciplined army—its farce of a naval armament—the utter absence of all energy, or chivalric or national spirit upon the part of its people, who carry on their small traffic of perfumes and gaudy ornaments like men doing business in tobacco-clouded dreams;—these features of the Ottoman Empire

COMMITTEE OF THE HOUSE OF COMMONS UPON THE CHATHAM ELECTION —(SEE NEXT PAGE)

have been long known to all the world. Only a few weeks ago the very effort made by its most enlightened statesman, the Prince Callimachi, to procure a European loan for Turkish purposes, showed, by its fate in the hands of the Porte, the absolute hopelessness of any progress in civilisation and the science of commerce being made by the Turks. While the European advances with mighty strides, the Mussulman sits cross-legged. A cushion, instead of a crescent, might be his emblem; and, indeed, unless energetic steps be taken, the period is, probably, not far removed, when, at any rate, the latter symbol will at length wane into absorbing darkness.

Not perhaps yet, however, if Great Britain bestir herself and do her utmost to protect and keep together her old ally. If we cannot make Turkey our active agent for our common interests, we might at all events attempt to stave off indefinitely the shock of dissolution, and oppose, at least, the obstacle of an inert mass to Russian and Austrian advances. Nay, even more than this. By assuming a bold posture, and employing a skilful and firm diplomacy, we might rouse the western, and perhaps even the eastern nations, to a sense of the possible consequences of a general European war, caused by an attempt at the destruction of the balance of European power. Are the Austrians secure in Italy? Or do they feel comfortable in Hungary? Why, a European outbreak of war, for the preservation or the destruction of long-settled boundaries and long-established dynasties, would set their clumsy, ill-governed, and disjointed empire in a blaze; while despotism, both in the West and the East, would reel before the movement.

May it not, then, be a worthy and a not unprofitable policy to stand unflinching in our opposition to any further dismemberment of the Ottoman empire? Let us remember, that our interests in its integrity are profound—more profound at the moment than they ever were before. Through Egypt lies our natural path to our Eastern empire—an empire of 100,000,000 of souls, inhabiting a continent of boundless fertility and of unknown industrial capabilities; an empire, the full fruits of which we have never yet enjoyed, because, unhappily, we have been engaged for the last century only in the work of conquest, in annexing kingdoms, abasing dynasties, and imposing tributes. Thanks, however, to increasing enlightenment and advancing soundness of policy, we are soon likely to turn over a new leaf in respect to our Indian Administration, and by applying the too long neglected arts of peace, by opening up the too long forgotten productions and locomotive capabilities of the vast continent which we hold, we are, in all probability, at last to learn the full value, and to profit by the full richness, of our realm. With proper means of communication—railroads on the plain, and steamers on the river—with the establishment of every species of industrial enterprise suited to an empire which is bounded by Cape Comorin at one extremity, and the Himalayas on the other—it is surely not too much to expect a more magnificent result of vast dominion than any which has hitherto accrued from our purely aggressive policy, and our steadily-pursued plan of seizing the possessions of Nabobs, and appropriating the revenues of Rajahs.

Such, then, is the plain position of matters. On the very eve of a great and beneficent change in our Indian policy—a change which we believe likely to be fraught with immense advantages both to us and to the population of Hindostan—we are threatened with the possible obstruction of our nearest route to our Eastern empire. A firm and unswerving determination, firmly and unswervingly exercised, might yet, however, stay the progress of mutual enemy bullet upon the dominions of a state recognised for ages as an independent empire; and this determination, and this expression of it, we would fain believe to be the settled policy and purpose of the Cabinet which has been called upon to preside over the interests of England.

PARLIAMENTARY ELECTION COMMITTEES.

THE Committee-rooms of the House of Commons, from which such instructive revelations of the working of our electoral system are now proceeding, occupy the upper story of the river front of her Majesty's Palace of Westminster. Between eleven and twelve o'clock every morning a stream of counsel, witnesses, and attorneys, may be seen passing through New Palace-yard on their way to the committee-rooms. Entering Westminster-hall, they ascend the fine broad flight of stone steps at the further end; and, turning to the left, pass through St. Stephen's-hall, the Lower Hall of the old House of Commons. The noble octagonal hall, which occupies the centre of the entire pile, is next reached; and here country witnesses, who have left their homes in obedience to the Speaker's warrant, pause bewildered to gaze upon the large clustered columns and arches, and the massive sculptured roof of stone. A door lies before them, which conducts the visitor along a corridor, and up a stone staircase, to the Waiting-hall, where the frescos of Herbert, Horsley, Cope, and other artists, embody in glowing colours the word-painting of the chief English poets. We have now reached the centre of the Great Corridor which gives access to the doors of the committee-rooms, and which is itself one of the sights of London. If the visitor looks to the right, an apparently interminable vista is presented along the corridor; and when he feels quite oppressed by the length of the vista and the vastness of the edifice of which it forms a part, and turns to the other hand, he discovers a similar vista, which he has been gazing at only half the corridor, and that a vista of similar extent, the end of which in like manner can hardly be perceived, stretches out upon his left. This corridor has no parallel in England, or perhaps in the world, for novelty of effect. (See Illustration, page 208.)

Between eleven and four o'clock the corridor is crowded with the most motley assemblage which is ever assembled in this great metropolis. As the committee-rooms are not sufficiently large and numerous for the general waiting-room for witnesses subpœnaed upon election committees, railway committees, and committees upon private bills, a walk along the corridor brings you into contact with people from the most distant provinces of England. Sometimes a particular committee-room order the room to be cleared, in order that they may deliberate upon some point of law raised by counsel; and then the audience in the committee-room pour themselves into the corridor, which thus becomes in places almost impassable. Counsel are flying about in wig and gown, exchanging confidential whispers with shrewd-looking provincial attorneys, or the latter are in deep conversation with their Parliamentary agents—the hardest-worked men in England during the sitting of Parliamentary committees, except, perhaps, the leading counsel who practise in committee-rooms. The dozen steps which bring you from one committee-room to another, take you from Yorkshire to Somersetshire, or from Lancashire or Kent; while Kerry or Waterford offers its contingent of human representatives, with their habit, of brogue, costume, and countenance. Here may be seen some fine specimens of these component elements of our British Constitution, the "roughs" of a contested election. That group of whiskered, ferocious, and powerful-looking blackguards are the bludgeon-men from Eatanswill, who led that gallant attack upon the Blue band and colour-cases, and who finished up by breaking the windows of the White Hart on the day of election. They are here to tell the committee who supplied them so profusely with beer at the election, and who enrolled their valuable services for the sitting member; and perhaps out of their replies the astute counsel for the petitioners may obtain another link in his chain of "agency." Here, also, are the low beer-shop-keepers of Eatanswill, whose kitchens, it was discovered, were wanted as committee-rooms about two o'clock on the afternoon of the day of polling. The gentlemen in horse-hair will extract from them that no committee sat at the "Pig and Calipers," or the "Cow and Cucumbers" on that or any other day of the election; that no paper or placard were ever brought to the committee-room for the use of the immaculate committee;" and that as soon as the bargain was made and the money handed over, they went off arm in arm with the agent for the sitting member to vote for "Popkins and Purity of Election." Counsel for Mr. Popkins will indignantly deny that this is bribery, and will triumphantly quote the decision of the Parliamentary Committee in the celebrated Eatanswill bribery case; while the learned serjeant on the opposite side will no less confidently rest his argument upon the great constitutional Swearleton disenfranchisement. The committee, thoroughly puzzled, and finding a safe landmark on either side, will probably decide that the case was not one of bribery—that committee-rooms bear a fancy price on the day of an election—and that the beer-shop-keepers turned the scale in Popkins's favour at three o'clock on the polling day solely from high constitutional and loyal motives.

Here, also, may be seen that mysterious personage, "the Man in the Moon," who dispenses, in a dark room, the box of sovereigns which he received from a little man whom he had never seen before, whom he has never seen since, and whom he should not recognise again if he saw him. These genteel young men, clerks in the county bank of Messrs Premium, Plum, and Foundage, give the history of a cheque for a few thousands which the sitting member happened to draw a few days before the election. They will tell the committee who cashed it, and who paid in some of the £100 notes. Nor are women and infants wanting in the motley throng. for the poor man's wife often receives the gold which the voter himself dare not touch: and it is no answer to the messenger of the Serjeant-at-Arms that she has a child in her arms, and cannot leave home: the Speaker's warrant is omnipotent alike over babes and parents, and hence the wail of an infant which now and then reaches the ear. Sunday coats of the commonest velveteen, flaring and jaunty yellow waistcoats, nether garments of the useful corduroy, and beaver hats of indescribably long and coarse nap, form the attire of a large portion of the assemblage. Some of the "free and independent" electors are "much bemused with beer," notwithstanding the dread presence into which they are waiting to be summoned, while others seem to have already an uneasy presentiment of the terrors of a cross-examination. They would probably rush out of the corridor, and take the next steamer for Boulogne, if they could peep into one of the briefs in that blue bag which a clerk is carrying along the lobby for the eminent Queen's Counsel, his "governor."

Let us enter one of the committee-rooms. Each room has two entrances; and unless we look up over the door, and ascertain whether the antique gilt letters emblazoned in colours denote that this is the "Public Entrance," we may heedlessly enter by the "Members' Entrance," through which, in such case, we shall be summarily expelled. A notice at the door informs us that we are about to enter the Chatham Committee room, and warns us that, if we are witnesses, our examination will not be taken if we are present without being duly summoned. The committee-room is an apartment nearly square, of lofty proportions. Two large windows, extending nearly from the floor to the ceiling, look upon the Thames, and enable the audience, when the interest flags, to diversify the proceedings by watching the steam-boats upon the river. The committee, five in number, sit round a table of horse-shoe form. Mr. Gurney's short-hand writer sits in front of them, whose flying pen takes down every word that the witness says, and who, when asked to repeat any answer that he has given, reads it off verbatim with a glibness and accuracy that seems to the witness to transcend all the wonders of magic. A long green-baize table runs across the middle of the room, at which sit the counsel engaged in the cause, with such of the attorneys and parliamentary agents by their side as can find room at the table. Behind them a bar of wood keeps off the spectators who stand and listen to the proceedings. The lower part of the wall is covered with rich wainscot, the upper part with crimson velvet-pile extending to the cornices. That middle aged soldier like gentleman—not in the picture, reader!—sitting near the table devoted to counsel is the sitting member for Chatham, who is charged with having corruptly induced certain electors to vote for him by the promise of obtaining places for themselves and their relatives, and who, with a courage worthy of his profession is listening to the evidence of the witness against him, and forging one of the scathing remarks of the learned counsel employed, will tender himself for examination. The witnesses, one by one, testify to an amount of Government influence brought to bear upon the Dockyard men which renders it hopeless for any but a Government nominee to contest the borough of Chatham; and the evidence, when printed, cannot fail to strengthen Sir James Graham's wish and intention to insert in any new Reform Bill a clause, disfranchising all persons engaged in the Government service in the Royal Arsenals and Dockyards.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—FRIDAY, MARCH 4.

Lord LYNDHURST drew attention to the irritation prevailing in Vienna and the Austrian dominions against the people and Government of England, arising out of the abuse by foreign refugees of the asylum which they enjoyed in this country. Political refugees, who endeavoured to excite revolt against a neighbouring state, not only violated every principle of gratitude, but rendered themselves liable to be punished by the laws of this country. He thought the Government ought to put themselves in a position to obtain redress against such parties, if they should commit any of the outrages, as the late a prosecution in their own name, without waiting for foreign states to demand this act of justice at their hands.

The Earl of ABERDEEN said that, although communications had taken place respecting foreign refugees in this country, no demand had been made by the Government of Austria or by any other state of Europe. Connecting, as the people of those countries did, certain atrocious and sanguinary acts of recent occurrence with the residence of certain refugees in this country, a feeling of irritation was not unnatural. It was not the intention of the Government to propose any new law to Parliament on this subject (Loud cries of "Hear"), because their existing law enabled us to discharge those duties which we owed to friendly states. He energetically disclaimed, both on the part of the Government and the people of this country, any sympathy with recent abominable acts in the Austrian dominions.

I speak (said the noble Earl) not only of the atrocious attempt on the life of an illustrious Prince, the hope of his country, and whose danger has roused all that ancient loyalty and devoted attachment which Lasso long been the possession of his family (Hear, hear); but also of the recent outbreak at Milan, where a few desperate men have been attacking and pillaging in detail unarmed individuals, carriers at their posts (Hear). These men may, indeed, call themselves patriots, but they are really assassins in disguise (Loud cries of "Hear, hear").

The Government had determined to institute legal proceedings when ever a case was made out; and foreign powers had been informed of their determination to institute these prosecutions.

Lord BROUGHAM bore testimony to the sufficiency of the existing law to put down all conspiracies against the peace and constitutions of foreign nations. The difficulty was not in the law, but in getting evidence and prosecuting to conviction. Foreign Governments wanted the English Government to drive these refugees out of this country.

But, suppose we had the power to do this by an alien bill. Driven out of this country, they would only find themselves safe in other parts of the continent of Europe. They must cross the Atlantic. Would that put an end to conspiracy—to sending assassins to Europe—to setting on assassins? The difference was not a bit between a bravo and a bandit and a prince, and the same risk would be encountered by these foreign Princes and Governments, if they sent an army to attack. He hoped these considerations would weigh in the high quarters referred to.

Lord TRURO said that no new law that would be consistent with the main principles of our Constitution could be passed which could give any greater protection to foreign Governments than was afforded them by the present law. He doubted the existence of conspiracies in London among foreigners.

The Lord CHANCELLOR concurred with his noble and learned friends in the belief that fresh legislation would be as absurd as it was wicked, and that the present laws gave sufficient power to do all that the law could enable to be done. It was the policy of persons in Austria, or other countries, to issue proclamations purporting to be issued in London, in order to put the police upon a false scent.

HOUSE OF COMMONS.—FRIDAY.

Lord J. RUSSELL, in answer to a question, said the law officers of the Crown were of opinion that it was competent for convocation to appoint a committee to sit during the present session.

On the motion for the second reading of the Clergy Reserves Bill, Sir J. PAKINGTON moved that it be read a second time that day six months. A debate ensued, in which several speakers urged that the bill was a violation of public faith. Sir W. MOLESWORTH, in defending the bill, was betrayed into an offensive expression, which, coming from a Cabinet Minister, has excited some surprise. The right hon. gentleman, in speaking of the Bishop of Exeter, described him as "a right rev. prelate whose litigious spirit makes him the pest of his diocese." There was a loud cry of "Order" from the Opposition benches, and Sir R. INGLIS rose to order; but Sir W. Molesworth refused to retract or qualify his expression. The debate presented few features of novelty; but the CHANCELLOR of the EXCHEQUER, in the course of a masterly reply to the objections urged against the bill, broke new ground when he reminded the House that, although up to 1840 the clergy reserves of Upper Canada had been devoted to the maintenance and support of the Protestant religion, yet that by the settlement of 1840 no such restriction was made. Half the reserved lands was by that act left for various religious denominations other than the Established Churches of England and Scotland; and the Church of Rome had in fact received a greater share of the reserved fund than any other religious denomination, except the Churches of England and Scotland. Mr. Spooner, in defending the bill of 1840, was therefore engaged in maintaining a bill to endow the Church of Rome in Canada. The House made itself merry at the expense of Mr. Spooner, more especially when the Chancellor of the Exchequer drew attention to the fact that the hon. gentleman was fast asleep upon the Opposition benches at the moment when the argument had reached this point. The Government had a large majority when the House divided, the numbers being—For the second reading, 275; against it, 192: majority in favour of the bill, 83.

HOUSE OF LORDS.—MONDAY.

The Earl of MALMESBURY wished to know the truth of the statement that Mazzini, having escaped from Lombardy, had repaired to Genoa, and was there taken on board her Majesty's frigate *Retribution*, and conveyed to Malta. If this political agitator had been received on board her Majesty's ship when in no personal danger, it was a most ill judged act of humanity on the part of the captain. In Sardinia, neither Mazzini nor any other political refugee would be in danger of his life. If he wished to flee from the vengeance of Austria, he might have used the common conveyance open to the public at those ports, and there was no possible obligation for his making use of one of her Majesty's ships. Their Lordships would see the inconvenience that would arise if her Majesty's ships were made mere passenger ships, to convey discomfited agitators and conspirators against her Majesty's allies to some other part of destination.

The Earl of ABERDEEN said he had no information on the subject.

NATIONAL EDUCATION (IRELAND).

The Earl of CLANCARTY called the attention of their Lordships to the operation of the system of National Education in Ireland after twenty one years' experiment. The number of schools on the 31st December, 1851, was 4,381, and the number of scholars was stated to be 529,637, although the number was probably a little exaggerated. The population of Ireland was now to be estimated (he stated incidentally) at 6,500,000. He complained that the Church Education Society had been excluded from a share of the Parliamentary grant, and that no good had arisen from the National system.

The Earl of ABERDEEN said that, if the national system of education in Ireland had not succeeded so extensively as had been expected, it was owing to that section of the Protestant clergy who supported the Church Education Society. He must confess that when he saw this system of education so strongly opposed, and the best chance—perhaps the only chance—for the permanent improvement of Ireland rejected and wantonly thrown away, it was with some difficulty that he could repress his feelings of indignation. He thought it would be one of the greatest misfortunes that could happen to Ireland if the national system were subverted. The noble Earl wished that Roman Catholics and Protestants should each be allowed to teach their respective religions in their own schools. If so, the Roman Catholic population being about five to one as compared to the Protestant, the Catholics must receive a similar proportion of the public grant. Such a system could not fail to lead to the encouragement of that sectarian spirit which was the bane of Ireland.

The Earl of EGLINTON said that when he went to Ireland as Lord-Lieutenant, knowing as he did that three-fourths of the clergy of the Established Church were opposed to the system, he thought it must be a bad one. But, after paying the most unremitting attention to the subject, he came to the conclusion that the system at first introduced was the best that could have been projected for a country so unhappily situated as Ireland. The Protestant clergy and laity were no doubt conscientiously unable to agree to a system by which the reading of the Bible was excluded from the schools. Unfortunately the result of that opposition had been the partial failure of the system, for the Roman Catholics had got possession of the greater portion of the grants, and, consequently, the greater power over the schools in Ireland.

The Earl of CLARENDON defended the Irish national system, and hoped their Lordships would not, by holding out expectations of a change, do anything to impair its efficiency.

The Bishop of LONDON expressed the deep sympathy with which he viewed the continued efforts of his Irish brethren for the cause of Scriptural truth, and the apprehensions he felt that an attempt would be made to introduce the Irish national system into England.

The Bishops of LIMERICK and NORWICH defended the national school system.

The Earls of HARROWBY and DERBY thought the time had come for an inquiry into the working and effect of the system of national education in Ireland. The latter noble Earl felt confident that any attempt to introduce the Irish system into England would be a signal failure; but he indicated pretty plainly that it would be better to dispense with the assistance and countenance of the Irish Protestant clergy than to introduce a separate system of instruction for each religious denomination in Ireland.

The Marquis of LANSDOWNE deprecated so large and indefinite an inquiry as the noble Earl (Derby) seemed to contemplate as to the effects which the system had produced on the morals, passions, and political feelings of the country.

The returns moved for by Lord Clancarty were ordered; and their Lordships adjourned.

HOUSE OF COMMONS.—MONDAY.

Mr. BASS having made complaint of the deficiency of silver coin,

The CHANCELLOR of the EXCHEQUER said, the demand for gold was so pressing that the Mint could not be applied to silver coinage. Half a million sovereigns per week were now being turned out—about twice as much as the regular work of the Mint; and means were being taken to increase that supply in order to meet the unslaking demand for sovereigns. During January £292,000 of silver coinage was struck, and more would be done to meet the want as soon as the demand for gold would allow.

THE MERCANTILE MARINE.

The House having resolved itself into a Committee on Pilotage,

Mr CARDWELL, in moving for leave to bring in a bill on this subject, developed, in a speech of much length, the views of the Government in regard to our mercantile marine. After preliminary remarks upon the present prosperity of the shipping interest, measured by whatever test—and upon the success of the measures inaugurated by Mr. Labouchere, distributed the subject under eight heads:—1. Lights.—He pointed out the defects of our system, and inquired how the best mode of providing for the control of the receipt and expenditure of the dues, with Parliamentary responsibility. The Government thought that this control should be vested in some person whose situation in the Government would render him directly accountable to Parliament, so that the funds should be strictly applied to the purposes for which they were levied. 2. Passing tolls.—A matter, as he showed, embarrassed with difficulties, and which the Government proposed to subject to a careful inquiry. 3. Manning.—The restriction which required that a British crew should consist of three parts British subjects, her Majesty's Government did not propose to maintain. 4. Volunteering in the Navy.—This power, which was a safeguard to the seaman and an advantage to the Navy, and was not altogether an injury to the mercantile marine itself, the Government did not propose entirely to abolish, intending to modify it by enactments. 5. Salvage to the Navy.—On this head there was a grievance, he admitted, which consisted in the fees upon the ship, which entitled the salvors to detain it in a distant port; but the Admiralty had arrangements in present action to provide a substitute for detaining the ship in question. Upon this subject a bill, he said, would be introduced to remedy the inconveniences suffered by the desertion of crews and the imperfection of the existing laws. 7. Consular fees.—These fees were regulated by Act of Parliament, but some of them would be abandoned. 8. Pilotage.—The Government proposed to amalgamate the two bodies—the Trinity House and Cinque Ports pilots in the river Thames, and to place them under one control; to confer upon the Board of Trade, in extreme cases, the power of remedying the defects of local acts in the Mersey, and a ministerial power in the Severn—the Board being invested, for these purposes, with authority to institute an inquiry into all the by-laws, regulations, rates, &c., with the aid of the able officers in the mercantile marine department of that Board. It would be proposed to reduce the London pilot age to 2½ per cent.

In the discussion which followed, the prominent points of the Government measure were slightly touched upon by Mr. Hume, Mr. Henley, Mr.

Labouchere, Lord Chelsea, Lord A. Paget, Mr. Turner, and other members; and Mr. Cardwell replied to certain objections.

Mr. LABOUCHERE doubted whether the proposed alteration, which would permit a Swedish-built ship, manned by a Swedish captain and crew, to enter our ports and harbours as a British ship, if she had British owners, would not give rise to cases of colourable and fraudulent ownership.

The Chairman was directed to move the House for leave to bring in a bill to amend the law relating to pilotage; and leave was accordingly given.

A long discussion took place upon the suspension of writs in cases where candidates had been unseated for bribery and treating. Lord J. RUSSELL recommended the appointment of a Select Committee to inquire in each case whether corruption and bribery extensively prevailed. Pending the inquiry, the House ought not to issue the writ.

HOUSE OF LORDS.—TUESDAY.

Lord BROUGHAM, in presenting petitions from Wales, praying for the extension of the County Courts to that principality, gave his energetic support to the extension of this local jurisdiction. The noble and learned Lord also strongly condemned the present system of paying the County Court judges by the fees of prosecutors, and not by salary from the Consolidated Fund, and expressed an earnest hope that it would speedily be altered

HOUSE OF COMMONS.—TUESDAY.

Mr. WILSON stated that the Government were willing that mints should be established in our Australian colonies, upon the colonists consenting to bear the whole expense. The colonists of Sydney had sent over £10,000 for the purchase of the necessary machinery for a mint; and the other colonists might obtain the same privilege under such due regulations as should secure the use of metal of the proper quality and value, so that there should be no depreciation in the coin

A discussion took place upon the constitution of Sheriffs' Courts in Scotland, upon a motion by Mr. CRAWFORD, which was agreed to, for leave to bring in a bill for their reform. The bill is to be referred to the select committee to which the Lord Advocate's bill on the same subject is to be remitted.

Col. MURE moved for a select committee to inquire into the management of the National Gallery, and to consider in what mode the monuments of antiquity and fine arts may be preserved, augmented, and exhibited. He referred to the injuries lately committed on some fine works of art in the National Gallery by a rash process of cleaning, and thought it desirable to have a distinct expression of opinion from a committee of the House of Commons as to the skill with which the operation had been performed

Sir G. SUTHERLAND called upon the House to rescue the divine monuments of art in the National Gallery from the destroying process of what was termed cleaning. He could say for himself that pictures which heretofore he had gazed at with delight, were now transformed by this process into objects of absolute disgust in his eyes.

Lord J. RUSSELL was glad the motion was so framed, as to include not only the vexed question as to the cleaning of the pictures, but also whether the pictures to be brought together, with other monuments and works of art, might not be so extended and diversified as to entitle them more completely to the character of a national collection than the present National Gallery might be considered. It had always struck him that the National Gallery, as now composed, was rather such a collection as a very rich individual, selecting a number of fine works of art, for his own particular gratification, might gather, than such a collection as a great nation should have collected together for its instruction and delight. Perhaps it would be possible to combine together, under one roof, all the various collections of art which the nation possessed at the British Museum and elsewhere. He had himself more than once urged upon the trustees of the National Gallery to obtain a collection of the early Italian masters, not so much perhaps on account of their intrinsic beauty, as for the great aid they would afford in tracing the progress of painting.

Mr. HUME spoke strongly against the removal of the National Gallery, and asked why the barracks and workhouses in its rear could not be purchased and added to it?

The CHANCELLOR of the EXCHEQUER said it was erroneously supposed the Government had decided upon the removal of the National Gallery from its present site, whereas no such decision had been arrived at.

The motion for the appointment of a committee was then agreed to.

Mr. WILSON moved for a select committee to consider the subject of Assurance Associations. At present the balance-sheets of many offices and their stability could not be relied upon; and the public had so deep an interest in the stability of these institutions that the Government considered it desirable to take measures for their protection. The enormous magnitude to which these associations had grown would be seen when he stated that in Scotland alone the liabilities of fifteen assurance offices amounted to £38,000,000. With respect to Great Britain, the accumulated capital of the offices with which it was now proposed to deal, amounted to £150,000,000 at the smallest estimate. The annual income arising from premiums paid to these associations amounted to £6,000,000, a sum almost equal to the revenue derived from the Income-tax. He observed incidentally that the landed interest had derived the greatest possible benefit in the improvement of their lands from the funds accumulated in these offices. In the case of twenty-five Life assurance-offices which had submitted their accounts, it appeared upon their own showing that, while the sums received as premiums amounted to £462,052, the costs of management were actually so high as to leave only a balance of £267

Mr. WALLACE wished the committee to examine into the affairs of analogous associations, known as benefit societies; and spoke of the misery and demoralization that had resulted in the district where he resided from the failure of these societies, which were principally composed of the lower classes.—The motion was agreed to.

Lord J. RUSSELL announced that the Easter holidays would include Passion week as well as Easter week. Parliament would rise on Friday the 18th inst., and would meet again on Monday the 4th April.

HOUSE OF COMMONS.—WEDNESDAY.

A debate arose upon the second reading of the Great London Drainage Bill, which was supported by Lord PALMERSTON upon public grounds, and carried, on a division.

The Public-houses (Scotland) Bill was read a second time.

The House then went into committee upon the Land Improvement (Ireland) Bill, the clauses of which were agreed to.

Upon the report of the Chairman of the Southampton Election Committee, a witness, named Bower, who had refused to take any oath or declaration before that committee, was committed to the custody of the Serjeant-at-Arms.

HOUSE OF LORDS.—THURSDAY.

On the motion of Lord BROUGHAM, the Law of Evidence Procedure Bill was read a second time.

The Mutiny Bill and the Marine Mutiny Bill were read a second time.

The Earl of ABERDEEN gave notice that he should on Friday, the 18th inst., move the adjournment of the House until April the 4th.—Adjourned.

HOUSE OF COMMONS.—THURSDAY.

Colonel Boyle took the oaths and his seat for the borough of Frome; and Mr. Lawrence Hayworth took the oaths and his seat for the borough of Derby, in the room of Mr. Horsfall, unseated.

Mr. PHINN gave notice of his intention, after Easter, to ask leave to introduce a bill giving jurisdiction to County Courts in case of penalties incurred for bribery committed at elections.

In reply to Lord R. Grosvenor, Lord PALMERSTON stated that the Government would recommend the House to pass no more bills for the supply of water to the metropolis until the different expensive works authorised by acts of last year should have had a fair trial.

In reply to Mr. H. Drummond, the CHANCELLOR of the EXCHEQUER said that the Government had no intention of moving the appointment of a committee to inquire into the subject of the recent influx of gold.

CERTIFICATES OF ATTORNEYS.

Lord R. GROSVENOR moved for leave to bring in a bill to repeal the duty on attorneys' certificates, which he considered to be an unjust imposition upon the industrial earnings of a large portion of the learned profession.

The CHANCELLOR of the EXCHEQUER thought the motion ill-timed, and he would oppose it. He did not consider the tax to be heavy or oppressive upon attorneys, although he was willing to admit that the tax might be open to readjustment.

Sir F. THESIGER supported the motion.

After some discussion, the House divided, when the numbers were—For the motion, 219; against it, 167; majority in favour of the motion, 52.

The result was received with much cheering by the Opposition.

Lord R. GROSVENOR then obtained leave to bring in his bill.

OATHS.

Mr. APSLEY PELLATT then moved for the appointment of a select committee to inquire into the subject of oaths; and the operation of the Act 1 and 2 William 4, c. 4, and the Act 5 and 6 William 4, c. 62, for the substitution of declarations in lieu of oaths in the Customs, Excise, public offices and corporations named in the said Acts; and the advantage of extending the principle of those Acts to the Courts of Law; and further, to inquire into the oaths now taken by members of Parliament at the table of the House, with the view of substituting one uniform declaration for members elect, in those premises, and to report thereon from time to time.

Mr. HUME seconded the motion.

The CHANCELLOR of the EXCHEQUER said that he believed the principle of the motion would command the universal sympathy of the House. He, however, hoped that the hon. gentleman would not, under present circumstances, think it necessary to press his motion upon the acceptance of the Government and the House.

The motion was ultimately withdrawn.

AGGRAVATED ASSAULTS.

Mr. FITZROY obtained leave to bring in a bill for the better prevention and punishment of aggravated assaults upon women and children. At present the magistrate had only the power of inflicting a pecuniary penalty, not exceeding £5, and, in default of payment, imprisonment for a period not exceeding two months, without hard labour. The proposed bill would give him a summary power to inflict a penalty not exceeding £20, or, in default of payment, imprisonment not exceeding six months, with or without hard labour.

THE CHATHAM ELECTION COMMITTEE.

Mr. LOCKE KING called the attention of the House to the following resolution of the above committee: "That it is the opinion of this committee that there are strong grounds for believing that Stephen Mount, in giving his evidence before the committee, has been guilty of wilful and corrupt perjury;" and moved that the Attorney-General be directed to prosecute the said Stephen Mount for perjury; and that, in all cases in which a committee shall report that there are grounds for believing a witness to be guilty of perjury, the Attorney-General be directed to prosecute at once.

Mr. BRAMSTON, the Chairman of the Committee, supported the motion. He, however, thought it would be better to confine the motion to the case before the House

Lord PALMERSTON coincided in the view of the case taken by Mr. Bramston.

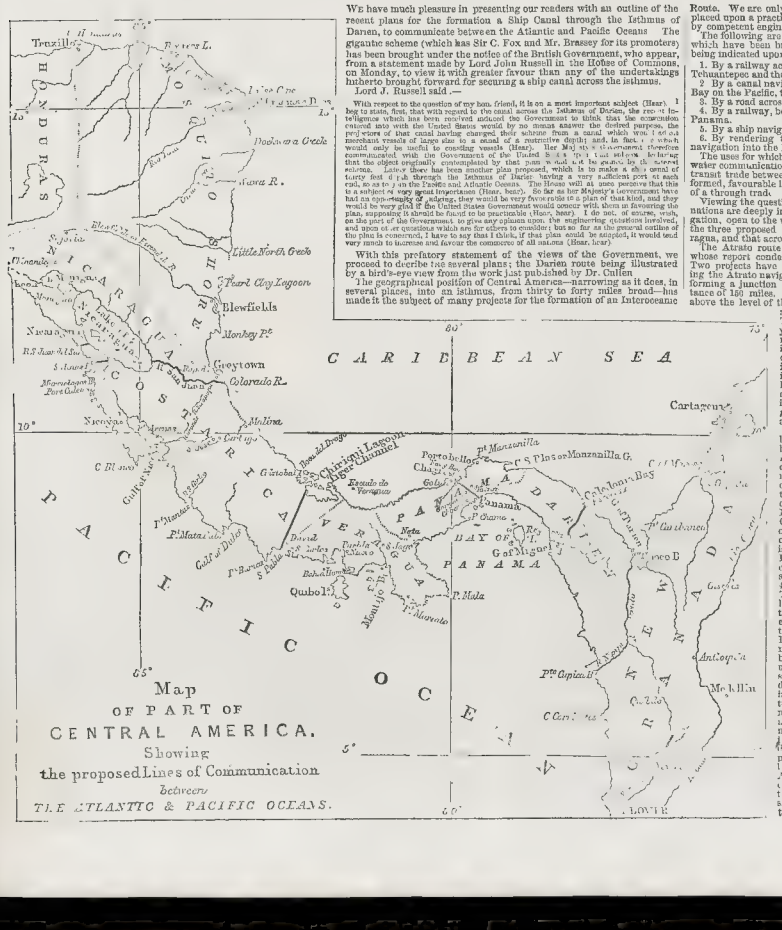
After a few words from Mr. Newdegate, in support of the same view,

Mr. LOCKE KING consented to withdraw the latter part of the motion, which was ultimately adopted in its amended form.

Mr. NAPIER obtained leave to bring in a bill to facilitate the more speedy arrest of absconding debtors in Ireland.

The Ecclesiastical Trusts Appointments Bill was read a third time and passed.—Adjourned.

INTEROCEANIC ROUTES ACROSS CENTRAL AMERICA.



We have much pleasure in presenting our readers with an outline of the recent plans for the formation a Ship Canal through the Isthmus of Darien, to communicate between the Atlantic and Pacific Oceans The gigantic scheme (which has Sir C. Fox and Mr. Brassey for its promoters) has been brought under the notice of the British Government, who appear, from a statement made by Lord John Russell in the House of Commons, on Monday, to view it with greater favour than any of the undertakings hitherto brought forward for securing a ship canal across the isthmus.

Lord J. Russell said:—

With respect to the question of my hon. friend, it is on a most important subject (Hear). I beg to state, first, that with regard to the canal across the Isthmus of Darien, the recent intelligence which has been received induced the Government to think that the connexion entered into with the United States would by no means answer the desired purpose, the projectors of that canal having changed their scheme from a canal which was to admit merchant vessels of large size to a canal of a restrictive depth; and, in fact, a canal which would only be useful to sending vessels (Hear). Her Majesty's Government therefore communicated with the Government of the United States upon that subject, declaring that the object originally contemplated by that joint would not be gained by the altered scheme. Lately there has been another plan proposed, which is to make a ship canal of thirty feet depth through the Isthmus of Darien, having a very efficient port on each end, so as to join the Pacific and Atlantic Oceans. The House will at once perceive that this is a subject of very great importance (Hear, hear). So far as her Majesty's Government have had an opportunity of judging, they would be very favourable to a plan of that kind, and they would be very glad if the United States Government would concur with them in favouring the plan, supposing it should be found to be practicable (Hear, hear). I do not, of course, wish, on the part of the Government, to give any opinion upon the engineering questions involved, and upon other questions which are for others to consider; but so far as the general outline of the plan is concerned, I have to say that I think, if that plan could be adopted, it would tend very much to increase and favour the commerce of all nations (Hear, hear)

With this prefatory statement of the views of the Government, we proceed to describe the several plans; the Darien route being illustrated by a bird's-eye view from the work just published by Dr. Cullen

The geographical position of Central America—narrowing as it does, in several places, into an isthmus, from thirty to forty miles broad—has made it the subject of many projects for the formation of an Interoceanic Route. We are only now, however, on the dawn of having this question placed upon a practical footing, through recent investigations carried out by competent engineers.

The following are the several communications across Central America which have been brought before the public; their respective positions being indicated upon the Map we have engraved:—

1. By a railway across the southern end of Mexico, between the Bay of Tehuantepec and the Bay of Campeche
2. By a canal navigation between Greytown on the Atlantic, and Brito Bay on the Pacific, through the Lake of Nicaragua.
3. By a road across the state of Costa Rica.
4. By a railway, between Panama and Chagres, across the Isthmus of Panama.
5. By a ship navigation, without locks, across the Isthmus of Darien.
6. By rendering the River Atrato navigable, and forming a canal navigation into the Bay of Cupica, or the River San Juan.

The uses for which all these routes will serve are not identical. As no water communication exists, a road or a railway may monopolise the transit trade between the oceans; or even when such a communication is formed, favourable local circumstances may create a traffic independent of a through trade.

Viewing the question, however, in the extended sense, that all maritime nations are deeply interested in the question of an Interoceanic ship navigation, open to the whole world upon equal terms, the issue is limited to the three proposed canal routes, viz., that by the Atrato, that by Nicaragua, and that across the Isthmus of Darien.

The Atrato route has been lately surveyed by an American engineer, whose report condemns it as being impracticable to a ship navigation. Two projects have been urged in connection with it; the one, rendering the Atrato navigable up to its confluence with the Napipi, and then forming a junction canal with Cupica Bay, on the Pacific, a total distance of 160 miles. The separating ridge to be crossed is about 300 feet above the level of the sea: no matured project, however, has ever been advocated, the engineering difficulties being too great.

The other project is by navigating the Atrato to beyond Quibdo, and then forming a junction canal to the mouth of the San Juan on the Pacific. It is said that, in the sixteenth century, a Spanish monk formed a digue between the rivers Atrato and St. Juan, so that, in times of flood, canoes could pass through it. There is no doubt that the Andes here depress into almost a level plain; but it is problematical whether this water communication ever existed. The length of this route is about 220 miles, which is fatal to it as a ship navigation, and it may be said to be completely abandoned as a commercial speculation

The Nicaragua route has been carefully surveyed by Col. Childes, an eminent American engineer, and his report, with plans and estimates, has been published. On the Atlantic, the harbour of Greytown, or San Juan de Nicaragua, is suited to the class of navigation proposed to be carried out; but its notoriously bad climate is an obstacle to its adoption as a terminus for such a great undertaking. The course of the river San Juan is 113 miles up to the Lake of Nicaragua, which is 128 feet above the level of the sea. Col Childs proposes to canalise this river by a series of dams, dividing the fall into fourteen reaches, to be overcome by that number of locks. A junction canal is to connect Lake Nicaragua with Brito Bay, on the Pacific, where an artificial harbour is to be formed at considerable expense. The total distance from sea to sea is 195 miles, embracing 91 miles of canalised river, 47 miles of canal, and 57 miles of lake navigation. There are to be 32 locks, each 60 feet wide and 350 feet long. The bottom width of the navigation is proposed to be 80 feet, and the depth of water in it 17 feet. The estimated cost is £6,500,000: if the depth is increased to 22 feet, the cost would be about ten millions sterling. It is very doubtful whether any ship navigation, which necessitates the use of artificial channels, can be maintained in such constant order as to secure an uninterrupted passage. The Caledonian Canal—constructed at a cost of £1,300,000 sterling, to accommodate the coasting trade—has been a great failure, in consequence of the numerous accidents to its attendant machinery, causing stoppages, sometimes for many months together. Its length is only 60 miles, and its depth [illegible] How much more are these objections applicable to a ship navigation 180 miles long, and suited to oceanic vessels. A vessel drawing 22 feet is the extreme limit to which even the promoters of the Nicaraguan scheme hope to obtain; but this would not satisfy the requirements of commerce. A vessel drawing 19 feet of water in the open ocean, cannot, in shallow water, move with a draft of less than from 22 to 23 feet; and, as the specific gravity of salt water is considerably greater than that of fresh, the same vessel, when brought into a fresh water canal,

BIRD'S-EYE VIEW FROM THE JUNCTION OF THE PROPOSED CANAL WITH THE SAVANA RIVER TO THE ATLANTIC.

cannot be safely navigated in a depth of less than 25 feet; so that a 17 feet navigation in fresh water will only pass ocean-going vessels whose draft is between 13 feet and 14 feet, and one 22 feet deep, those whose draft is under 18 feet. Most large merchantmen, and every trans-oceanic steamer, would be thus excluded from taking advantage of the Nicaraguan navigation, if even executed on the larger scale.

The Atlantic and Pacific Junction Company, whose prospectus has been lately issued, proposes to form a navigation across the Isthmus of Darien, "which will, without locks, at all times permit the passage of the largest vessel;" and, for this purpose, invites the public to subscribe £75,000, to enable them to secure the concession of territory granted to them by the New Granadian Government; and to make all necessary preliminary arrangements to place the undertaking on a sound commercial footing, by limiting the expenditure to what will ensure a remunerative outlay, and to enter into arrangements with the principal powers of Europe and America to secure its neutrality.

Since the days of Spanish conquest the Atlantic side of the Isthmus of Darien has remained in the hands of an independent tribe of Indians, who, although friendly disposed to the English particularly, have guarded their territory with jealous care, fearing that any footing obtained among them by white men would cause a repetition of those acts of tyranny and oppression which are a disgrace to the history of the western world.

In 1848 Dr. Cullen visited the Isthmus of Darien, and brought to England information respecting it, which he communicated to Sir Charles Fox. Mr. Bransey and Mr Henderson associated themselves with Sir Charles Fox in sending out an expedition to survey the Isthmus of Darien, and to verify the statements made regarding it. Two engineers, Messrs. Gisborne and Forde, were placed in charge of this undertaking; they sailed from Southampton in the month of April last, and returned at the end of August. Mr. Gisborne has published a journal of their adventures, and a report upon the feasibility of the undertaking, for the carrying out of which the Atlantic and Pacific Junction Company has been formed. Caledonia Bay on the Atlantic, and San Miguel harbour on the Pacific, form the termini of this proposed great ship navigation. Nature affords in both places land-locked harbours, with deep water, safe anchorage, and of sufficient extent to contain several hundred sail at once. From the Atlantic the range of Cordilleras appeared unbroken; but, an examination of the country proved that the river Caledonia drains a large plain at the back of them, and debouches into the Atlantic through a gorge at Caledonia Bay. On the Pacific side the river Savanna flows likewise through an extensive plain, and falls into the Gulf of San Miguel. The separating ridge of hills is only two miles wide at the base, and 150 feet high, and the total distance from deep water to deep water on the two oceans is under forty-five miles. On the Atlantic side there is only a tide of a few inches, whilst on the Pacific it rises and falls twenty-four feet, affecting the waters of the Savanna for eighteen miles, the true distance between the tidal effect of the two oceans being only twenty one miles. Mid-water on the two oceans may be assumed to be on a level, so that if a perfect communication was formed between them, there would be alternately every six hours a current each way. With these facts, Mr. Gisborne has recommended that a channel should be cut from sea to sea, with a width of 150 feet, and depth of thirty feet at low water, and he estimates the cost of such a ship-navigation at £12,000,000 sterling,—making a large allowance for importing labour, and working under the disadvantageous circumstances of a tropical climate.

It must not, however, be supposed, that the Atlantic and Pacific Junction Company propose to expend so large a sum, without the most satisfactory assurances, based on the fullest inquiry, that, as a commercial speculation, the investment will meet with a remunerative profit. They bring forward this design on the scale proposed, as the only one which will meet all the requirements of maritime nations, both politically and commercially; but should they feel satisfied, upon carefully digested data, that the merits of commerce alone will not produce a sufficient revenue, the scale of the navigation will be reduced, so as to bring the capital within the scope of such revenue; and the principal powers of Europe and America will be invited to assist either by grants of money or guarantees of interest in carrying out the larger project.

GREAT SHOAL OF WHALES.

WE have been favoured by a Correspondent at Athline with the accompanying Sketch and details of a shoal of Bottle-nosed Whales, in number about 200, which appeared on the morning of the 26th ult., at Athline, a few miles from the entrance of Loch Seaforth, one of the arms of the sea, at the southern extremity of the island of Lewis.

The whales were first discovered by Mr. M. Macaulay, gamekeeper to F. Millbank, Esq., who alone, with one boat, succeeded in driving them a distance of six miles towards the head of the Loch. The inhabitants collected in large numbers, with all available boats, but were ill prepared with suitable weapons for their capture. They had to resort to the most primitive means, and take the first instrument that came to hand—such as guns, knives, &c.; the latter they formed into species of spears, by fastening them to the end of oars, poles, &c. Their mode of attack was as follows:—A semicircle was formed with boats, extending from land to land, each of which contained a quantity of pebbles, which were cast into the water, accompanied with loud shouts by each crew. When these means failed to drive them ashore, the gun was resorted to, charged with ball, which, in the hands of the keeper, committed great destruction; several whales were killed, which immediately sunk. Three of which having since reappeared on the surface, have been towed ashore: they measure from the nose to the tail from 18 to 20 feet; and will yield, as near as can be ascertained, from 100 to 120 gallons of oil each.

A singular circumstance occurred during the chase. A bull-terrier, the property of F. Millbank, Esq., accompanied the keeper, when the whales made their appearance; he made several attempts to leap from the boat in the midst of them; on one occasion, when the keeper fired, he succeeded, and for some seconds made great efforts to grapple them. Fortunately he did not succeed, or this valuable dog might have been lost, as he was never known to loosen his hold until the life of his prey was extinct.

It was a most exciting scene: the atmosphere was clear, frosty, and bracing; the scenery bold, rugged, and thickly covered with snow; the roar of a hundred rough voices, re-echoed fourfold by the surrounding hills; the jets of water cast up by each whale, as it rose to the surface, forming prismatic hues by the rays of the sun, the whales, in their anxiety to escape, lashing the water with their huge tails into foam, for a considerable space, and their passage through the water marked by a broad stream of blood from their ruinous wounds, while on the summit of a commanding height could be descried a herd of Royal stags; and, soaring far above, the golden eagle. In fact, it was a scene that could not be appreciated unless beheld.

GREAT SHOAL OF WHALES AT BOLSOWAY.

FORMER ENTRANCE TO THE BRITISH COFFEE HOUSE, STRAND.

METROPOLITAN IMPROVEMENTS.

Of the course of last year the three houses shown in the first of the accompanying Illustrations, were removed. The centre house will be remembered as the entrance to the Crown and Anchor Tavern, and now the Whittington Club. The tavern is mentioned by Strype as "a large and curious house, with good rooms and other conveniences fit for entertainments." Here Dr. Johnson and Boswell occasionally supped together. Upon the site of these three dwelling-houses has been erected the pile represented in the second Illustration, which must be considered a very handsome addition to our street architecture.

Hitherto, for many years past, the architect has been greatly restricted in his art by the window-tax, an imposition which, while it darkened the dwelling, blanched the cheek of the inmate, and in concealing dirt, made full manifestation of disease. This large structure appears as if designed to proclaim the abolition of the tax; the triple fenestration no longer imposes triple penalty, and Palladian forms of window, emancipated from thraldom, seem to rejoice as they gaily reflect the broad light from their ample surfaces. Architects may now again, without the infliction of an annual penalty on their employers, recall to their aid the graceful examples of window openings, left them by Jones, Wren, Gibbs, and Chambers, and produce facades which shall be something beyond the mere perforation of brick walls. The effect of the design before us is bold and striking, and there is no other façade of the same extent of unbroken unity from the Bank to Charing-cross; indeed it is seldom that the diversities of property and trade permit such extent of unity. The lower story has shops of a first-class character, disposed under a bold and full block cornice—not a mere wood framing, but an integral part of the building—carried by proportionate piers, over which are two stories of triplicate window openings, decorated with full and uncurtailed Ionic composite orders, in close superposition; the superior orders being crowned with segmental pediments. By this arrangement of his designs, the artist has, not altogether without success, endeavoured to overcome the pervading and almost inevitable anomaly of shop architecture, that of loading a void enclosed by plate glass with massive pieces of superstructure. In this case, the Palladian form of window gives void over void, and the eye rests satisfied with the adjustment.

A moulded plat-band, or string course, separates the upper stories, the windows of which are architecturally treated; and the whole is crowned by an entablature, which, by its commanding projections and varied detail, gives great force and importance to the whole.

The architect is Mr. H. R. Abraham, who lately carried out the Westminster improvements, and is now engaged on those of the Arundel estate. The entire buildings have been erected at the cost of Messrs. Smith and Son, of the Strand, at an outlay of about £9000. The enterprise was bold, and the superior style of the occupation tells of success; affording to his Grace the Duke of Norfolk a gratifying illustration of the value of liberality as a spring of action both for landlord and tenant; under the influence of which, the Messrs. Smith have taken a similar plot of land to the westward of the last, being the corner houses of Arundel-street and those adjoining, now in course of demolition. Among these was a house of the time of James II.

Next is a quaint and not unpicturesque piece of old London, which occupied the upper portion of the east side of Milford lane, entered from the Strand on the south side of St. Clement's Church, and has just been removed. It consisted of six tenements, with a small enclosed space in front of each: each had a bay, in which were the principal windows, originally casements; these bays were timber-framed, filled with lath and plaster; but the end tenement, at the corner of Little Essex-street, was *entirely of timber*, except the chimneys; there were remains of the original exterior paneling, the weather board being modern. The tenements had no windows in the rear, being placed close to the chapel and the back of the houses in Essex-street. Essex-house, which Pepys describes "a large but ugly house," after a great variety of historic fortunes, as Exeter house, Paget-house, Leicester-house, and Essex-house, "was purchased by Dr Barbon, the great builder, and by him and other undertakers, converted into building as it now is."—(*Strype.*) It was taken down about 1774, when the present chapel was built for an Unitarian congregation. The row of tenements occur in a deed of assignment, dated 1694. One of the outgoing tenants and his father had lived here eighty years.

Milford-lane was, in past ages, a place of some notoriety: it "was never well inhabited, but deserves to be remembered from the fact that here, from 1632 to 1633, lived Sir Richard Baker, whose Chronicles

NOS. 188, 189, 190, 191, STRAND, REBUILT 1852.

(Sir Roger de Coverley's favourite book) will long familiarise his name to the English reader." Mr. Cunningham, whose "Handbook" we quote, has verified Sir Richard Baker's residence here by reference to the rate-books of St. Clement Danes. Mr. Cunningham adds: "A poem by Henry Savill, commonly attributed to the witty Earl of Dorset, beginning

In Milford lane, near to St. Clement's steeple

has given the lane an unwelcome notoriety."

Its name puzzled old Stow, who refers to it as "Milford-lane down to the Thames, but why so called I have not read as yet." The difficulty is, however, of easy solution—for at this spot was a *ford* of the Thames, and near it a wind-*mill* in the Strand. In a variation of a view of London, engraved by John Visscher in 1616, published in Holland, and described by Gough as "a capital view," we trace part of the evidence. The variation of the view has no date, but has the name of "Ludovicus Hondius Lusit." It is, says Mr. J. T. Smith, in his "Ancient Topography of London," page 25, extremely well executed, and exhibits a wind mill standing in the Strand, very near where the New Church is now erected: and another above the Water-works at Queenhithe." It is shown to be a view of the time of King James I., by a procession introduced on the water, in which the Royal barge is surmounted by the thistle.

OLD HOUSES IN MILFORD LANE, STRAND, JUST TAKEN DOWN.

PARLIAMENTARY PORTRAITS.

MR. CHARLES TURNER, M.P. FOR LIVERPOOL.

APART from political preferences, the return of Mr. Charles Turner, the eminent Liverpool merchant, by the constituency of which he is so valuable and respected a member, was one of the least objectionable consequences of the strong religious passions excited at the last general election. Mr. Turner, although an active participator in what we may term the commercial politics of Liverpool, had never been a violent politician; and it showed some discernment in the concoctors of the opposition to the sitting member that they should have fixed on a man whose antecedents so little predicated his subsequent performances.

Mr. Turner's first appearance in the character of candidate on the hustings was so successful, as to have elicited from no less an authority than the *Times* newspaper, the remark that "he exhibited a fluency and a tact for which he had not before received credit." He was almost the last man who would voluntarily have put himself forward as a candidate, because, although a man of great and deserved influence in his town, his previous pursuits had not led to such objects of ambition. As a merchant of high standing and character, he had taken his place among the commercial aristocracy of Liverpool; and as chairman of the Dock Committee, and of the East India and China Association, of that town, he had commanded the respect of his fellow-townsmen; although of course exposed to the amount of local criticism and adverse partizanship usual in a community which boasts so much of the Lancashire energy and mental activity. Mr. Turner, although a Tory in politics, avowed himself a thorough Free-trader on the principles of the late Mr. Huskisson; he being one of that large and respectable class of Liverpool Conservatives who cherish the memory of that lamented statesman, and the still more illustrious Canning, more for their elevated and enlightened sentiments on various questions of freedom than for those extreme opinions which, to a certain extent, they held in common with their party. Mr. Turner came before the Liverpool shipowners and the shipping interest generally, not as the opponent of the repeal of the Navigation-law, but as desirous of carrying that measure out fully in all its integrity. Mr. Turner's intimate acquaintance with the mercantile marine enabled him to take a useful part in the discussion in the House of Commons on Monday night last, when Mr. Cardwell brought in his bill for amending the law of pilotage. The hon. member for Liverpool, who spoke with great readiness, and in a most effective manner, represented strongly the grievances which the shipping interest suffered; first, in the desertion of their seamen in the Australian ports; and, secondly, in the enormous demands for salvage sometimes made by officers of the Royal navy for services rendered to merchant vessels. Mr. Turner was listened to with marked attention by the House.

We need scarcely remind our readers that the last contest for Liverpool was a severe one; and that Mr. Cardwell and Mr. Ewart,

MR. CHARLES TURNER, M.P. FOR LIVERPOOL.—FROM A PHOTOGRAPH BY CLAUDET.

the Liberal candidates, who were supposed to be identified with the Roman Catholic party, were beaten by Mr. Turner and Mr. Forbes Mackenzie, by a majority of upwards of a thousand votes. The result was more decisive than had been expected of the extent to which the anti-Catholic preachings of the ultra-Protestant divines of Liverpool had penetrated the public mind, in a community generally enlightened and liberal in opinions.

Mr. Turner is the son of Mr. Ralph Turner, of Hull, a merchant. He was born at Hull in the year 1803, so that he brings maturity and experience to aid him in the performance of his Parliamentary duties. He was educated at Bingley, under the care of the Rev. Dr. Hartley. In 1843, after a long and successful career as a commercial man, he married the daughter of Charles Whittaker, Esq., of Melton-hall, Yorkshire. As has already been mentioned, he is the chairman of the Dock Committee of Liverpool (an important and responsible office), and also chairman of the East India and China Association. He takes an active part in the various charitable movements of the town; and is altogether one of the magnates of the town, independent of his newly-acquired importance as M.P.

CAPTAIN GLADSTONE, R.N., M.P.

Of late years the name of Gladstone has been of frequence occurrence in the rolls of Parliament, the family having furnished several times representatives of borough constituencies, of whom the most distinguished is the brother of the subject of this memoir, Mr. W. E. Gladstone.

Captain Gladstone is not new to the House of Commons. He became conspicuous in January, 1841, about the time when his brother was first establishing his reputation as a practical statesman, by defeating the

CAPTAIN J. N. GLADSTONE, R.N., M.P. FOR DEVIZES. FROM A DAGUERREOTYPE BY BEARD.

then comparatively powerless Anti-Corn-law League on the first occasion of their attempting to carry an election. This occurred in the borough of Walsall, for which Captain Gladstone was only returned to the House of Commons on the Conservative interest after a sharp contest with the nominee of the League. In July, 1842, the eldest brother of Captain Gladstone having withdrawn from the representation of Ipswich, Captain Gladstone was returned for that place. He gave a general support to the policy of Sir Robert Peel, of which his brother, the Right Hon. W. E. Gladstone, was, next to the right hon. Baronet, the chief exponent. In accordance with the then views of his party, he supported the proposed increase to the Maynooth Grant; but he voted against repeal of the Corn-laws. At the general election in July, 1847, he again stood for Ipswich, but was defeated; and he remained for a considerable time out of Parliament. At the late general election, however, he was returned for Devizes without opposition. On the same general principle that had actuated him in his vote against the Corn-laws in 1846, he professed himself ready to give to the Administration of the Earl of Derby a general support; but he also expressed himself decidedly opposed to any attempt to re-impose the Corn-laws, even in the shape of a fixed duty. Thus, although the two brothers are ranged on opposite sides of the House, they agree on the general principle of the inexpediency of any attempt to restore Protection. It is probable that, as the position of parties becomes still more clearly defined, they will be found acting and voting together on many questions of constitutional policy. Captain Gladstone seldom spoke when in Parliament, not more than three or four times, but was in regular attendance at his duties.

John Neilson Gladstone, third son of the late Sir John Gladstone, of

Fasque, Baronet, was born at Liverpool on the 18th of January, 1807 Having been destined for the naval profession, he was educated at the Royal Naval College, and he entered the navy in March 1820. He has seen some service; having been on the North American station, twice in the Mediterranean, twice on the South American station, and twice on the Pacific station. While on the Mediterranean station he was present at an attack and capture of Greek pirates in the Archipelago, by the boats of H.M. ships *Cambrian* and *Seringapatam*. This was in January, 1825. On the 7th of July, 1827, he was made Lieutenant; and Commander on the 27th of February, 1842.

Captain Gladstone married, on the 7th of February, 1839, Elizabeth Honoria, the second daughter of Sir Robert Bateson, Bart., of Belvoir Park, in the county of Down. His brothers are Sir Thomas Gladstone, Bart.; Mr Robertson Gladstone, the eminent merchant of Liverpool; and the Right Hon. William Ewart Gladstone, M.P.

CALENDAR FOR THE WEEK.

SUNDAY, March 13.—Fifth Sunday in Lent. Earl Grey born, 1764.
MONDAY, 14. Klopstock, author of "The Messiah," died, 1803.
TUESDAY, 15.—New London bridge commenced, 1824.
WEDNESDAY, 16.—Battle of Culloden, 1746.
THURSDAY, 17. St. Patrick.
FRIDAY, 18. Princess Louise born, 1848.
SATURDAY, 19.—Louis XVIII died from Paris, 1815.

HIGH WATER AT LONDON BRIDGE,

FOR THE WEEK ENDING MARCH 19.

TO CORRESPONDENTS.

T. T.—The translation of M. Le Gray's book may be depended on. There are some advantages in the use of the wax-paper process, but it is not so easily practised as the improved Calotype processes.

R. S. CUTTOCK.—Bril. P. Fry's process consists in the employment of excessively dilute solutions for exciting the paper. When excited, it will keep for a day or two, and is fixed in the usual manner. The proportions employed are 6 grains of chloride of gold to 1 ounce of water; 1 grain of iodide of potassium to 1 ounce of water; 1 ounce of a saturated solution of hypo-sulphite of soda, and allow it to remain till the above change is effected, which speedily takes place if the bath is new, but if old, may remain for hours without harm. The action of the hypo appears completely modified by the chloride of gold, its violent action upon the photograph is completely subdued, and, beyond the mere chance of colour, little or no alteration takes place".

F. L. W. Holloway.—See "Cobb's Principles of English Composition."

DON JUAN should apply for the cheap edition of Lord Byron's works to Mr. Murray, Albemarle-street.

J. ELY, Huntingdon.—See "Short Short-hand," just published.

J. & H. Kingsbridge.—High Tor, the work on Conchology to Reeve and Co., Henrietta-street, Covent-garden.

J. L. Manchester.—The back numbers may be had, to order of any newsvender.

SHARON TURNER, Birmingham.—See Holtzapffel's work on Turning.

A. D., Newton-Abbott.—See Jackson's Treatise on Wood Engraving, in No. 114 of the ILLUSTRATED LONDON NEWS.

W. W. P., Ruxbelm.—The illustration will appear shortly.

N. W. Wisbech.—We have not room.

J. and E.—Apply to Messrs. Rivington, St. Paul's Churchyard.

J. P. P., Peterham, will find the Post-office expenses in the Parliamentary returns.

SCRUTATOR.—For the costume of "Masaniello," see ILLUSTRATED LONDON NEWS, No. 481.

M. B., Herne-hill, will find the origin of St. Valentine's-day in the ILLUSTRATED LONDON ALMANACK for 1846

S. A.—The Address of the Union Bank of Australia is 38, Old Broad-street.

AGIAH, Leith.—The continuation will be shortly announced.

J. S., Camberwell.—We have not room to detail the plan.

E. C., Lavender-hill, is thanked, although we cannot avail ourselves of his results.

W. B., Liverpool.—See the Introduction to Booth's Analytical Dictionary, and the Preface to Walker's Pronouncing Dictionary, for much information on the pronunciation of our language.

A. A., Great Grimsby.—See the Apocryphal Writings collected by Fabricius and by Philo; the latter, Lipsiæ, 1852.

PETER THE SAXONIAN.—Declined.

J. D.—The Queen, if single, might marry whom she pleased; but, if she married a Catholic, the Crown would be forfeited.

W. H., Oldcastle.—The family of Folliott, or Ffolliott. Lord Folliott, of Ballyshannon, bore for arms: "Arg. a lion rampant, double-queued purpure, ducally crowned or. A crescent for difference. *Crest*: A bag's head arg. issuing from a ducal coronet or." Jordan, Lord Folliott, summoned to Parliament as a Baron in 1295, had for his coat of arms "Gu. a bend or."

A CORRESPONDENT informs us that the only candidate for Blackburn, on the Liberal interest is J. Fielden, Esq

A SUBSCRIBER, Clark's "Heraldry."

A CONSTANT LIVERPOOL SUBSCRIBER.—An application by letter to the Heralds' College will discover if the Arms be registered or not. A grant of arms is obtained, through a Herald, by memorialising the Earl Marshal. The expense is seventy-five guineas. The proceeding is different and less costly in Ireland. A motto may be adopted *ad libitum*. A crest must be authorised by the College of Arms.

TIRO.—A maiden lady may use either form of lozenge shield.

NATE MAXIMUS.—The eldest son succeeding after his father's death the mark of cadency; but not the other sons.

TEDESCO.—No one is entitled to use any arms or crest but those of his paternal family.

M. F. S.—1st quarter, the paternal coat; 2nd quarter, that of great-great-grandmother; 3rd quarter, coat of great-grandmother; and 4th quarter, that of grandmother.

AN OFFICER informs us that we were inaccurate in our list of British regiments as to the order they stand in the service. The Royal Horse Artillery take rank after the Household Brigade of Cavalry, and before all other regiments of cavalry. The Royal Artillery and Royal Sappers and Miners rank before Foot Guards and regiments of the line. The Royal Marines after the 49th, and the Rifle Brigade after the 53rd. Regiments in the Duke of Wellington's funeral procession the junior regiments led the way; consequently, the Royal Marines came after the Rifle Brigade and before the 33rd, the Royal Artillery after the brigade of Foot Guards, and the Royal Horse Artillery between the two brigades of cavalry.

W.—Declined.

ANVIL, Woodbridge.—The Daguerreotype patent has not yet expired. Do Calotype patents have been given to the public, with the reservation of royalty.

AUGUSTUS W., St. James's street.—A portrait and memoir of the late Thomas Hood appeared in the LITERARY GAZETTE, Nov. 15, No. 158.

M. K., Ulverstone.—(Letters from Australia).—See the information given in our Journal of last week, page 187. On Monday night Mr. James Wilson stated in the House of Commons, that the only letters which were damaged by being on board the *Australian* were on a ship for Melbourne. The bag was brought back to London, and after the letters had been sorted, and dried they were packed in boxes and sent on by the Overland Mail. The directions of all the letters were made out, with the exception of seventy, which were so much damaged that their directions were quite unintelligible, and they were, therefore, deposited in the Dead Letter office. Of these seventy letters, twenty-two had been since returned, and the remaining fifty were open to the inspection of those persons who might be anxious to ascertain if they were their own

*** We consider that Mr. R. G. Kelly complains groundlessly of our description of his picture, the "Irish Elopement," which, although apparently misunderstood by him in some respects, we are prepared to adhere to as substantially correct.

THE NAVIGATION ST. MARY'S, Lough, DONCASTER, will appear next week

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 12, 1853.

ATTENTION to the Government have determined to deal with the vast, and, it is to be feared, in too many instances, rotten and delusive, system of Life Assurance Companies. Mr. Wilson's speech, on Tuesday, must have fallen like a bomb amidst that class of industrious whose business it is to establish mushroom companies and parade an appearance of vast capital and abundant resources, whether real or not, every pound which they could muster has been spent in fitting out a magnificent office, and in advertising a sham list of men of straw as directors. That this class is more numerous than is generally conceived, and that the number of their dupes must also be proportionally greater, will be evident from the statement in Mr. Wilson's speech, that, since 1844, not less than 335 new Insurance-offices have been projected, of which 149 were actually founded. Of these, 90 speedily closed their doors; so that there are now only 59 of the original number in existence. Last year alone produced proposals for 72 companies; 18 only were founded: of these 12 have ceased to exist, leaving only six actually in operation.

We agree with Mr. Wilson that this is a state of things requiring prompt legislative interference. Delicate and difficult as the task of State interposition in matters of trade and private speculation ever must be, still there are cases and circumstances which imperatively call for legislative action. It is to be remembered that insurance companies are started under certain acts of Parliament—for the last eight years under the provisions of the Joint Stock Companies Act—and therefore it becomes the duty of Parliament to see that its own legislation is duly carried out, and most rigidly to inquire into any alleged violation of it. That such violations do exist, and to a great and gross extent, is undoubted, and so far the bill of 1844 has proved a comparative failure. This act was passed in the catastrophe of the celebrated West Middlesex Company, in which half-a-dozen adventurers passed themselves off upon the public as a vast company, holding capital to the extent of a million; and, in the four years, during which the bubble remained unbroken, the public had been duped out of £200,000. A select committee was then appointed to inquire into the means by which these and other corporate frauds had been concocted. This tribunal sat for three years, and from its reports originated the Joint Stock Companies Bill, the provisions of which are now ascertained to be so signally and extensively broken. Under the law, it is provided that insurance companies should be registered, like other joint stock companies, and that each company should return an annual balance-sheet, showing the state of their affairs, to the Registry-office. These safeguards, Mr. Wilson stated, had been grossly violated and evaded; the "greatest frauds and deceits" had been got up under the sham registration, and the names of fictitious—or no better than fictitious—directors and trustees had been palmed off for lists of millionaires. In regard to the balance-sheets returned by these worthless associations, the old adage as to figures being made to prove anything, seems to be abundantly verified. "The fact was, that accounts might be presented in so many forms and shapes, that it was impossible for the mind to form any conclusion on them." This is the dictum of Mr. Wilson, a most undoubted authority upon such matters, and, considering the repute of our accountants and actuaries, is certainly a startling one. It has, however, been ascertained, in spite of all figure juggling, that the receipts of twenty-five of the new companies amounted during the last year to £462,000, while the cost of management reached to £378,000, thus leaving a balance for the payment of policies—the premiums of which produced a yearly revenue of near half-a-million—of the sum of £85,000. This one fact, we agree with Mr. Wilson, demonstrates to the full the stern necessity of immediate legislative interference. The operations of the companies in question are simply those of the West Middlesex over again. They manage a short and precarious existence, until either the public is roused to its danger, or several heavily-insured lives fall rapidly in. The crash immediately follows, and the premiums are gone for ever.

We trust that the operations of Mr. Wilson's committee may be more rapid in their progress, and more effectual in their results, than those of the committee of 1844. The present state of things is clearly one not to be trifled with.

THE MANUFACTURE OF PAPER.

On Wednesday evening, at the rooms of the Society of Arts, Adelphi, Mr. Stones delivered a most interesting and instructive lecture on the manufacture of paper. He stated that the manufacture of a kind of paper from vegetable fibrous substance, it is supposed, was known to the Chinese in the early part of the second century of Christianity. It gradually spread, with various improvements, throughout many countries of the East; but it was not manufactured in Europe from linen rags until about the fourteenth century. It is curious to observe the gradual steps by which the manufacture of paper was developed, until it had arrived to its present state of perfection. First, the leaves of trees were used by the ancients for their writings; then the bark of trees; a more solid material, was adopted for the purpose; sheets of metal and stones were invented as an improvement upon the former. The fibrous part of vegetable substances was subsequently manufactured into paper; and ultimately linen rags, and the other raw material now used, were found to produce the article in its present complete and beautiful condition. The machinery from time to time invented and improved upon to facilitate the manufacture of paper is of a most complex and minute character; and, although the most invaluable advantages have been conferred upon mankind by such machinery, some of the great inventors of it had been utterly neglected by the ruling powers of the day, and allowed to go to their graves unrewarded and unpitied. The lecturer then alluded to the machinery of Messrs. Fourdrinier, their patents, their losses, and Chantery suits, and stated that there were 200 patent machines in operation, capable of making at the rate of 180 miles in length of paper per day. He also referred to the various purposes to which paper was applied, and the vast increase that was every day taking place in the various kinds of its manufacture. The lecturer concluded by asking the society to use its efforts in inducing the Government to remove those Excise impediments which stood in the way of its full development and the diffusion of useful knowledge.

Mr. Henry Cole, the chairman, having, in the name of the society, thanked Mr. Stones for his able and instructive lecture, alluded to the heavy taxation which pressed on the manufacture of paper, and which the Government ought at all hazards to remove, if they were desirous of conferring real benefit upon the people. He considered cheap books much better than the schoolmaster, and it was only by the abolition of the existing heavy duty upon paper that such a blessing could be conferred upon the masses. He should have stated that the proprietors, although the proprietors generally seemed to think that their interests would be jeopardised if they had free trade in newspapers. He thought that this was a great mistake.

Mr. Charles Knight hoped they were on the eve of a revolution in the literary world, which would get rid of all those impediments that at present existed in communicating the blessings of education to all the people.

Other gentlemen having spoken, the meeting separated.

MARSHAL VISCOUNT BERESFORD continues in very indifferent health at Bedgebury-park, and his Lordship is not expected in London this season

HIS ROYAL HIGHNESS THE DUKE OF BRABANT, heir-apparent of King Leopold, and first cousin to her Majesty, on the occasion of his attaining his majority (his 18th year) next month, will, it is expected, visit the King and Royal family, except the invitation of the city of Liege to a grand municipal fête, in honour of the event.

MR. LIONEL MOORE, son of N. Moore, Esq., H.B.M. Consul at Beyrout, has been appointed an Attaché to the British Embassy at Constantinople

THE Lord-Lieutenant of Ireland has appointed Mr. Lowry Barfour to the office of secretary to the Most Illustrious Order of St. Patrick, vice the Hon. Robert Boyle, resigned.

THE PORT OF LONDON.—The first stone of the new works for enlarging and deepening the East Country Dock and adding it to the Commercial Docks at Rotherhithe, was laid on Wednesday, by the deputy-chairman of the company. It is interesting to notice that the Greenland Dock, now one of the Commercial Docks, was, in the reign of Charles II., the only dock (or rather basin, for it had no gates) in the port of London

AUSTRALIAN NEWS.—The *Oriental* arrived on Thursday from Sydney, whence she sailed the 21st October. She brings £28,480 worth of gold, and advices are in town from Sydney to the 8th December. Four ships are reported to have arrived at Cairns from Port Phillip. So far from the gold fields failing, the yield continues to be abundant.

THE COURT.

BUCKINGHAM PALACE. Her Majesty has continued the Royal hospitalities at Buckingham Palace during the week, but was again represented by the Prince Consort at the levee on Wednesday last.

The events of Court life are thus chronicled in the official programme for the week: On Saturday the Queen and Prince Albert paid a visit to her Royal Highness the Duchess of Gloucester at Gloucester-house. The Prince Consort subsequently went to the Horticultural Society's gardens, to witness the removal of a large tree by M'Glashen's apparatus. On the same day their Royal Highnesses the Prince of Wales, the Princess Royal, Prince Alfred, the Princesses Alice, Helena, Louisa, and Prince Arthur, visited her Royal Highness the Duchess of Kent at Clarence-house. The Tyrolese Minstrels had the honour of attending, and sung several of their favourite national melodies for the gratification of the Royal circle.

On Sunday the Court attended Divine service in the private chapel of Buckingham Palace.

On Monday the Prince Consort, attended by the Duke of Wellington, Sir William Molesworth, and Captain the Hon. Dudley De Ros, went to St. Paul's Cathedral, and inspected the spot where it is proposed to deposit finally the remains of the late Duke of Wellington.

On Tuesday the Queen and the Prince Consort, accompanied by the Princess Royal and the Princess Alice, took a drive in an open landau and four. In the evening her Majesty and the Prince Consort honoured the Princess's Theatre with their presence.

On Wednesday the Prince Consort held a Levee, by desire of her Majesty.

On Thursday, the Queen and the Prince Consort again drove out in an open carriage and four. In the evening her Majesty and Prince Albert, with the Prince of Wales, the Princess Royal, Prince Alfred, and the Princess Alice, honoured the Princess' Theatre with their presence.

The Court will go to Windsor for the Easter holidays, on the 17th inst.

The Countess of Charlemont has relieved the Countess of Desart in her duties as Lady in Waiting to her Majesty.

THE LEVEE.

The Levee on Wednesday was very numerously attended.

The Prince arrived at St. James's Palace soon after two o'clock from Buckingham Palace, escorted by a detachment of the Life Guards, and was received by the Lord Steward, the Lord Chamberlain, and the Master of the Horse.

Before the Levee, Viscount Delvmple, M.P., had an audience of his Royal Highness, and delivered up the ribbon and badge of the Order of the Thistle held by the late Earl of Stair.

The diplomatic circle was first introduced, and several presentations took place. In the general circle the following were among the more noticeable persons presented:—

Viscount Sydney, on his appointment as Lord-Lieutenant of Herefordshire.
Captain the Hon. Richard S. Dundas, R.N., on appointment to be one of the Lords of the Admiralty
Lieut.-Col. the Hon. L. Maule, on appointment to the office of Surveyor-General of the Ordnance.
Sir Arch. Islay Alison, on being created a Baronet.
Col. Wheatley, on appointment to the command of the garrison at Woolwich.
Col. Barnard, on his appointment to the command of the Monmouth and South Wales District
Co. Beresford, on his appointment to Commissariat of Gibraltar.
Lieut.-Col. Wyndham, on appointment as Keeper of the Jewels.
Commander Edward A. Inglefield, on his return from a search for Sir John Franklin, and appointment to command an Arctic Expedition
Lord Stanley, on his appointment as Lord-Lieutenant of Herefordshire.
Captain the Hon. Richard S. Dundas, R.N., on appointment to be one of the Lords of the Admiralty
Lieut.-Col. the Hon. L. Maule, on appointment to the office of Surveyor-General of the Ordnance.
Sir Arch

FOREIGN AND COLONIAL NEWS.

FRANCE.

(From our own Correspondent.)

PARIS, Thursday.

The gaieties of the *carnaval* have been considerably saddened in the highest circles by the terrible calamity which so suddenly terminated the existence of the young Comte de Camerata. So many causes have been assigned for this tragical event, that it is impossible to arrive at the true one. Some declare that pecuniary difficulties, the importance of which the unfortunate young man's imagination greatly exaggerated, led to the step; others assert that it proceeded from a derangement of health, of which one of the symptoms—deafness—caused him much uneasiness and annoyance; while others intimate that a misplaced attachment drove him to the fatal act. It appears that some mistrust of his own intentions—some consciousness of the terrible temptation to which he ultimately yielded—occupied his mind for a few days previously: and, on the night that preceded the calamity, he desired his servant to sleep in his room. The man left his young master asleep at eight o'clock in the morning; and, on returning, two hours after, found him expiring. The Comte de Camerata was the only son of the Comtesse de Camerata, daughter of Elisa Baciocchi, sister to the Emperor Napoleon, and was, consequently, cousin once removed to Louis Napoleon. He held the post of Maître des Requêtes in the Conseil d'Etat, where his attention and intelligence had made him already remarked. At five-and-twenty, rich, clever, amiable, and generally beloved, it is difficult to conceive what could have led him to determine on so fatal a step as self-destruction, and we can but suppose that one of those momentary impulses, the result of some nervous derangement, in which state comparatively trivial annoyances acquire a morbid gravity, drove the unhappy young man to that desperate act.

The mortality of which we last week spoke has been proceeding with a rapidity really frightful, and every effort is being made to conceal the extent of its ravages. Since the time of the cholera in 1849, nothing at all like it has been seen. At some of the churches the funerals average from fifteen to twenty a day; at Père la Chaise and Montmartre, Death ceases not to hold his gloomy receptions, and hearse after hearse arrives to deposit his guests. Among those who has been one whose name was, in the last generation, associated with all that the stage could boast of most comic and original talent. Brunet, the inimitable Brunet, whose modesty contemporary—and who would have been, had not his extreme modesty and absence of ambition prevented his presending to the post, the rival of Potier, expired at his house at Fontainebleau, at the age of eighty-eight.

Brunet was the originator of the character which has become a type and a name, not only on the French stage, but in the French society and in language: the *Jocrisse*—whose amusing absurdities, whose *piquante naïveries*, whose comical mistakes, whose ingenious *bêtises*, never fail to provoke a mixture of amusement and impatience—was the creation of Brunet, whose *rôles* were principally of that order. Like many other *notabilités*—Talma, for instance, who believed that the comic was his true vein, and who actually took lessons from Brunet, and acted his parts in private theatricals at Talleyrand's and Ouvrard's—Brunet mistook his powers; he was persuaded that his force lay in tragedy; and his ambition, for years, was to adopt that line. When age compelled him to bid adieu to the stage, he still, up to the conclusion of his existence, entertained the impression that some unforeseen circumstance would call upon him to return to it; and he not only continued to study his *rôles*, but he even occasionally dressed himself in his costumes, and walked about the forest of Fontainebleau in the guise, to air them, as he said. Remarkable modesty and a total absence of jealousy of his brother actors, were in Brunet, as in our Bartley, the rare and striking characteristics of his nature. When manager of the Variétés, he always selected for himself the most unimportant parts, which he played with a care, a precision, and an earnestness such as he would have employed in the most striking and difficult; while the success of the theatre he attributed wholly to Potier, his rival, for whom he entertained the most intense admiration. Brunet's talent was an extraordinary mixture of childish simplicity and extreme *finesse*; a combination of the *enfant* and the finished actor, of nature and art, wholly indescribable. The theatre was his world—his home; his fellow comedians his family; the audience his intimate friends—and such they felt themselves. Brunet's half whispered confidences, his winks, his gestures, his grins, his signs, were telegraphs they each accepted individually; and they laughed and Brunet laughed; why, neither could tell. *"Je ris parcequ'il rit,"* said the audience, and Brunet made the same reply.

The principal theatrical success of the moment is a drama, in five acts at the Café, entitled "Le Boisière."

In the Pyrenees, at the borders of the forest of Arzelles, is a village called Saint Sauveur, inhabited by a poor population, who live by collecting and selling the dead branches of the forest, and are hence called *boisiers* and *boisières*. René Noiret is a peasant of St. Sauveur; but his tastes, his instincts, his education, and a fortune he has acquired, remove him wholly from his natural sphere. He goes to Paris—*où on se dore* and goes to *mon dieu, mieux*; falls in love with a *grisette élevée*, *La Comtesse Louise de Varennes*; who not feeling inclined to favour his suit, our hero-peasant thinks himself most ill-used; and, having effectually disposed of his fortune, he returns to his village, *mauvais farceur*he, *dégoûté*, contented, and, like most men in similar circumstances, considering himself the victim of the world, the *Comtesse*, fate—everything but his own folly. In the same village dwells *Marguerite*, and her daughter *Jeanne*: the former, whose only care and pride are in her child toils day and night to spare the delicate beauty of the *demoiselle paysanne*; while she, like *René*, aspires to a station above her own; and finds in him the hero of her romantic dreams. *Sur ces entrefaits*, arrives *Louise de Varennes*, on a pleasure trip. *René*, bent on vengeance, insults her; accuses her as the cause of all his misfortunes; denounces her as such to *Jeanne*, who, of course, believes him; and, resolved to humiliate her, he, having learned that she was of humble origin, determines that *Jeanne* shall outrival her. Having—how, we are not informed—recovered his fortunes, he marries the *belle paysanne*, takes her to Paris, and instructs her in her *rôle*, which she, nothing loath, accepts. A series of combats, and jealousies, and alternate triumphs succeed: *Jeanne* is finally worsted; once more is her husband ruined, and once more does he bow at the feet of the *Countess*. *Jeanne* resolves to drown herself. *Louise*, who is, *au fond*, a noble woman, though spoiled by the world, saves her; reads the faithless husband a lecture; suffers him, by way of a lesson, to go through all the torments of remorse which succeed on his learning the supposed death, of *Jeanne*, and finally restores her to him. Interwoven, in a delicate language, and powerful and natural pathos are the grounds of the success of this drama, for, as our readers will perceive, there is a want of probability throughout the piece, and the characters are not fenced with sufficient precision. At times the spectator hardly knows which are the good and which the bad—which are to claim his sympathy or to call for his condemnation. We must give all the praise which is merited by the performance of the work. Lacressonnières, as *René*; his wife, as *Louise de Varennes*, Madame Lambquin, as *Marguerite*, are beyond all criticism; and Madame Naptal Arnault would be equally perfect in *Jeanne*, but for one defect—a little too much of exertion, of forced effort, to be true to nature.

At the Français, "La Mal'Aria," a tragedy in one act, and in verse, by the Marquis de Belloy, is a perfect *chef d'œuvre*. The subject is the oft-told tale of "Pan di Tolomei," who, the innocent victim of her husband's jealousy, is confined by him in a castle in the Maremma, where the venomous air, aided by a subtle poison, which like dew-drops he scatters on a bouquet, finishes her brief and sad career.

One of the *bruits* here is that the Duchesse d'Orléans is about to contract a morganatic marriage with an side-de-camp of her late consort; while another declares that the mother of the Empress is also about to take to herself a second lord

It is hinted that the state of her Imperial Majesty's health gives grounds for encouraging the most earnest hopes of the Emperor, who is more devoted to her than ever.

After a period of comparative quiescence, during which the press has spoken with great freedom, Louis Napoleon has commenced a fresh attack on several journals. M Emile de Girardin has published articles entitled "Why the Republic did not last," and the arguments would equally suit an article in which the word "Empire" was substituted for "Republic." The argument of M. de Girardin is, that universal suffrage cannot by a single act delegate its authority, which must remain with the people for permanent use; and the obvious inference is insinuated that the Emperor has usurped the functions properly belonging to the country. Consequently, the *Presse* has received a "first warning." The *Assemblée Nationale* and the *Mode* have also been "warned," for defending the Bourbons against the attacks of Granier de Cassagnac. After describing the insecure character of the Empire under Napoleon I., the writer (said to be M. Guizot) implies that the same insecurity attends the usurpation of Louis Napoleon. The *Patrie* has been "warned" for simply announcing that the other journals had been warned! The *Siècle* has also received a "warning," in consequence of an article deemed offensive to the Government.

Another exercise of authority is the expulsion of Father Lacordaire from Paris. A few days since, addressing a crowded congregation in the church of St. Roque, he exclaimed, "However magnificent the design, however grand the execution, even if the object be to effect what is called the making of a nation, he who, to effect this object, makes use of villanous means, is himself nothing but a villain." The sermon contained other political allusions no less obvious and severe.

The Emperor has appointed a commission charged to visit every part of the empire, to inquire into the wants of the country, and to report to him.

An Imperial decree orders that articles of Chinese crape imported from the possessions of Great Britain in Europe shall cease to be subjected to the restrictions established by decrees of the 8th February, 1826, as regards the products of Asia, Africa, and America. The *Journal des Débats* applauds this first step to the way of enfranchisement, as an act "tending to favour an exchange with the United Kingdom, our most important commercial ally."

The Minister of Marine has asked of the Government the formation of two squadrons of six vessels each: one to be stationed before Toulon, the other before Brest, and each commanded by a vice-admiral.

The suppression of the Inspectors-General and Special of Police in the departments has been considered as one of the first steps towards the suppression of the Department of Police itself. The Central Commissaries of Police are considered much less objectionable than the officers suppressed.

The committee of the British Charitable Fund in Paris intends giving a ball on the 30th, for the benefit of that institution. The ball is to be under the patronage of the British Embassy.

The suicide of Count Casimir Wodzicki a few days ago shot himself through the head, continues to excite much sympathy.

The French Government are officially busy in sending the goods of French manufacturers to the Universal Exposition of New York.

The Bourse was animated on Wednesday; and, no unfavourable reports having been circulated, the rise remarked on the previous day in the price of public securities made further progress. The Three per Cents opened at 81f. 10c. and closed at 81f. 15c. for the end of the month.

DENMARK.

Count de Reventlow-Criminil, Minister in the Danish Cabinet for Holstein, has resigned, in consequence of the determination of the Danish Government to remove the line of customs from the Eider to the Elbe. General Hansen, Minister of War, is spoken of as his successor.

GERMANY.

The political condition of Bavaria is stated to be extremely critical, military precautions are redoubled, and the Council of Ministers have forwarded a despatch to King Maximilian, who is at present in Naples, urging his immediate return to his capital. At Landau, a few days since, every house in which an officer resided was marked by a red cross.

From Berlin we learn that the Second Chamber has rejected Article III. of the law enacting the exemption of the estates of the nobles from the land-tax. Ministers withdrew the *Projet de Loi*.

Professor Gervinus has been sentenced to ten months' imprisonment for the "seditious" sentiments contained in his book on the history and progress of civilisation.

AUSTRIA.

The Emperor is so much better, that no more bulletins are issued The wound caused by the assassin's knife is healed, but the complete recovery of his eyesight must be the work of time, as it is feared the optic nerve has received some injury. The Imperial patient is able to sit up; and said that a few days must elapse before he is able to drive or ride out His signature shows that he has fully recovered his strength.

Count O'Donnell and the burgher, Ettenreich, who seized the assassin, are still the heroes of the day. Some ladies of rank have presented the former a costly vase; the St. Severin Union has given him a prayer-book "embellished with Roman Catholic emblems," and several Courts have sent him crosses and ribands. Ettenreich has received the Cross "Medal of the Redeemer."

The Archduke Ferdinand Max has published an address to the nation, in which it is invited to show its gratitude to the Almighty for the preservation of the Emperor by building a church in Vienna, which, it is recommended, should be in the Gothic style. Nearly 100,000 florins have been subscribed towards the church. The idea has been very warmly taken up by the higher classes of society and the clergy, but it would be much wiser to bury the whole matter in oblivion. The proposal for a new church has been much better received than was that of an Austrian nobleman who proposed that a monument should be erected on the spot where the attempt at assassination was made. The present church is called the so long projected enlargement of the city near the Karnthner-Thor should immediately be carried out, in order that the spot on the ramparts where the crime was committed should disappear for ever.

The hotels in the city have been crowded by the deputations which have successively arrived from all parts of the empire to congratulate the Sovereign on his happy escape. Some of the principal citizens of Crakow, in the Schlweswesolserg county, where Libeny was born, have been to Court to express their abhorrence of the crime, and their sorrow that the perpetrator was a native of their town.

The balance-sheet of the Bank for February shows an increase in the paper circulation of 2,000,000fl.

Since Count Leiningen's return some particulars connected with his mission and sojourn in Constantinople have become known. The demands of Austria, and still more the way in which they were made, appear to have excited the astonishment of the foreign diplomatists, as well as of the Turkish Cabinet. The French and English representatives spoke to the Austrian Envoy of intervention; he drily replied, that he was a soldier who was directed by his Sovereign to make certain positive answers to categorical questions, and that all intervention was, therefore, inadmissible. He added that, being no diplomatist, he must even decline entering on the merits of the case. It is also related, that when the Austrian General was admitted to the presence of the Sultan, the Turkish courtiers were scandalized at the tone and manner assumed by the *plenipo* M. d'Ozeroff, who seemed as much surprised as the English and French Ministers at the nature of the Austrian propositions, for a time held back—but he soon mostly received instructions from St Petersburg to give all possible support to Austria. There is still a very prevalent impression here, that the Porte will so ill perform the engagements entered into, that coercive measures will sooner or later be necessary.

The advantages which Austrian commerce will derive from the concessions made by Turkey are of great importance. Duties on imports and exports are fixed at 3 per cent, and the monopoly is only maintained on certain articles arriving by sea.

On the 20th drum head law was proclaimed in the Hungarian county of Pressburg, as well against robbers as incendiaries. A letter, dated Pesth, 26th ult., says:—

The day before yesterday, the Provost of the fortress of Comorn was brought here heavily ironed, and lodged in the new prison. He is said to have himself to be drawn into a conspiracy with the State prisoners in that fortress, the object of which was to deliver up the place to the Magyars. The Commandant Field-Marshal Simunich was to have been assassinated, and the small garrison paralyzed, in order to furnish arms to the liberated prisoners. One of the latter, being troubled in his conscience, discovered the plot by a letter which he addressed to a person high in office, and thus prevented the calamity.

Charles Juhhal (formerly the tutor of Kossuth's children), Charles Andrassfy Von Devenyujfalu, Caspar Noszlopy, and Samuel Sarkózy, were executed on the 3rd at Pesth, for the crime of high treason. Andrassfy was shot in the Neugebäude, and the other three hanged at the usual place of execution before the Villier gate. A great crowd was collected. Sarkózy suffered first, then Juhhal. Noszlopy, the last, was the only one who showed no signs of repentance.

Great military precautions are taken at Nuremberg, and several arrests have been made at Fürth.

ITALY.

We hear from Milan that Marshal Radetzky has obtained an imperial decree, sequestrating the real and personal property of all political refugees from the Lombardo-Venetian kingdom. This measure of severity has produced an immense sensation at Milan. It appears that the sequestration is to extend to the property of several emigrants who had obtained the right of citizenship in foreign countries.

The number of persons arrested in Milan between the 6th and 25th of last month was about 600. The Italian army is to be reinforced by several brigades, one of which must already have reached Milan. The Austrian troops on the frontier near Ticino have been reinforced, and now amount to 16,000 men. The triumvir Saffi has published a letter, in which he accepts his share of the responsibility of the Milan insurrection. He says, the populace of Milan arrayed themselves unanimously for vengeance, and that himself and others did not lead, but followed the resolute will of the oppressed. "Had the fate of the Lombard capital not roused Europe, Europe," as Italy would have obeyed the call to arms." The Court-martial at Milan has set about 60 prisoners at liberty. The sequestrations of property continue. A Capuchin, named Lazzati, was stabbed the other day while walking in the streets. The assassin escaped.

We hear from Mantua that three persons were to be hanged there on the 23rd, namely—a M. Speri, of Brescia, an amnestied refugee; Count Montanara, of Verona; and the mitred Abbot of Revere, aged thirty. Twenty-five more have been condemned to death or to 20 years' hard labour in irons at Mantua; 108 more are still under prosecution.

The Federal Congregation at Berne has attempted to induce the Austrian Government to relax the severity of its measures against Ticino; but without avail. The Ticinese, who are accustomed to procure a great part of the necessaries of life from Lombardy, will be reduced to great distress; but the sudden expulsion of 17,000 or 18,000 diligent people from Lombardy is also felt to be a serious loss.

SPAIN.

The Spanish Parliament was opened on the 1st inst. M. Martinez de la Rosa was elected President by 152 votes out of 170.

The Ministry sustained a defeat in the Senate, the Opposition having succeeded in electing the four secretaries. At the sitting of the Senate on the 3rd, Count de Lucena handed the President a communication from General Narvaez, Duke of Valencia, in which, after complaining of the decision of the Government which prevented him from taking his seat in the Legislative Assembly, the Duke demanded that the Senate should impeach the Cabinet in virtue of the right conferred on it by the Constitution, to try its own members. A debate arose as to the expediency of referring the communication for examination to a Special Committee. M. Pena Aguayo, together with the Duke of Sotomayor, the Marquis de Fuentes del Duero, M. José de la Concha, and the Marquis de San Felices, laid on the table a motion to that effect, which was adjourned until the 5th.

A bill is to be presented to the Cortes as quickly as possible to indemnify the heirs of Don Manuel Godoy for the seizure of his property in the year 1808.

TURKEY

Prince Menschoff has arrived at Constantinople on a special mission from Russia relative to the Holy Shrines. The Russian Cabinet peremptorily insists on the publication of the firman in favour of the Greek church which M. d'Ozeroff obtained some time ago, but which has until now been a dead letter. The Porte has resolved to demand the intervention and arbitration of Prussia, but it is doubted whether Russia will consent to any delay. France and the French Ambassador at Constantinople have already obtained from the weakness of the Turkish Government concessions to the Latin church, to which the Russian head of the Greek church opposes counter claims and privileges of at least equal authority. And the Porte has materially increased the difficulty of arriving at a suitable arrangement of this controversy by having previously committed itself in different firmans to the adverse and irreconcilable claims of both parties.

The Porte has consented to pay an indemnification to the French holders of coupons of the Turkish loan. The amount agreed to is 25f for each bond of 1000f. The determination of the Turkish paper-currency imposed. Before despatches could arrive in Montenegro, directing Omar Pacha to discontinue hostilities, some sharp engagements had taken place

The news of the victory gained by George Petrovich at Limljani, in the southern extremity of Montenegro, is confirmed. The Montenegrin Commander attempted to keep his undisciplined troops from indulging in their villanous habit of mutilating the corpses of their vanquished foes, but in vain. Seventeen Turks were cut to pieces. We have positive information from the Herzegovine (says an Austrian Ministerialist paper), that the ill-usage of the Christians exceeds all bounds. They are robbed, if not cast into dark dungeons and strangled." When Ismail Pacha succeeded in reducing the inhabitants of Banjani to submission, he picked out fifteen of them, among whom was the Pope Christo Koprovitra, and put them into chains. "The Pope had a bridle put on, as if he had been a horse, and was so led to Mostar." Death saved him from further torments. His breast was covered with bruises and wounds. Three of the companions of the Voivode of Grahovo were strangled in prison The *Correspondence* is a Ministerial paper; but this is all more diligently relative to the sketch Montenegrin war, which comes to us through the Austrian press, is not to be believed without confirmation.

WEST INDIES.

By the *Orinoco* we have intelligence from Jamaica to the 13th of February. Mr. Westmorland's resolution, limiting the public expenditure for the current year to £169,000 was, after a lengthy debate, carried by a very large majority, only two members voting against it. Emigration to Australia, not to the Isthmus of Darien was proceeded apace. A Government ship was in Kingston for the purpose of taking passengers to the former place. About 200 passengers, among whom were many of the labouring class, were to sail in the Royal Mail Company's steamer *Conway* for the Isthmus. The labourers were to be employed on the railway. The sugar crop had commenced, and was expected to reach from 30,000 to 35,000 hhds., although some apprehensions were felt with regard to the scarcity of labour. The subject of mining was attracting much attention. The Trinidad journals were discussing the subject of reform in the government of that island. The sugar crop had commenced, but the canes were not yielding satisfactorily. There appears to be abundant labour in certain localities; and, for the general want, about 1,000 Coolies and 1000 Chinese are expected for distribution upon the work of the present crop. The first Coolie ship of the season had arrived from Calcutta with 264 men, forty seven women, and six children. A project is on foot to put a suitable vessel on the berth to sail from Trinidad to Port Phillip, Australia, carrying cargo and passengers, and bringing back cargo. At Barbadoes the fever had disappeared, and the islands generally were healthy.

AMERICA.

By the *Niagara* we have advices from New York to the 24th ult. International copyright treaties between the United States and Great Britain, and also between the United States and France, are being negociated, if they have not already been brought to a conclusion.

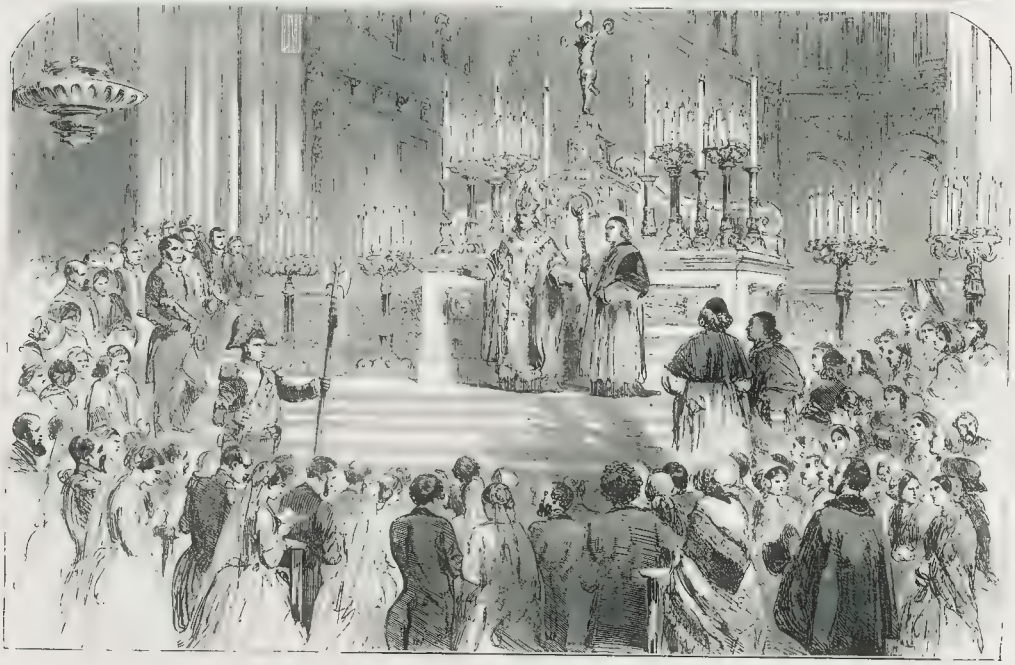
The vessel of the new *Fulton* steamship at Alexandria (near Washington), after a successful passage by sea, has inspired more confidence in the new motive power than was before felt. The ship had to encounter a pretty severe gales, during which she acted very well. When she came to anchor off the Chesapeake, her engines had been working constantly for seventy-three hours, requiring no adjustment, and one fireman only on duty at a time during the trip. She consumed less than five tons of coal per day. The opinion is very generally entertained that the new motive power will be extensively adopted.

At the present moment almost as much interest is being felt by our capitalists in Australia as in California itself. Englishmen will find powerful competitors in the race for gold, even in their own new golden continent. The Australia Steam-ship Company of New York is now submitting proposals to run a regular line of mail ships between Acapulco, the nearest North American port that can be reached from Australia. It is thought that no commercial aspects since the discovery of Californian or Australian gold have been invested with such deep and universal interest. The Mexican Government has, it is said, ceded to an American association the right of transit from Vera Cruz to Acapulco

New York was electrified on the morning of the 22nd ult., by the announcement that the news from California had been received in eighteen days. Another week in the month's passage to San Francisco has been annihilated, and this route is so feasible and reliable that the Post-office department of Washington has entered into a contract with a company just formed, by which the mails are to be taken through between New Orleans and California in sixteen days

General Pierce keeps his own counsel, and avoids office-holders. Nothing is known of his Cabinet. As the day of inauguration (March 4) approached, the public curiosity became unusually great to know what his policy would be likely to be

Advices from the city of Mexico to the 13th ult. report that General Uraga and Colonel Robles had arrived in the city of Mexico. President Cevallos, not being able to agree with them, had resigned. Uraga and the garrison of Mexico immediately pronounced in favour of Santa Anna, and his recall was ordered. General Lombardini was made President *ad interim*. Santa Anna has on several occasions been sent into exile, but they always have to send after him when they get into trouble. He is beloved by few or none, perhaps, but accepted as the least of all evils. He is, doubtless, the ablest political man Mexico has had for many years



MARRIAGE IN THE CATHEDRAL OF NOTRE DAME, AT PARIS, OF THE COUPLES PORTIONED BY THE EMPEROR.

MARRIAGES AT NOTRE DAME.

It will be recollected that among the commemorations of the marriage of the Emperor and Empress of the French, was the allotment of wedding portions to certain couples by the Imperial liberality. The religious marriage of these couples, twenty-eight in number, took place on Thursday morning last week, at Notre Dame, Paris. From an early hour, the interior of the cathedral was filled with an immense number of persons anxious to be present at the ceremony. The happy couples, accompanied by their friends, arrived successively from their respective *mairies*. At eleven o'clock, mass was celebrated by the Archbishop of Paris, assisted by his grand vicars. M. Berger, the Prefect of the Seine, M. Merruau, Secretary General of the Prefecture, the Mayors of Paris and the Banlieue, and the curés of the different parishes to which the newly married persons belonged, were present. After the mass, the Archbishop gave his benediction in the most solemn manner, and pointed out to them the feelings of gratitude and fidelity with which they ought to be animated towards the Chief of the State, who was desirous that the day of his own marriage should be commemorated by acts of munificence towards others, and that his happiness should be shared in by persons of all ranks and of all classes. The majority of the happy bridegrooms were old soldiers, who had given frequent proofs of their morality, courage, and attachment to the cause of order.

LARGE NUGGET OF GOLD FROM PORT PHILLIP.

Captain G. T. Brown, of the fine ship *Chowringhee*, of Sunderland, has just arrived in the East India Docks, from Port Phillip, with a large quantity of gold—68,000 ounces—on freight alone, independently of that brought by the passengers, of whom Captain Brown had about fifty from the above colony, principally successful diggers.

The gold was deposited, in the course of last week, in the bullion office at the Bank of England. It included an immense nugget weighing 545 ounces; which is stated to be the largest piece ever brought into this country. It was found at the White Horse Gully, Bendigo Diggings, by George Potter, one of a party of three—Robert Bennett and John Hazel being his successful partners. Potter states that the gully where the Nugget was found is not more than six yards from the place where the great Victoria Nugget was discovered. It had been repeatedly turned over, and many of the holes were abandoned, and full of water. The exact spot was one that had been covered up with the soil from the neighbouring holes, and the only spot of the allotment belonging to the before-named party that had not been searched by them; indeed, they were on the point of leaving for another allotment; when George Potter, in turning the earth over lightly, about eighteen inches below the surface, struck his pick upon the mass imbedded in the sand, &c.; and the Nugget remains in the same state as when first extracted by him. Potter and his comrades are seamen, and came over in the *Chowringhee*.

Among the passengers in the *Chowringhee* were some persons who went out in the *Lady Elgin*, about twelve months ago, as Government free emigrants: they have returned with a considerable sum in gold dust—some £1000 worth.

LARGE NUGGET OF GOLD JUST BROUGHT FROM PORT PHILLIP.

MONUMENT TO LADY MARGARET MARIA COCKS

This beautiful Altar-tomb has just been completed by Mr Poole, of Great Smith street, Westminster, and presents an interesting novelty in this branch of art. It is to the memory of Lady Margaret Maria Cocks, and is as creditable to the taste and feeling of the designer and Mr. Poole, as it is appropriate to the character of her whose memory it preserves. The material employed by Mr. Poole is the Cornish serpentine marble, which has been profusely used in the lately-rebuilt church of Eastnor, for the mortuary chapel of which the tomb has been designed. This stone takes a high polish, is very rich in colour, and makes a good ground for the beautiful mosaic glass cross which is inlaid on the top. The cross, which is of elegant proportions, has fleury terminations, plinth, and stepped base, in gold blue, red, and white glass; the base and terminations being in brass electro gilt. The colour of the

MONUMENT TO LADY MARGARET MARIA COCKS.

glass is very good. On the splayed edge moulding of the tomb is a verge of brass. The legend is in raised letters on a black ground:—

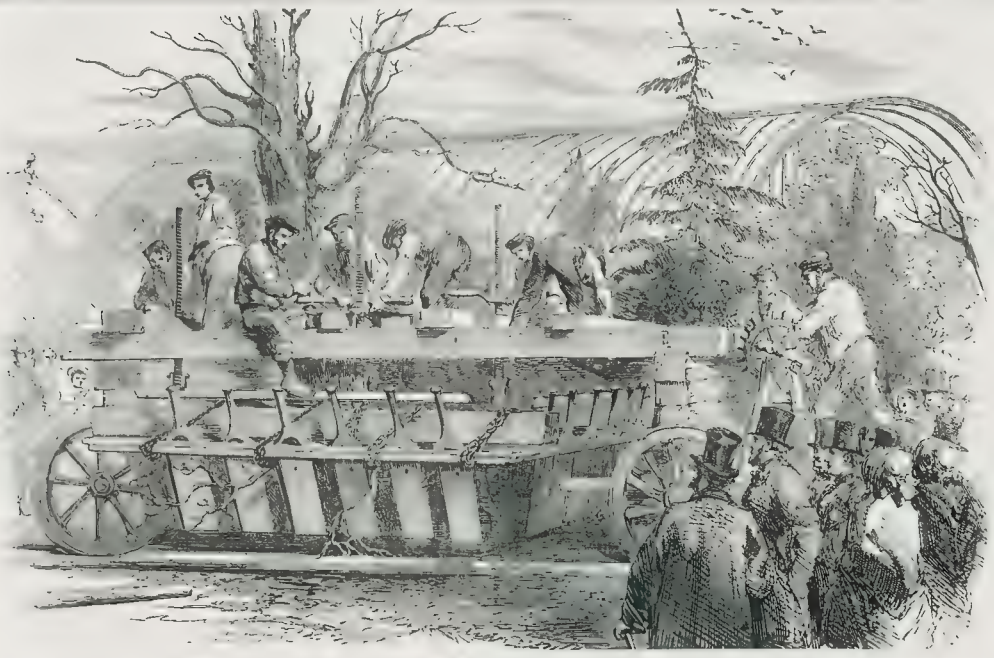
> In memory of the Lady Margaret Maria Cocks, only daughter of John Somers, first Earl Somers, who died 10th May, A.D. 1849, in the humble hope of a joyful resurrection. "Her life was hid with Christ in God."

Altogether, this monument is a work of highly-refined, religious taste.

APPARATUS FOR THE REMOVAL OF LARGE TREES

On Saturday last, at the gardens of the Horticultural Society, at Chiswick, there was exhibited an interesting application of the working of the apparatus for transplanting trees of large size; the invention of Mr. M'Glashen, and shown by him at Edinburgh, a few weeks since. We have illustrated the process, by an Engraving of a large poplar-tree being lifted by the apparatus. A square frame was first laid on the ground, inclosing an area, the length of each of whose sides was 9 feet 10 inches, the tree being in the centre. Iron cutters were then driven into the ground, outside the frame, to the depth of 2 feet 8 inches; and two lifting beams were next placed on the frame, to which they were securely attached by chains. A collar, or clasp, was then set round the tree (previously protected by matting), and made fast by screws lying close on the beams. A flat bar of iron was now placed inside the top of the cutters, and extension rods were then made to bear against opposite sides of the square, by means of a screw, to exert an outward pressure against the tops of the cutters, and, consequently, in an equal degree, to compress the lower part of the contained mass of roots and earth.

An upper framework of beams was now formed around the tree, and elevated on wheels to the required height, the two frames being connected by four strong upright screws; and to the lower frame of lifting-beams were attached chains. Several men were employed to set the screws in motion, by which the cutters and the contained tree-roots and earth were lifted clear out of the ground for removal. A stout rope, worked by a windlass, attached to the frame, was made fast to the tree in the direction required; and the whole mass, though weighing fourteen or fifteen tons, yielded without much difficulty to the efforts of a single man. The tree removed was 55 feet high and 4 feet 10 inches in circumference. The man at the windlass in the Engraving, is introduced simply to show how the



REMOVAL OF A LARGE POPLAR-TREE, WITH MR. SCRASBURY'S APPARATUS, AT THE HORTICULTURAL SOCIETY'S GARDEN, CHISWICK.

mass is moved; since he would not be at work during the lifting. The tree, which incline I considerably on one side in its original position, was lowered into its new site perfectly erect. Indeed the facility with which an object so lofty and ponderous was handled by working a screw on either side, seemed marvellous. By other modifications of the same process, Mr Mirfield has removed shrubs, plants, or entire borders, he also proposes boxes in which the mass removed from one situation can be enclosed and conveyed to another, however remote.

The operations of the Horticultural Society's Gardens on Saturday, were witnessed by his Royal Highness Prince Albert. Sir Joseph Paxton and other practical men were also present, and expressed themselves highly satisfied with the process.

BANQUET AT THE TOWN-HALL, LIVERPOOL.

On Thursday evening, March —, an entertainment was given by the Mayor of Liverpool (Mr. S. Holme) to the Directors and Officers of the Railway Companies having termini in Liverpool. The banquet was served in the great dining-room, at the Town hall, and the whole suite of reception-rooms was thrown open on the occasion. These rooms are almost unequalled in the splendour of their decorations, and the architectural symmetry of their proportions. Hilton's celebrated picture of the "Crucifixion" is now placed in the gallery, and is seen as the visitor ascends the grand staircase, itself a magnificent work. An allowance of £120 a year is made by the Corporation of Liverpool to the Mayor to enable him to maintain the state and dignity of chief magistrate, and he is also allowed two carriages. The present Mayor is earning golden opinions for the spirit and liberality with which he dispenses his hospitality. Mr. S. Holme is one of those men of whom a great commercial country may well be proud. He is the architect of his own fortune, and, having conducted for many years some of the largest building contracts in England, he has retired with ample means to enjoy the ease and competence which he has so well earned by a life of industry and integrity.

The Mayor's guests at the banquet in question comprised the principal members of the boards of the London and North-Western, the

GRAND BANQUET IN THE TOWN-HALL, LIVERPOOL.

Lancaster and Carlisle, the Chester and Holyhead, and the Lancashire and Yorkshire railway. General Anson, chairman of the London and North-Western Railway, was prevented from attending, in consequence of being engaged in London on an election committee. Among the gentlemen present were the Hon. Colonel Lowther, M.P.; the Hon. C. Howard, M.P.; Mr. Locke, M.P.; Mr. Peto, M.P.; Mr. R. Benson, Mr. Henry Howard, of Greystoke Castle; Admiral Moorsom, Colonel Maclean; Messrs. H. Earle, Grant, Ewart, E. Tootal, W. Stuart, Brooke, Langton, Rathbone, Cropper, Rotherham, E. Watkin, Braithwaite, Poole, Captain Huish, and others.

The occasion was suggestive of many interesting associations and historical reminiscences. The guests could not forget that only twenty-seven years have elapsed since the great parliamentary battle for a railway between Liverpool and Manchester was fought in the House of Commons. Liverpool was the cradle of the railway system; and it was upon the Exchange, at Liverpool, that Mr. George Stephen son found patrons in the wealthy and enterprising merchants, whose steady support enabled him to effect his cherished object of opening the Liverpool and Manchester Railway, as the first passenger line worked by locomotive engines. The Liverpool merchants and Manchester manufacturers were almost the only people in England who listened to the great self taught engineer without a sneer, when he proposed to construct a steam-engine which should draw a heavy load at a speed of twelve miles an hour along his new line. Now, there are 7000 miles of railway in Great Britain, upon which the amazing amount of £300,000,000 has been expended. The railway interest has become a fifth estate in the realm; and there was felt to be an especial fitness in this splendid entertainment to railway magnates and railway *employés* in a town that has the honour of originating and inaugurating that mighty system which has effected a revolution in modern commerce and modern habits, and the wonderful agency of which, in promoting the comfort and welfare of man, is not yet fully developed.

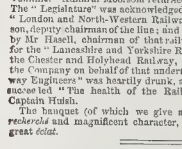
The Mayor having proposed the usual loyal and patriotic toasts, the health of the "Clergy" was given, and responded to by the Rev. Mr. Tomline. Admiral Moorsom returned thanks for the "Army and Navy." The "Legislature" was coupled by Col. Lowther. The toast of the "London and North-Western Railway" was acknowledged by Mr. Benson, deputy chairman of the line; and that of the "Lancaster and Carlisle" by Mr. Hasell, chairman of that railway. Mr. Howard returned thanks for the "Lancashire and Yorkshire Railway." and Mr Pete, chairman of the Chester and Holyhead Railway, acknowledged the good wishes of the Company on behalf of that undertaking. The toast of "The Railway Engineers" was heartily drunk, and called up Mr. Locke, to which success led "The health of the Railway Officials;" acknowledged by Captain Huish.

The banquet (of which we give an illustration) was of the most *recherché* and magnificent character, and the evening passed off with great *éclat*.

OBITUARY OF EMINENT PERSONS.

SIR EDWARD DOUGHTY, BART.

THIS gentleman, the heir-male and representative of the old and eminent family of Tichborne, of Tichborne, seated in Hampshire before the Conquest, died on the 5th inst., aged 71, at his seat, Tichborne-park, near Alresford. He was the third son of Sir Henry Tichborne, the sixth Baronet, by Elizabeth Lacy, his wife, daughter of Edmund Plowden, Esq., of Plowden. In 1826 he succeeded, at the decease of the late Miss Doughty, of Stanford hall, Lincoln-



shire and of Richmond-hill, Surrey, to that lady's extensive estates, together with her property in the neighbourhood of Russell square, including Doughty-street, &c.; and assumed, in consequence, the surname of Doughty. In 1836 he served as High Sheriff of Dorsetshire; and in 1845, by the death of his elder brother, the late sir Henry Tichborne, without male issue, became eighth Baronet of Tichborne.

Sir Edward married, 20th June, 1827, Katharine, daughter of James Everard, ninth Lord Arundell of Wardour; and by her, who survives, who died in youth; and one surviving daughter, Katharine-Mary-Elizabeth Doughty. The present inheritor of the title and estates is Sir Edward's, only surviving brother, now in his 69th year, Roger Tichborne, Esquire. He is married to Harriette-Felicita, daughter of Henry Seymour, Esq., of Knoyle, Wilts, and has two surviving sons, Roger-Charles and Alfred-Joseph.

ADMIRAL THE HON. SIR THOMAS BLADEN CAPEL, G.C.B.

THE death of this distinguished and venerable flag-officer occurred on the 4th instant, at his residence, Bognor, Sussex-park, at the age of seventy-seven. His career has been one of active service for fifty-one years. The Hon. Sir Thomas Bladen Capel was born the 29th August, 1776. He was the youngest of the five sons of Algernon, 5th Earl of Essex, by his second wife, Harriet, daughter of Colonel Thomas Bladen. The second of the six sons is Sir Thomas's brother, the present Lieut. General the Hon. Thomas Edward Capel; the eldest of these also fateful Capels, present Earl of Essex, and of Commander Algernon Heary Champagne Capel, R.N., who are, consequently, Sir Thomas's nephews. Sir Thomas entered the navy the 22nd March, 1793, on board the *Phaeton*, 38, and, subsequently, had his full share of the toil and glory of the late war. He was present at Lord Bridport's action, at the battle of the Nile, and at the battle of Trafalgar. In his despatch to the Admiralty, announcing the victory of the Nile, Nelson alludes to Captain Capel as a most excellent officer, and recommends him to their Lordships' notice. (*Gazette*, 1798, p. 915.)

In the war with the United States of America, in 1812, Sir Thomas Capel was stationed on the new n coast of America, where he commanded a small squadron, blockading the enemy's frigate in New London, and sharing generally in the labours of the contest. Sir Thomas rose successively through the various grades to that of Admiral; his Commandership he obtained immediately after the battle of the Nile. He was created a K.C.B. in 1836, and he became a Vice-Admiral in 1841. Sir Thomas Capel married, in 1812, Miss Catherine Coulthurne, only daughter of Francis George Smythe, Esq., but has had no issue.

DR CHARLESWORTH.

THIS eminent physician, who died on the 25th ult., had great practice at Lincoln, and filled many high medical appointments there. He was a so distinguished for his public benevolence, and especially for the philanthropic interest he took in [illegible]. Indeed, while the science of medicine lasts, he will be remembered as the great founder of the new system adopted by institutions for lunatics. He was most energetic in starting the scheme plan, and devised gentle remedies of every description. At the Lincoln Asylum his exertions in this behalf were, during a long series of years, unwearied, and led eventually to the most happy results.

It might be supposed that Dr. Charlesworth's professional engagements would leave him sufficient occupation; but his extreme punctuality, energy, and decision of character, enabled him to fulfil many duties others would not have found minutes. The Lincoln Stock Library owed its foundation to his energetic zeal, and he was elect d the first president of that excellent institution. The Lincoln Mechanics' Institution also had his warm sup, ort and assistance, and he for some time acted as its president; and the Lincoln National Schools found him a most useful friend. On the subject o public health l e published a pamphlet "Health and Cleanliness," an interesting cur osity, as showing that there is scarcely a t ple suggestion in it which has not since been acted into effect.

Dr Charlesworth's medical education was f rst with the celebrated Dr Harrison, of Horncastle, and afterwards at Edinburgh. Dr. Charlesworth was an honorary vice-president of the Central Society of Education. One of his nieces showed much taste in su anonymous work, "Rural Gleanings." His nephews, Edward Charlesworth, Esq., curator of the Yorkshire Museum, has an European celebrity through his authorship of the *Magazine of Natural History*, and his valuable contributions to geology.

CHARITABLE BEQUESTS.—Miss Anna Maria Pole, of Upper Harley-street, daughter of the late Sir Charles Maurice Pole, has bequeathed one thousand pounds, to be divided equally by her executors between the following charitable institutions: The Deaf and Dumb Asylum, the Blind Asylum; the Royal Female Naval School, at Richmond, the Destitute Sailors' Asylum and Sailors' Home, Well-street; the Infant Orphan Asylum, the Society for Promoting Christian Knowledge, the London Orphan Asylum, the Church Missionary Society, and the Religious Tract Society.

METROPOLITAN NEWS.

Note.—The sign – denotes below the average, and th sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The mean reading of the barometer for the week, at the height of 82 feet above the level of the sea, was 29.897 inches. The highest reading occurred on the 5th, when it stood at 30.5, and was 30.178 inches. The mean temperature of the week was 44·06, being 3·06 above the average of thirty-eight years, and 4·89 above the average of the nine preceding weeks. The mean daily temperature, which has been below its average nine days in succession from February 1, with the single exception of February 7, continued on Mar 4 to 7 inclusive above its average value of the 5th, and was 6° and 7° in excess on the 5th and 7th; but declined slightly on the 8th. From February 1 to March 10 the average daily defect of temperature was 6°2°. The temperature has risen considerably during the week, from 26° 8° on the 4th to 56° 5° on the 10th—a difference of 29° 5° in the range of temperature in the week. The greatest difference of temperature daily was 17·4°, being 6·7° above the average of the nine preceding weeks. The weather has been squa..y and variable. Rain fell in the week to the depth of rather more than four-tenths of an inch. Slight fog was prevalent early on the 9th.

Lewisham, March 11, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week, ending March 5th, there were 1671 children born within the metropolitan districts; of these, 861 were boys, and 810 were girls. This number exceeds the average in eight corresponding weeks in the years 1845 to 1852 by 202. The number of deaths in the week were 1417, showing an increase of 93 upon that of the preceding week. Of these deaths 573 were children under 15 years; 459 were 15 years old and less than 60; and 379 were 60 years old and upwards. The estimated number of deaths based upon the number in the corresponding week in the previous ten years, and augmented in proportion to the increase of population, is 1109: of these, 388 are due to diseases of the lungs and of the organs of respiration, whose average is 216; to old age 82, its average is 53, to hooping-cough 56, its average is 43, to typh..s, 60, its average is 39; to consumption 160, its average being 158; to bronchitis 212, its average being 78 only, to pneumonia 105, its average is 90; to asthma 44, its average is 29; to poison 3; to hanging and suffocation 3; to drowning 7, and to wounds 3 deaths were registered.

CHARITABLE AND BENEFICENT MEETINGS.

ROYAL LITERARY FUND.—The annual meeting of the members of this benevolent institution was held on Wednesday, at 73, Great Russell-street for the election of officers, &c., for the ensuing year. The chair was taken by Sir Henry Ellis, in the absence of Sir Robert Inglis, who was prevented from attending by indisposition. A statement of the funds, &c., was laid before the members; the vacancies in the council and committee elected; and the usual thanks voted to the chairman and secretary.

PRINTERS' PENSION SOCIETY.—The annual general meeting of the friends and subscribers to this valuable institution was held on Monday, in the London Tavern, Bishopsgate-street; Mr. William Tyler in the chair. The secretary (Mr. Hodges) read the report, which stated that there had been an increase in the amount of annual subscriptions and donations of £37. The numerous sheet showed the total receipts to have amounted to £1484 0s. 6½d., and the expenditure to £1270, leaving a balance in hand of £213 13s. 3½d. The report having been received and adopted, the meeting proceeded to the election of four pensioners from a list of 24 candidates; and the two unsuccessful candidates shortly after the poll having been chosen by the committee as the Whittingham and Fley pensioners. A vote of thanks was passed to the chairman, which terminated the proceedings

ATHENÆUM INSTITUTE.—A new society is putting forward its claims for support, called "The Institute for the Encouragement of Useful Men of Science" (briefly to be described as a mutual benefit society). At a meeting of from fifty to sixty gentlemen, authors and journalists, held at the rooms of the Athenæum Club, on Tuesday last, it was resolved that a public meeting of "the friends of literature" should be called, and that Mr. Disraeli, who has taken some interest in the society, should be invited to preside.

THE BRITISH AND FOREIGN BIBLE SOCIETY held its fiftieth anniversary the first Jubilee—on Tuesday, in Exeter-hall: the Earl of Shaftesbury in the chair. Nearly £5000 was announced.

SCHOOL FOR THE INDIGENT BLIND.—On Thursday the annual meeting of the Society was held in the London Coffee-house—Lord Radstock in the chair—when a report was read, which stated that there were now seventy-five male and sixty-nine female pupils in the schools, and twenty-three persons had completed the curriculum. The receipts for the year amounted to £4217 1s., and the expenditure to £3644 9s. 3d. A piece of land, which has been presented to the charity by her Majesty, in the name of the Prince of Wales, on condition that he becomes entitled always to have a nominee in the school.

ROYAL HUMANE SOCIETY.—On Thursday, the anniversary festival of this society was celebrated at the Freemasons' Tavern—Lord Powis presiding. In proposing the toast of the evening, "Prosperity to the Royal Humane Society," the chairman stated that in the course of last year 190 persons came under the care of the society who were apparently drowned, of whom 150 recovered. In order to extend the benefits of the institution as much as possible medals of all their implements for saving life would be forwarded to the engineering exhibitions in New York and in Dublin. The subscriptions of the evening amounted to about £700.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST.—The fifth anniversary of this institution was held on Tuesday at the London Tavern; Lord Ashley presided. The number of patients in the last year has been [illegible]. The subscriptions during the evening amounted to the very large sum of nearly £2000.

ROYAL MASONIC INSTITUTE FOR BOYS.—The anniversary festival of this Institute was held at the Freemasons' Tavern, on Wednesday evening; the Earl of Zetland, G. M., presided. During the evening about £1100 was so lected, being a much larger sum than usual.

THE ROYAL SOCIETY FOR THE PROTECTION OF LIFE FROM FIRE held their annual meeting on Monday, when it was stated that the total number of fires attended by the escapes during the year, 281; and the number of lives saved, 41.

THE TAILORS' BENEVOLENT INSTITUTION.—The anniversary festival in connection with this charitable institution took place on Wednesday, at the London Tavern; the Duke of Cambridge in the chair. During the evening, about £700 were added to the funds of the society.

FISHMONGERS AND POULTERERS' INSTITUTION.—On Wednesday evening the friends and supporters of this charity celebrated their seventeenth anniversary, at the London Tavern; R. W. Phillipps, Esq., occupying the chair.

LEARNED AND SCIENTIFIC SOCIETIES.—Various meetings of societies have been held within the last few days. We enumerate some of them:—The Linnæan Society held a meeting last week, Mr. Robert Brown in the chair; when Mr. Thomas Bell, Professor of Zoology in King's College, was elected in the place of the late Mr. J. F. Stephens, and a paper entitled "Notes on the Vegetation of Buenos Ayres and its neighbouring districts, by C. J. F. Bunbury, F.L.S." was read.—At the meeting of the British Archæological Association, Mr. T. J. Pettigrew, chairman, six new associates were elected. The meeting was principally devoted to the reading and discussion on an interesting paper, "On the Camps of Upper Lanarkshire, by Mr. G. V. Irving. At the same Association, on Wednesday last, Mr. Pettigrew read a paper "On the discoveries of Roman ware in Wilbrook, and other parts of the city."—On Monday the Epidemiological Society met—Dr. B. G. Babington in the chair when papers by Mr. B. W. Richardson, of Mordake, and Mr. J. B. Harrison, Higher Broughton, Manchester, on scarlatina, or scarlet fever, were submitted and discussed.—The Entomological society had a meeting on Monday Mr. Newman in the chair, after the business of which evening was ended, a petition to the Government from the Royal and other scientific societies, for a centralised building, and stating its numerous advantages, was laid by Mr. Pettigrew, on the table.—On the Playfair gave his final lecture "On the Dependence of Industry on Science," at the London Institution, on Monday last, to a crowded and delighted audience.

ROYAL INSTITUTION.—At a general monthly meeting held on Monday last—Sir C Fellowes, V.P., in the chair—it was announced that after the Easter vacation courses of lectures would be delivered by Drs. Faraday, Frankland, and Tyndall, and Mr. W. Carpmael.

UNITED SERVICE INSTITUTION.—The annual meetin, of the members of this institution was held on Saturday, at the Institut on in Scotland-yard. The Duke of Northumberland presided. The report stated that during the past year several valuable presents had been received. There had been a falling off in members, although several new members had joined during the year. The receipts amounted to about £1261, but there was a deficit of £78 16s 6d., taken from the stock. After some further detail, the report was agreed to.

EXHIBITION OF CABINET WORK.—The following notice has just been issued.—The Lords of the Committee of Privy Council for Trade having had under their consideration the desirableness of making a collection of fine specimens of cabinet work for the information of students of schools of art, and the public at large, have directed the Department of Practical Art to collect and publicly exhibit such specimens. Permission has been obtained from the Royal Commissioners for the Exhibition of 1851, to use such accommodation as may be afforded by Gore House, Kensington, where the proposed exhibition will accordingly take place in the month of May next. The space being limited, it is intended to exhibit only specimens of furniture which have been executed before the present century. Her Majesty the Queen has been graciously pleased to allow examples, &c., from Windsor Castle to be placed in the proposed exhibition, and the loan of fine specimens has been liberally offered by several persons.

NEW NATIONAL GALLERY.—His Royal Highness Prince Albert and the Royal Commissioners for arranging the commencement of the contemplated new National Gallery, are in future to hold their me tings at Gore House, a wing of which has been fitted up for their reception, under the presidency of the Prince Consort. Sir Charles Barry and the Baron Marochetti have been already professionally consulted by the Royal Commissioners respecting the new building which is to assemble science, manufactures, and arts under the small roof.

SOCIETY OF ARTS.—On Friday last, his Royal Highness Prince Albert visited the Society of Arts, and inspected the complete and ingenious machinery with which Mr. F. Warren illustrates the series of lectures on on ton manufacture, which he has been lately delivering there. This model of machinery enables the lecturer to show the process, from the raw cotton as it arrives from [illegible] to the yarn as it is presented to the [illegible] Mr. Warren is a mechanic-engineer of considerable and [illegible] and the forth for his zealous and [illegible] The [illegible] the following classes. [illegible] The [illegible] was with his own hands and [illegible] and [illegible] and [illegible] his perseverance [illegible] leisure hours [illegible] The Prince [illegible] examining the model, expressed himself highly pleased, and requested Mr. Warren to place himself in communication with the Board of Control.

ROYAL THAMES YACHT-CLUB.—The arrangement of matches for the approaching season is as follows: The first will take p ace on Tuesday, May 3, amongst a l three classes, for distinct prizes; the distance extending from Erith to the Nore Light and back. The next match—and the one which will possess the charm of novelty—is nominated for Thursday, June 2, confined to schooners, for 100 guineas; the start to be from a steamer in the Mouse Light, and back. The third and last will embrace all three classes, for hundred guineas, on Thursday, July 7. Lord Alfred Paget, Mr. R. Green (the Vice-Commodore), and the officers have been re-elected for the ensuing year. The funds are in a flourishing condition, and everything augurs well for increasing prosperity and capital sport.

WANDSWORTH LITERARY AND SCIENTIFIC INSTITUTION.—On Tuesday evening, the 8th inst., the members flocked their old neighbour, Mr Deane F. Walker, of West Hill, Wandsworth, to deliver an astronomical lecture, on his original Lidonarium, or large transparencies, so long distinguished for its popular illustration of the science. On this occasion, though the price of admission was small, the funds have been materially benefited. Nothing could exceed the beauty of Mr. Walker's machinery and zodiac, &c., lit by gas; and the lecturer received a hearty welcome for his gratuitous services. The second and farewell lecture is to be delivered, we understand, on Tuesday evening next.

CENTRAL CITY TERMINUS.—Several gentlemen favourable to this project, held a meeting on Monday, at the Cordwainers' Hall, to consider the best teps to be taken to advance the object. Mr. Lupton took the chair. The meeting was addressed by Mr Millard, Mr. Stevens, Mr. Blackmore, &c. A resolution was carried that a petition be adopted, praying the Court of Common-council to co-operate with her Majesty's Government by carrying into execution such street improvements as may be found indispensable in connection with this undertaking.

FREEDOM OF THE CITY.—Last week, Mr. Deputy Bennoch, in moving that the freedom of the City be presented to Mr. Layard, M.P., observed that, since the year 1814, naval and military heroes had received the freedom, and fifty swords had been presented. Among these the names of Nelson and Wellington shone conspicuous. Those were presented at the most critical periods of national history after victory had greatly excited the public mind and hastened the enthusiasm of the citizens of London. At times of political excitement, beyond inquiry with success, we found the honour conferred on Grey, Russell, Althorp, and Attwood. When public propriety was at stake, and public sympathy roused in favour of a persecuted Queen, London stood forward to offer her successful assistance. Brougham Lushington, Denman, and Hume were granted all the honour the City could bestow. At the time of national fear and sorrow, when pestilence walked over the streets like a destroying angel, the names of the City and magistrates of suffering and pa.s- Roupel, Field, Rabington, Ridout, and Wire—had conspicuous honours showered upon them. So also on the philanthropists, Jones and Hanway—the latter they had a noble bust erected in that chamber, and he trusted that ere long it would be balanced by one of Jenner. Of civilians, we had Rowland Hill and Sir James Brooke, whose works were well known, and he now proposed to add to this roll of honour the name of Alfred Austen Layard.

METROPOLITAN WATER SUPPLY.—On Wednes lay the vestry of St Pancras unanimously resolved to direct the vestry-clerk to draw up a petition to Parliament in favour of an independent water supply, as proposed in the bill now before the Legislature, and to call upon the borough members to give it their strenuous support.

METROPOLITAN POLICE.—The annual expenditure, for the year 1852, for the metropolitan police was £390,622 15s 1d. The sum needed to defray this charge was £349,205 9s. 9d. Of this sum, £100,0.. - - rates, and £24 644 14s 2d. was received from miscellaneous sources, leaving a balance over the expenditure of £48,340 8s 8d. The sum expended for the expenses of the police-courts was £44,805 19s. 4d., of which £39,870 9s. 7d was for salaries. Of twenty-three police magistrates, one is in receipt of £1200 per annum, the other twenty-two of £1000 per annum each. The salaries of the two commissioners are also £1200 per annum each, and that of the receiver £1000.

THE MIDDLESEX CONSTITUENCY.—It appears that the Liberal party have gained largely upon the late revision. The number of [illegible] registered for the year 1852 was [illegible] number for 1853 is 14,616. Increase, 220. The total number of changes is 3378 [illegible] 802 new names insert d. These facts show a total [illegible] of 3078 electors in less than six months.

SALE OF BRIXTON HOUSE OF CORRECTION.—On the completion of the new gaol at Wandsworth common, all the houses of correction for Surrey will be done away with, and among them Brixton House of Correction, which fetched only £9000 or £7000. The property was recently advertised the materials for sale, intending to let the ground for building; but the day previous to the sale [illegible] the grounds, with the supposed intention of turning them into a park, for the convenience of the military on the south side of the metropolis.

DEPARTURES FOR AUSTRALIA.—The departures from London for Australia during the past week consisted of eight vessels to Port Phillip, and one to Swan River. Of 3588 tons: their total capacity, 6887 tons. Considerable employment continues to be made, but the quotations of freight have experienced a decline.

POPULATION, INHABITED HOUSES, AND ELECTORS.—According to a Parliamentary return just printed, the population of England and Wales in 1851 was 17,927,609, and the number of inhabited houses, 3,925,099. There were on the register 1851 82, of constituted electors, 918,683; and the number polled at the last general election was 841,205.

DEPARTURE OF DR. LAYARD FOR CONSTANTINOPLE.—Dr. Layard has sent the following address to the electors of Aylesbury.—"Gentlemen, My services having been considered of use in the East in the present critical state of affairs, I have not hesitated to place them at the disposal of her Majesty's Embassy at Constantinople. In taking this step, I would fain hope that I should meet with your approbat on. I should have desired it right to consult you previous to my departure, had time permitted me to call a meeting; as it is, I have only been able to obtain the sanction of a few of my friends and supporters. I have reason to hope that your interests will in no way suffer from my absence; and I need only add, that nothing but an imperative sense of duty would have induced me to leave my place in Parliament during the session. I trust I shall very shortly be again at my post; and, relying upon your kind indulgence, I beg to subscribe myself, yours very truly, A. H. LAYARD."

ELECTION COMMITTEES.—There is some very heavy business before these committees, and several seats have been disposed of during the week. *Caermarthen*.—Sir J. M. F. Smith has been declared [illegible] and the [illegible] Hon. Mr. Mostyn [illegible] *Dudley*.—Mr. Hughes Hughes's opposition to the petitioners, and was thereby unseated; and Mr Heywood was declared duly returned.—*Hull*: In this borough Mr. Clay and Lord Goderich had been guilty of bribery by their agents, and are therefore unduly elected; and the committee state that corrupt practices extensively prevail in the constituency.—The *Guildford* petition against the sitting members has been abandoned, and the petitioners saddled with the costs.—The *Boston* and *Limerick* petitions have been withdrawn.

PROVINCIAL INTELLIGENCE.

UNIVERSITY OF EDINBURGH.—Sir E. Lytton Bulwer Lytton, Bart., has agreed to allow himself to be put in nomination for the office of Honorary President of the Associated Societies of the University of Edinburgh. The election takes place next week. Lord Campbell, Mr. Macaulay, and Mr. Disraeli, had previously declined the honour. The hon. Baronet has agreed, if elected, to deliver the inaugural address early in the winter session.

HOLYHEAD HARBOUR.—The recent heavy gale has caused a fearful loss of property at the New Harbour of Refuge, Holyhead. Every one of the piles for the south pier has been washed away, and large timbers strewed the shore in very direction. Such was the violence of the sea, which raged most furiously for more than twenty hours, that on the north pier the piles, staging, and even the stonework were swept away. Hundreds of workmen have been thrown out of employment.

INTERESTING NATIONAL MEMORIAL.—There has just been completed on Southsea Beach, Portsmouth, a very interesting memorial of the great Nelson. It consists of a structure of granite, surmounted by an anchor, which is dedicated to Nelson's ship the *Victory*. The spot on which it is erected is on the harbour's mouth, and is the place from which Nelson last saw

THE FEMALE EMIGRANTS' HOME, AT HATTON-GARDEN.—THE CHIEF ROOM.

FEMALE EMIGRATION FUND.

In presenting our readers with two Engravings illustrative of the departure of the thirtieth party of female emigrants, sent out by the Fund for promoting Female Emigration from want and misery in London, to happiness and plenty in Australia, it will be, perhaps the most profitable course, instead of describing the ordinary incidents of farewell embarkation, shortly to state the proceedings of the Society since it commenced its operations, and equally briefly to notice some of their results.

It was in the winter of 1849 that Mr. Sidney Herbert, horrified, with many others, by the fearful revelations then in the process of being made of the condition of the London needlewomen, started the idea of a great emigrational scheme, which was actively taken up in the higher and more opulent branches of society; a large sum was promptly subscribed, and immediate practical measures were adopted. The sum at first received amounted to upwards of £22,000, and some small additions have since dropped in. With this money the promoters of the scheme have sought for, investigated the cases and the characters, organised into bands, fed [illegible] and despatched, in 1850, not less than 403 young women; in 1851, upwards of 528; and in 18[illegible], the greatest number, 635—making a grand total of 1071 young women rescued from the brink of starvation in London; and now—at least the vast majority of them—settled in marriage or service amid the plenty of Australia. This great benefit, to comparatively so great a number of helpless individuals, has cost in all £18,972 11s. 8d.; money actually expended. By this the passage payments amount to nearly £13,000, and the purely emigrational expenses of outfit, and the "Home," to about £6000. Add to this the ordinary working expenses, which are creditably low, and we have the outlay already mentioned. At this moment the further liabilities of the society for part passage-money for six ships, lately despatched, is £1,565 11s. 8d.; leaving, as an ultimate result, a working balance of only £3684 1s. 11d.

Under these circumstances, it is obvious that the Society must speedily discontinue its operations, if the public, on being made acquainted with the vast benefit conferred not only upon the poor friendless emigrants themselves, but upon Australian society, should not come forward to continue the stream of bounty which three years ago so liberally flowed. The publications of the Society will amply prove the great success of the experiment. The eager welcome with which girls of good character were received by the various Australian colonies, the rapidity with which one and all were provided with service, and the concurring testimony, not only of their own letters [illegible]—hundreds of which have been received—but of many of the principal colonists and government functionaries at the Antipodes, leave no doubt of the benefits conferred upon the emigrants themselves, or the advantage afforded by the arrival of so copious a succession of supplies of female labour to the settlements. And yet the demand continues more eagerly more expensively than ever. The gold fever has attracted a vast male emigration, and the balance of sexes in Australia is more uneven the[illegible] than in Great Britain the reverse is the case—the number of females by the last Census, outstripping that of the males of the population as [illegible] to 545,702 individuals. It is evident, therefore, that reasons both of humanity and of policy combine to urge forward a system of female emigration on as great a scale as can be effected.

The tables showing the difference of wages and general position of the emigrants sent by Mr. Sidney Herbert's society are very curious, and contain information which it would be well for the working [illegible] generally to read. The list of occupations from which women were taken in London is in itself remarkable. There were artificial-flower-makers, [illegible]-makers, brush-makers, carpet-bag-makers, gelatine-packers, [illegible]-transferrers, and furriers. These are, of course, exceptional employments. The vast proportion of emigrants lived by the dreary labour of the needle. Of professed dressmakers, during the three years of operation, there were sent out 88; of needle-workers, 182; and of persons taking the designation of "servants," but, we believe, suppressing themselves as a general rule, by various species of needle-work, [illegible]. The best [illegible] to the sempstresses is that of persons with [illegible] employment, of whom there were despatched 84. Only [illegible] shirt-makers proceeded to the Antipodes, but many of the [illegible] servants must have toiled at this most unremunerative species of [illegible]. So much for the proportions sent out from different female employments. A short selection from the English and the Australian wage tables will complete the picture:—

Employment in England.	Yearly wages (with rations) in Australia.
Berlin-worker, 6s to 7s. per week	£35
Laundress, 6s. per week	35
Servant, £7 per annum	[illegible]
[illegible]nt, 1s 6d per week	1
[illegible] wages	1
[illegible] 5s 6d. to 6s per week	20
[illegible] per week	20
[illegible] week	20
[illegible] per week	20
[illegible]	20
[illegible]	20

With the above sums as wages, rations and lodging must not be forgotten. The table from which they were taken [illegible] young women, who landed in March, 18[illegible] at Port Phillip[illegible] recent arrivals present exactly the same results, and offer a cheering picture of the change in the circumstances and prospects of so many of our poorer countrywomen.

On Wednesday last week there were despatched in the *Madagascar* forty emigrants of ages ranging from seventeen to thirty-two, and who had hitherto been [illegible]-makers, shoe-binders, domestic servants, &c. The [illegible] were conveyed to Gravesend in one of the finest ships employed in the East India trade, but which has been transferred by Mr. Green (her owner) to the Australian trade, had been engaged to convey the emigrants to Port Phillip; and a most commodious and convenient cabin had been especially fitted up amidships for their accommodation.

The party having arrived at Gravesend, went on board the *Madagascar*, where the girls were immediately mustered in their cabin, and received each, in rotation, a copy of a letter of directions and advice which had been addressed to them by Mrs. Herbert.

Lord Robert Grosvenor then delivered a few parting words to them in the name of the committee, and read to them an excellent letter of advice from Mrs. Herbert.

The Rev. Mr. Quekett also addressed a few farewell words to the girls, in the course of which he observed that when the last party reached the colony, no fewer than three hundred persons assembled to engage them. They ought to be extremely cautious, and not make any engagement that the Government inspector did not sanction.

The members of the committee shortly afterwards took a final leave of the party, and returned to town.

CABIN OF "THE MADAGASCAR," AND FEMALE EMIGRANTS.

F I N E A R T S.

BRITISH INSTITUTION.

We this week engrave two very attractive pieces in the Exhibition of the British Institution. The first is J. Wolf's capital picture, thus punningly described in the catalogue:—"Just out, the 'Tale (*Teal*) of a Teal:' quarterly list of new works on natural history." It represents a teal which has just escaped, terror still in his looks, from the clutches of a couple of hawks, who, perched upon a stony eminence, are fighting over the remains of his tail. The combat between the two birds of prey is delineated with great fire and spirit: the elaborate plumage throughout being represented with wonderful accuracy and great softness of texture. This clever picture has been purchased by the Earl of Ellesmere.

"A Moonlight Feast," by Danby, represents a solitary stork picking up his supper in a pool of water, in a wild mountain district. One unfortunate frog is fast disappearing down his throat, whilst another is swimming across the water just in time to be snatched up. The full moon is rising in the back ground; and a few refracted rays from the setting sun add their little warmth to the picture, which is painted in the artist's most finished and effective style.

"JUST OUT—'THE TALE OF A TEAL,' QUARTERLY LIST OF NEW WORKS ON NATURAL HISTORY"—PAINTED BY J. WOLF.

Manchester Wellington Memorial.—The committee of the subscribers to the Manchester Wellington Memorial have issued a notice, inviting sculptors, who wish to compete for the execution thereof, to send in their names, with references to previous works, on or before the 31st instant. Those who are approved of as competitors will have to send in models of their proposed designs within three months afterwards; together with a statement of the whole expense for making and erecting it. The statue is to be in bronze; and the cost is not to exceed 7000 guineas. The committee do not bind themselves to give the commission to the artist whose design shall be declared to be the best; but, should they not, a prize of 200 guineas will be awarded, the model remaining the property of the artist.

Free Library in the City.—Mr. Anderton, at the last court of Common Council, moved the following resolution, which was unanimously adopted; and we understand that the Lord Mayor will shortly call a public meeting on the subject:—"That, to extend and improve the national education, to develop and encourage industry, art, and science, and to elevate the moral and social condition, and thereby promote the welfare and happiness of all classes of her Majesty's subjects, so graciously expressed by her Majesty in her speech to both Houses of Parliament upon the late dissolution, it is desirable that a free library and a free circulating library should be established in the City of London; therefore, that it be referred to the library committee to consider and report how and by what means such libraries can be best established in the City, and whether any portion of the present City Library can be made available towards such a purpose."

Art in the Provinces.—The Birmingham Society of Artists has closed its annual exhibition, after a most prosperous season; the amount of sales effected, including the selections made by the Art Union [illegible] holders, reached £1675. The exhibition of works of living artists, which was open two or three months towards the close of the past year, at Newcastle-upon-Tyne, has terminated in a very satisfactory manner; sufficiently so to warrant the committee to make additional efforts for its extension in future seasons. The exhibition was got up under the auspices and management of the "North of England Society for the Promotion of the Fine Arts," and the success of their recent endeavour to promote the cause of art in this portion of the kingdom is evidenced by the sale of pictures realising about £400. The first annual exhibition of modern works of art, under the auspices of the Leeds Academy of Art, will open on Whit-Monday, the 16th of May; and will include works of painting (water and oil), sculpture, architectural designs, and engravings.

The Duke's Tomb.—On Monday last [illegible] Prince Albert visited St. Paul's Cathedral, and inspected the proposed site for the tomb of the late Duke of Wellington, and the arrangements now in progress for the restoration of the paintings which decorate the cupola of the dome. His Royal Highness, accompanied by the present Duke of Wellington and Sir William Molesworth, and attended by the Very Rev. the Dean, Dr. Milman, proceeded into the crypt. The coffin remains in the same position as when lowered on the day of the funeral, resting on the summit of Nelson's sarcophagus, but a hoarding painted black entirely covers it from view. The Prince, having taken a careful survey of the spot intended for the erection of the tomb, and expressed his approval of the proposed site, returned to the interior of the cathedral. His Royal Highness's attention was then directed to the arrangements for restoring the paintings of the dome, which has just been undertaken by Mr. Parris.

The Crystal Palace at Paris. The *Union* says:—"The works for the construction of the Crystal Palace in the Champs Elysées, and those which are necessary for rendering the old Hôtel of the Menus-Plaisirs (in the Faubourg Poissonnière, ready for the exhibition of the works of living artists, have not been interrupted in consequence of the bad weather. In the Champs Elysées it is an immense edifice which it is intended to construct. From 400 to 500 workmen, and 100 horses, have, it is said, been every day at work for the last two or three months. A mass of concrete has been laid for the foundation of this building, the proportions of which will rival those of the famous Crystal Palace of London, but the existence of which will not be so ephemeral as the latter."

A MOONLIGHT FEAST."—PAINTED BY T. DANBY.

MUSIC.

ROYAL SOCIETY OF MUSICIANS.

The 115th anniversary festival of the Royal Society of Musicians was celebrated on Tuesday night in Freemasons'-hall, the president of the day being B. B. Cabbell, Esq., M.P. This ancient and admirable institution is under the patronage of her Majesty, Prince Albert, the King of the Belgians, the Earls of Westmoreland, Howe, Cawdor, and Carlisle, and the Bishop of Bath and Wells; and is under the management of a Court of Assistants, composed of professional members. With the exception of the requisite officials, to collect subscriptions, and keep the accounts, the executive give their services gratuitously. The chaplain, counsel, physicians, surgeons, solicitors, and treasurer (Mr. Anderson), are all honorary officers of the institution. It is interesting to glance down the list of stewards, donations, and benefactions; beginning with the illustrious name of Handel, and including the well known celebrities of the past and present age, as Storace, Signora Storace, Mrs. Bland, Mazzinghi, Paganini, Thalberg, Cosia, Ernst, Braham, Jullien, Neale, Parish Alvars, Moscheles, Mrs Anderson, Grisi, Jenny Lind, Mario, Sims Reeves, Ciprani Potter, Brinley Richards, Mdme. Caradori Allan, Braham, Miss Birch, Charles Kemble, W. Knyvett, Lord, Miss Mason, the late John Parry, and John Parry, Roveding, Puzzi, Sir George Smart, C. Salaman, Miss Dolby, Loder, A. Novello, F. Romer, Schultz, Hafle, F. Labitzche, &c.

The attendance on the occasion was large, the musical arrangements attractive, and the subscriptions considerable, including the unexpected twenty-one guineas, the Misses Hilmston for £50 each, besides many donations varying from one to ten guineas, the second Harmonic Society being amongst the subscribers.

Miss Birch, Madame Ferrari, Mrs. Weiss, Miss K. Fitzwilliam, Miss Williams, Messrs. Benson, D. King, Bayley, Barnby, Ferrari, Young, Weiand J. Coward, H. Cent, A. Novello, Howe, M. Smith, &c., were the vocalists, and the instrumental performers, Mrs. Thomyson (late Miss R. Loder) and Mrs. F. B. Jewson (late Miss Anderson, Arkham), Piatti, Bottesini, G. Cooke, Card (sen. and jun.), Godfrey, Lazarus, Hayeock, T. Harper, Cioffi, Winterbottom, Williams, &c. Miss C. Potter and Sterndale Bennett were the accompanyists. These names are a guarantee that there was no ordinary treat offered to the numerous company including the ladies who graced the galleries. A link thrown out by the way of amalgam ation between the two societies (the Royal Musicians and that of Female musicians) is well worthy of the serious consideration of the managers of both institutions.

NOTES OF THE WEEK.

The fifth concert of the English Glee and Madrigal Union (Mrs. Anderson, Miss M Williams, Mrs. Lockey, Hobbs, Foster, H. Barnby, and Phillips) took place at Willis's Rooms, last Monday evening.

The fifth of Dando's Quartet Concerts, at Crosby Hall, was given last Monday.

The Amateur Musical Society gave their first concert last Monday evening, at the Hanover-square Rooms, under the direction of Mr. Leborne.

Herr Pauer presented his third and last pianoforte *soirée* on Wednesday, at Wills's Rooms; aided by Madame Doria, Miss K. Fitzwilliam, Mr. Wrighton, Mr. L. Sloper, and Herr Molique.

Mr. Lucas had his second music al evening on Wednesday, at his residence, in Berners street. The programme included Quartets by Mozart (No. 4) and Beethoven (No. 9); a Quartet by Kreutzer, Op. 72; a Trio, Sonata for pianoforte and violin, by Mrs. H. Thompson (the accomplished Miss Kate Loder); and Bee hoven's Theme, with variations for pianoforte and violoncello. The executants were Mrs. H. Thompson, Cramton, Cooper, Hill, and Lucas.

The Réunion des Arts had their second *soirée* on Wednesday in Harley street.

The Harmonic Union performed Mendelssohn's "Elijah" on Tuesday last, at Exeter-hall, conducted by Benedict, the principal vocalists being Mrs Endersohn, Miss F. Rowland, Miss Dolby, Miss Chambers, Mr. Sims Reeves, Mr. Gadsby, and Mr. Lawler.

John Parry has been presenting his "Notes" this week at Glasgow, Carlisle, Preston, and Manchester; his popularity remaining undiminished.

Madame Biscottesi, a new contralto, will shortly appear in Paris as *Arsace* to the *Semiramide* of Cruvelli, and the *Assur* of Bellotti.

Letters from Barcelona, of the 28th ult., state that the new opera "Jane Shore," the subject of the libretto by Felce Romani, had been produced with signal success, both the composer and the *prima donna*, Madame Juillenne, having been called before the curtain seven times. The music is written in the purely modern Italian school. The finale of the third act was encored, as also a chorus, and the rondo finale of "Jane Shore" in the fourth and last act. Mdme. Juillenne was presented with a magnificent diamond bracelet by the subscribers for her performance of the heroine.

Herr Lindpaintner, the composer, kapelmeister to the King of Wurtemburg, has arrived in town, to conduct the first four concerts of the New Philharmonic Society.

Next week will be a busy one both for amateur and professor. The renowned Philharmonic Society open the campaign under Costa's direction, with Beethoven's "Eroica" and a symphony by Gade. Mrs. Jewson (the niece of Mrs. Anderson) will perform a pianoforte concerto; and Mr. Lucas, Mr. Hinton, and Mr. Howell, a trio by Corelli. On Tuesday, Mr. W. Sterndale Bennett will have his third and last classical pianoforte evening. On Wednesday the New Philharmonic society will commence its second season. On Thursday will be the fourth and last of the Musical Winter Evenings, at which Mr. Hullah will make his last appearance this season. On Friday Mozart's "Requiem" and Mendelssohn's "Lobgesang" will be repeated by the Sacred Harmonic Society, under Costa's direction.

Mr. Allcroft has announced his farewell musical festival, at Exeter-hall, on Monday next, previous to his departure for America.

Signor Alari, the composer, has been appointed accompanyist to the Imperial Chapel of the Emperor Napoleon.

Letters from St. Petersburg state that Viardot's benefit, at the Italian Opera, was attended by the Emperor and Empress of Russia, and that she was called for twenty times. Mario was the *Elvino*.—Madame Parish Alvars, the harpist, gave a concert on the 8th ult. Balfe was the conductor, and Viardot, Mario, Mdme. Meerfort, Mdme. Moray, Rosamil, Mdlle. Dobré, and Labitche, the chief singers. The Emperor presented Mdme. Parish Alvars with a magnificent diamond brooch after playing at the Imperial Palace.

THE THEATRES.

DRURY-LANE.

On Monday the lessee took his benefit, and was rewarded by a full house. Two new pieces were produced on the occasion. The first was entitled "The Maid of Kings." It rela es to the fortunes of *Hedwiga* (Mr. Davenport), the King of Bavaria. This monarch, becoming blind, is conspired against by certain nobles, who seek his abdication. *Amelia*, or rather *Rosamunde* (Miss Fanny Vining), the heiress to the throne, loves their leader, and thwarts the plots to the character of *Joan of Arc*, and succeeds in reinstating the monarch, who likewise is restored to sight. The musical attainments were well acted. Mrs Griffiths also, as *Hedwiga*, had a touching and tender part to perform, which contributed to the success of the comic a tion.

The second new piece was an Oriental spectacle, written by Captain W. H. Armstrong, entitled the "Turkish Lovers." It is the old story of the sack and the Bosphorus; but the Pacha who resorts to this mode of revenging himself on an unfaithful member of his harem, is shot by *Captain Pandora* (Mr. Charles Selby). This incident was extended to two acts by means of some comic scenes, in which Mr. Wild, as a cockney pinmaker, in Turkey, was successful, and some ballet dancing, executed by Mdlle. Julie and little Ada Montgomery. With fresh and grave The literary merits of both these pieces, however, inconsiderable.

ST. JAMES'S.

On Saturday a piece in two acts, entitled "La Parapluie de Damoclès," gave M. Ravel another opportunity for exhibiting his whimsical perplexities, in the part of *M. Stanislas Cotandon*, who lends his umbrella to a lady, and afterwards incurs a world of trouble, responsibility, and risk, from the jealousy of her husband, and the imprudence of *Madame Morisseau*.

M. Lefont made his first appearance for the season on Monday in the vaudeville called "Une Petite Fille de la Grande Armée."

HAYMARKET.—Mr. Webster's lesseeship and management terminate on Monday next, when he will take his farewell benefit; and, on Tuesday, there will be a variety of performances for the benefit of Mrs. Frederick Webster. Mr. Buckstone's lesseeship and management will commence at Easter.

NATIONAL SPORTS.

With the exception of the annual place on the turnpike-road at Kiplin Coates, the flat racing next week will be confined to Warwick; where, on Tuesday and Wednesday, we may look for an average quantum of sport. On the following day, in the same locality, we shall have the "Grand" Military; and on Friday the "Grand" Annual Steeplechase, to be followed on Saturday by the Hurdle-race Handicap. The coursing fixtures are three in number—the Maunsell Memorial Meeting at Clear Club and Galloway on Wednesday—each occupying two days. The season will close in the following week.

TATTERSALL'S.

MONDAY.—So many had left for the Great Spring Meeting at Doncaster, that, except on Lindes, Orestes, Umbriel, and the Reiver for the Derby, the round betting had little to do: on those horses the outlay was considerable. The prices at the close stood as follows:—

NORTHAMPTONSHIRE STAKES.—12 to 1 agst Maria.

	MEDIUM HANDICAP.	
7 to 1 agst Contentment	11 to 1 agst Langrove	30 to 1 agst Fog Orrock
CHESTER CUP.—50 to 1 agst Trifle. 40 to 1 agst Nancy.		

DERBY.

8 to 1 agst West Australian	18 to 1 agst Honeywood (5)	33 to 1 agst Nimshammer
13 to 1 — Cimon	18 to 1 — the Reiver	33 to 1 — Filbert
14 to 1 — Orestes	18 to 1 — Umbriel (5)	40 to 1 — Wolverton Beckon

THURSDAY.—A thin room, and very dull betting-ring duil; important, however, in showing a decline in Honeywood, and a slight improvement in Orestes and Khelbert for the Epsom event. We have but a brief question to submit:—

NORTHAMPTONSHIRE STAKES.—10 to 1 agst Peanut.

	MEDIUM HANDICAP.	
6 to 1 agst Contentment	11 to 1 agst Langrove	11 to 1 agst Foggy
CHESTER CUP.—30 to 1 agst Constallee (5)		

DERBY.

13 to 1 agst Orestes (5)		25 to 1 agst Honeywood
18 to 1 — Birmingham (5)		25 to 1 — Adalbert (5)

THE "GRANITE CITY."—This splendid clipper, intended for the London and China trade, has arrived in the Thames, in sixty four hours, from Aberdeen, and may now be seen in the West India Dock. This magnificent ship has been built by Messrs. Walter Hood and Co., of Aberdeen, distinguished for their successful clipper build—the *John Bunyan*, the *Phantom*, two clippers turned off by them, having made the quickest voyages to China and Sydney yet on record. The *Granite City* measures length of keel, 185 feet; rake forward, 18 feet; rake on stern post, 8 feet; length over all, 193 feet; extreme breadth, 34½ feet; depth of hold, 20 feet: measures 1,000 tons per old register, or 771 tons by the new, and is estimated to carry 1200 tons.

IRISH LAND COMPANY.—The City of Dublin Steam-packet Company have lately brought across from Liverpool the first portion of a carefully selected lot of young cattle and bulls, of the best breeds, and ten excellent work-horses, and a quantity of improved agricultural implements, the property of the Irish Land Company. The stock, &c., has been forwarded, we hear, to the Company's recently-purchased property of Lauespark and Poyntstown, situated in the counties of Tipperary and Kilkenny; and future large importations, we are informed, may be expected for the same property, and for the large portion of the Kingston estate (about 20,000 acres), which the Irish Land Company has purchased. The company possesses property in the counties of Tipperary, Limerick, Cork, Galway, Kilkenny, and Wexford, aggregating nearly 30,000 acres; the larger portion of it is contiguous, and in the two first-named counties. Preparations are being made by the company for an extensive operation on their estates in arterial drainage and other improvements. [illegible] *Notes L.*

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

During the whole of the present week the market for National Securities, notwithstanding that the amount of business transacted in it has been by no means extensive, has ruled steady, and prices have slightly improved. The comparatively small stock of bullion in the Bank of England, considering the abundant yield of gold in Australia and California, has taken some parties by surprise. On the first discoveries being reported, it was assumed that the supply of gold here would increase at a very rapid rate; and that the value of all descriptions of property would rise in the same proportion; but we have borne in mind that capital is a far more delicate thing than labour, and that, although the precious metals are plentifully employed in this country, hence it follows that when a good and secure market can be found for bullion, there it will find its way. Then, again, it has become apparent that large quantities of coined gold have been forwarded to Australia in return for the dust, and that immense supplies have yet to be forwarded from this country. We therefore, are of opinion, that any great increase in the present supply in the Bank can hardly be anticipated. The demand for money for commercial purposes during the present week has been moderate, even the published rate of discount—first-class bills having been done at from 2½ to 3 per cent per annum. Large quantities of paper have fallen due this week; but the accommodations have been given without any pressure. The discount-brokers are full of cash; but money on "call" is worth 2 per cent.

On Monday the Three per Cent Consols were done at 99¾ ⅞; the Three per Cents Reduced, 100 ⅛; and the New Three-and-a-Quarter per Cents, 103⅝. Bank Stock was 227 to 228. India Bonds were done at from 48s. to 53s.; and Exchequer Bills, 12s. to 17s. premium. No material change took place in the quotations on Tuesday; but on Wednesday the Three per Cents, for Money, were 99⅝ ⅞; and for the Account, 99¾. On Thursday, the transfer-books of the Three per Cents, South Sea, Annuities, and the New Three-and-a-Quarter per Cents, 1853, were closed for the dividends. Consols were inactive, yet scarcely any change took place in the quotations. The Three per Cents were 99¾ ⅞; Ditto for the Account, 99¾ ⅞; and the New Three-and-a-Quarter per Cents, 103⅜. India Bonds were 48s.; and Exchequer Bills, 8s. to 13s. prem.

The Foreign House has continued very firm, and prices generally have been well supported. Greek coupons Coupons have sold freely. These securities represent the stock of 1824 and 1825; and it is said that the purchases made by the Dutch buyers are on account of the Government of St. Athos, who are redeeming a portion of the Debt. The quotations have varied from 7½ to 8⅜. The Turkish bondholders committee have received a letter from the Foreign office to the effect that Sir Edward Clarendon has had an interview with the Turkish Minister, who has intimated that it is his opinion that, within a month from this time the Ottoman Government will fully satisfy the claims of the bondholders in this country. In the new Peruvian loan, which is to be issued at from 4⅞ to 5⅛ prem. On Thursday, Brazilian Four-and-a-Half per Cents were marked 97¾; Spanish Bonds, 4⅞ to ⅝; Grenada, ex Dec. 1849, Coupon, 22⅝; Greek over-due Bonds, 8¼ to ⅜, Mexican for the Account, 25½; Peruvian Scrip, 5 prem.; Russian Five per Cents, 113⅝ ⅜ ex div.; Ditto Four-and-a-Half per Cents, 103⅜; Spanish Three per Cents, 43⅝; Ditto, New Deferred, 24; Spanish Committees' certificates, 7¾; Turkish Loan, 2 prem.; Dutch Two-and-a-Half per Cents, 65⅜; Ditto Four per Cents, [illegible].

Miscellaneous shares have been in very moderate request. Australian Agricultural have sold at 10 to 10½; ditto Land, 2½ to 2¾ prem.; Van Diemen's Land, 1 to 1½; South Australian Land, 62 to 63; North British Australian, 1¾ to 2 prem.; Scottish Agricultural Investment, 1¾ to 1⅞ prem.; Nova Scotia, 16 to 16½; Canada Company, 19½ to 19¾; Union Bank of Australia, 9 to 9½; Bank of Australasia, 91 to 92; Oriental Bank, 54 to 55; London Chartered Bank of Australia, 3¾ to 4; English, Scotch, and Australian, 3⅞ to 4; Australasian Steam Navigation, 1 to 1½ prem.; Great Nugget Vein, 2¾ to 2⅞ prem; New South Wales Coal and Intercolonial, ⅜ to ½ prem.; St. Katharine Docks, [illegible] Australian Docks, 3⅞ to 4; Crystal Palace, 4¾ to 5. Canada Six per Cent Stock, 31; General screw Shipping (£12 paid), 11¾; Netherlands Land Enclosure (£2 paid), 2¾; Peninsula and Oriental Steam, 85 to 84½; Royal Mail Steam, 8⅝; Subterranean Telegraph, 2.

The returns of the import and export trade of the United Kingdom for the two months ending on the 7th ult., shows, in round numbers, an increase, as compared with the corresponding period of the last five years, of £1,496,000. The amounts [illegible] £4,821,781; and 1851, £4,817,8[illegible]. In some measure the increase is attributable to enhancement of value; nevertheless, it is evident that our aggregate trade is in a most flourishing state.

The movement in bullion has been again considerable. Two steamers have arrived from the West Indies, bringing about 2,250,000 dollars—£5,000 being on account of the Mexican dividends. From New York, 950,000 dollars have come to hand; whilst £100,000 have been received from Australia, and £7 00 from Africa. The shipments have been nearly £300,000—chiefly in sovereigns to Sydney and Port Phillip.

The market for Railway shares has been by no means active; prices, however, have ruled steady. The following are the official closing prices on Thursday:—

ORDINARY STOCKS AND SHARES.—Aberdeen, 30; Ambergate, Nottingham, and Boston Junction, 68; Bristol and Exeter, 103½ ex div.; Caledonian, 68; Chester and Holyhead, 22½; Dublin and Belfast Junction, 46 ex div.; Eastern Counties, 13⅜ ex div.; East Anglian, 2; Edinburgh and Glasgow, 75½; Edinburgh, Perth, and Dundee, 53; Glasgow and South-Western, 95; Great Northern Stock, 82 ex div.; ditto, A Stock, 45; ditto, B Stock, 193 ex div.; Great Western, 52 ex div.; Lancashire and Yorkshire, 78½; Leeds Northern, 16; London and Blackwall, 9 ex div.; London and Brighton, 104½; London and North-Western, 115⅞ ex div.; London and South Western, 87½ ex div.; Midland, 76¾ ex div.; Newmarket, 9¼ ex div.; Newport, Abergavenny, and Hereford, 19½; Newry and Enniskillen, 5½; Norfolk, 83¾ ex div.; North British, 30¾; North Staffordshire, 13¾; Scottish Midland, 65¾; South-Eastern, 75¾; Thames Haven Dock and Railway, [illegible]; Vale of Neath, 14¾ ex div.; Waterford and Kilkenny, [illegible]; West Cornwall, [illegible]; York, Newcastle, and Berwick Extensions, 19¾ ex div.; York and North Midland, 30¾ ex

LINES LEASED AND FIXED RENTALS.—Hull and Selby Quarter Shares, 27½ ex div.; Lowestoft Guarantee 4 per cent, 10¾ ex div.; North and Eastern, 65 ex div.; South Staffordshire, 8¾ ex div.; 46 par Value [illegible].

PREFERENCE STOCKS AND FIRST CHARGES.—Caledonian, [illegible]; Eastern Counties, [illegible]; Great Northern 4½ per cent, 105; Great Western 4½ per cent, 103¾; London and Brighton 6 per cent, 150; Londonderry and Enniskillen, 10½; Manchester, Sheffield, and Lincolnshire, £10 shares, 16½; North British, 10½; South Devon, New, 10½; South Yorkshire 4 per cent, 99¾; York, North Midland B and S, Purchase, 20.

FOREIGN.—Dijon and Besançon, 11; Grand Junction of France, 14½; Luxembourg, 6⅜; Northern of France, 30⅜; Ditto, 250 Bonds, 14½; Norwegian Trunk Preference, 8½; Paris and Lyons, 27½; Paris and Rouen, 6¾; Paris and Strasbourg, 29½; Rouen, Caen, and Cherbourg, 5¾; Upper India Scrip, 3 prem.; Western of France, [illegible].

Mining shares have sold steadily. Australian have been in request. Freehold, 1¾; British Australian Gold, 1⅜; Imperial Brazilian, [illegible]; St. John del Rey, 30⅜; Cobre Copper, 43⅜; Colonial Gold, 2⅜; Cornish Copper Miners of England, 70; Great Nugget Vein, [illegible]; Mexican and South American, 6⅜; Port Phillip, 1⅜ to [illegible]; Scottish Mexican, 6⅜; Ditto, 1 prem.; West Macquarie, 1⅜.

FRIDAY AFTERNOON.—The favourable accounts received from the gold fields have had some effect upon the Consol Market to-day. Consols have been steady, at 99⅝ ⅞ for Money and 99⅞ for the next Account. India Bonds have sold at 49s and Exchequer Bills, 12s. premium. Exchequer Bonds Railway Shares have been very [illegible].

THE MARKETS.

CORN EXCHANGE (Friday).—During the week the arrivals of wheat have been on a very moderate scale, and the supply of foreign has been small, both as regards the aggregate and the number of cargoes now on the market.

Gibraltar and dantzic have moved off a fair supplies with rank, on which a good business has been done, and prices have ruled steady, the supply of which was [illegible].

ARRIVALS.—English wheat, 2,416; barley, 1,350; malt, 1870; oats, 1200; flour, 1070. Irish: oats, 870. Foreign: wheat, 3,080; flour, [illegible]; oats, 2,000 barrels.

English.—Wheat, Essex and Kent, red, 42s. to 45s.; ditto, white, 43s. to 47s.; Norfolk and Suffolk, red, 39s. to 42s.; ditto, white, 42s. to 46s.; rye, 30s. to 31s.; grinding barley, 20s. to 23s.; distilling ditto, 25s. to 26s.; malting ditto 30s. to 36s.; Lincoln and Norfolk malt, 54s. to 56s.; brown ditto, 50s. to 53s.; Kingston and Ware, 57s. to 58s.; Chevalier, 62s. to 66s.; Yorkshire and Lincolnshire feed oats, 19s. to 21s.; potato ditto, 19s. to 20s.; Youghal and Cork, black, 18s. to 19s.; ditto white, 20s. to 21s.; Sligo, 18s. to 20s.; Limerick, 19s. to 20s.; Galway, 20s.; tares, 30s. to 32s.; beans, 30s. to 32s.; grinding ditto, 28s. to 30s.; peas, 30s. to 32s.; boilers and maples, 32s. to 34s.; flour, sacks and barrels, 30s. to 32s.

Foreign.—Wheat, [illegible]; barley, [illegible]; oats, 18s. 9d.; rye, [illegible]; beans, [illegible]; peas, [illegible]; flour, [illegible].

Seeds.—Trade continues very dull, the demand confined to a very restricted state, and prices are rather lower. Fine yellow Mustard, 8s. to 9s. per bushel; fine brown, 7s. to 8s.; white, 10s. to 12s.; good to fine white Bengal, 9s. to 10s.; Tares, 30s. to 32s.; Linseed, 50s. to 52s.; Hempseed, 36s. to 38s.; Canary, 48s. to 52s. per quarter; Carraway, 28s. to 30s. per cwt.; Coriander, 10s. to 12s. per cwt.; Rapeseed, 24l. to 25l. per last of 10 quarters. Linseed cakes, English, 6l. 10s. to 6l. 15s.; Foreign, 6l. 5s. to 6l. 10s. per ton. Rapeseed, 6l. 10s. to 6l. 15s. per ton. Rape cakes, 4l. 10s. to 4l. 15s. per ton. Hempseed cakes, 5l. 10s. to 5l. 15s. per ton.

Potatoes.—The prices of potatoes brought in the metropolis are from 7d. to 8d.; of household ditto, 5d. to 6d. per 8 lbs. [illegible].

Imperial Weekly Average.—Wheat, 45s. 9d.; barley, 31s. 7d.; oats, 18s. 2d.; rye, 30s. 6d.; beans, [illegible]; peas, [illegible]; flour, [illegible].

Sugar.—The supplies on offer [illegible] and the trade rules firm, and prices are the turn higher. Fine yellow Barbadoes, 39s. to 40s.; fine red ditto, 38s. to 39s.; good to fine white Bengal, 38s. to 39s.; fine ditto, 40s. to 41s.; low brown ditto, 34s. to 35s.; good to fine yellow ditto, 36s. to 37s.; fine ditto, 38s. to 39s. per cwt. Refined goods are in steady request, at from 42s. to 46s. per cwt. The total clearances to the 5th inst. were 11,000 cwt., against 1,000 cwt. for the corresponding week in 1852.

Coffee.—Fashionable kinds are in moderate demand, at full currencies; but good ordinary sorts are dull, and 1s. per cwt. lower. Plantation Ceylon, 44s. to 46s.; native ditto, 42s. to 43s.; Mocha, 60s. to 62s.; fine Jamaica, 52s. to 54s.; good ordinary ditto, 48s. to 50s.; fine Costa Rica, 48s. to 50s.; middling ditto, 44s. to 46s.; fine Cuba, 46s. to 48s.; good ordinary ditto, 42s. to 44s.; fine Java, 48s. to 50s.; good ordinary ditto, 44s. to 46s.; fine Ceylon, 46s. to 48s.; good ordinary ditto, 42s. to 44s.; fine

THE AMERICAN EXPEDITION AGAINST JAPAN.
THE UNIVERSAL LIBRARY, Part 10, for March, contains
KEMPFER'S JAPAN. A new and carefully revised edition. With Frontispiece and Vignette. 112 pages, royal 8vo. Price 1s.
On the 1st of APRIL will be published, Volume I. of
TALES OF THE CITY OF LONDON.
OSBERT OF ALDGATE: a Tale of the Goldsmith's Company. Handsomely printed in fcap. 8vo. 160 pages, price 1s. 6d., bound in cloth, with Illustrations by Kenny Meadows.
PROSPECTUS. Under the title of "Tales of the City of London," it is proposed to issue a series of volumes, which, while interesting and, from the works of fiction, will, at the same time, be correct delineations of the manners, customs, and habits of life, public and private, of London at various periods of its history. The Tales will chiefly have reference to the great City Companies, of which so many claim of wealth and honorable remain, and of one or other of which each person may be a member himself or through a friend. The events of the Tales will be laid in different periods, so that the whole will comprise a distinct and consecutive account, without repetitions, of the customs and costumes, the houses and the ha bits, and the modes of thought and action of the London citizens, from the 1st to the 19th centuries inclusive.
No pains will be spared to render those accounts in every historical and descriptive particular of the texts; and also no time and expense will be spared in the selection of subjects for the series. Each Volume will be complete in itself, and contain about 320 Engravings, carefully executed, from the costume, architecture, a rest scenery of each period. &c., will be carefully executed from authentic sources.
Intending Subscribers are requested to give their orders to any Bookseller in London, Dublin, or Edinburgh, and they will be supplied with the First Volume on the day of publication.
Just published, in post 8vo. cloth, price 7s. 6d.,
THE FLIGHT of the PIGEON; or, a Trip from Paris to Vienna. By DRAPEAU BLANC. "The narrative is throughout lively, easy, and rapid."—Britannia.

NEW BOOKS, &c.

NEW WORKS by the Rev. JOHN CUMMING, D.D., Minister of the Scottish National Church, Crown-court, Covent-garden.
1. THE CHURCH BEFORE the FLOOD. Third Thousand. Handsomely bound and gilt, fcap. 8vo. price 5s.
"For a well-digested, and at the same time popular exhibition of the fundamental principles defined from the history of primeval humanity we [illegible] to the present work, which [illegible] for [illegible] a series of characteristic [illegible] incidentally discussed with a force and clearness that cannot but be effective and at once gain a wide circulation."—Morning Advertiser.
"It is written with great completeness, beauty, and lucidity. The volume may be read with profit by all professing Christians."—Church and State Gazette.
"A series of lectures on the book of Genesis, in which the chief events are seized on in their interesting portion of holy writ are explained and commented upon in Dr. Cumming's usual clear and attractive style. We have no doubt the present volume, like the former of the series, and we have no doubt that all its readers will be equally gratified, and, we trust, instructed."—Worship Advertiser.
2. SABBATH EVENING READINGS on the NEW TESTAMENT.
Vol. I. (December will have, in successive Month's Numbers), price 5s. in the lowest publish price, an entirely [illegible] critical, and a fair copy has any and great on comment on the Lessons or Gospels of the New Testament read in successive Sabbath evenings in public worship. The Author has found his exposition of the Lessons so useful, that he has very often determined his sermon [illegible] went to [illegible] the exposition. Long also [illegible] a most popular edition of the Sabbath evening [illegible] edition of the New Testament by Alford is most popular. Macnaught, Barnes, Henry, and Scott have their distinctive merits, but the Author thinks there is room for a work which, in less bulk, shall unite a way that Scott's is, and a union which has now interest, and which he hopes will be found in these pages. Such expositions will, after all, [illegible] engagements at command, and [illegible] for general study of God's Holy Word than they could with schools, Scripture [illegible] and [illegible] Sabbath evening [illegible] and [illegible] proposed to publish in more interesting and even instructive, than learned and formal sermons. To produce such productions is a congregation not good enough for the public if needful; the one, they must be of some use to the other. To be continued in Monthly Parts, price 1s.
3. WELLINGTON: a Lecture. New and Enlarged Edition, with additional Notes, and Portrait by Jeens, price 6d.
"The Lecture is characterized by all the author's vigour of language, picturesqueness of style, and aptness of illustration that, though Dr. Cumming has now attained a reach rank, he has lost [illegible] as a way that gives it freshness and brightness the interest which it cannot fail to inspire in every reader."—Morning Advertiser.
4. THE FINGER of GOD. In Fcap, neatly bound. 2s. 6d. in presentation.
5. FORESHADOWS; or, Lectures on our Lord's Miracles and Parables as Earnests of the Age to come. Fifth Thousand. Two Volumes, neatly bound, price 6s. each. Each volume is complete in itself, so that the whole may be read at once or the other. To be continued in Monthly Parts, price 1s.
6. Apocalyptic Sketches; or, Lectures on the Book of Revelation, delivered in Exeter-hall and Crown-court Church. New Edition, revised and corrected by the Author, with Index, &c. Twelfth Thousand. In Two Volumes, price 8s. each, cloth gilt; or, handsomely bound, 10s. 6d. each.
7. LECTURES on the SEVEN CHURCHES of ASIA: Ephesus, Smyrna, Pergamos, Thyatira, Sardis, Philadelphia, Laodicea, illustrated by Wood Engravings, elegantly bound and gilt, price 5s.
8. PROPHETIC TIMES; or, Lectures on the Book of Daniel. Price 1s. Fourth Thousand. Prize to each gift; or 1s. interest extra.
9. OCCASIONAL DISCOURSES. New Edition, in Two Volumes, price 6s. each, cloth gilt.
10. LECTURES for the TIMES; or, Illustrations and Refutations of the Errors of Romanism and Tractarianism. New Edition, in Two Volumes.
11. THE CELEBRATED PROTESTANT DISSENTING Sermons by the Rev. JOHN CUMMING and DANIEL PRATT. Four Discourses on [illegible] price 1s., cloth, gilt edges.
12. OUR FATHER: a Manual of Family Prayers for General and Special Occasions, with Short Prayers for Spare Minutes, and Passages for Reflection. Fifth Edition, in foolscap 8vo. price 3s., cloth, with gilt edges.
13. "IS CHRISTIANITY from GOD?" A Manual of Evidence for Young Persons. Fcap. 8vo. price 2s. 6d., cloth.
London: HALL VIRTUE, and Co., 26, Paternoster-row.

Now ready, price 2s. 6d. each, neatly bound; or in Numbers, at 2d.
TUTOR'S ENGLISH GRAMMAR, TUTOR'S NATURAL GEOGRAPHY, TUTOR'S POPULAR GEOLOGY, TUTOR'S HISTORY of ENGLAND. Each of these numerous miscellaneous masters of a highly instructive character, and perfectly adapted for the purposes of Schools and Families. Volumes of the FAMILY TUTOR. Each numbers, and covers for binding the volumes, price 6d. each, are now ready. Also, Part I. of the Volumes of the "Family Tutor," natural philosophy forms the leading subject of the Fifth Volume. Catalogues post free on application.—W. and R. CHAMBERS, Publishers of Cyclopædias, a system of education with special reference to learning, on the Treatment of Stammering and Defective Articulation together with a series of Exercises for the Cure of Stammering and Kindred Impediments. These systems are varied by miscellaneous matters, calculated to form a pleasing and instructive Reading Book for Schools, especially introduced. Published fortnightly, at 2d. each number.
London: HOULSTON and STONEMAN, 65, Paternoster-row; and all booksellers.

Just published, 12mo. 414 pages, 3s. 6d., bound,
HISTORY of ENGLISH LITERATURE: with an Outline of the Origin and Growth of the English Language. Illustrated by Extracts. For Schools and Private Students. By the Rev. ARTHUR Professor of Logic, Rhetoric, and Belles-Lettres in the University of St. Andrews.
"A compilation and well-put-book of a very superior kind.... Mr. Spalding has brought to his survey not only a knowledge of our [illegible] and a [illegible] power, but a [illegible] and a [illegible] of [illegible] which [illegible] to his subject. The volume is the best introduction to the subject we have met with."—Spectator.
"A book of high merit. We know no [illegible] and a man of learning and industry, taste and critical acumen, could have produced."—Christian Witness.
"Well adapted for school study."—Educational Times.
Edinburgh: OLIVER and BOYD; London: Simpkin, Marshall and Co.

SAUNDERS and OTLEY, Conduit-street.

New Edition of the best Ball-room Guide published, price 1s.,
ETIQUETTE of the BALL-ROOM; containing the Steps and Figures of all the new and fashionable Dances, with Hints and Instructions respecting Toilette and Deportment. By Mrs. NICHOLAS HENDERSON. Sent post free for six stamps, by G. BIGGS, 67, Strand.

NEW MUSIC, &c.

JULLIEN and CO.'S MUSICAL LIBRARY. Is now open, Three Guineas per Annum.—The principal feature which distinguishes this Library from all others is that the Subscribers, besides being liberally supplied on loan during the year with all Standard as [illegible] Vocal and Pianoforte Compositions, are also presented with Three Guineas' worth of music every year, which none be selected by themselves during the term of Subscription. [illegible] forwarded free on application to JULLIEN and Co., 214, Regent-street.

NEW MUSIC.
THE GHOST PHANTASY. By NORDMANN. A most effective and interesting piece for the Piano on the celebrated Ghost Fantasy in the "Russian Brothers." 3s. 6d.
LUGKNIE VALSE IMPERIALE. By WALDMÜLLER, with a true and beautiful Portrait of the French Empress, by Leighton. 3s. "Every dancer will so congratulate with it, it, also used with an play will soon have its by heart."—Ethe. Feb 19.
AURORA GALOP DE CONCERT. By GOLLMICK. The most brilliant and fascinating drawing-room composition by this graceful pianist. 3s.
DOBSEY and SON, 22, Hollis-street.

THE TEN GUINEA HARMONIUM, with all the late improvements, manufactured solely by Messrs. WHEATSTONE and Co. (who received the only Exhibition Prize Medal for the instrument), has the full compass of five octaves, with metallic & rich sustaining tone, which can be produced either loud or soft at pleasure [illegible] not requiring, and [illegible] to the [illegible] organ. Also an extensive variety of Harmoniums, with the new patent Pianoforte Bass introduced, from 14 Guineas. Wheatstone's instructions for the above. Is.—WHEATSTONE and Co., Inventors and Patentees of the Concertina, 20, Conduit-street, Regent-street.

PIANOFORTES. Elegant Rosewood, Mahogany, or Walnut, 18 Gs. Semi-Cottage, 20 Gs. Cottage, 22 Gs. Semi-Grand, 25 Gs. Grand, 30 Gs. PIANOFORTES having various, guineas warranted.—H. TOLKIEN, the original Maker of the [illegible] for [illegible] 27, Berners-street, Oxford-street.

PEACHEY'S PICCOLO PIANOFORTES.—First-class, for H.R.H., with option of purchase. Second-hand Pianofortes, all makers, from 15 Gs. Every description at half-price. Sale, Hire, or Exchange.—City of London Manufactory, 104, Bunhill-row, Finsbury.

CHUBB'S FIRE-PROOF SAFES and DOORS.—These Safes are now made secure from Fire, and Thieves and Housebreakers, and are guaranteed by the Makers. Illustrated Lists of all sizes, Complete Safes, with Iron Doors, in Stock, and Orders executed at the Manufactory, 28, Ludgate-hill, Warehouse, 57, Fleet-street, and 28, Ludgate-hill.—CHUBB and SON, 57, St. Paul's Churchyard, London; 28, Ludgate-hill, Liverpool; 16, Market-street, Manchester; and Wolverhampton.

NO CHARGE MADE FOR STAMPING PAPER and ENVELOPES with Arms, Crests, or Initials and Stationery of every description, at manufacturers' prices. RODRIGUE'S Steam-hall Establishment, 34 and 36, Cornhill, 100 yards from the Mansion-house, five doors from Birch's. Crest Die, 5s. Name Plate, 3s. Initial Die, 2s. Business Die, 5s. Arms, Crests, or Initials,

PROTESTANT TESTIMONIAL TO THE REV. DR. CUMMING.

EARLY in 1852, a public meeting of the friends of Protestantism was held in Exeter-hall, for the purpose of recording their sense of the services of the Rev. Dr. Cumming, in advocating and defending the Protestant cause against the recent attempted encroachments of Romanism. Sir Peter Laurie presided The meeting was numerously attended, and amongst the influential persons countenancing the object were, the Duke of Montrose, the Earl of Shaftesbury, the Earl of Cavan, Earl Ducie, Sir John Maxwell, Bart., &c. After some discussion, the meeting embodied their sentiments in the following resolutions, which were unanimously assented to :—

"That, being deeply impressed with the eminent services rendered by the Rev. Dr. Cumming to the great cause of Protestant Christianity, this meeting is desirous of recording, by some suitable and substantial testimonial, the grateful sense they entertain of the faithfulness, eloquence, and ability with which he has advocated and maintained the purity of that faith so dear to Christians of every denomination of the Protestant Church."

"That, in order to give effect to the intentions of the meeting, and to secure the co-operation of all who, irrespective of political bias or religious denomination, revere the great principles of the Reformation, the following noblemen and gentlemen be appointed a committee:—The Duke of Montrose, the Earl of Shaftesbury, the Earl of Cavan, the Earl of Mayo, the Earl of Ducie, Lord Berners, Lord Kearne, Sir J Heron Maxwell, Bart., Sir Ralph Anstruther, Bart.; Sir William Baynes, Bart.; Sir James Duke, Bart; Sir Peter Laurie, Hon. and Rev. L. Noel, Mr Charles Baring, P. Northal, Laurie, Esq., George Moffatt, Esq., M.P.; John Hardy, Esq., M.P.; Mr Pownall, Dr. Mc Neile, Principal Macfarlan, Glasgow, &c."

In a comparatively brief period this committee reported that the object they had in view had met with the cordial concurrence of a large and influential body of Christians of every denomination of the Protestant Church, and that they had received an amount of support fully equal to their anticipations.

Another meeting was then held to consider the nature of the testimonial to be presented, when it was unanimously resolved to present Dr Cumming with a purse of a thousand guineas, and a service of plate of the value of about 300 guineas. The service of plate, which has just been presented, was manufactured by Messrs. Hunt and Roskell; it is exquisitely engraved, with designs from Teniers (see Engraving), and bears the following inscription :

Presented, with one thousand guineas, to the Rev. Dr. Cumming, by a few of his friends, as a testimony to the faithfulness, eloquence, and ability with which he has advocated and maintained the purity of that faith so dear to Christians of every denomination of the Protestant Church. 1851-52

The subscribers to the testimonial are extremely numerous, and, amongst others, is the name of the premier peer of England, his Grace the Duke of Norfolk.

We annex a sketch of the life of the popular divine, who has just received this distinguished honour :—

The Rev. Dr. Cumming sprung from Highland parentage, and was born in Aberdeenshire, in the year 1809. He received his early education at the grammar-school of Aberdeen, where he gained the fourth prize previous to entering upon his University studies; which, in due course he commenced at King's College, Aberdeen. Here, also, he distinguished himself by his literary proficiency, and was third prizeman before taking his degree of A.M., in 1827. While at the University he studied theology with great care and remarkable success, under the late Dr. Mearns, at that time Professor of Divinity at King's College, whose gravity and purity of manners, and warm attachment to the principles of the Reformation peculiarly fitted him for the honourable office of instructing and guiding in religious knowledge those who were destined hereafter to disseminate and exemplify in practice the great truths of the Gospel. Respecting his University career little is known but that he was distinguished for his classical attainments; and so respectable were his acquirements in the Latin language, that he was not unfrequently invited to criticise the discourses delivered by the students in that tongue in the Divinity-hall. Mr. Cumming was also, we believe, an active member and honorary secretary of the Literary Society, composed of the students in the University, and in that capacity became extremely popular

The public career of Dr. Cumming may be said to have commenced with his entry upon the ministry of the Scotch National Church, Crown-court, Covent-garden, which took place towards the latter end of the year 1832. This church, then a small edifice, was occupied by a congregation in connection with the Scottish Presbytery in London, a branch in connection with the National Church in Scotland. His labours here were soon found to be acceptable, and his amiability of manners, combined with an ardent Christian zeal, endeared him to his congregation.

But now a period approached in which he was brought more prominently before the public. The doctrines of the Reformation being established, controversies took a turn towards matters of discipline, both in England and Scotland. It would be out of place, in a rapid sketch, even to allude to the numerous topics which agitated the minds of Protestant Christians in the days of the Stuarts; but, in the days of William III., it resulted in the Presbyterian form of Church government being established in Scotland, and England maintaining her Episcopal system. Through the excessive zeal of Wesley, Whitfield, Venn, and others, which drew upon them much opposition, the Non-conforming party were brought prominently forward; and ultimately the question of "separation of Church and State" became the topic of the day. Wardlaw and Chalmers were the chosen champions on either side. Highly animated and interesting were the discussions which took place. Public meetings were held, at which many able men distinguished themselves, and, amongst others, Dr. Cumming. At a public meeting held at the Freemasons' Tavern, in 1837, presided over by Lord Ashley, Dr. Cumming so ably distinguished himself upon the importance of National Church establishments, as to receive letters of thanks from the then Archbishop of Canterbury and the Bishop of London

During this period, the long agitated question of the Roman Catholic claims had been settled in Parliament, and had drawn attention to the theological points of difference between the two Churches In 1839 Mr. David French, a very learned and accomplished scholar, and a barrister, was put forward by the priests to meet Dr. Cumming in a Roman Catholic controversy, to which Dr. Cumming had given great attention. The discussion lasted eleven days. Mr. George Finch, M.P. for Stamford, was chairman on the Protestant side, and Mr. G. Weld was chosen Roman Catholic chairman. The entire controversy, which excited considerable attention, was published, and obtained an extensive circulation. For a controversy of this description Dr. Cumming was pre-eminently fitted. His classical acquirements and knowledge of the fathers and early writers of the Christian church, proved of the greatest service; and his congregation, who took a pride in his theological accomplishments, made him a present of a complete edition of the "Fathers," together with a service of plate, worth £260.

The Protestants at Hammersmith, also, where the controversial discussion took place, were so satisfied with the manner in which their champion had acquitted himself, that, at a public meeting, they presented to him the Bible in nine languages, elegantly bound, and bearing a suitable inscription, expressive of their sense of his services

During this time Dr. Cumming's congregation continued to increase, and his church was successively enlarged: in 1841, at an expense of £2000; in 1847 at an expense of £3000; and, in 1848, the church and schools were rebuilt at an expense of £9000, which, with the exception of about £1200, was entirely defrayed by his congregation. The church now presents a very chaste specimen of Norman architecture, with open oak roof and stained windows. Adjoining, are spacious schools. During the enlargement of his church, Dr. Cumming preached in Exeter-hall every Sunday; and for six months the large hall was densely crowded.

We have omitted to mention that in 1844 he received his degree of D.D. from the University of Edinburgh.

A period now approached of considerable national excitement. In the autumn of 1850 Cardinal Wiseman forwarded to England for publication his celebrated pastoral, or edict, dated "The Flaminan Gate of Rome, Oct. 7th, 1850," which startled all England. "We were," said his Eminence, "enabled to ask for the archiepiscopal *pallium* for our new see of Westminster; and this day we have been invested by the hands of the supreme pastor and pontiff himself with this badge of metropolitan jurisdiction." Dr Cumming was requested by influential persons to enlighten the public mind on this matter. He announced a lecture in the Hanover-square Rooms, in November, 1850; and such was the anxiety to hear, that, hours before, the room was densely filled, and the square and surrounding streets crowded. Dr. Cumming irrefragably identified Dr. Wiseman with St. Liguori, and showed to demonstration what Englishmen had to expect from the Pope's present.

Dr. Cumming then gave notice of a second lecture on the archiepiscopal oath of Dr. Wiseman, who stated that he was exempt from taking a clause in the oath on which Dr. Cumming had great stress, and accordingly invited the Doctor to his house to examine his pontifical. Dr. Cumming went, and, to the amazement of the public, pointed out the pre-ecuting clause in the oath, "I will persecute and attack heretics and Dissenters, and all resisters of Pio Nono with all my might." The exertions of Dr. Cumming in the Protestant cause upon this memorable occasion have been marked by the presentation of the testimonial we have described.

Dr. Cumming's works are numerous, and suited to the circumstances and the exigences of the age. Most of them have had a large circulation, particularly his "Apocalyptic Sketches." His latest published work, the "Church before the Flood," is a fair specimen of the interesting style and dress with which he clothes his pulpit labours. He is "in season, and out of season," engaged in Christian and benevolent efforts; and is, altogether, one of the most active and indefatigable pastors of modern times.

THE REV. DR. CUMMING, MINISTER OF THE SCOTCH NATIONAL CHURCH, CROWN-COURT, COVENT-GARDEN

TESTIMONIAL PRESENTED TO THE REV. DR. CUMMING

THE CORRIDOR OF THE COMMITTEE-ROOMS, HOUSE OF COMMONS

THIS Corridor, which runs nearly the whole length of the New Palace of Westminster, gives access to a vast number of Committee-rooms of the House of Commons; a similar one, but more lofty, beneath it, forming the means of access to the Conference-rooms, the Lords' Committee-rooms, and the Libraries of both Houses of Parliament. There is a smaller corridor above the one in our Engraving, leading to other and smaller committee rooms. The vista produced by the almost unbroken line of Corridor forming the subject of our Engraving, is very striking from its immense length, and there is ample space on the walls for portraits, or other small pictorial embellishment.

The ceiling is flat, paneled, and simply coloured, but not in rich diaper work. The seats, wainscoting, and framings to the doors are of oak; the latter being very nicely designed. Each committee-room has two doors one for the "Members," the other the "Public Entrance," and they are so named in labels painted over each. Small brass frames are fixed in the sides of the doorways, and the name of the committee sitting in each room is printed, and slipped into these frames. Each window has a stout desk, with ink standishes in it, so that parties engaged in the committee matters can write and transact business out of the committee-rooms.

CORRIDOR TO THE COMMITTEE-ROOMS OF THE HOUSE OF COMMONS —(SEE PAGE 194.)

THE ILLUSTRATED LONDON NEWS

No. 613.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MARCH 19, 1853. [SIXPENCE.

THE INAUGURATION ADDRESS OF THE NEW AMERICAN PRESIDENT.

On the 4th of March—as we learn from the latest Transatlantic intelligence, conveyed by the *Arctic*—the inauguration of General Pierce as President of the United States took place, at Washington, with such simple ceremonial as the severe forms of Republican government dictate. The usual Address pronounced by American Presidents upon assuming office was listened to with great interest, and evoked general approbation. The capitol was very full, and the occasion was felt to be one of great importance.

The Address is somewhat vague, but still we have before us enough of General Pierce's views to be able to estimate in some degree his policy. It is true that these views do not appear to us to present a perfect consistency, or an unbroken coherency. The tone of the speech—its sentiment and tendency—vary; and the aggressive and defiant passages contrast oddly with professions of a peaceful policy, and a strict observance of international law.

The General began by a natural expression of gratitude to the people who had raised him to his present elevation, and next entered into a dignified eulogium on the Constitution of the United States, which had thus far fulfilled its duties to suffering humanity; and never ceased, by its prosperity, its tranquillity, and its rapidly increasing intelligence and wealth, to announce to he whole world the results of the largest rational liberty. To the truth of this assertion no positive objection can be made. In the history of nations, the rapid rise and unchecked progress of America stands unrivalled. And though, of course, much of her extraordinary career is to be attributed to the as extraordinary natural facilities afforded her, yet the constitutional freedom of the States may be fairly said to have always exercised as great an effect as the boundless prairie and the endless river. This result, President Pierce added, had dispelled a degree of solicitude which had formerly been strongly felt, as to the possible evil results of a vast extension of American power and American soil. The orator alluded to the bold hearts and far-reaching intellects of the men who had been disturbed by gloomy visions of the future, which he regarded as being now entirely dispelled. We may fairly, however, question—and that from the very document before us—whether the time has even yet arrived which their "far-reaching" intellects stretched to. "The apprehension," the orator continues, "of increased danger from extended territory and multiplied states, has been proved to be quite unfounded. The greater our power—our wealth—our hold of the earth's surface, the better our position." From this statement of principle there can be but one inference; and here it is:—"The policy of my administration will not be controlled by any timid forebodings of evil from expansion." An ominous sentence, this; and reading "annexation" in every letter. The "timid forebodings of evil from expansion"—the lesson read from the past as to the policy of the future; all this has a deep significance, which the context increases and confirms. "Indeed"—such was the pith of the President's words—"it is not to be disguised that our attitude as a nation and our position on the globe, render the acquisition of certain possessions not within our jurisdiction, eminently important for our protection, if not in the future essential for the preservation of the rights of commerce and the peace of the world." We can imagine the feelings of the auditors as they listened to this enunciation of aggressive policy. Cuba swam before their eyes; the rich territories of Mexico rose up to their gaze. Did it—there is a sort of possibility of the fact—extend to the mountains of Jamaica, and certain continental possessions called Berbice and Demerara? At all events, more soil, more space, more extended dominion are passions never absent from the heated mind of a true American. A phantom of aggression is continually beckoning, and eagerly does the nation obey. Yet, let it be observed how General Pierce now changes his tone and proceeds to drape his warlike image in a sort of drab Quaker costume. The conquests of the unambitious States will be made through no grasping spirit, but in a manner "entirely consistent with the strictest observance of international faith." General Pierce will read to the world its first lesson in the art of appropriating independent States in the severest spirit of self-denial, and seizing upon the property of one's neighbours with the highest respect for every moral precept and every established law. That "we have nothing in our history or position to invite aggression," is a curious statement from an American General who won his military rank in a pure war of aggression, and whose voice has always been for gaining territory at all costs and all risks. But up to what point does all this boast of intention to add ever so many more stars to the thirty-three, which we believe at present constitute the United States constellation—lead up to? "Relations of peace and amity with all nations"—"purposes as once just and pacific," and the careful avoidance of any "act which cannot challenge a ready justification before the tribunal of the civilised world." Surely this conclusion sounds oddly, drawn from such opposite premises. The trumpet has become a shepherd's reed. The signal to charge fades away into a pastoral melody, but somehow leaves a warlike impression ringing in the ear and in the brain, which survives the succeeding billing and cooing, if it do not drown it. Notwithstanding, however, the President goes on with his pacific strain:—"The great objects of our pursuit as a people are best to be attained by peace." A great truth; but unfortunately quite inconsistent with one or two preceding passages, in which the "timid forebodings of evil from expansion" are derided, and the "acquisition of certain possessions" is warmly advocated.

These points passed, the remaining portion of the speech is unobjectionable. It refers to the determination of the States to keep clear of European warfare, but to cultivate European commerce. The doctrine of reciprocity is strictly laid down—a fact which we trust may prove an indication that we are about to reap some benefit from the repeal of the Navigation laws. The state of international copyright is also included in the idea. The maintenance of standing armies is next sternly repudiated—an opinion which very few of our own generals would be likely to share in. "Devoted integrity in the public service, and observance of rigid economy," are pledges, of course; and the Address concluded, by an assurance that the speaker is totally a stranger to all ties and associations, personal or political, which might influence his conduct as a ruler; and a promulgation of his opinion somewhat in the style of a postscript, that the "compromise" laws of 1850, relating to the slavery system, are strictly constitutional, and ought to be unhesitatingly carried into effect. This declaration, however, it will be observed, contradicts the preceding statement, as General Pierce now acknowledges belonging to a political party. The Southern States carried him into office, and to the Southern States it is known that he has ever been inclined by birth, by opinion, and by gratitude.

GENERAL PIERCE, THE NEW PRESIDENT OF THE UNITED STATES.—FROM A DAGUERREOTYPE BY MEADE BROTHERS, NEW YORK.

MEMOIR OF GENERAL PIERCE.

THE new President of the United States is developing extraordinary and unexpected qualifications for the Presidential office. His force of character, his political experience, his chivalrous bravery in the field, and his statesmanlike sagacity in council, afford the amplest warrant for the general belief that the destinies of the Union could not be entrusted to firmer or more prudent hands.

His friends agree that the most remarkable characteristic of his mind is its progressive growth and development. His biographer and early companion, Nathaniel Hawthorne, says of him, whenever they met in early life:—"Always I was sensible of progress in him. He widened, deepened, rose to a higher point, and thus ever made himself equal to the ever heightening occasion." We make thus prominent mention of a peculiarity of intellectual growth, continued beyond an ordinary period, because General Pierce's tendencies are favourable to Free-trade; and because the happy and prosperous results of the great commercial experiment made by this country are not likely to be lost upon the mind of an enlightened statesman, so well able to discern the needs of the age as the new President of the United States.

Franklin Pierce, the sixth son of General Benjamin Pierce, was born at Hillsborough, New Hampshire, Nov. 23, 1804. His father, who was one of the earliest settlers of Hillsborough, left his home in 1776, after the events at Lexington and Concord, and joined the revolutionary army. He fought at Bunker's-hill, and served through the whole of the War of Independence. He was afterwards elected to the State Legislature, and became member of the Council. He was brave, public-spirited, and patriotic; and lived to be elected Governor of New Hampshire, and to enjoy in a green old age the distinctions which the virtues and talents of his son enabled him early to achieve.

Franklin Pierce (or Frank Pierce, as he is now familiarly known throughout the Union) received his earliest education at Hancock, and afterwards at Francestown, under Peter Woodbury, father of the eminent judge. In 1820 being then sixteen, he became a student of Bowdoin College, in Brunswick, Maine. During the early part of his college career the claims of physical development somewhat interfered with the manifestations of his intellectual activity; but during the two latter years he gained an honourable elevation in his class. It is stated, that during one of his winter vacations Pierce taught a country school. He determined to choose the profession of the law, and became a student with Judge Woodbury. He afterwards studied at the Law Seminary of Northampton, in Massachusetts, and afterwards entered the office of Judge Parker, at Amherst.

He was called to the bar in 1827, and began to practice at Hillsborough. His first forensic effort is said to have been a failure, but the young lawyer assured his friends that he should live to argue cases in the Court-house at Hillsborough in a manner that would mortify neither himself nor his friends. He lived brilliantly

to verify his own prediction, but for some years professional practice came in but slowly. In 1829 his fellow-townsmen elected him their representative in the Legislature of the State of New Hampshire, in which he sat four years. In 1833, he was elected a member of Congress, and gave a warm support to the Administration of General Jackson. He did here is said to have had upon his death-bed a prophetic foresight of his young friend's destiny, and remarked to a mutual friend that the interests of the country would be safe in such hands. Here Franklin Pierce avowed the views upon the slavery question, which the opponents of abolition regard as only a due recognition of the rights pledged to the south by the constitution.

In 1837, Pierce was elected to the Senate of the United States. Mr Van Buren, who was then President, having been defeated, in 1840, by the Whig leader, General Harrison, the Government of the country was snatched by the Whigs, for the first time during twelve years. Mr Pierce quickly distinguished himself as a member of the Democratic Opposition; but, in 1842, he determined to retire from the Senate, and to resume the practice of his profession, in order to make some pecuniary provision for his young family. He took up his residence at Concord, the capital of New Hampshire, and so highly distinguished himself as an advocate, that, in 1846, he was offered by President Polk the post of Attorney-General of the United States. He refused this high distinction, declaring that nothing but the call of his country in time of war should separate him again from his family.

It can hardly be said that the contingency contemplated by Mr. Pierce occurred when the Mexican war broke out in 1847. A lawyer, in full practice, might have left it to more unsettled and adventurous spirits to volunteer for service in Mexico, without the smallest imputation upon his patriotism. But Pierce knew well the passion of his countrymen for military glory, and must (we probably whisper it, at this early period) that his chance of ever obtaining the highest honour that could be conferred upon a citizen of the United States would be materially strengthened if he could find an opportunity, in the coming war, of displaying the unquestionable courage and talent for military command which he had inherited with his father's good name. He applied for employment, and obtained the colonelcy of a New England regiment. In March, 1847, he was appointed to the rank of Brigadier-General, his brigade consisting of regiments collected from the most distant portions of the Union. The military courage displayed by these American volunteers, in the Mexican war, was worthy the days of chivalry; and no higher praise can be given to General Pierce, than that he was worthy to be the leader of these citizen soldiers. General Pierce and his troops landed at Vera Cruz. He ordered them to be marched to an encampment upon an extensive sand-beach upon the shelf, where he had time to examine whether any and what preparations had been made for his departure to join the army under General Scott. The mules that had been collected had been carried off by the enemy and the Mexicans told him he would lose almost all his men by the climate and the vomito before he could begin his march into the interior. Wild mules, unaccustomed to harness, had to be collected and broken in; and, after a delay of more than three weeks, the troops began the march, in the earlier part of which the General was—as we were occupied rather in breaking the animals to harness than in preparing a march." After many encounters with the Mexican Guerilla, in which General Pierce saw with delight the steadiness of his men under fire, the troops, 2400 in number, reached the main army at Puebla on the 7th August, without the loss of a waggon.

General Scott, as soon as Pierce's reinforcement arrived, began his march towards the capital. A few days afterwards, it was necessary to attack an entrenched camp—in which 7000 Mexicans, under General Valencia, were found posted—at Contreras. General Pierce's brigade was fiercely engaged, when, in passing over a brook at tract, his horse slipped among the rocks, and fell heavily upon his rider. The General fainted, and, for a few moments, lost his consciousness. When he came to himself, he found he had severely sprained his left knee, upon which the horse had fallen, and that he had received, likewise, some severe bruises. Contrary to the advice of the surgeon, he persisted in going to the front, and, having found a horse, the rider of which had received a mortal wound, he was lifted into the saddle, and rode into the fight. When nightfall came the entrenchment was still held by the Mexicans, and the attack was renewed next morning, when General Pierce, notwithstanding the pain and want of sleep caused by his injured knee, again got into the saddle, and took his post at the head of his brigade. The fort was stormed, and the Mexicans were pursued to Churubusco, and here Santa Anna rallied his army and offered battle. Pierce was sent for by the Commander-in-Chief, who told him he was badly injured, and not fit to be in his saddle

"You are rash, General Pierce," said he; "we shall lose you, and we cannot, as you see, risk the loss of a leader just now. St. Augustine is but a league distant, General," exclaimed Pierce, "don't say that. It is the last great battle, and I must lead my brigade!" The Commander-in-chief made no further remonstrance, but gave the order for Pierce to advance with his brigade.

In the excitement of the battle, he forgot his injury, and hurried forward, leading the brigade, a distance of two or three hundred yards; but the exhaustion of his frame, and particularly the anguish of his knee—made more intolerable from the use of it—was greater than any strength of nerve, or any degree of mental energy, could struggle against. He fell, faint and almost insensible, within full range of the enemy's fire. It was pronounced to be one of the field hot, as some of his soldiers approached to lift him, he became aware of their presence, and was partially revived by his determination to resist it. "No," said he with all the strength he had left, "carry me off! Let the brigade live!" And there he lay, under the tremendous fire of Churubusco, until the enemy, in total rout, was driven from the field.

Pierce's brigade was engaged in the battle of Molino; but the General was prevented from participating in the glory of Chapultepec, the last battle of the war, by his injuries and overexertions, which rendered him unable to leave his bed for two days. When the city of Mexico fell into the hands of the conquerors, the officers of the regular army rendered full justice to the daring valour of General Pierce's brigade, and to the indomitable fortitude with which the General had borne up against the anguish of injuries which would have sent most other men to the hospital.

After the war, General Pierce gave up his commission, and returned to New Hampshire, where he resumed the dry profession of the law. In 1850 he was elected president of a convention for revising the constitution of his native state. In June, 1852, he became the nominee of the Democratic National Convention, assembled at Baltimore, to select a candidate for the Presidency of the United States. When the result of the ballot was declared, "quickly as the lightning flash could have run it around, his name was on every tongue, from end to end of his vast country. Within an hour he was proclaimed President." When the news of his election to the Presidential office reached Concord, the Democrats of that town were wild with delight. The General was the only self-possessed, calm, and quiet man in the place.

General Pierce's habits are plain and unostentatious. His legal practice yields him a large income, but he is said to be generous to a fault; and the bar of "good men's feasts" predicts that he will spend every cent of his Presidential allowance of £5,000 dollars a year. During the period of his election he boarded, at Concord, in the family of a coach-maker, the health of Mrs. [illegible] being unable, for the fatigue of housekeeping, to undertake it. [illegible] attended the Sandy Church (Calvinistic Congregational) with General Pierce and a numerous [illegible] servants.

The subject of this memoir was born, in 1804, Jane Means, daughter of the Rev. Dr. Appleton, a former president of Bowdoin College. Three children were the issue of this marriage. One died in early infancy; another in 1834, a little boy of four years old, of great beauty, and much engaging promise. These deaths were the greatest affliction that his father had yet experienced. All his hopes were now centred in his remaining child, a son of between eleven and twelve years old, of remarkable promise, whose recent tragical death by a railroad accident under the eyes, and in the presence of his fond and distracted parents, excited a profound and intense feeling of sympathy and grief through out the civilised world. May the new President find in the gratitude of his patriotic aspirations for the welfare of his country, that comfort and happiness which an inscrutable Providence has denied to him in the exercise of paternal affection, and the pursuit of unclouded domestic happiness!

RAILWAY ACCIDENTS.—A Parliamentary Return has been published which contains the returns made to the railway department of the Board of Trade of the various accidents which happened during the half year ending June 30, 1852, from which it appears that the total number of persons of every description killed and injured on the passenger railways open for public traffic in Great Britain and Ireland during that period, amounted to eighty-three killed and ninety-six injured. The number of passengers conveyed during the half-year amounted to 30,249,605

FOREIGN AND COLONIAL NEWS.

FRANCE

(From our own Correspondent.)

PARIS, Thursday.

Dear Readers—We have sat down to our desk, we have mended our pen (which fact will form the subject of an interesting note to our biographers, as proving that we do not use a steel one), we have scribbled a few flourishes, and drawn a few impossible heads on the page of our blotting-book; we have gazed vacantly out of the window and dreamily into the fire in search of inspiration, and we find that nothing comes of it; we have literally nothing new, startling, amusing, interesting, or exciting, to tell you of the sayings and doings of this "*petit Paris près St. Denis.*" It has got the vapours, the blue devils, the spleen; it does not amuse itself, or anybody else; it does not even talk politics—much, it can't feast or dance, on account of Lent; so it games, loses its money, quarrels over its cards, and speaks ill of its neighbour; catches the *grippe*, and is laid up—none of which proceedings tend to improve its spirits or temper. It is to be hoped Easter will bring some change in this state of affairs, and that *les cafés du Piéquus* may contain somewhat to restore its smiles and gaiety. You all know what are *les cafés de Piéquus*, do you not? ("Friend, thou first tellest me a lie, and then askest me a question," said a Quaker when an interrogatory was put to him in the above form). Yes, of course, you reply, *nous faites comme si nous ne le savions pas.* Well, then, it is the custom here at Easter to have at all the confectioners' shops, eggs made of sugar or chocolate, varying in size from those of a pigeon to the dimensions of the ostrich egg of the "Arabian Nights." These *œufs* are hollow, and as they are made to open, in them may be placed anything that the fancy of the purchaser may suggest, and they are then given about among friends. Presents of great value, jewels, works of art, precious articles of all sorts, find their way into these capacious eggs, as well as the merest trifles of nothing, from a ruby bracelet to a tiny pair of dancing dogs in bone, comes amiss to the stomachs of those omnibuses of eggs; and seldom does their opening fail to be greeted with exclamations of surprise and satisfaction, more especially among the junior members of the community, who generally find in them some coveted toy, some long-wished-for object, the desire for whose possession maternal ears have heard, and maternal memories have carefully noted to be fulfilled on this occasion.

An event which has caused considerable regret in the theatrical world, has extended its interest to the higher circles of society, as being said to be closely connected with a similar one of late occurrence in this privileged arena. Mdlle. Marie Duplessis, a young actress of considerable talent, of great beauty, who possessed already a sufficient fortune—with youth, some good looks, great charms of manner and conversation, and whose amiable character and disposition made her universally beloved among her friends and *connaissances*—has won for herself committed suicide, by that mode so frightfully common in Paris, inhaling the fumes of charcoal. Various reasons have been given for this desperate act. The disgust and *ennui* caused by the false and factitious atmosphere in which her position placed her—the desire for a higher and purer destiny, without the power or energy to quit her present sphere—have been particularly cited; and we believe with reason, as tending to the melancholy *finale*; but the immediate cause was, we are assured, the event narrated in the commencement of our last week's letter. Poor girl! While condemning the fearful act which terminated her short career, we would appeal to all who place mercy before sacrifice, to pity the struggles, the sufferings, the errors into which a neglected youth and falsely-nourished maturity plunged one whose very crime proved the existence of a nature far better things—a desire which probably want of training and encouragement alone prevented from bearing fruit.

It is now positively asserted that the Pope is to come to Paris—we believe in May for the coronation of the Emperor and Empress: we may, however, add, that certain doubts are still by many entertained as to the truth of the declaration. Meantime, the *Semi Pere* has, for the moment, enough to do to settle the affairs of the Jubilee, in the city of France. The apple of discord is the *Univers*—a religious journal, under the guidance of M. Veuillot, who has written therein certain articles which have called for the loud and open censure of the Archbishop of Paris. Hereupon the Bishop of Moulins takes up the cudgels for M. Veuillot and the *Univers*: others join him: the Archbishop has also, of course, his supporters: a general *mêlée* ensues: *Gallicans* and *Ultramontains* are borne on the two banners: Holiness is recalled to the point; and while he—no doubt, a good deal puzzled how to decide the matter—delays pronouncing his judgment, the rival parties carry on the war—half political, half religious—with increased vigour, and considerable acerbity. It is said that the Archbishop of Paris has submitted, that *they* never have any of the differences which disturb our Protestant churches!

A funeral oration, from the circumstances attending the life and death of the deceased, has excited an extreme interest both in private and political circles here—took place on Sunday—that of Madame Raspail, the wife of the celebrated surgeon and *savant*, who, for his political opinions has been for many years in either house than a prison; his declining years, and in which the self-devotion and incessant cares of this wife have been his only earthly support and consolation. Upwards of 30,000 persons, of all conditions and all parties, followed to the tomb, in solemn silence, the remains of this admirable woman, "whose name," says the *Presse*, "is told in these three words—abnegation, devotion, and humility." Such demonstrations of public interest, peaceful as they are, are not without their signification.

It appears that the ball of the *Corps Législatif* is put off indefinitely: that is to say, from the Easter Monday to the beginning of April; but no day is fixed for its celebration, and it seems by no means improbable it will be given up altogether.

The week of spring with which we were indulged has been again replaced by winter, with grey skies and bitter east winds, putting to rout the summery toilettes, which, like butterflies, came forth with the first days of sunshine. The greatest attraction for the thousands who came to bask in the Champs Elysées has been the beautiful exhibition of flowers there, displayed in a temporary building erected with great taste and skill for the purpose. Camellias, rhododendrons, hyacinths, and azaleas were the principal flowers exhibited: and some exquisite specimens particularly of the [illegible] were [illegible] one [illegible] named after the Emperor, was certainly one of the most beautiful we have ever seen; and a white one, with scarlet stripes (*Azalea Dentii*), from the gardens of Messrs. Standish and Noble, of Bagshot, attracted universal attention, and was deservedly awarded a first prize. Some very fine amaryllis were also displayed, and some extremely large palm trees. Apart from the flowers, a portion of the building was devoted to instruments of horticulture, ornamental vases, *jardinières*, fountains, &c., in various materials; some of these in pottery were beautiful both in taste and execution.

The Odéon has produced a piece, of which the great and merited success calls for honourable mention—"L'Honneur et l'Argent," such is the title of the work, written by M. Ponsard, whose name as poet and dramatist stands at the head of his class. The plot may be told in a few words:—*Georges*, with a fortune of 30,000 francs a year, is about to marry *Laure*, the daughter of *M. Mercier*, a rich and matter-of-fact *banquier*, when his father dies, leaving nothing but some thousand pounds of debt, the fruit of imprudent speculations. His mother has, however, left him a moderate fortune, safe from the wreck; and *Georges* has the choice of accepting the debts of his father and retrieving that father's honour by giving up his all to pay them, or the fortune of his mother, securing him a competence with a sullied name. Generous and high-principled, he takes the first alternative; but, being thereby reduced to absolute poverty, *M. Mercier* withdraws his consent to the marriage, and commands his daughter, one of those weak-souled and yielding natures which may be forced into evil from want of courage to hold to good, to resign *Georges* and wed a man she does not love. After bitter struggles with the destiny, touchingly and exquisitely portrayed, our hero, whose strength has almost given way, meets in *Lucie*, the sister of *Laure*, the devotion, energy and courage in which his own nature is so wanting. Reanimated by her affection and hopeful spirit, aided by her in obtaining the loan of a sum requisite to establish him in an honourable profession, he recovers a moderate but secure means of existence. The rich husband of the unhappy *Laure* is ruined, and in his failure engulfs a large portion of the fortune of *M. Mercier*, who is now but too happy to accord the hand of his second daughter to the rejected suitor of the elder, and all ends happily, as such a piece should end. The poetry—the play is in verse—is of first-rate merit, the delineation of the characters considerable; and, as will be seen, the moral of the piece merits a commendation we can but too rarely accord to French dramatic work.

The steam ship *Cerberus*, on the 13th, disembarked at Marseilles 200 political offenders from Oran, who had been pardoned. The *Aller* has sailed from Toulon, for Cayenne, with 200 convicts.

Several cases of cholera have again made their appearance in Paris.

Count Turgot is, it is said, nominated Ambassador of France at Madrid.

The Legislative Body have voted some bills respecting the purchase of Preference Shares in the canals, the calling out of 80,000 conscripts, and the postal correspondence between France and her western colonies.

It is believed that the disputed point about the Holy Shrines is settled; Rome being satisfied with the concessions made by France. Louis Napoleon, whose foreign policy is said to be directed towards obtaining the presence of the Pope to perform the ceremony of his coronation, has, it is stated, consented to renounce the concessions obtained by M. Lavalette from the Porte.

The Emperor has positively insisted upon a balance being struck between the income and the expenditure. Thirty-four million francs of expenditure, thought necessary by Ministers for the public service, have been struck off by the Emperor in person during the recent secret discussions in the Council of State at the Tuileries. It is more than doubtful, the *Moniteur* hints, whether such a reduction could have been obtained by the old Parliamentary method of discussing the Budget; at least, the past offers no parallel example

Marshal St. Arnaud, who has been all for some days, has left Paris, and the general impression was that he would not return in the capacity of Minister at War. Thus, for the first time since December, 1851, the famous War Minister of the *coup d'état* is without actual power. Though during and unscrupulous, St. Arnaud was in favour of a moderate and pacific foreign policy.

A decree by the Emperor of the French has been issued, appointing the opening of the Exhibition of Industry of all Nations for the 1st of May, 1855, and directing its close in the September following. The postponement is made for the purpose of giving the Exhibition a more world-wide character

Extensive preparations are making for the Imperial coronation, which will take place on the 10th of May. The cathedral of Notre Dame will be in the hands of the architects for the next month.

On the 10th inst., the Emperor entertained Lord Stratford de Redcliffe and several of our countrymen at dinner, at the palace of the Tuileries. The Emperor had a long private interview with Lord Stratford, who is on his way to resume his duties as British Ambassador at Constantinople. It was remarked that Lord Cowley, the British Ambassador, was not invited

The Grands de Wellingarnes, the Ambassador of Spain, presented on Monday to the Emperor the insignia of the Royal Order of Noble Ladies of Marie Louise, which the Queen Isabella has conferred upon the Empress.

AUSTRIA.

Advices from Vienna state that the health of the Emperor is completely restored. His physicians recommend him to make a tour of the Tyrol in the course of the spring. Austria has addressed to England a note on the subject of the refugees. A Cathedral service, at which the Emperor assisted, took place in St. Stephen's Church on Saturday. His Majesty, who looked pale and worn, was rapturously received. At night the city was illuminated. The Emperor has conferred the order of the Iron Crown on Count Lowingen. The ex Emperor and ex-Empress of Austria have subscribed 30,000 florins towards the building of a church, in commemoration of the preservation of the life of the reigning Emperor. A telegraphic despatch informs us of the death of Marshal Haynau.

ITALY

The accounts we receive from Italy tell us daily of fresh severities, fresh sentences, fresh executions. The military tribunal sitting in Mantua, which conducts the prosecutions of upwards of two hundred individuals, is sending them to long terms and twenties at a time, either to death or chains. Everything connected with these processes is enveloped in mystery, save the executioner and the gallows. The accused are not allowed counsel for their defence; they are not allowed a public trial; they are not brought face to face with the spies, accusers, and witnesses. Men belonging to the upper and most respectable classes of society are judged, condemned, slaughtered, or loaded with chains, and, what would be incredible, did not appear incredible, from the assigned reasons for their sentences, are compelled to do ample justice to the morality of many among them.

The Swiss Federal Diet have seriously remonstrated against the expulsion of the Ticinese from Lombardy.

SPAIN.

A letter from Madrid of the 11th informs us that the committee of the Senate, on the demand of Marshal Narvaez to have his case examined by the Senate, has decided against the proposition that he shall have a trial by his Peers, and also against the proposition that the Senate should pass to the order of the day on the question. The committee has now to decide on the proposition that the Marshal shall be permitted to come to Madrid to take his seat as a senator

PORTUGAL.

We have accounts from Lisbon to the 12th inst. The news is of considerable importance. The Minister of Finance, M. Fontes, had laid before the Cortes a popular measure, calculated to authorise the Government to put down the monopoly of tobacco and sugar, and to allow the growth of tobacco at Madeira and other Portuguese islands. The measure will be a great blessing to Portugal, and must ultimately bring down the monopolies of tobacco and sugar in London.

The answer of the House of Deputies to the Queen's Speech had been carried almost unanimously, and in consequence of its being ascertained that many Peers had resolved upon an opposition to the approval of the dictatorial laws, a batch of twenty new members had been created, many of whom had taken their seats, and some are represented as discreditable selections on the part of the Government.

The Special Committee of Deputies had reported in favour of all the dictatorial decrees since the Saldanha insurrection of 1851, and it appeared unlikely that any of the decrees will be altered until the whole have been legalised, when, it is said, the Government will be disposed to meet the English bondholders upon an arrangement to do away with the objectionable principle of the recently-decreed conversion of the Foreign Debt.

TURKEY

The Russian Special Ambassador, Prince Menschikoff, on a special mission from the Emperor of Russia, arrived at Constantinople on the 28th Feb. On the 2nd March he was received by the Porte. On the 3rd Fuad Effendi placed his resignation in the hands of the Sultan, and on the 6th. He was replaced by Rufat Pasha. A telegraphic despatch states that on the demand of the Grand Vizier, the Chargé d'Affaires of England has sent despatches to Admiral Dundas, commanding the fleet in the Mediterranean, at present at Malta, begging him to come with all convenient speed, and to anchor in the Archipelago.

The Turks have evacuated Montenegro, and the war is at an end. Omer Pasha has retired into Albania. Reis Pasha into Nicsitch, and Dervis Pasha into Kowienne. The Montenegrins claim the final success of the war. They attacked the last-named Turkish General, and entirely routed him with considerable loss.

EGYPT

The Sublime Porte has issued a decree restoring to the governors of the principal provinces in the Ottoman Empire the arbitrary power of life and death, which is one of the principal causes of the much-mooted Tax question. Consequently, all Abbas Pasha's resistance last year to the demands of the authorities of Constantinople, in opposition to all his rights, and to the [illegible] of the Porte, to [illegible] of it, have been [illegible] whatever, whose large sums of money have been drained [illegible] by the never-ceasing demands made [illegible] Sublime Porte, [illegible] to that [illegible] state, and Egypt is always made to supply the most urgent necessities of Constantinople, while, if this country were left to take care of itself, or even were no other demand made than that of the yearly tribute, which is now so regularly paid, its prosperity would be incalculably greater than it is

The value of landed property within the walls of Alexandria has increased to an enormous extent, and the rents of houses have within the last year been in many cases doubled. The sons of Ibrahim Pasha, who possess great wealth, are building very extensively; but the demand far exceeds the supply, and new houses are occupied even before they are completed. Abbas Pasha, the Viceroy, is going to remedy this state of things, which presses so heavily upon the residents, and is about to build a very considerable number of houses, and form a new quarter altogether for the accomodation of the European population.

The appointment of the Hon. C. A. Murray, our Consul-General, as Minister Plenipotentiary in Switzerland, will be detrimental to British interests in Egypt, as his knowledge of both Arabic and Turkish had secured to that gentleman great influence with the authorities in the

country. The advantage of direct communication with the Viceroy, without the assistance of a Gragoman, can only be appreciated by those who know how often the latter mis-translates, either advisedly or from ignorance.

[illegible] and are now on their way to Syria by the desert.

CAPE OF GOOD HOPE

By the *Trent* we have news from the Cape to the 4th of February. The Governor, accompanied by his staff, had left Graham's Town with an escort of mounted volunteers, and had arrived at Kreli's Kraal with a view to the declaration of peace. His Excellency had appointed a board of officers to assemble at Graham's Town, for the purpose of investigating all claims or losses sustained during the war. Information had been sent to the civil commissioners of Uitenhage that the Zourberg was again infested with a body of Kaffirs, supposed to be about 100 in number; the police and the farmers were about to unite in expelling the marauders. The chief Moshesh had recently punished a Basuto captain and killed seven of his people, for having plundered some colonial farmers; and Letsi, the son of the Basuto chief, had delivered to the Civil Commissioners of Smithfield a valuable horse, which he stated was found in his father's territory, but supposed to belong to a British officer.

AUSTRALIA.

By the Overland Mail we have remarkably late news from Australia; viz. from Sydney to the 28th December, and from Adelaide to the 10th of January. There was no decline in the yield of the gold-fields, although the diggers were making their way in large bodies to the towns to enjoy the Holidays. Notwithstanding the great influx of emigrants, some 80,000 souls, to the colony, the numbers located at the Victoria diggings are still only set down at 100,000. The produce of the gold-fields for the last year is estimated at 4,000,000 ounces. [illegible] The aggregate export from Sydney had been [illegible] from Port Phillip. The harvest in New South Wales [illegible] abundant, the only want being that of hands to reap it. The yield is best flour, however, kept up to 45 per ton.

The *Great Britain* left Sydney on her Homeward passage on the 20th December, taking 24,176 ounces of gold on board. She was expected to call from Melbourne on the 3rd of January for Liverpool, and would probably ship 150,000 ounces of gold there.

The *Melbourne Argus* says:—

Mount Alexander, Bendigo, and the Ovens are now being advantageously worked. The astonishing richness of Mount Alexander is evidenced in the large amounts which it yields, notwithstanding the immense quantities that have already been drawn from it. The whole country therefrom appears to be more or less auriferous. Ballarat, which at one time began rising into favour, and their products ensured, is being more fully developed. The gold at Ballarat is more unequally distributed than at Mount Alexander, and therefore the proportion of successful to unsuccessful diggers is not so great as at the latter place. But then the individual finds are in some cases greater. The labour is more severe, also, than at the Mount, as the gold lies deeper, and more numerous trials have to be made before the deposits are struck upon. There is no doubt that Ballarat will continue to give out considerable quantities for a long time to come, and will be a resort for many diggers who have failed at the Mount. The capabilities of the Ovens, as a very rich field, may now be deemed an admitted fact. The amounts brought into Melbourne as yet has been comparatively small, but it is known that large quantities have been carried privately overland to Sydney, and all reports agree in attesting the richness of the locality. The Sydney papers state, for instance, that a gold buyer in that city lately purchased 500 ounces in one lot, from two men who had just come down from the Ovens.

The intelligence from Australia is altogether as important as it is cheering. An announcement that will give great satisfaction, is that of the abundant wool crop, which has been secured, throughout the colonies, in a good condition, without extraordinary expense.

The invitation of the inhabitants of Van Diemen's Land on the subject of transportation, had risen to such a height that the legislature had threatened to stop the supplies.

A letter from Melbourne says:—

The city is crowded with shipping, and contains at this time, as I was assured by a captain of one of them, more of the finest ships to be found in any harbour in the world. The number of emigrants and the quantity of merchandize newly poured into this place from the vessels which arrive daily are truly wonderful. As yet, there seems no excess of the one over the other. Goods fetch remunerating prices, and there vast multitude, in some way or other, find the means of living. Of course rents continue high. Butter is 3s. per lb.; and as to vegetables and fruit, the prices are almost prohibitory.

The mail steamer *Sydney* arrived at Plymouth on Wednesday. Her dates have been anticipated overland. She brings 170,790 ounces of gold on freight. The new diggings at the Ovens seem the great centre of attraction; and many instances are recorded of parties making their four or five lbs. a day there. Fresh discoveries were continually being made in the locality—each one superior to the other; and these goldfields seem unlimited. They are fully expected to exceed in richness and extent those about Mount Alexander. The last escort from Forest Creek brought in from the Ovens 17,000 ounces. Spring and Specimen Creek diggings were the favourite ones; gold of a very fine description being found there in abundance. Gold of a coarser description had been found in the Buffalo Range, about twelve miles from the Ovens.

SOUTH AMERICA.

By the *Teviot* steamer we have letters from Buenos Ayres, dated Feb. 2. Civil war was still raging. The besieging army was outside the walls, and several skirmishes had taken place, with some loss of life. The city had been well fortified, and there were at least 50,000 stand of arms, loaded and primed, ready for immediate action.

Urquiza, the pseudo-Liberator, is the mainspring of the rebellion.

Rosas y Belgrano, who was marching to the relief of the city, sustained a reverse, and is in the hands of the enemy.

Her Britannic Majesty's Charge d'Affaires to the Argentine Confederation, the Hon. R. Gore, had been ordered to leave that province. The order was communicated to him through Mr. Hood, the British Consul; [illegible] being that his presence endangered the public tranquility.

Rio Janeiro we learn of the lamented death of Mr. Henry Southern, the British Minister at the Court of Brazil. He died from yellow fever, on Jan. 29.

CHINA.

Accounts from China state that the rebellion was making decided progress. The rebels were close to Han Kow Chiu, on the Yantzekiang, one of the largest marts for trade in the Empire, whilst the Canton accounts state that a great part of the city had been destroyed by fire, and was in possession of the rebels. Their object was to advance and occupy Nankin, about 650 miles distant from Han Kow Chiu. Other towns are said to have fallen to the rebels, and considerable quantities of military stores to have been captured by them. It is stated that the Imperial treasury is empty, and large contributions are exacted from all the provinces.

UNITED STATES.

INAUGURATION ADDRESS OF THE NEW PRESIDENT

The *Arctic* steamer has brought us advices from New York to the 5th inst.; and the inauguration Speech of the new President, General Pierce, on the 4th inst.

The excitement in Washington on the 4th was excessive. So great was the anxiety to witness General Pierce's inauguration as President, that, on the previous night, hundreds of persons, including ladies, slept in the Rotunda of the Capitol, while thousands walked the streets, determined to be sufficiently early, or unable to obtain accommodation in the hotels.

Shortly before one o'clock, General Pierce took his seat in a carriage, and was escorted by a procession to the Senate House, which was reached at one o'clock. The President elect stood erect in the carriage, with President Fillmore by his side, surrounded by Marshals, and bowed to constant cheers and waving handkerchiefs from the windows. The foreign Ministers followed in carriages. The proceedings were rather [illegible] a heavy fall of snow. At a quarter past three o'clock the Marshal of the district, with the Judges of the Supreme Court, followed by the President and President elect, and the entire assemblage in the Senate, started in procession to the eastern front of the Capitol, where an immense stanine was erected sufficiently large to accommodate all. At half-past one o'clock, all being arranged, the oath of office was administered to General Pierce by the Chief Justice, as follows:—

I do solemnly affirm that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the constitution of the United States.

General Pierce in taking the oath did not, as had been ordinarily the custom, say "I solemnly swear," but "I solemnly affirm;" and, instead of kissing the book in Southern fashion, he raised his right hand and held it in that position until the pledge was read. "Immediately before the address," said a describer of the event

When General Pierce took the oath, with head uncovered, and raising one hand to heaven, while he laid the other on the Holy Book, the spectators were uncovered, even in the snow that was falling at that time, and many there fulfilled up their hands as if in an act of the most fervent devotion. It was a solemn scene. The address, which the President delivered unfalteringly from memory, and without a single note, was received with great enthusiasm by the vast multitude, particularly those portions of it that asserted the Monroe doctrine, the protection of American citizens abroad, the firm adherence of the President to the compromise measures, and his determination to carry out the Fugitive Slave Law. Cries of "Good, good," and other warm expressions of admiration were emitted from the crowd. The sentiments, the tone of the address, the earnest manner in which it was delivered, and the beautiful action; his manly, erect appearance; his pure cast of countenance, in which intellect and courage were the predominating features; and, then, that well-modulated sound of the voice, [illegible] all combined to make a deep impression in favour of General Pierce, and many asserted that this was the best inaugural address ever delivered from that spot. He is undoubtedly a very effective speaker.

After the conclusion of the usual formalities President Pierce stepped to the front of the platform, and, amid enthusiastic cheers, proceeded to deliver the Inaugural Address, of which we give the more important portions. His opening sentence contained a brief but touching allusion to the existing domestic calamity which he has so recently sustained.

My countrymen,—It is a relief to feel that no heart but my own can know the personal regret and bitter sorrow over which I have been borne to a position so suitable for others rather than desirable for myself.

Whether the elements of apprehension in the Republic have kept pace with its unparalleled progression in territory, population, and wealth, and been the subject of earnest thought and discussion on both sides of the ocean—

The actual working of our system has, however, dispelled a degree of solicitude which at the outset disturbed bold hunts and far-reaching intellects. The apprehension of dangers from an enfeebled virtue, multiplied wants, accumulated wealth, and augmented population, has proved to be groundless. The stars upon your banner have become nearly twice fold their original number, your densely populated possessions skirt the shores of the two great oceans, and yet the vast increase of people and territory has not only shown itself compatible with the happiness and union of the States and the general Government in their respective constitutional spheres, but has afforded an additional guarantee of the strength and integrity of both.

Then follows a somewhat startling declaration that the Administration will not be controlled by any timid forebodings of evil from expansion.

With an experience thus suggestive and cheering, the policy of my Administration will not be controlled by any timid forebodings of evil from expansion. Indeed, it is not to be disguised that our attitude as a nation, and our position on the globe, *render the acquisition of certain possessions, not within our jurisdiction, eminently important for our protection*, if not, in the future, essential, for the preservation of their rights of commerce and the peace of the world. Should they be obtained, it will be through no grasping spirit, but with a view to obvious national interest and security, and in a manner entirely consistent with the strictest observance of national faith. We have nothing in our history or position to invite aggression; we have everything to beckon to the cultivation of relations of peace and amity with all nations. Purposes, therefore, at once just and manly will be significantly marked in the conduct of our foreign affairs. A sound and comprehensive policy should embrace not less the distant future than the urgent present.

After announcing a policy which must change the position of the United States in relation to the other States of the world, General Pierce proceeds to express his sympathies in favour of peace and commerce—

The great objects of our pursuit, as a people, are best to be attained by [illegible] and are entirely consistent with the tranquility and interests of the rest of mankind. With the neighbouring nations upon our continent we should cultivate kind and fraternal relations. We can desire nothing [illegible] to threaten their welfare. Our interests consolidate their strength, and promote the paths of prosperity and happiness. If in the course of the growth we should open new channels of trade and create additional facilities for friendly intercourse, the benefits realised will be equal and mutual. Of the complicated European systems of national polity we have and therefore been independent, and, as a consequence, free from their dangers, we have been, happily, almost entirely exempt. While it is [illegible] to the nations which gave them existence, and with which our legitimate jealousies, the offspring of our own position, we have no sympathies in the causes of human freedom and universal advancement. But the vast interests of commerce are common to all mankind, and the great waves of enterprise, additional to its course, must always present a noble field for the moral influence of a great people.

The paragraph which follows refers to the protection of American citizens abroad, was the occasion of little incident which showed how admirably it was adapted for his audience. The President elect seemed to face with Mr Fillmore and the diplomatic corps, and laid down the law with thrilling emphasis, and when he again turned to the masses of the people in front, occupying the vast square below, the cheers rent the air, and every man of the 50,000 in the streets could feel that "Pierce is the man for the times."

With these views firmly and honestly carried out we have a right to expect, and shall under all circumstances require prompt [illegible] of the rights which belong to us as a nation are not alone to be [illegible] but those which pertain to every citizen in his individual capacity, at home and abroad, must be sacredly maintained. So long as we can discern every star in its place upon that ensign without wealth to purchase for him preferment or title to secure for him place will be open to his privilege, and must be his own exclusive right, to stand unabashed even in the presence of princes, with proud consciousness that he is born of one of a nation of sovereigns. It cannot, again, persist, under so far from being that agent whom he shall leave behind in the place which I now occupy with not see that no rude hand of power or tyrannical passion shall upon him with impunity. He must rest be that, upon every new and [illegible] where our enterprise may rightfully seek the protection of our American citizenship is an inviolable panoply for the safety of American rights. And in this connexion it can hardly be necessary to re-affirm a principle which should now be regarded as fundamental. The [illegible] security, and repose of this Confederacy reject the idea of intervention or [illegible] on this side of the ocean to any foreign Power, beyond present jurisdiction, as utterly inadmissible.

The subject of slavery in the United States has now so engrossing an interest for the people of Europe, that every section of the country will require to know the sentiments of the new President here upon. General Pierce upholds the Slave-Fugitive Compromise Bill

I believe that involuntary servitude, as it exists in different States of this confederacy, is recognised by the constitution. I believe that it stands here any other admitted right, and that the States wherein it exists are entitled to the most ample means to enforce the constitutional provisions. I hold that the laws of 1850, commonly called the compromise measures, are strictly constitutional, and to be unhesitatingly carried into effect. I believe that the constituted authorities of this Republic are bound to regard in the spirit of the South in this respect as they would view any other legal and constitutional right; and that the laws to enforce them should be respected and obeyed, not with a reluctance except, led by abstract opinions as to their propriety or by a different code of duty, but cheerfully, and according to the decisions of the tribunal to which them exposition belongs. Such have been and are my convictions, and upon them I shall act. I fervently hope that the question is at rest, and that no sectional, or ambitious, or fanatical excitement may again threaten the durability of our institutions, or obscure the light of our prosperity.

The President concluded his Address as follows:—

So standing, as I do, almost within view of the green slopes of Monticello, and, as it were, within reach of the tomb of Washington, with all the mighty memories of the past gathering around me, [illegible] so many eloquent voices of exhortation from Heaven, I can expect no better hope for my country than that the kind Providence which smiled upon our fathers may guide their children to preserve the blessings they have inherited.

Great cheering and firing of cannon succeeded the Address. On the conclusion of the ceremonies, the President was escorted to the White House, where he held a kind of levee. The proceedings of the day closed with a private dinner at the White House. Ex-President Fillmore quietly returned to the apartments in the hotel where President Pierce had resided.

The following are the conjectures of the American press as to the *personnel* of General Pierce's Cabinet:—Governor Marcy, of New York, the State Department, equivalent to the portfolio for Foreign Affairs; James Guthrie, of Kentucky, Secretary of the Treasury; Jefferson Davis, of Mississippi, Secretary of War; Mr Dobbin, of North Carolina, Secretary of the Navy; Governor M'Clelland, of Michigan, Secretary of the Interior; Judge Campbell, of Pennsylvania, Postmaster-General, and Caleb Cushing, of Massachusetts, Attorney-General.

The Canada Reciprocity and Copyright Bills will probably not become law this session.

The Secretary of the Navy has written to the Navy Committee of the House of Representatives, recommending the building of a Government frigate of 2000 tons, propelled by the Ericsson caloric engine, and asking Congress to make an appropriation of half a million of dollars for that purpose.

Congress had voted an appropriation of 150,000 dollars for the purpose of surveying and explaining a railway route to the Pacific—survey and report to be laid before Congress as soon as possible.

WASHINGTON DURING THE INAUGURATION.

(From our own Correspondent.)

WASHINGTON, Feb. 28th, 1853.

The levees at the presidential mansion take place every Friday evening. That of last week, being the concluding one of the season, and of the Whig President, Fillmore, was most numerously attended. It seemed as if all Washington had given itself the rendezvous at the White House. Whigs and Democrats, Abolitionists and Slavery-men, Unionists and Secessionists, were there assembled for the last time around the peace-loving chief of the nation, before his retirement from office. The man, I must say, is worthy of every tribute of respect, for one better or more prudent never held that distinguished station; and whatever the failings—and who has them not?—they are lost behind the fact that he has helped to steer the ship of State, through a period of a most exciting and menacing character, with a conscientious steadiness that has gained for him the esteem of all parties. The crowd was immense, and the building anything but adequate to the reception of the multitude which continued to throng there until a late hour of the night. The arrangements were none of the best. I was much amused by the appearance of a fat old woman, evidently just from her stall at the market-house, who had come early for a good "sight" of the President and the company, and had taken possession of a comfortable arm-chair, from which she viewed her fellow-citizens with an amount of calm assurance as great as if she had been a Dowager Duchess in velvet and diamonds. Another citizen, evidently from the country, had come to see the President, and nothing but the President. He slid quietly into the room, in hornide dress and thick shoes covered with dirt, and, stationing himself against the wall, took such a look at the great chief of the nation, that one might have supposed the poor fellow mesmerised with astonishment and respect.

On Saturday evening Thackeray gave his last lecture at Carusi's Saloon. The President and the new President were there together, and clearly on the most friendly terms. Both are worthy men, who allow not party considerations to interfere with that gentlemanly conduct which is due to each. Van Buren, I understand, was an exception to this rule, and treated his successful rival, General Harrison, with rudeness and a display of animosity. Such meanness is rare. Thackeray is much liked: there are, of course, detractors. Some complain of his manner with his audience—keeping them completely in his hand, as it were, and not allowing them that independence which they [illegible] their own lecturers. At the slightest noise, or at the entrance of strangers, Thackeray stops, shows impatience, and persists in controlling and governing his hearers.

His delivery is understood to be definitively made up. It will be Conservative. The Young American party, with its revolutionary inclinations, is quite put on one side. For this it has to thank the editor of the *Intelligencer*, Gideon, who has completely mistaken his constituents. The city is now exceedingly full of strangers, most of them office-seekers. I have heard of at least a dozen who have come up from various parts of the Union, *determined* to have the office of Postmaster at San Francisco: it is worth about 20,000 dollars. The present man resigns, to avoid being turned out: he knows the post is too valuable to hold any longer. I pity the Government the indignant enemies it must make of the hosts of Democrats who must necessarily be disappointed. But what can it do? Men, at all times sufficiently unpalatable to their own merits, are here not a jot behind the rest of the world in that respect. They will have to return home, and prepare the ground for a better move next presidential election.

Congress sits no longer than the 4th of March, breaking up at twelve o'clock at night, after a species of [illegible] creditable to the united wisdom of the country. On some occasions, I am told, most of the members are too drunk to attend to business. Bills are passed through by a few knowing ones, and the business of the nation then becomes more strangely a part of the interest of private individuals.

The new President, Pierce, is expected here to-day. The inauguration takes place on the 4th of March, and is always accompanied by much ceremony and crowding. The multitude of people collecting in Washington, both for the event itself, or for the purpose of getting into [illegible] upon the occasion, already begins to [illegible] Already, houses are [illegible] for the reception of visitors. That is to say, [illegible] put up in them, side by side, as in a hospital, for their accommodation. Everywhere the crowd will be packed into close [illegible]. Small rooms in boarding-houses will be made to accommodate 6, 8, or 10 men; and if we may judge by the crowd at the last inauguration, many will have to sleep, despite the cold weather, in the market-house. It is a glorious time for making money. As much as *eight dollars a day* are asked for a room having a view on the Avenue; and that even though engaged three weeks previous to the event.

Office-seekers are pestering the new President unmercifully. I don't believe anything can astonish a person much who can put up with in this country, if an power. Every man argues that he has a *right* to office, no matter what his incapacity and no man hesitates to clear himself with all due assurance. They are bred to this. The plague is growing more unbearable with the increase of population; and will perhaps a few more Presidents and great men have been butchered and handled to death by their expectant supporters from all parts of the Union, they may hit upon some rational system of distributing patronage and forsome more honest and democratic than the disgraceful scramble that characterises here every change.

L.

(From another Correspondent)

WASHINGTON, U.S., Feb. 28th.

Washington is at present attracting almost as vast a political pilgrimage to witness the Presidential inauguration as ever rushed to receive the Papal benediction on a jubilee year. Not every fifty years, but in quadrennial recurrence, does this national progress take place towards the congressional shrine. The hotels are literally besieged by bands which successive trains bring in to this congressional centre, which seems to vouch for the unlimited capacities of this little town's hospitality.

Willard's City Hotel, especially, is besieged by eager embryo cabinet members, or minor post-hunters. The stars and stripes which overshadow the hotel front attest the presence of the President elect, who has taken up temporary quarters here till the "White House," which is discernible at a distance, becomes vacant. In one brief week hence the two potentates will have exchanged the roofs which now shelter them. It is touching, mean while, to witness the kindly amenity and courtesy interchanged between the twin heads of the State, who, as they go about arm in arm, strike one as the monster valves of Capt. Ericsson's new ship, the one rising as surely as the other goes down at the stern will of the popular crank. At least, so it struck one's fancy, as both these magnates, with a gallant company of guests, invited by Mr. Kennedy, the Secretary of the Navy, steamed down the Potomac a few days since, in the little *Water Witch*, till they reached the *Ericsson* ship itself, anchored abreast of the lowly port of Alexandria, some five or odd miles down the river. Leaving scientific men to expatiate on the simplicity of the invention and the mode in which it has been carried out, and which, like all good things else makes one rather wonder this brilliant motor was not sooner discovered, the company (amongst whom we noticed all the town's gunsts, Thackeray and Irving) dispersed, whilst the navy-yard guns were firing a stunning parting salute, and frightening sundry covys of canvas-back ducks from their haunts on the bank side.

Though the cannon's boom could hardly reach the walls of Congress, thickly encased with marble, a non-conductor of sound, if we mistake not, yet the propriety of adopting Captain Ericsson's new propelling invention in connection with the State navy, has been actively canvassed for a few days since. We hear the question fully propounded by Mr. E. C. Marshall, of California, whose main argument was, that refitting "old bottoms" was ultimately more costly than manufacturing new and efficient vessels. Mr. Kennedy, the able secretary of the out-going Government, has recommended the immediate construction of two new frigates on the "Caloric-engine" model." Here is good news for our sea-yard comman lers, who have another chance of once more demolishing and re-constructing a whole navy!

Political agitation, however, has it not all its own way; Thackeray has been giving his lectures to audiences, if not as numerous, yet as admiring, intellectual, and brilliant as graced his discourses at Willis's Rooms.

THE MENURA ALBERTI, FROM RICHMOND RIVER, AUSTRALIA.

NEST OF THE MENURA ALBERTI.

AT the meeting of the Zoological Society, held on Tuesday evening, the 8th inst., Mr. Gould brought before the notice of the members present a Nest and Egg of the *Menura Alberti*, which had been forwarded to him by Mr. James Wilcox, of Sydney. Mr. Gould remarked upon the extreme interest which attached to those objects, tending as they do to clear up most satisfactorily the position this bird should hold in the scientific arrangements of ornithology. By most previous writers, it had been placed among the *Gallinacea*, a group of birds scarcely any member of which constructs a nest, and the young of which are in possession of the powers of running and feeding immediately after their exclusion from the egg; while, as is now known, the *Menura* constructs a large oven-shaped nest, which, in its materials and in its form, more nearly assimilates to those of the common wren and its allies, than to those of any other known group of birds; and the young, so far from being endowed with the powers of motion, and procuring their own food on their exclusion from the egg, are unable to leave the nest for some time afterwards—a fact with which Mr. Gould became acquainted by a passage in Mr. Wilcox's letter, in which he mentions that he lately lost, by an accident, a young bird, *which had been taken from the nest the moment it was able to leave it*; and we may infer that like all other insessorial, or perching birds, which are confined to the nest for some time after being hatched, that they are blind at their birth. Whether the bird lays one or two eggs is somewhat uncertain, at present it would seem to be but one. In size it is about that of a domestic hen, of a very dark olive stone colour, with blotches and specks of a still darker hue. Mr. Wilcox states that the nest was placed on a rocky ledge, about 100 feet above the stream of the Richmond River, so difficult of access as to render its acquisition a task of no ordinary kind; the entrance of the nest being placed towards the rock. About two years ago Mr. Gould named this fine bird *Menura Alberti*, in honour of his Royal Highness Prince Albert; the original specimens to which the name was applied had been received by him from the brushes of the Richmond River, which, together with the other brushes between the ranges and the coast of the eastern portions of Australia, constitute the natural *habitat* of the species. The public will be glad to hear that this interesting specimen has been purchased for the British Museum.

WINTER AT THE CALIFORNIAN GOLD MINES.

WE are indebted to an English mining engineer in San Francisco for some particulars of the sufferings of the miners during the late winter. It is stated that a winter of such extreme severity has not been experienced in California for ten years and San Francisco was crowded with men who were driven from the mines by the inclemency of the weather and the scarcity of provisions. The snow at the northern mines lay twenty feet deep in some places, and mining was generally suspended throughout the gold fields. The roads became almost impassable, and the result was an alarming scarcity of food in the more remote districts. Provisions became exorbitantly high, and the sufferings of the miners, from the inclemency of the weather and the want of food, were indescribable. Meals of pilot bread only are spoken of as commanding two dollars each in some of the mining districts. It was calculated at San Francisco that two months at least must elapse before provisions could be packed over the mountains, and conveyed into the more distant mining villages. Some frightful deaths from absolute starvation were known to have taken place, and others were considered inevitable.

Our Correspondent forwards us an Illustration of a scene upon the mountains. Some miners are returning to their tent or log-hut, with such necessary provisions as the distant town could supply. Their mule had died from exhaustion and fatigue. This was a circumstance of daily occurrence, compelling the men to carry the provisions on their backs over the mountains covered with snow, which in the drifts nearly overwhelmed them. In some known cases, lives were lost by the unhappy miners becoming engulfed in the snow drifts.

While in the northern district mines, snow fell in abundance; rain and floods in the southern mines inundated the plains and valleys. The roads were almost impassable; the streams could not be forded; and several towns were inundated from the unusual swelling of the rivers, on the banks of which they were built. At Churn Creek, 700 miners were compelled to subsist six days upon acorns, being entirely destitute of provisions, and unable to procure them in consequence of high water. At Downes's Ranch, on the north side of Cow Creek, twelve persons were cooped up in a room 7 feet by 9 feet, for eight days; during which time they were obliged to subsist on one scanty meal of beans per diem. O'Neil's Ranch, twenty miles below Tehama, was wholly inundated. Mr. O'Neil, his wife, and three children, were compelled to remain on a beam, under the roof of their house, for two days without food. Mr Sedora, with his wife and family, floated in a waggon box from their dwelling to a neighbouring island, where they were soon after "treed" by a grisly bear, and obliged to stay in its branches the remainder of the day and succeeding night, without a morsel of sustenance. The farmers have lost thousands of cattle, and many an acre of young wheat would, it was feared, be rendered utterly unproductive. Two hundred waggons were on the road between Sacramento and Jackson, most of which were hopelessly stuck in the mud. When this happens, the driver, in many cases loads his mules with so much of the contents of the waggon as they can carry, and leaves the waggon in the mud hole. Some of the waggon-drivers have perished in the attempt to ford the streams.

The city of Sacramento has had a flood added to the calamitous fire, and many houses which were being rebuilt, with American energy, have been again levelled. Boats there have superseded all other modes of locomotion. At Stockton the flood spread all over the city, bearing away houses and bridges before it. The city looked like a vast lake, in which there floated a fleet of houses at anchor. Nearly every house on the plains was more or less flooded. The prospects of the miners, it was sarcastically said, were excellent, if they did not die of starvation meanwhile.

NEST OF THE MENURA ALBERTI.

WINTER IN CALIFORNIA.

JOHNSTONE GRAND INDUSTRIAL EXHIBITION.

A VERY remarkable *sequitur* of the Great Exhibition in Hyde-park has recently been realised in the small town of Johnstone, in Renfrewshire, in the west of Scotland, distant three miles from Paisley, noted for its shawl manufactures, and ten miles from the mercantile metropolis of Glasgow, in a westerly direction. But Johnstone is just the locality in which the industrial offshoot might be expected to flourish. Seventy years ago Johnstone had no existence as a town; in 1782, the population consisting of only ten persons. It has since grown up into a considerable manufacturing town; and its population (now 6000) exhibits an increase scarcely paralleled in Scottish statistics. Its numerous chimney-shafts bespeak the industry of its artisans to the traveller by the Glasgow and South-Western Railway; and its coal fields, cotton and flax manufactories, foundries, engineering and machine-shops, explain to the visitor the rapid rise of this industrious and enterprising community. Thirty years ago was established here a Mechanics' Institution, to aid the funds of which the directors projected the present Industrial Exhibition.

The building was originally intended for a cotton factory, and consists of two spacious flats, or halls. The articles exhibited were machinery, manufactured goods, productions in the fine arts, and curiosities; altogether, 1073 in number. In machinery, as might be expected in a town like Johnstone, the Exhibition was strong. The lower hall was entirely devoted to this department, in which fifty four specimens were exhibited, in active operation, showing their wonderful powers of adaptation, ingenuity of device, and exquisite workmanship. These machines were moved by a high pressure steam-engine of five-horse power, constructed expressly for the Exhibition by the workmen of Messrs. John M'Dowall and Sons, at their own time, and presented by them to the directors of the Mechanics' Institution. Upon a long central table were placed working models of the steam-engine of every construction: improved gas and water meters; the original model of the first attempt at screw propulsion (1837); hydraulic press, steam-wheels, drying and ventilating machines, &c. Here were also to be seen several models of ships; a large assortment of ornamental pottery, horse-harness, agricultural implements, &c. From the joist of the hall were suspended beautiful *papier-maché* ornaments.

In the upper hall were exhibited articles of great variety and beauty, including paintings, sculpture, music, plate, furniture, dress, decorative materials, porcelain, ship models; specimens in geology and conchology; curiosities and antiquities, &c. At each end of the apartment was a gigantic mirror; a fine organ, in the flat above, pealed forth its rich harmony; and in the centre of the hall was a fountain of eau de Cologne. Both the upper and lower halls were lighted day and night with gas.

At the time of the Exhibition closing, it had been visited by 30,000 persons; amongst whom were the Lord Provost of Glasgow, William Honstoun, Esq., of Johnstone; Sir Robert Napier, Bart., of Milliken; Captain Stirling, of Glentyan; Colonel M'Dowall, of Castuth; Thomas Spiers, Esq., of Caldess; Major Mewton, Ardrossan; Captain Blair, of Blair, the Magistrates of Paisley, and the Magistrates of Kilmarnock. The Directors were complimented by several of the gentlemen, upon the taste and judgment displayed throughout the arrangements; and every one was highly gratified with the success of the Exhibition; the result of which, it is expected, will give stability and efficiency to an institution which may be the means of still more enlightening and elevating the working classes of Johnstone.

THE JOHNSTONE GRAND INDUSTRIAL EXHIBITION.—THE UPPER HALL.—(SEE PRECEDING PAGE)

DEATH OF M. ORFILA.

WE regret to announce that M. Orfila, the eminent physician, died, in Paris, on Saturday last, after a severe illness, in the 70th year of his age. He was born a Spaniard, at Port Mahon, in Minorca; but was naturalised in France in the early part of the reign of Louis Philippe. In 1805, M. Orfila went to sea in a merchant-vessel, it being intended by his friends that he should enter the naval service; but he had already a strong inclination for the medical profession, and suddenly abandoned the sea, and went to Valencia, to study medicine. Here he greatly distinguished himself, and carried off the first prize in physics and chemistry. A favourable report having been made of his studies to the Junta of Barcelona, that body resolved to send him to Paris, to study the natural sciences; and a sum of 1000 francs per annum was voted to him for that purpose. He arrived in Paris in 1807; and had hardly been there ten months, when war broke out between France and Spain. He was thus deprived of pecuniary resources for continuing his studies; but he had, fortunately, an uncle established at Marseilles, who agreed to provide him with 1500f. per annum, until he should obtain the diploma of Doctor of

THE LATE M. ORFILA.

Medicine, when his uncle's pecuniary provision was to cease. M. Orfila passed a brilliant examination, and obtained his diploma. Having no longer any funds at his command, he opened a course of lectures in chemistry, which was well attended, and furnished him with the means of living. Some of the most eminent men of the present day were among his pupils; of whom may be mentioned M. Jules Cloquet, M. Beclard, sen., and M. Edwards. The reputation of M. Orfila continued to increase, and in 1816 he was appointed one of the physicians of Louis XVIII. He was next elected a Professor of the Faculty of Legal Medicine, and in 1823 he was chosen to fill the chair of Chemistry. He had already been elected a member of the Academy of Medicine. The Revolution of 1830 opened to M. Orfila a new era of distinction. He was successively elected Dean of the Faculty, member of the Council general of Hospitals, and member of the Council-general of the department. After he had received his letters of naturalisation, he was appointed a member of the Council of Public Instruction, and was successively named chevalier and officer and commander of the Legion of Honour.

Most of our readers are aware of the importance attached to the opinions of M. Orfila in cases of legal medicine. In cases of poisoning, where much depended on the medical evidence, he was invariably called upon by the Courts of Assize

During the evidence given in the trial in 1840, of Madame Lafarge, for poisoning her husband, M. Raspail, who was opposed to M. Orfila, disputed with great energy most of his statements, but without effect; and subsequently the opinion expressed by M. Orfila, in opposition to that of M. Raspail, as to the absorption of poisons by the human body after interment, by contact with the earth, to such an extent as to reveal the presence of a quantity which would lead to a supposition that it had been administered during life, has been confirmed by most of the eminent men who have been examined on such questions.

The discovery that arsenic exists in all human bodies, was, however, claimed to have been originally made by M. Couerbe, who also showed that a considerable quantity of arseniate of calcium exists in the bones; and, that the more a body becomes putrid, the more easily is the arsenic extracted from the fleshy and muscular parts He was one of the physicians who declared that M. Lafarge was not poisoned; and he next adduced the startling fact, which M. Orfila admitted after the trial, that the per-oxide of iron given to M. Lafarge as an antidote to the arsenic he was supposed to have taken, did itself contain arsenic at the time of its being purchased; and that all per-oxide does so, more or less. A *précis* of the joint experiments of MM. Orfila and Couerbe will be found translated from the "Journal de Chimie Médicale," in No. 103 of the "Philosophical Magazine."

During the whole of the reign of Louis Philippe, M. Orfila remained at the head of the Faculty of Medicine; but, after the Revolution of February, 1848 the Provisional Government revoked his functions

The scientific reputation of M. Orfila commenced with the publication of his "Treatise on Poisons or General Toxicology." The next works published by him, which acquired European reputation, were the "Elements of Legal Medicine," and "Lessons on Legal Medicine," which went through several editions; but he was also the author of many other works of almost equal celebrity. In the course of his researches in the action of poisons, M. Orfila performed numerous experiments with animals, some of which, from the great suffering that they occasioned, induced a belief among persons who were not personally acquainted with him, that his nature was cruel. This, however, was very far from being the case. He was humane and benevolent; and it was with great pain to himself that he was compelled, in order to make science useful to his fellow-creatures, to perform some of these experiments.

Among the more recent investigations of M. Orfila, is his valuable Report to the Academy of Medicine upon Nicotine, in 1851; confirming facts already known, and containing many new observations of interest relative to the properties of the poison, and its traces after death.

It may be interesting to add that M. Orfila was an accomplished musician, and highly celebrated for his exquisite singing.

M. Orfila, in addition to the physical suffering which for a considerable time preceded his death, had also long experienced great mental affliction, caused by the illness of his son, who had become epileptic, and so affected in mind that it was found necessary to place him in a Maison de Sante

The funeral obsequies for M. Orfila were performed on Monday with great pomp at the church of St. Sulpice. Nearly the whole of the 20th battalion of the National Guard were present, to render military honours to the deceased, as grand officer of the Legion of Honour. The church was crowded, and amongst the congregation were the greater part of the members of the Faculty of Medicine, the Academy of Medicine, and the Academy of Sciences The eminent men of science never met in greater numbers than on this occasion. Many of the high public functionaries were also present. The cords of the pall were held by MM. Paul Dubois, Bérard, Dubois d'Amiens, and de Bussy. After the religious service, the body was conveyed to the cemetery of Mont Parnasse, followed by an immense line of mourners.

BRONZE STATUE OF THE LATE MARQUIS OF BUTE.

BY J. EVAN THOMAS.

THIS fine colossal Statue of John Crichton Stuart, Marquis of Bute, K.T., is the result of a public subscription raised in Glamorganshire, of which county his Lordship was the Lord-Lieutenant. The Statue is about to be erected on a pedestal of Aberdeen granite, in the town of Cardiff, in testimony of his Lordship's high and distinguished character, and the unwearied zeal with which his exertions were employed in the last moment of his life to promote the interests and trade of Cardiff, by largely adding to his great and magnificent work, which bears his name, "The Bute Docks."

This Statue is the work of Mr. J. Evan Thomas, of Belgrave-place. It represents the Marquis dressed in his Peer's robes, and standing in a dignified and unaffected attitude, as if addressing a public assembly The effect is highly agreeable; and the likeness we believe to be indisputable.

BRONZE STATUE OF THE LATE MARQUIS OF BUTE.—BY J. EVAN THOMAS.

CALENDAR FOR THE WEEK.

SUNDAY, March 20.—Sixth Sunday in Lent. Palm Sunday.
MONDAY, 21.—Duc d'Enghien shot, 1804
TUESDAY, 22. First Protestant Charity-school opened in England, 1688
WEDNESDAY, 23.—Southwark-bridge opened, 1819
THURSDAY, 24. Maundny Thursday. Earl of Chesterfield died, 1773.
FRIDAY, 25.—Good Friday. Lady day.
SATURDAY, 26.—George Duke of Cambridge born, 1819.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, MARCH 19, 1853.

At length, thanks to Mr. Fitzroy, we have a near prospect of the introduction into our criminal law of a much-needed and long-called-for reform. For years and years the journals and the public have been protesting against the perfectly insufficient powers granted to magistrates for the punishment of brutal assault cases. Men who had beaten their wives almost to death's door—who had been within an ace of committing murder—got off with a couple of pounds fine, or two months' imprisonment. This result was inevitable. It was stern, unalterable law. Perhaps one additional blow would have changed two months of the treadmill to transportation for life, or even to capital punishment But the blow had not been struck, and the ruffian at the bar, who had advanced to the very edge of murder, escapes with the humanity of one hundred shillings. As to sending to the sessions cases of the kind—particularly where, as often happens, the person maltreated is a near relation of the offender—every magistrate is well aware that he might as well dismiss the whole matter at once. The wife, or the child, or whoever may be the prosecutor, will in the interval be worked upon; perhaps bribed; somehow or other, at all events, kept out of the way; or induced, when before a jury, to tell a perfectly different story from that which appears in the depositions of the police-court. The fact is, that the sharp anguish and the keen sense of injury first experienced have worn away. As the gashes have healed and the bruises disappeared, so have old recollections of better days, and a returning sense of attachment sprung up again; and neither judge, jury, nor counsel can extract truth from the weak, and pale, but determined woman who stands before them.

The importance of summary conviction is thus made abundantly evident; and Mr. Fitzroy's Bill proposes to give the magistrate power either to impose a fine of £20. or to send the offender to prison for two months—a proposition which cannot be, at all events, objected to on the score of over-severity. Mr. Phinn, in seconding the motion, hinted that "the judicious application of corporal punishment would be the best check." But Mr. Phinn forgets that public opinion would go strongly and justly against literally returning blow for blow. The effect of stripes has always been found to degrade a man even below a previously wretched condition of debasement, besides producing a feeling of desperate and hopeless recklessness, which is but too likely to lead to fatal effects in regard to himself or others. Mr. Fitzroy's bill, as he has introduced it, will, we have no doubt, go a great way to check brutal violence, especially in the cases of those drunken, dissolute, idle people who live upon their wives' earnings—and who form the class by members of which, nine-tenths of the most brutal assaults are perpetrated. Short imprisonments are little dreaded by these people, but long confinements are their horror.

We cannot leave this subject without bestowing a couple of words on a popular Continental delusion widely disseminated and firmly believed in, the English are a very brutal set of people—that English husbands are continually beating their wives; and in fact that we are all, as a general rule, singularly addicted to the amiable practices of striking, kicking, scratching, and committing all sorts of ruffianism upon each other. Now, the source of all these very mistaken and somewhat calumnious ideas, we take to be our own passion for police reports, and for devouring the narrative of every case of savage violence which occurs. The result of our national taste for this delicate species of literature is, that columns on columns of our journals are daily filled with the details of assaults and outrages of every possible character, industriously gathered by the indefatigable penny-a-liners, and, of course, set off with every possible garnish, to give every case the highest practicable flavour. Now, when these reports—pouring daily forth by scores—are read abroad, the natural inference is drawn, that we are a mere set of savages, constantly belaboouring each other, and recording our exploits in this way in our journals, as if they were something to be proud of. The fact is, that there is just as much fighting, beating, sabot-kicking, and, what is worse, knife-cutting, in the lower quarters of Paris, as exists in the courts and alleys of London; and the same is the case in all the great Continental cities. There, as well as here, passion, drink, and jealousy do their work; only, on the Continent, the journals do not blazon their countrymen's shortcomings; they prudently leave these matters to the police; and we would show our discretion and our taste if we followed their example.

A QUESTION, of which the English public has until lately heard but little, is rearing itself into the social and commercial atmosphere, and bidding fair to become one of the engrossing subjects of the day. Good people in general used instinctively to consider Custom-house abuses as things pretty sure to be connected with squabbles about carpet-bags detained at Folkestone, or French editions of English books peremptorily seized in the searching-room at London-bridge. There were few indeed who dreamt that, unseen and unfelt by the world in general, but guiding, in darkness and secrecy, the whole of our Custom-house system, there has for many years existed a despotic body of gentlemen, endowed with powers and privileges which no other Englishmen whatever were entrusted with, and ordinarily known as the Custom-house Board. The growth of the abnormal powers of the institution in question seems to have been slow but sure. For a long time it exercised them cautiously, and without daring to attack great merchants or the richer companies of the City. Becoming, however, emboldened, after some successful crushing of the smaller class of traders whose want of capital and social influence rendered even a struggle for justice impossible—the Board attacked the Great Dock Companies, and, happily, met with their match. Our readers cannot but remember the long columns of Custom-house trials which some time ago occupied pages of the daily journals. These proceedings at last roused the whole might of the commercial world, and successive appeals were made to different Governments for a most sweeping reform of the Custom-house system, and a most extensive lopping of Custom-house powers—appeals which at length have had their effect. The present Cabinet took up the case practically; and on Saturday last a deputation—unprecedented as a gathering of the commercial aristocracy of England, in and out of Parliament, and representing an almost boundless decree of wealth—waited upon the Chancellor of the Exchequer, to present him with a memorial setting forth the views and wishes of the mercantile community.

This memorial, which was read by Mr. Trevor, the chairman of the London committee, is a document to be perused and remembered. It points out the mass of complicated confusion into which the accumulated orders, minutes, and by-laws of the Board have gradually fallen; and it states that under the existing law a merchant's person may be seized, his property sold without a warrant, and without a charge being brought against him, or any opportunity being afforded him of making the slightest personal defence. Practically, the memorial alleges that there is no chance of justice from an appeal to the Commissioners. If the victim resort to them, they refer back to the seizing officer: he reports his version of the story, and the Board uniformly decide that he is in the right. Nor are the chances of appeal to the Treasury happier ones. The Treasury remits the matter again to the Board; and thus, all through the Custom-house system, the accused becomes his own judge, and virtually pronounces his own verdict of "Not Guilty." "A man," says the memorial, "may be beggared in means and ruined in character; but neither the Customs Commissioners, nor the Lords of the Treasury, will furnish him with a statement of the charges against him, nor allow him to answer personally in his own defence." Many similar details are set forth with similar plainness; and then the memorial proceeds to recite that, though it was understood that the Treasury minute scheme had been given up, and that bills were in preparation, yet that, as it was rumoured that those bills were being drawn up by the Commissioners themselves, drafts of them should, before they were laid before Parliament, be furnished to the mercantile community, for their practical suggestions and amendments.

Mr. Gladstone's reply was re-assuring. He informed his hearers that the Government were perfectly at one with them in the absolute necessity of introducing sweeping changes into the Customs system; but he put it to the deputation whether the most advisable plan would not be to allow the bills in their original state to have a parliamentary introduction, after which, ample time would be allowed for discussion, and the suggestion of improvements out of doors. These suggestions Government would consider, and those they deemed efficient they would embody in amended bills. To this reasonable proposition, there was little demur. The members of Parliament present agreed with the instinct of legislatorial *esprit de corps*; and the great mercantile firms followed in their train, their representatives expressing their entire confidence in the sincerity of the Government.

It is, however, not only with reference to the anomalous and in practice cruelly-exercised powers of the Board of Customs that the administration of the Custom-house is intended to undergo extensive improvements. It is also proposed materially to simplify the whole arrangements—to codify into an intelligible form such present rules and by-laws as Parliament may approve of; and generally to remove every possible obstacle to the rapid and facile carrying on of our importing trade.

There can, we should think, arise no difficulty about the matter. Ministers, merchants, and members of Parliament are all agreed upon the necessity of a reform. The members of the Customs Board, whom we are far from blaming personally, are themselves drawing up the bills for the destruction of powers—which, we are sure, they never exercised, save from a stern sense of duty, and from which they will speedily be relieved; while the measures in contemplation are solely for the practical benefit of that Free-trade, to the full operation of which, opposition and obstacles long banished from the Senate cannot be allowed to lurk in the darkness of an institution, founded, to a great extent, on the false principles of other days, and growing worse as it grew older.

CHURCH, UNIVERSITIES, &c.

PREFERMENTS AND APPOINTMENTS.—The Rev. R. Cave, M.A., to the Archdeaconry of Lindisfarne, with the vicarage of Bamburgh annexed, Northumberland. The Rev. W. P. Creyk, M.A., to be Chaplain to the Lord High Commissioner of the Ionian Islands. The Rev. Joseph Wenley, B.D., to be one of her Majesty's preachers at the Chapel Royal, Whitehall. The Rev. C. W. Doherty, M.A., to be Domestic Chaplain to the Marquis of Ely. *Rectories*: the Rev. R. Smith, B.D., to Hope, Kent; the Rev. J. Emerson, M.A., to Eyeton, Salop; and the Rev. T. E. Bridgeman, M.A., to Grinsley on-the-Hill, Bawtry. *Vicarages*: The Rev. W. Lyddon, M.A., to Stanford; the Rev. F. J. Richards, M.A., to Boxley, near Maidstone.

RE-OPENING OF BRAMFORD SPEKE CHURCH.—This church, of which the Rev. Mr Gorham is the vicar, was re-opened on Thursday week. Upwards of fourteen clergymen were present, and the Rev. F. Close, of Cheltenham, was selected to preach the sermon. The church has been entirely rebuilt, with the exception of the tower, which is left in its original condition. The roof is of open oak, and the high pews have been replaced by neat open seats. Two-thirds of the cost of the restoration were bequeathed by a wealthy lady of the parish named Tucker, and the remainder is to be made up by subscriptions. The architect was Mr Butler, of London.

NEW CHURCH, PIMLICO.—The new church of St. Gabriel, situate in Warwick-square, Pimlico, is rapidly approaching completion, and will be ready for consecration next month. The Rev. R. Belcher, B.A., will be the first incumbent.

CHURCH RESTORATION.—Through the exertion and liberality of the Rev. I. H. Gossett, the venerable parish church of Northam, in Devonshire, has undergone partial restoration within the last two years, the expenditure amounting to £2000, and to carry out the vicar's laudable design it would take another £1000.

WOMEN'S ADDRESS ON SLAVERY.—The final meeting of the ladies' committee for the promotion of this address is arranged to be held at Stafford House when the 24 volumes, containing more than 500,000 signatures, will be presented to Mrs. Beecher Stowe, as to their representative in America. An address to the women of America is also to be set on foot to raise a considerable sum for books for the purpose of advancing the cause of liberty amongst the coloured race in America. The administration of the fund will be entrusted to Mrs. Beecher Stowe, as a tribute to her well-known exertions on behalf of the slave; and the Earl of Shaftesbury, the Earl of Carlisle, and Mr. Samuel Gurney have agreed to act as trustees.

ELECTION COMMITTEES.—*Southampton*: Sir A. Cockburn and Mr. Willcox are declared duly elected. *Cirencester*: The petition has been withdrawn, and the Hon. Archer Fonsonby retains his seat. *Maidenhead*: Mr. Stansfeld has lost his seat, through the bribery and treating of his agents. *Wigtown Burghs*: Sir J. M'Taggart retains his seat, being duly elected.

ST. PATRICK'S DAY.—Thursday being St. Patrick's-day, it was observed in all the Roman Catholic chapels as a solemn festival. In the chapel, Sutton-street, Soho, a solemn high mass was chanted by a full choir, after which Cardinal Wiseman delivered a discourse on the life and acts of St. Patrick. The anniversary meeting of the friends of the Royal Society of St. Patrick was held at the London Tavern, Bishopsgate-street, and the customary solemnities for the means of promoting the great object for which the society was established, was made and liberality accorded to. At guard mounting the military bands played principally Irish airs. The colours of the various battalions were decorated with the shamrock.

THE LATE PORTUGUESE PRINCESS.—On Tuesday, a funeral service was celebrated in the Catholic Church of St. James, Spanish-place, Manchester-square, for the repose of the soul of her late Imperial Highness the Princess Marie Amelie, sister of the Emperor of Brazil and of the Queen of Portugal. Invitations were sent by the Brazilian Minister to all the representatives of the Sovereigns who are related by consanguinity or affinity with the august deceased, as well as to all the Portuguese and Brazilians resident in London.

BATTERSEA PARK.—Mr. Thomas Cubitt, the builder, by whom Battersea Park was suggested, offers to take the whole of the land that has been agreed to be purchased off the hands of the Government at the cost price, he will also, if they desire it, take the bridge now erecting at the cost price, with its new approach.

THE COURT.

The week just closed has been full of interesting incident at Court. Her Majesty continues in the enjoyment of excellent health, and has frequently appeared in public. A liberal dispensation of the Royal hospitality, and occasional visits to the theatre, have alternated with each other, and left no day without its agreeable occupation

On Saturday, her Majesty and the Prince Consort drove to Sydenham, and inspected the works in progress at the New Crystal Palace. Mr. Owen Jones was in attendance, and conducted the illustrious visitors over those portions of the building already completed In the evening the Queen had a dinner party, the company, at which included the Duchess of Kent, the Princess Adelaide of Hohenlohe, the Lord Chancellor and Lady Cranworth, the Austrian Minister and the Countess Colloredo, Lord and Lady Charles Wellesley, Lord and Lady De Ros, Lord and Lady Colborne, Sir James and Lady Graham, and Sir John and Lady Pakington

On Sunday the Queen and the Prince, with the Prince of Wales, the Princess Royal and the Princess Alice, the Duchess of Kent and the Princess Adelaide of Hohenlohe, and the ladies and gentlemen of the household, attended Divine service in the private chapel of Buckingham Palace

On Monday her Majesty took walking exercise in the gardens of Buckingham Palace. The Prince Consort, with the Prince of Wales and Prince Alfred, went in the morning to the Bank of England. The Royal party were shown over the various departments of this national establishment by the Chairman of the Board of Directors. In the evening the Queen and the Prince went to have gone to the St. James's theatre, but her Majesty's plans hastily changed her determination, and visited the Haymarket Theatre, to witness Mr Webster's retirement from the management

On Tuesday the Queen and the Prince Consort paid a visit to the Duchess of Gloucester, at Gloucester House. In the evening her Majesty had a dinner party, the guests at which included the Duchess of Kent, the Duchess of Cambridge and the Princess Mary, the Princess Adelaide of Hohenlohe, the Duke of Wellington, the Marquis of Breadalbane, the Earl and Countess of Eglinton, the Earl of Malmesbury, Viscount and Viscountess Hardinge, Lord and Lady Edward Fitzalan Howard, Lord and Lady Robert Grosvenor, and Sir Charles and Lady Mary Wood. On Wednesday, the Prince Consort presided at a meeting of the Royal Commission for the Exhibition of 1851, held at the New Palace of Westminster In the evening, the Queen and his Royal Highness Prince Albert honoured the performances of the French Plays at the St. James's Theatre with their presence

On Thursday the Queen gave a dinner party. The company included the Duchess of Kent, the Princess Adelaide of Hohenlohe, the Duke of Norfolk, the Prussian Minister and Madame Bunsen, the Earl and Countess of Derby, the Earl and Countess of Shaftesbury, the Earl and Countess of Rosebery, and the Earl Delawarr

Lord Camoys has relieved the Marquis of Ormonde in his duties as Lord in Waiting to the Queen, and Major General Berkeley Drummond has relieved Mr. R. Ormsby Gore as Groom in Waiting to her Majesty

The departure of the Court for Windsor has been delayed from Thursday last until to-day (Saturday). Under present arrangements, the Queen and the Prince, with the youthful members of the Royal family, leave Buckingham Palace this afternoon for Windsor Castle.

HER ROYAL Highness the Duchess of Kent, accompanied by the Princess Adelaide of Hohenlohe, visited the Countess of Neuilly, at Camberwell, on Wednesday. The Duchess of Orleans and her youthful family have arrived at Claremont, from Devonshire.

HIS Excellency the Belgian Minister and Madame Van de Weyer arrived in Portland-place, on Friday night, from Brussels

THE Duke of Devonshire gave a grand dinner on Tuesday at Devonshire House, to his Excellency the French Ambassador and the Countess Walewska, his Excellency the Austrian Minister and the Countess Colloredo, and a party of distinguished friends His Grace gave another dinner party on Thursday, when the guests included the Earl of Carlisle, the Earl and Countess Cowper, Viscount and Lady Olivia Cavendish, Lord Ward, &c.

WE regret to learn that the Duchess Downger of Leeds has been seriously indisposed for the past few days at Hornby Castle The Duke of Leeds was summoned from London on Friday to attend his affected parent. The latest accounts describe her Grace as somewhat better

THE Earl and Countess of Clarendon entertained a distinguished circle at dinner, on Saturday evening, at their residence in Grosvenor-crescent. The Countess had a reception last evening (Friday), at the Foreign Office, which was very numerously and fashionably attended

THE Duchess of Argyll gave birth to a son on Friday morning last, at Stafford House. Her Grace and the infant are progressing most favourably. This is the seventh child, and fifth son, of the young Duke of Argyll.

THE Marquis and Marchioness of Ailesbury arrived in Grosvenor-square, on Saturday, from Tottenham Park; but Lordship having so far recovered as to enable him to travel as London

THE Countess of Aboyne gave birth to a son on Saturday last at Orton Longueville, the family seat in Huntingdonshire.

VISCOUNT and VISCOUNTESS PALMERSTON intend to pass the Easter recess at Broadlands.

VISCOUNT and VISCOUNTESS CASTLEREAGH have left town on a Continental tour.

LORD LONDESBOROUGH has taken a mansion on Carlton-house-terrace. His Lordship, with Lady Londesborough and their youthful family, are gone to Grimston park for the recess.

NAVAL AND MILITARY INTELLIGENCE.

INDIAN SERVICE.—The regiments of the line now serving in India are to be filled up from the provisional battalion to the number of 2000 men. The garrison orders of the 14th name the following depôts of corps at Chatham, parties for that service: For Bengal, the 10th, 15th, 22nd, 24th, 29th, 32nd, 56th, 61st, 70th, 75th, 80th, 87th, 96th, and 98th; for Bombay, the 8th, 64th, 78th, and 86th; and those for Madras, the 25th and 31st

CONVEYANCE OF HORSE ARTILLERY BY RAILWAY.—An experimental removal of troops and artillery took place on Wednesday morning from the Bricklayers' Arms station of the South-Eastern Railway, for the purpose of ascertaining the time required to load and unload a troop artillery with horses, ammunition, &c., for conveyance by railway. A portion of a battery of the Royal Artillery, with the full complement of men, horses, guns, &c., were loaded in a train at the Bricklayers' Arms station, conveyed to Woolwich, and there unloaded all in 2 hours and 38 minutes, 26 minutes of which were occupied in constructing a temporary platform to unload the guns

HONOUR TO THE BRAVE.—A gratifying scene occurred at the Cavalry Depôt, Maidstone, last week, when a general parade assembled to witness the presentation of a medal and clasps to the non-commissioned officers and men of the 11th Light Dragoons who shared in the late Punjaub campaign. Colonel Griffiths congratulated the men on the distinguished honour conferred on them, and the garrison sergeant-major performed the pleasing duty of decorating the medals on their breasts

THE SCREW FLEET.—In the course of the next three months there will be a very strong addition to our fleet of screw line-of-battle ships. The *Ocean of Ares*, 101, will be launched at Devonport on the 23rd inst. The *Renown Wolf*, 91, will be launched at Pembroke in the course of next month. The *Royal George*, 120, will be completed at Chatham by the 30th of next month. The *Royal Albert*, 121, at Woolwich; and the *Hannibal*, 91, at Deptford, will be launched about next June

THE ARCTIC EXPEDITION.—The screw-ship *Phœnix*, Commander Inglefield, fitting for the relief of Sir J. Belcher's expedition, will be taken out of dock at Woolwich on the 20th of March, and will be out of the hands of the dockyard by the second week in April. Her complement is 100 officers and men. Of this number she has nearly one half on her books

THE *Isabel* screw steam-ship is expected to leave Woolwich this day for Behring's Straits, calling only at Vancouver's Island, on her way there. Mr. Kennedy will have the command of the vessel, and Mr. Grate will act as sailing master, and Mr. Gridin as engineer. M. Bellot, the French officer who accompanied Mr. Kennedy in his last voyage, declines (in consequence of a domestic affliction) proceeding to Behring's Straits in the *Isabel*

THE NEW CRYSTAL PALACE.—On Thursday, a special meeting of this company was held at the London Tavern—Mr. S. Laing in the chair—when an agreement with the Westerton and Crystal Palace Railway Company—whereby the Railway Company are to receive three-sevenths, and the Palace Company four-sevenths, of a penny to be fixed for transmission to and from, and admission into, the Palace—was agreed to; the chairman stating the amount fixed upon was 1s. 6d It was also stated that tickets were shortly to be issued to enable the Company to inspect the works during their progress.

WOOLWICH BATHS AND WASH-HOUSES.—On Wednesday the baths, wash houses, and lecture-hall, erected by a company at a cost of £7000, were sold by public auction, in consequence of the large debt due for their erection. The premises only realised the sum of £2480.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—FRIDAY, MARCH 11.

The affairs of India were again discussed by their Lordships to-night The Earl of DERBY deprecated permanent legislation for India during the present session, while inquiry was going on, and recommended a continuing act for a period not exceeding five years The Earl of ABERDEEN, on the other hand, thought sufficient evidence had been taken relative to the government of India to enable their Lordships to legislate during the present session.

HOUSE OF COMMONS.—FRIDAY.

India was also the first subject which engaged the attention of the Commons this evening. Mr. BRIGHT strongly complained of the mal-administration of justice in India, and the absence of roads, bridges, and other signs of material improvement. He also laid great stress upon the petitions of the natives for a reform in the Indian Government, and the deficiency in the Indian revenue. Lord J. RUSSELL, in reply, defended the administration of the East India Company; and the discussion terminated without any glimpse having been afforded of the nature of the Government measure or the term of its continuance.

After the presentation of a great number of petitions against the admission of the Jews to Parliament, the House passed to the consideration of the second reading of the Jewish Disabilities Bill; when Sir F. THESIGER, in a clear and effective speech, led the opposition to the bill by moving that it be read a second time that day six months. The hon. and learned gentleman was followed by Mr. B. OSBORNE, who, in the first speech delivered since his accession to office, showed that his forte rather lies in personal attack than in logical argument. Mr. H. DRUMMOND, in one of those original and amusing speeches which puzzle his friends, and do not greatly damage his opponents, admitted, while he opposed the bill, that there was not one single argument to be brought against the bill upon religious grounds. The Jews, he said, cared not one rush for any Christian community, and would not be at the trouble of supporting any one sect or of pulling down another. The faithful among them were looking forward to the time when they should trample upon the Gentiles like ashes under the soles of their feet. The debate called up Lord J RUSSELL, who contended that those who condemned the Madiai on account of religious faith were only acting upon the principle of those who excluded Jews from Parliament. In conclusion, he said—

It is because I am not indifferent to the triumph of Christianity, but because I believe Christianity will triumph amidst the greatest liberty and the most free diffusion of opinion, that I believe that triumph will be hastened and confirmed by the removal of the last of these disabilities (Much cheering).

The majority in favour of the second reading considerably exceeded that in favour of the introduction of the bill. The numbers were—For the second reading, 268; against it, 212: majority, 51.

HOUSE OF LORDS.—MONDAY.

Lord LYNDHURST drew attention to the revision and consolidation of the statutes, which the Lord Chancellor had stated the Government desired to see carried out. He cited cases to show the carelessness with which Acts of Parliament were framed, and the loose manner in which amendments were made and carried in committee. In one case, where a pecuniary penalty was originally proposed for an offence, fourteen years' transportation was substituted during the progress of the bill through Parliament. But the party who had charge of the bill omitted to strike out the other clause of the bill by which the penalty was to be divided, and the result was that the whole parish became entitled to seven years' transportation, and the other half was to go to the informer.

The Lord CHANCELLOR promised to direct his attention, not only to devising the best manner of consolidating what was past, but a better mode of legislation for the future. He had obtained the services of a few of the most efficient men, and in the first week of April the proposed consolidation should commence. Of thirty-eight quarto volumes of statutes, he believed not above six or seven were in force. He proposed that they should take three or four rather easy subjects, put the enactments into better language and form, and lay the result as a specimen before the House.

After some useful suggestions from Lord St. LEONARDS and Lord BROUGHAM, the subject dropped.

The County Elections Polls Bill (introduced into the House of Commons by Lord R Grosvenor) was read a first time, after an energetic assurance from the Earl of ABERDEEN that the Government was most anxious to check the present amount of bribery and corruption. The attempt of this noble friend (Lord J. Russell) was directed to meet an evil which threatened to bring our whole representative system into contempt.

HOUSE OF COMMONS.—MONDAY.

Petitions were presented by Sir H. R. INGLIS from chaplains of a large number of gaols in various parts of the country, against the opening of the Crystal Palace on Sundays. The petitioners strongly represented the demoralising effect of a breach of the Lord's Day, which their experience had shown to be one of the most fruitful sources of crime.

The Jewish Disabilities Bill went through committee, and the House adjourned at the unusually early hour of eight o'clock.

HOUSE OF LORDS.—TUESDAY.

Lord MALMESBURY called the attention of the Government to the loss of life and limb to passengers by railway. Since he last drew their lordships' fire accidents of the most serious nature had occurred one on the South Eastern, one on the Berwick and Newcastle, one on a branch of the same line, another on the Manchester line, and the fifth on the Bristol and Birmingham. In consequence of these accidents, eleven persons had been at once destroyed, and about forty persons seriously many of them irremediably injured. Nor did these accidents arise from casualties and unavoidable accident, but from neglect on the part of the railway authorities, and from want of a presiding system of management and control

Lord STANLEY of Alderley said that the Government would not hesitate to ask for new powers if required by the public safety. He trusted that the committee of the House of Commons, which would have the assistance of the most scientific men in the country, might suggest some remedy for the evils with which the working of railways was now attended

The Earl of HARROWBY was of opinion that the greater number of railway accidents arose from two causes chiefly—namely, excessive economy on the part of the company, and excessive speed. If Parliament wished to obtain security in most, in the first place, diminish the speed of the trains, and that could only be done by getting rid of the spirit of competition; and, in order to put an end to competition, they must assign certain districts of the country to certain railway companies.

The Earl of WICKLOW said, their Lordships ought to bear in mind, when speaking of the great number of railway accidents, that the weather had been worse for several months past than was ever previously known in this country. Was it not to be expected that under such circumstances, excessive injury would be done to the railroads, in like manner as to other descriptions of roads? Another cause, of a more serious nature, might be the deterioration which, from use, the railways themselves had undergone. The wear and tear of those roads was immense, and the companies had not funds enough to put them into that state of repair which they required.

HOUSE OF COMMONS.—TUESDAY.

The London and Watford Spring Water Bill was thrown out, after a speech by Lord PALMERSTON, who said that it would not be fair to existing Water Companies to sanction another bill for supplying the metropolis, until it should be seen whether the present companies who were going to great expense to obtain an improved supply under the bill of last session—had failed to give an abundant supply of good water

Sir B. HALL said that, after Easter, he should move for leave to bring in a bill to extend the municipal franchise to all ratepayers in the city of London, and to provide that the Lord Mayor should be elected by the votes of the municipal electors.

Sir De L. EVANS asked the Commissioner of Works

Whether it was his intention to proceed with the bill which was prepared by the late Government for the reconstruction of Westminster-bridge: and, if not, what course was intended to be taken in respect of the ruinous and dangerous state of the present structure?

Sir W. MOLESWORTH admitted that Westminster-bridge was in a very ruinous and almost dangerous condition:—

The late Government came to a determination to pull the bridge down, and to construct another on nearly the same site, and, after much consideration, he had come to the conclusion, that the determination of the late Government, in that respect, was a wise one (A laugh). The exigencies of commerce, and the transit going on in this great metropolis, would probably, at no distant period, require two additional bridges across the Thames one in the vicinity of Charing-cross, and another at Lambeth; but it was advisable to rebuild Westminster-bridge on its present site. It was his intention, therefore, to proceed with the bill of the late Government, and he was preparing plans for that purpose On account of the vicinity of the New Houses of Parliament, the new bridge ought to be low, wide, and at right angles with the New Houses. Operations would be commenced in the course of the present year.

Sir J. GRAHAM, in reference to the second return of the *Australian* steamer into Plymouth, was sorry to say, that the service of the Australian Mail packet Company, under their contract, was most unsatisfactory. One of the contract engagements of the Government to inflict penalties for the non-performance of the service stipulated; and both the late and the present Government had not failed to enforce the penalties whenever it appeared equitable to do so.

Mr. K. SEYMER moved an address for a commission to inquire into the state of the borough of Canterbury. As chairman of the Election Committee, he could state that a very large number of electors were bribed by means of colourmen's ticket. He urged that measures should be taken to deprive persons who had thus employed their franchise of a privilege they had abused. Mr. MALINS believed the only remedy was the withholding the franchise from such persons. Mr. DISRAELI thought that a better remedy would be an enlargement of the constituency. His only hope was in a new reform bill, and he called upon Sir J. Graham to prevail upon his noble colleague to give a good one. Lord J. RUSSELL was ready to vote for the motion; while Mr. J. HUME thought the commission would be a waste of time. The motion was ultimately agreed to

A debate took place upon a motion, by Mr. WILSON PATTEN, that a new writ be issued for the borough of Blackburn, in the room of Mr. Eccles, unseated for bribery and treating by his agents. Some members thought there ought to be an inquiry by a committee, but ultimately the writ was issued

A lengthy discussion followed upon a motion, by Colonel FORESTER, for the issue of a writ for the borough of Bridgenorth Sir J. SHELLEY contended that the case was in a very different position from the last: that a regular system of coercion, treating, and intimidation had existed in this borough; and that a Select Committee ought to be appointed to inquire. The House, however, appeared to think that there were no special circumstances in the present case to justify the suspension of the writ, which was accordingly granted.

The Aggravated Assaults Bill, which provides a more severe punishment for cruel assaults upon women and children, was read a second time

HOUSE OF COMMONS.—WEDNESDAY.

On the order for the committal of the County Rates and Expenditure Bill.

Sir J. FAKINGTON moved to defer the committee until the 13th of April, to afford time for the courts of quarter sessions to consider the bill that a regular system of coercion, treating, and intimidation had existed in this borough; and that a Select Committee ought to be appointed to inquire. The House, however, appeared to think that there were no special circumstances in the present case to justify the suspension of the writ, which was accordingly granted.

The Aggravated Assaults Bill, which provides a more severe punishment for cruel assaults upon women and children, was read a second time

HOUSE OF COMMONS.—WEDNESDAY.

On the order for the committal of the County Rates and Expenditure Bill.

Sir J. FAKINGTON moved to defer the committee until the 13th of April, to afford time for the courts of quarter sessions to consider the bill

Mr. M GIBSON, believing that the county magistracy had had ample opportunities for understanding the scope and character of the measure, resisted this postponement.

The House went into committee on the bill

Upon the 4th clause, enacting that the county financial board, with certain exceptions, shall consist of persons elected by the elected members of the board of guardians and by the guardians of the poor,

Sir J. FAKINGTON moved to include the justices duly qualified to act in each county,

Mr M GIBSON declined to assent to this amendment, which would, he said, be fatal to the bill, being inconsistent with the representative principle upon which the bill was founded

A debate took place, and the Chairman was ordered to report progress before a decision had been come to upon the clause.

HOUSE OF LORDS.—THURSDAY.

The following bills were severally read a third time and passed, viz, the County Elections Polls Bill, the Grand Jury Cess (Ireland) Bill, the Indemnity Bill, the Office of Examiner (Court of Chancery) Bill, and the Consolidated Fund Bill. The Slave-trade Bills (Solar in Arabia and New Granada) were severally passed through Committee

In reply to Lord St. Leonards, the Lord CHANCELLOR said that there were three or four of the most eminent men engaged upon an inquiry on the subject of a general codification or classification of the laws. The present Commission was more for the purpose of ascertaining to what extent it would be wise or practicable to go in respect to this matter. The inquiry, however, was only preliminary.

THE AUSTRALIAN STEAMERS.

Lord WHARNCLIFFE asked whether the Government proposed to make any arrangements for the more certain transmission of the mails to Australia? and whether they intended to take any steps for more effectually enforcing, or for terminating, the contract for that object with the Royal Australian Mail-packet Company?

Lord CANNING admitted that the company did not fulfil the contracts entered into, and said that the Government would do the best they could to remedy the inconveniences caused thereby. They sent the mails on by other vessels, and would endeavour to prevent such casualties occurring for the future.

After a short discussion, the House adjourned.

HOUSE OF COMMONS.—THURSDAY.

Mr. T. DUNCOMBE brought up the report of the committee on the Norwich election petition. It will be remembered that a petition had been presented to the House complaining of the withdrawal of the petition of Colonel Dickson, and that he attributed that withdrawal to an arrangement entered into between Mr. Brown, the agent of Colonel Dickson, and Mr. Coppock, the agent for the Liberals, to pair off certain petitions on the one side and the other. The committee was of opinion that no authority had been given for the withdrawal of the petition, and censured the system which seemed to prevail, that agents on both sides should pair off one petition against the other; and they stated that in this case there appeared to have been the withdrawal of petitions affecting ten seats. He concluded by moving that the evidence taken before the committee be printed.—Agreed to.

In answer to a question from Sir De L. EVANS, Lord PALMERSTON stated that Mary Hill, who had been convicted and sentenced to ten years' transportation by Mr. Serjeant Adams, would have her sentence remitted to seven years. The lady (laughter) had been in concert with some of her fair confederates, no doubt pure parsons (laughter), and accidentally—of course, quite accidentally robbed (laughter) a person she became acquainted with on a journey, having conveniently by her her male friend (laughter), of course her husband (laughter). The lady was found guilty, and kept up a row in the court (of course accidentally) She had been rescued before she was secured (laughter), and the Judge thought she might have her friends in court—of course, her male friends (roars of laughter)—to restrain her from the Judge and the police No doubt the lady thought it a hardship to be restrained from showing her own power or that of her male friends—the husband's (Laughter). But it was necessary to preserve the dignity of the Court and the police, even from the attacks of a lady of so much physical if not moral power (Roars of laughter).

In answer to a question from Lord Stanley, Mr. F. PEEL said that it was the intention of the Government to propose a uniform rate of 6d. for each half ounce for colonial postage, a penny of which 4d. is to be for the colony for delivery

Mr. NAPIER, in moving for the production of certain papers relating to the Six Mile-bridge (Ireland) affray, entered into a history of that case, in which there were seven persons, who formed part of a riotous mob, killed by a company of soldiers, while the latter were protecting the body of voters going to the polling place, on the 22d of July last, at the Clare election.

A warm discussion ensued, which was confined to the Irish representatives, and which occupied the House until its adjournment.

EXPLOSION OF TWO STEAMERS.—Two steamers have blown up within the last few days. One, the *George Bolton*, was proceeding to Goole Grimsby with a full cargo of coal. When near the Humber, on Friday, her boilers exploded with terrific force, tearing up her decks, and partly splitting the vessel in two. The chief engineer, Christopher Jewett, was found most shockingly scalded, and otherwise much hurt. Another unfortunate man, named James Smith, was also similarly hurt. The vessel sank, but most of the crew escaped. Two poor fellows seem to have perished, whether from the effects of the explosion, or being unable to escape, is yet to be learnt The other mishap befel the *Engineer*, which had been recently built on the Tyne. She made an experimental trip on Friday, to test the capabilities of her engines. When off Tynemouth her boilers exploded, and eight or nine persons are reported to have been scalded, some, it is feared, fatally. The steamer became disabled, but was towed back to the Tyne.

NATIONAL SPORTS.

TATTERSALL'S.

MONDAY. Although the room was well attended, the betting was languid and generally unimportant, an improvement in Ethelbert, Lampedo, Hobby Horse, and Defiance for the Handicap at Newmarket, Epsom, and Northampton being the only changes to which it is necessary to speak. The market prices at the close ruled as follows:—

SWEEPSTAKES OF 100 SOVS EACH.

7 to 1 agst Hobby Horse	8 to 1 agst Defiance
	15 to 1 agst King of Trumps
	100 SOVS IN HANDICAP.
7 to 1 agst Contentment	11 to 1 agst Lampedo
	12 to 1 agst Snowden Dunhill

NEWMARKET HANDICAP.—5 to 1 agst Contentment. 8 to 1 agst Ethelbert.

TWO THOUSAND GUINEAS.—6 to 4 on the field, agst West Australian and Stringbourne.

CHESTER CUP. 15 to 1 agst Felix. 20 to 1 agst *Lady Evelyn.*

2 to 1 agst West Australian	16 to 1 agst Thorpe	33 to 1 agst Ribsthorn
12 to 1 —— Greene (t)	20 to 1 —— Dryden (t)	33 to 1 —— Contentment
14 to 1 —— Circus	20 to 1 —— Honeywood (t)	33 to 1 —— Filbert
15 to 1 —— Stringbourne	25 to 1 —— Harworth	40 to 1 —— Queen colt

100 SOVS.

9 to 2 agst Catharine Hayes	7 to 1 agst The Queen	14 to 1 agst Mistletoe.

WARWICK AND LEAMINGTON SPRING MEETING

TUESDAY.

SWEEPSTAKES of 5 sovs each. Brown f. by the Sheriff, 1. Gip, 2.
TRIAL STAKES.—Defiance, 1. Poodle, 2.
WOODCOTE STAKES. Colt by John Bull—Jaunt, 1. Cheaster, 2.
WELLESBOURNE HANDICAP. Defiance, 1. Don, 2.
A FREE HANDICAP.—Commore, 1. Herodne, 2.
The FARMERS' PLATE was won by Jilly by Heron, dam by Defiance, beating seven others.

WEDNESDAY.

DERBY SWEEPSTAKES. [illegible] The Miner, 2
HANDICAP PLATE of [illegible] Hermia, 1 Heroine, 2
TWO YEAR-OLD STAKES. The Last Lord, 1. Contender, 2.
GREAT WARWICKSHIRE HANDICAP. Little Davie, 1. Commore, 2.
MATCH, £50.—Milcote, 1. Tipperary Boy, 2.

ST. PATRICK'S DAY.

In olden times, while the gentry kept open house, and the better class of the peasantry indulged themselves at home, or had recourse to a public-house, to celebrate the nativity of St. Patrick, those lower in the social scale prepared to honour the day after another fashion. Every "boy" who was beaten on some previous festival, plotted to have his revenge on this. The "faction" which had the worst of it at the last great fight, mustered their forces to renew the struggle now. And the lovers, who had few opportunities of meeting, anxiously looked forward to the coming holiday. In the north, the Orangemen and Ribbonmen had a grand field-day. On the anniversary of the Battle of the Boyne, the former became the aggressors; on Patrick's Day, the latter took the initiative. In the south and west the annual contests were based upon honour, not religion. To "take and hould" a town on the fair-day when it fell upon the 17th of March, was there the object of ambition; and the sooner had day dawned, than an experienced eye could detect certain symptoms of impending warfare: at either end of the village to be fought for might be seen groups of men assembled round a personage busily employed in distributing "potteen" amongst them; and, incredible as it may appear to our English readers, the instances were many where the "head man" of faction sold his cows to entertain those who volunteered to support his cause. By said day, such persons as came on business, and were peaceably inclined, had left the town. In anticipation of the coming conflict; and then the parties started from their respective positions to commence the fray. The leader marched some twenty paces in advance of his followers; with his right hand he brandished a shillelagh: while in his left he held the sleeve of his coat, which trailed along the ground after him, so that any one who wished to fight, might tread upon it. They met half way, and the battle became general, sometimes from lack of numbers, one party doubled the enemy, and then their adversaries paraded up and down in triumph, offering liberal pecuniary rewards "for the head" of an opponent. While this scene was being enacted in the public street, other persons carried on a desultory species of warfare, on the fair ground, which was studded with tents for refreshment. These premeditated assaults were made on personal enemies, and accidental skirmishings took place which often led to serious consequences. One of the most violent faction fights in the south arose from a rather ludicrous cause. Tom Casey, a farmer, with a "long following," sold a cow to Jemmy Leary, who could also boast a large connection. The men entered a tent to arrange pecuniary matters, and "wet the bargain" with a glass of potteen, while two "paffers" (little boys) held their horses without. The friends tippled, until the tent filled, when the fiddler got on the barrel, and dancing commenced. Mr. Casey wishing to ascertain the state of the weather, lifted being too "decent" to disturb his company, turned a portion of his face through a hole in the canvas, but no sooner did his nose protrude from the opening, than the "paffer" who held Mr. Leary's horse (not being able to resist the temptation) gave it a sharp tap with a sally-switch. Mr. Casey at once recognised the offender, and not being able to get at him, pulled up a wattle (one of the stakes supporting the canvas), and, holding Mr. Leary vicariously responsible for the conduct of his temporary servant, immediately felled that gentleman to the ground. The support being removed, the tent fell in, a general skrimmage ensued, and from it originated faction-fights of many years' duration.

The famine has uprooted the greater portion of the aristocratic families, and so broken down the spirit of the peasantry, that the festival of St. Patrick has now ceased to be celebrated with the same amount of fun and fighting as in olden time.

DROWNING THE SHAMROCK ON ST. PATRICK'S NIGHT.

In good old times, when potatoes and whisky were plenty, Patrick's day was always kept as a special festival in Ireland. Then the squire gathered all his friends around him; there was hard drinking in the parlour, and great jollity in the servants'-hall. The ceremonies of the day commenced with the presentation of shamrocks by the servants, who always received gratuities for their attention. Then there was a hunt, at which men rode more desperately than usual: this was followed by a steeple-chase, when horses' necks and riders' bones were frequently broken—not a cockney steeple-chase, such as may be seen at Hampton, but a regular Irish one, four miles over a sporting country, interspersed with some sixty or seventy fences, of all sorts and sizes, quick-set double ditches, and six feet walls. This, again, was generally succeeded by a fight; each gentleman who ran a horse mustered his tenantry to support the pretensions of his animal, and every tenant felt his honour as deeply implicated in the success of "the master's steed" as if it were his own private property; and did it happen that there was a particularly popular jockey, the last few fences were passes of veritable danger for those who led or followed him too closely in the runs: sticks were hurled, or "cashees" (large implements for the mob wished to hurt or frighten. Then came the return home—the cup carried in triumph at the carriage window by the ladies of the family, who were duly cheered by the inhabitant of every cabin that they passed. Night brought its own amusements. The piper played in the hall during dinner, and was admitted into the parlour after the ladies retired. The national and family tunes came first; and these were followed, as the guests waxed warm, by the "Foxhunter's Jig" and "The Hare in the Corn." Neither was enjoyment confined to the upper regions of the mansion. There was as much happiness and more boisterous merriment in the servants'-hall. There were assembled the domestics of the house, the grooms of all the guests, whose horses filled the stables, the huntsman and the whip (where hounds were kept), and the earth-stopper, and the game-keeper, and the stable-men, and the labourers, and favourite neighbours, with their wives and daughters, and that nondescript class of persons "the stray followers," a ubiquitous race, who frequented "big houses," fellows who ran long journeys at the shortest notice, and with the greatest speed, who retailed all the gossip of one house at another, and whose special vocation was, to watch and thwart the machinations of the Sub-Sheriff and his myrmidons: all these classes accumulated formed a sort of flowing establishment, in comparison with which that of an Indian Rajah would appear mean and be economical. When "the mistress" calculated that the gentlemen had imbibed a "quantum suf," the denizens of the lower regions were summoned to the grand hall, where the piper, now as jolly as any of the party, struck up some merry reel, "Tatther Jack Walsh" or "Tumbling on the Mountain;" and the bashful housemaid or peasant girl came timidly forward, and, reversing the usages of good society, "dropped her courtesy" before the gentleman she wished to dance with; and then the pair danced up and down the middle and turned corners to some eighteen or twenty other couples: the ladies

ST. PATRICK'S DAY.—DRAWN BY GEORGE THOMAS.

looking on, and the common men applauding the performance of their superiors. During the intervals of repose, some crack hornpipe dancer, who could "quit trebles," exhibited his agility on a door with a loose hasp attached, so that the "quiltings" of his flexible foot might be heard with more distinctness. When the gentlemen were danced down, the retainers retired to their own quarters to continue the fun. The host assembled his guests at supper, and the scene closed with the crowning ceremony of the day, when each person, glass in hand, and shamrock floating in punch of mountain dew, wished health and happiness, and long life, to all around.

The wealthier portion of the peasantry held revel in their own houses, or adjourned to some neighbouring village, where they might be seen assembled, as in our Artist's sketch: the amateur musician inflicting inharmonious sounds on his neighbours; the young couple, who were to be married at Easter, exchanging tendernesses; the 'cound waiter, exerting his wit, and those of his customers who could appreciate enjoying it; "the roving blade," who "kills the girls," quaffing his glass, and treating the "loose boy," who with his "caubeen" set upon "three hairs of his head," his stick under his arm, and the skirts of his great coat tucked up ready for action, wanders from party to party, partaking "the goods the gods bestow," while on the look out for fun; and ready to drink or fight, as occasion may require, being "blue mouldy for want of a bating."

DROWNING THE SHAMROCK ON ST. PATRICK'S NIGHT.—DRAWN BY E. FITZPATRICK.

THE BURMESE WAR.—PROME, FROM THE HEIGHTS.

THE BURMESE WAR.

ONE of the most brilliant exploits of a war which has for the most part reflected little credit upon our arms, is the capture of the Burmese stockade, in the Aeng Pass, the news of which has just been brought by the Overland express. We stated a fortnight ago that the stockade was considered impregnable except by shelling; and in illustration of the strength of the Burmese stockades, we published a Sketch of the stockade at Martaban. We have now the gratification to announce that the stockade in the Aeng Pass has been carried by a *coup de main* without the loss of a man by a small party of the Arracan Battalion, under the command of Captain Nuthall, who was sent forward merely to reconnoitre. The capture was effected on the 6th of January last, under the following circumstances:—

When it was first reported, in October last, to the commanding officer in Arracan (Major Maling) that the Burmese had stockaded the Aeng Pass, Captain Barre with the Arracan Battalion was ordered to advance against it, and, if practicable to attack and dislodge the enemy. Captain Barry found the stockade impregnable to a front attack, and Major Maling who joined the force soon after was also of the same opinion. A chief named Nakeekay had, however, stated that there was a jungle path by which our troops might advance to a point from which a flanking fire might be directed on the stockade and an effort was made to turn the enemy's flank in this manner, but the jungle was found so dense that the attempt was abandoned and Major Maling and Captain Barre reported that it was impossible to take the enemy's position without a strong reinforcement and a supply of rockets and mortars being sent from Calcutta. Pending the arrival of these, Capt. Barry's force was withdrawn from the advanced and very unhealthy position it had occupied at the mouth of the pass and Captain Nuthall with Captain Sutherland, and a small party of the Arracan Battalion under his command was sent forward to gather information regarding the practicability of turning the enemy's flank. Captain Nuthall arrived in the neighbourhood of the pass early in January, and immediately put himself in communication with Nakeekay, who informed him that the Governor of Mengdoon had proceeded to attack Prome, after which he intended to return and invade Arracan through the Aeng Pass; there was therefore no time to be lost in securing this most important frontier entrance into the British territories and Captain Nuthall advanced immediately through the jungle path, reaching on Arracan, consisting in the left of the Burmese position, distant about 300 yards. Here he halted for much without having been observed, within 100 yards of the pass and two miles in rear of the Burmese side of the stockade. Captain Nuthall, accompanied by Nakeekay and two attendants then advanced to reconnoitre, and at midday moved his party close to within 50 yards of the pass. At two o'clock on the following morning the Sergeant on the pass, and, guided by Nakeekay, marched up it toward the rear of the Burmese stockade, on reaching the immediate neighbourhood of which Captain Nuthall again advanced to reconnoitre, and looking through the chinks of the stockade perceive that the enemy were asleep. He accordingly ordered Captain Sutherland to advance against the gate in the rear of the stockade while by a simultaneous attack the left flank. The Burmese were assailed by a volley of musketry from flank and rear and immediately fled panic-struck leaving their arms and two brass guns behind them. Captain Nuthall and two sepoys only were wounded.

The evacuation of the southern provinces by the Burmese troops has not been so complete as was at first supposed. It is true that, south of the Meaday outpost General Godwin was, they have entirely abandoned the western bank of the Irrawaddy, but the eastern bank appears to be as strongly occupied as ever. When the Burmese army that was investing Pegu suddenly raised the siege and tore itself off it was surmised that it had either been suddenly recalled to Ava or had departed to oppose General Steel's intended advance to Martaban. The latter surmise has turned out to be the correct one, and though Pegu is no longer invested by a regular Burmese force, none of the garrison can venture themselves outside the walls without being fired at, and an officer has in this way lost his life. General Steel's force marched from Martaban on the 14th of January, and on the following day came to a strong stockaded position of the enemy, which was cleared without loss by a little well-directed shelling. The latest accounts report, however, that General Steel had met with a decided repulse, on attacking the strong stockade of Sitang. The force was a competent one, supported by six guns, and was supposed to be more than equal to the undertaking.

A boat expedition, despatched on the 22nd of January, under Captain Lambert up a creek near Donabew, against one of the robber chiefs now plundering the lower provinces, has been repulsed with the loss of 11 wounded and killed, amongst the former one officer very severely. A second expedition against the same enemy was under orders for the 24th, it was to be commanded by Captains Loch, Shadwell, and Lambert, and to consist of 300 soldiers and 100 blue jackets.

The news of the death of the King of Ava is confirmed. The succession to the throne is disputed, and several of the chiefs and members of the Royal family who were commanding troops in the lower provinces have abandoned their further defence, and marched to Ava to take a part in the great struggle for power. One of the competitors for the throne is about to open negotiations with General Godwin, and has despatched an English prisoner from Ava for the purpose. General Godwin and the Commissioner have proceeded to Meaday to meet him, and it is reported that an English embassy is to proceed to Ava.

The cause of the recent revolution at Ava is not clearly known. It would appear that the famine price of rice, occasioned by the British occupation of the lower provinces, having rendered the King (who was the soul of the war party) extremely obnoxious to the inhabitants of his capital, the Prime Minister, who was also a member of the Royal family, placed himself at the head of the malcontents, assassinated the king, and assumed the ensigns of sovereignty after imprisoning or otherwise disposing of the late King's brother. The opposite faction assert the right of the heir apparent, a nephew of the deceased Monarch, who is a mere lad, and a tool in the hands of those who surround him.

The latest dates from Rangoon are to the 26th January. The health of the troops was improving.

THE CITY OF PROME, FROM THE HEIGHTS.

By the gallant capture of the stockade in the Aeng Pass, the road is open for the arrival of the reinforcements which the Governor-General has ordered to be sent from Calcutta to Arracan. These reinforcements will now march through the Aeng Pass into the basin of the Irrawaddy, to cut off all communication between Ava and Prome. The capture of Prome on the 9th October, by the British forces, was an important event, since it gave us the command of the lower portion of the river Irrawaddy, and of the water communication with Rangoon and Bassein. Prome may be considered the third town in the Burmese empire, Ava the capital being the first, and Rangoon ranking second. We have been favoured with an effective sketch of Prome from the pencil of George D. Willoughby, Esq., Lieutenant and Adjutant, Bengal Artillery, who was present at the storming of the town, and from the same point from which the Artist has taken his sketch. The large building to the right of the centre of the View is the Shwé-dan Pagoda, which was defended by the men against a detachment of the 80th Regiment, who, after a sharp contest, drove the enemy out of the Pagoda, and put them to flight. Three or four such pagodas are seen, also, occupy the foreground on the left. In the right hand distance is seen the way to Ava by the river. Upon the heights are encamped European infantry, who look forth across a stream of a thousand yards, at the rocky heights which guard the right bank. These are a portion of the chain of wooded hills, which extend in unbroken links from a point on the right bank, forty miles below Prome, to another point, forty miles above it. Its line of ramparts is beautiful throughout. In the most abrupt bends of the river the rocks, which occasionally decorate the left bank also, seem to unite themselves as picturesque ally to those of the right. The site of Prome is salubrious as well as beautiful, and the air of the breezy hills around it is still more delicious. From Prome to Ava the distance by the river is about 200 miles. When the last advices left a British garrison remained at Prome, but General Godwin was higher up the river, at Meaday, some forty miles nearer to the capital.

MUSIC.

PHILHARMONIC SOCIETY.

A full subscription, a large and once, a new symphony of no ordinary merit, the revival of a fine but neglected overture by Beethoven, the successful debut of a young and gifted pianiste, the "Eroica" quite marvellously executed—such were the features of the first Philharmonic Concert of the season. The directors have every reason to be proud of their opening programme; the subscribers were evidently delighted with the admirable performance; and Costa was full of energy and zeal, giving vitality to a per. for nance, the perfection of which the most refined musical city on the Continent would find it difficult to excel. The scheme was thoroughly healthy and promising, preserving the beauties of the master-minds, and introducing the novelties of their followers. Gade's symphony in A minor, proved that Mendelssohn had not overrated the powers of the musician of Denmark; but Gade is more like an ancient Roman than a Dane. His forms are classical and elevated. His ideas are melodious and fresh. The allegretto was encored; it is piquant and showy. The overture in C. Op. 124, of Beethoven, would have been unexceptionable, but for the mishaps of the brass in the fugued allegro; the andante was nobly rendered. The funeral march in the colossal conception of Beethoven, the immortal "Eroica" symphony was so marvellously coloured by Costa that it was like a novel to with breathless attention; perhaps the recollection of the interment of England's hero at St. Paul's added to the awe and sentiment which it in spired. Spohr's "Bergeeta" overture, and equally old-fashioned trio, cleverly played by Lucas, Hancock, and Howe i, came in for their share of admiration. Mrs. F. B. Jewson (late Miss Anderson Kirkham) is another of those finished pupils whom Mr. Anderson, the pianiste to her Majesty, has introduced to the musical world. Mrs. Jewson's reading of Mendelssohn's Concerto in G minor was from memory no common feli vement; and she won the warmest applause by the taste and intelligence she displayed. Miss Dolby and Madame Castellan were the vocalists, and their selections from Winter, Weber, Jomelli, and Rossini.

Various works by Cherubini, Schubert, Schumann, Mehul, Berlioz, &c., are to be produced, the directors having wisely resolved to ascertain whether the domain of art may not be safely extended.

NEW PHILHARMONIC SOCIETY.

The second season commenced at Exeter-hall on Wednesday night before a very large audience. Mr. Kalk has retired from the direction, and Berlioz from the conductorship. The chief manager and occasional conductor is now Dr. Wylde, a young pianist and composer of some pretensions. Herr Lindpaintner will direct the first few concerts, and Spohr will hold the bâton, for the last two. Mr. Jarrett, the horn-player, has engaged the orchestra, which contains upwards of a hundred players including no less than eight harps. Mr. Wylde replaces Sir Sterndale Bennett as *chef d'attaque*. The scheme comprised Mendelssohn's symphony in A minor; Beethoven's "Egmont" overture; Lindpaintner's "Vampire" overture; Mendelssohn's "Athalie;" much to a clever chorus conducted by Lindpaintner, exquisitely executed by M. Wuille; and Beethoven's glorious pianoforte concerto in C minor, most eloquently rendered by Mdme. Clauss. The vocalists were Miss Dolby, Mr. Weiss, and Mrs. Anderson. There were also choruses from "Fidelio" (the Prisoners") the Dervishes Chorus, from Beethoven's "Ruins of Athens" (re-demanded), and one from Gluck's "Iphigenia en Tauride." Lindpaintner, the *kapellmeister* to the King of Wurtemberg, is one of the most distinguished of existing musicians in Germany; and, as a conductor, he must, be styled the first of his class, even if that class be not the first. His tendency is to hurry the time, and thus to render comprehend passages somewhat obscure, but we are not quite sure that the fault itself is not much more responsible for this defect of obscurity than Herr Lindpaintner The scherzo of the symphony was encored, and Weiss was similarly honoured in the bass solo of Spohr's, from "Il Flauto Magico." On the whole, barring the loss of Berlioz, which has left a serious vacuum, the season has begun favourably; and as there is no end of novelty promised in the prospectus, besides a new Music Hall, we will live in hope.

NOTES OF THE WEEK.

The sixth concert of the English Glee and Madrigal Union (Mrs. Enderso'n Miss Williams, Messrs. Lockey, Hobbs, Foster, Barnby, and Phillips) took place last Monday, at Willis's Rooms.

Mr. Sterndale Bennett concluded his admirable series of pianoforte performances at the Hanover-square Rooms last Tuesday, in the presence of a numerous and fashionable audience. The Serenade, and brown beautiful Tema in A, Op. 26, for piano, violin (Cooper), and violoncello (Piatti,), was encored. A great treat was afforded also by Beethoven's quintetto, Op. 16, in E flat, for piano, clarionet (Mr. Williams), oboe (Mr. Barret), bassoon (Mr. Pond), and horn (Mr C. Harper). The vocalists were Miss B. Street and Miss M. Rose.

Mr. Charles Beuler had his annual concert on Tuesday night, at the Freemasons' Tavern.

Mr. A. Biller gave his third evening performance of classical pianoforte music, at the Hanover-square Rooms, on Thursday. The German Vocal Union sang quartets, and Mrs Temple aire by Mendelssohn; and Benedict, Herr Jansa (violin), and Herr Pagne (violoncello), assisted M. Billet.

Mr. Charles Salaman opened his classical campaign of pianoforte music at the Lanc-street Rooms, on Thursday—aided by Mr. Saunton, R. Blagrove (viola), Hancock (violoncello), and Reynolds (double bass), Mrs. Weiss, Miss Messent, Mr. Alfred Pierre, and Mr. F. Lablache. Mr. Salaman is a composer of some very elegant canzone's, as well as being an accomplished pianist.

Mr. Charles Cotton, a basso, met his friends and patrons, after his continental tour, on Tuesday night, at Willis's Rooms. He was supported, in the instrumental department, by Mellon, Bonjouni (piano), Mr. Aylward (violoncello), Herr Nabich (trombone), and Mr. F. Theseus Stevens, accompanyist. The vocalists were Madame Nedden, fro n the Royal Theatres of Copenhagen, Hanover, and Brunswick—a clever singer of northern ditties, national as well as sentimenta; Mrs. Sims Reeves, Miss Dolby, Mrs. G. A. Cooper, and Herr Brandt.

The fourth and last of Mr. Ella's musical winter evenings at, Willis's Rooms, on Thursday, ma ntained the high character they have earned both for execution and selection. Spohr's quintet in G, Op. 33, Schumann's quintet in E flat, Op. 44; Mendelssohn's quartet, No. 1, in A minor, Op. 13; and Beethoven's sonata in C, Op. 53, indicated that the clever director has no intolerance, and is disposed to give his supporters the advantage of variety. With such eloquent exponents as the captivating Mdlle. Clauss, the gifted Molique, and Piatti the refined, and with Mellon, Webb, and Goffrie, the scheme must have been indeed a feast of touches. Madame Doria was the vocalist.

Mr. George Forbes' benefit concert on Tuesday last was signalized by the engagements of Madame Fiorentini, Mrs. A. Newton, Madame F. Lablache, Mrs. Inesent, Salaton, Guido Regondi, Signor Nappa, Signor F. Lablache, and the Messrs. Barnby and Case; a powerful array of talent.

Mr. Walter Rodes' evening concert took place at the Walworth Lecture-hall on Thursday, under the direction of Herr Anschutz; the vocalists were Miss Harry Corbett, Madame Lascelles, and Mr. Lascelles. Messrs. G. Tedder, E. L. Hime, J. W. Horsham, Blackbee, and S. Rooke.

The Countess of Wicklow gave a second concert in Cavendish-square on Tuesday, under the able direction of Sir H. R. Bishop. The vocalists were Madame Catalan, Miss Poole, Miss Dolby, Mr. Benedict, and Mr. Phillips; and the selections were from Paer, Guglielmi, Mozart, Gilde, Attwood, Handel, Haydn, Paisiello, Stevens, Dr. Clarke, Winter, &c. There was a large party of fashionables present, and the performances was excellent.

BERLIOZ.—It is with the greatest satisfaction we announce that the directors of the Royal Italian Opera, faithful to the principle on which that great lyric establishment was founded -to encourage art progress, without distinction of country or of composers, and without bigotry of feelings as schools, have come to arrangements with the composer of the "Romeo and Juliet" and "Harold" symphonies to produce his opera of "Benvenuto Cellini," originally brought out at the Grand Opera in Paris, and which lately created such a sensation at Weimar, under the composer's direction. Berlioz will, therefore, visit London again this season; and we are glad to learn that a complete cast is performed to organise a benefit concert for him on the largest scale, so that his great instrumental compositions may be heard during his visit. His opera will be mounted at Covent-garden, with all the resources of the theatre.

BALFE AT ST. PETERSBURGH.—Our popular English composer has been received in the Russian capital with signal honour. The Imperial Royal family have been present on several occasions at the Italian concert in the Salle de l'Assemblee de la Noblesse, at which upwards of 2000 persons attended. Madame Viardot was rapturously encored in Balfe's scheme, with chorus; and in the brilliant finale from the "Maid of Artois." Mario's Italian version of "You'll Remember Me," from the "Bohemian Girl," was also re-demanded. Ronconi, De Bassini, and Lablache sang in the grand trio of Rossini's "Siege of Rochelle;" and Madame Viardot, Mdlle. Medori, and Madame Maray, the trio of soprani, from "Falstaff." Mdlle. De Meric sang Balfe's "Speranza." Hiswerein to the "Daughter of St. Mar." and the "Rabbi's Feast," were executed by the band. Balfe has received the most cordial compliments from the Emperor and Empress of Russia. Balfe is engaged to compose an opera for Vienna, after his departure from Russia. The acting and singing of Mdlle Maria Lablache, the daughter of the Titan of Basses, at a private performance be ore the Court, of Donizetti's "Figlia del Reggimento" are highly praised. Her father, it is stated, however, will not allow her to go on the stage.

THE ROYAL ITALIAN OPERA.—Mr. Frederick Gye has been in Paris to make arrangements for the opening of the Covent-garden season, on Easter Tuesday. Grisi is recovering from her interesting indisposition. Weber's "Oberon" will be the earliest novelty

Mr. Allcroft's Farewell Musical Festival will take place at Exeter Hall, on Monday. Mr. and Mrs. Sims Reeves, Mesdames Nedden and Favanti, are among the artists engaged; with the Tyrolese Singers, &c.

A PRIMA DONNA PUNISHED.—A curious scene took place recently at the San Carlo, "Nabucco" being the opera. Ronconi, who made her appearance in "Meden" Towards the close of the act it became evident that the audience were disappointed with her, and expressed the same. The signs of displeasure by such repeated expressions of disapprobation, suddenly left the stage, and the curtain fell. The police immediately marched her off, in her theatrical dress, to prison, where she remained for 48 hours—a rather severe castigation even for Naples.

THE THEATRES.

ST. JAMES'S.

The performances of French plays continues to be illustrated by the talents of M. Ravel and Lafont, and of Mdlle. Luther. "Les Ressources de Jonathas" displaying the contrivances of a servant to serve two masters, living in the same house, and inimical to each other—furnishes the usual opportunities for the exercise of M. Ravel's peculiar humour. M. Lafont, as *Général Breton*, in "Une Petite Fille de la Grande," gives to the expression of military sentiment a gentlemanly bearing and a make up more than usually effective. The Marguerite, a young lady, his daughter, *Hortense*, was admirably sustained by Mdlle. Luther. The piece is not one, indeed, calculated to interest an English audience, nor has it endurance qualities even as a French vaudeville; but the excellent acting which it elicits justifies its representation.

On Monday "Le Mariage au Miroir" was brought out. Mdlle Luther, as *Zoe*, makes use of the mirror to observe her own discomfort, and, at length, learning that a woman may know too much for her peace, is fain to dispense with the dangerous privilege of seeing too far and too much. She was well supported by M. Leon. Her Majesty and Prince Albert were present.

On Wednesday was performed "Faute de s'entendre" and on Saturday) M. Ravel will make his last appearance "Il Flauto an

SADLER'S WELLS.

On Thursday, Mr Phelps's season of Shakspere, for his benefit. "The Second Part of Henry IV." in which the worthy manager enacted the character of the Monarch having been selected by her Majesty to support the same in the performance of the tragedy of "Julius Cæsar" (at Cæsar's castle). Besides, this, however, he undertook the impersonation of *Justice Shallow*. The merit of both these assumptions will justify a more extended notice than is now possible.

CANTERBURY.—Last Monday, Miss Edith Heraud closed an engagement at the theatre, with "The Lady of Lyons." The house was crowded in every part.

THE ISTHMUS OF DARIEN.

A crowded meeting of the Royal Geographical Society was held on Monday, at the Theatre of the Royal Institution; Sir R. I. Murchison in the chair. The paper read was "On the Great Isthmus of Central America," by Captain Robert Fitzroy, R.N., F.R.S., F.G.S. He referred to his former paper on the same subject, and expressed a hope that the present might be considered as only supplementary to the former. After some introductory remarks, Captain Fitzroy took a brief view of seven proposed lines of inter ocean communication. He then mentioned the novel and important information recently received—especially from Mr. Gisborne and Dr. Cullen and others—by which the former could not have been given in 1850 to the Atrato and Cupica line for a water communication, there is no argument that can be adduced in favour of that line that does not apply with far greater force to that line proposed between the Gulf of San Miguel and Caledonian Harbour. Captain Fitzroy then entered into the nature and feasibility of a canal on such a gigantic scale as is contemplated by Sir John Hall and Mr. Gisborne. He alluded to the labour attainable, to the possibility of employing convicts, and to the guidance of establishing military organisation to a certain extent He then referred to the survey of Captain Wyse and his officers, the aborigines and the climate—and he showed by what means those obstacles might be greatly lessened He then referred to Mr. Gisborne's opinions of the cost and nature of such a canal, and of various others, somewhat at variance with them. He referred to the claims of other companies, to certain legislative enactments of 1850, and to the general character and object of an enterprise so important that—when a survey shall have fully proved the whole case Government will, doubtless, assist and unhesitatingly, if not unanimously, will energetically unite in grasping its *absolute neutrality*. The discussion was maintained until a late hour, and the meeting adjourned to the 11th of April.

A meeting of the shareholders of the Panama, Atlantic and Pacific Junction Company was held the same day; Lord Wharncliffe in the chair. After Sir Charles Fox had given an outline of his whole proceeding in relation to this gigantic undertaking, and communicated with Her Majesty's Government, and with that of the United States, were laid before the meeting. It was announced that the £24,000 caution money will be duly paid to the Government of New Granada on the 25th inst., and that it was unanimously agreed that the amount of £25,000, required for preliminary expenditure was reasonable and fully justified. The Board was also informed that a communication had been received at the conference of days from the British Ambassador at Paris, to fix a day on which the Emperor of the French would give an audience to Sir Charles Fox, and a resolution to the effect that the company, in whose success it is hoped, that France and Russia, as great maritime powers, will co-operate with the British and American Governments. The necessary resolutions for the future proceedings were then agreed to, and the meeting separated.

THE "AUSTRALIAN."—This unfortunate iron screw-steamer (belonging to the Australian Royal Mail Steam Navigation Company), having left Plymouth on the 10th, sank rapidly on the 14th; and the following details by one of the passengers will explain the cause of her return: he stated, "they had nineteen days' incessant successes and excitement; four trial trips, and two breakdowns; twelve hours calm in the Bay of Biscay, and when they turned round, they only found in the wind ahead; the vessel at the time making as much water that the passengers were compelled for their own safety to work the pumps, which they did for twenty-four hours, the crew of the ship consisting only of eighteen men and six boys, just enough to float one sail at a time, leaving no hands to do the other duties of the ship." Great complaints were made as to the manner in which the luggage had been disposed of, the company having filled the saloon with freight, and even on, without the knowledge of the passengers, a large proportion of their things in another vessel. A meeting was held on the deck of the vessel, and very strong resolutions were passed against the company, and also claiming from them compensation for "all the losses and necessary expenses to which we have been subjected." Another resolution ran thus— "That this meeting sympathises with Captain Bowen in his efforts, and his officers, and crew, as well as with the chief engineer (Mr. Clements), engineers and stokers, under the harassing and additional duties imposed on them by the bad management of the company." The passengers' resolutions departed to hand in person the resolutions, so passed, to the directors of the company; to whom the public will look for full explanation. The directors have come to the determination of returning the passage-money to those who may apply for it. The luckless *Australian* has left Plymouth to return to London, to have her cargo discharged, and be docked there.

THREE SHIPS DESTROYED BY FIRE. Intelligence has been received at Lloyd's, Boston, of a terrific gale along the eastern coast of North America. During the storm the *J. Stanley*, steamer, laden with 1200 bales of cotton and 100 passengers, took fire off New Orleans. The *St. Charles* steamer bore down, but approaching too near, the flames communicated, and both vessels speedily became a mass of fire. It was with much difficulty the passengers were got from the latter, twenty-three perishing in the flames, which destroyed both vessels. Intelligence was also received of the total loss by fire of the *Hope*, of Liverpool, Philips, master, bound from Demerara. The fire was occasioned by one of the men getting into the spirit-room with an unsheltered candle. The crew fortunately escaped by the boats, and landed at Demerara. These losses, amounting to £250,000, are covered by insurance.

GREAT AVALANCHE IN FRANCE.—An enormous avalanche of snow fell at Reboul, department of the Ariege. It swept away crops, trees, and detached houses, and completely buried the hamlet, with about its population. 400 men from the adjacent villages immediately assembled, and, after a great deal of labour, succeeded in rescuing twelve persons. They were all sadly bruised and partly frozen, but it was considered they will recover. Nine dead bodies, three of them children, were dug out; also a number of horses and oxen. The amount of loss was very great.

HURRICANE AT CORFU.—Under date of February 20, we have news from Corfu of the most disastrous character. On the 19th a terrible hurricane burst over the island. The roof of the Governor's palace was lifted off; an olive forest, the pride and wealth of Corfu, was destroyed, a hundred trees on the esplanade were uprooted; and five lives were lost. Inland, the loss of life is variously estimated between thirty and eighty persons. Several ships had been driven on shore.

SOUTH-EASTERN RAILWAY COMPANY.—On Thursday the half-yearly meeting of this company was held at the Bridge House Hotel; Mr. James Macgregor in the chair; and the half-yearly dividend of 11s. per share declared.

Note.—The sign + denotes above the average, and the sign — below the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The mean reading of the barometer for the week, at the height of 82 feet above the sea, was 29.804 inches, and the range in the week, 0.688 inches. The weather during the week has been very changeable: and the temperature, which was 3° in excess on the 11th, rose on the 13th to 7° above its average, and from that time to the 17th declined rapidly, on which day it was nearly 12° in defect The mean temperature of the week was 41·4°, being 2·7° above the average of the ten preceding weeks, and 0·1° below the average of thirty-eight years. The average difference of temperature daily during the week was 17·2°, or 5·8° above the average of the ten preceding weeks. The mean temperature during the week was 3·5°, the highest reading being 49·8° on the 11th, and the lowest 30·6° on the 17th, while the range of temperature on the 13th alone was slightly above 26°. Rain fell on 5 days of the week, but rather more than half an inch. Fog was prevalent early on the 12th and 13th, and sleet on the 17th.

Lewisham, March 17th, 1853. JAMES GLAISHER

HEALTH OF LONDON.—During the week ending last Saturday, 1816 children were born; of these 892 were boys, and 924 were girls. The number of births exceeds the average of the eight corresponding weeks in the eight preceding years by 348. The number of deaths in the week were 1449, of which 660 occurred to individuals under 15 years of age, 41 of 15 years and under 60; and 368 at 60 and upwards. To diseases of the lungs and other organs of respiration 332 deaths are attributed; their average is 211; among them, 233 are due to bronchitis, whose average is 78; to zymotic diseases, 224, their average is 166. Among these were two cases only of small-pox, whose average is 2; deaths are attributed to 79, whose average is 48, to typhus, 53, whose average is 41; to tubercular diseases 1 their a ra. e 2 ; of these 167 are due to consumption, 1 to hydrocephalus, 1 to privation, 1 to cold, and intemperance, 31 deaths are due

ROYAL WESTMINSTER OPHTHALMIC HOSPITAL.—On Sunday morning last an eloquent sermon was preached at St. Martin's-in-the-Fields, by the Rev. Richard Lee Rev. H. Melville, M.A., on behalf of the above excellent institution. It appears that upwards of 6000 persons are relieved annually, of which number about 5000 are children; and that one in 20 of the children who attend the Hospital are attributed to

EPITOME OF NEWS.—FOREIGN AND DOMESTIC.

There are three candidates in the field for the representation of Hull Mr. W. B Curne, son of Mr. Rakes Carrie, M.P.; Sir Charles Douglas, who he d office as one of the Lords of the Treasury, under the Peel Administration; and Lord Dalkeith.

Dr. Forbes Winslow has been elected President of the Medical Society of London.

The young Danish poet Christian Molbech, the translator of Dante, is appointed professor of Danish and the Northern languages in the University of Kiel.

A deputation from the Free Kirk of Scotland, headed by the eminent Dr Candlish, is now in London, for the purpose of conferring with the Government on the subject of national education.

On Sunday eight Jews were baptised at the Jews' Episcopal Church, Palestine-place.

Mr. Robert Hanbury is appointed her Britannic Majesty's Consul at Philadelphia. Mr. Samuel Henry, of Lerwick, is appointed Commissary Clerk of Zetland.

The King of Denmark sledged on Sunday week from Frederiksborg to Kronborg Castle. He was enthusiastically received; and a number of the pilots and ferrymen accompanied him part of the way back in boats placed on sledges.

The beach at Morpha Bychan and Harlech, Wales, has lately been strewed with dead pullets and razor-hills. A question arises as to whether these birds are many story or not, or is this the result of the very severe westerly gales we have experienced.

The United States Chargé d'Affaires has arrived at Florence, from Washington. diplomatic relations, which were for a brief period suspended, having been renewed.

Lieutenant Cookney, R.N., has subscribed the liberal sum of fifty guineas in aid of the Chapel Building Fund of the Royal Naval School, at New cross.

Negotiations are at present going on between Austria and Russia for the introduction of complete uniformity in the construction of railways in both states.

On Sunday morning, police sergeant Patterson, who was severely burned on the preceding Wednesday, while attempting to extinguish a fire at a chemical warehouse in Holborn, died of his injuries in Bartholomew's Hospital.

The States of Oldenburg have taken the oaths of fidelity to their new Sovereign. On this occasion his Royal Highness solemnly renewed his promise to maintain the Constitution and existing laws.

A deputation of the Epidemiology Society, consisting of Dr. Bamonton (the president), Dr. Grainger, Dr. Waller Lewis, Dr. Seaton, and Mr. Marson, had an interview with Lord Palmerston on Saturday at the Home office, on the subject of the Vaccination Extension Bill.

In the Southampton election case, a person named Bower refused to take the oath, and was placed in custody of the Serjeant-at-Arms. He has been released without paying the fees; and it is said he found the "prison of the House of Commons" so comfortable as to be almost careless whether he was purged there till the Easter recess.

Colonel Peter Hawker, the well-known sportsman, we regret to state, is suffering from a long and severe illness, and is in a very precarious state.

Mr. E. Knatchbull Hugessen, son of the late Sir Edward Knatchbull, has announced himself a candidate for Canterbury.

Robert Bunch, Esq., now British Vice-Consul at New York, has been appointed her Majesty's Consul at Philadelphia.

The Prussian fleet, for active service, consists at present of 48 vessels, large and small, with 1-4 guns, including the frigate *Gefion*, of 42 guns.

Six new petitions were filed during last week in the Encumbered Estates Court; and the amount paid to claimants, by order of the Commissioners, was £ —nil.

Orders have been given by the Spanish Government to have the surveys of the railway from Madrid to the French frontier urged on as rapidly as possible. Advantageous propositions have been made on the subject by several foreign companies.

William Charles Sargeaunt, Esq., has been appointed Colonial Secretary for the district of Natal, in South Africa.

M. Frederich, a sculptor of Strasburg, has resolved to erect a statue of the musician Kleber in honour of St. Bernard de Menton, founder of the well-known hospital which bears his name. It will be the most elevated monument in Europe.

The Killarney Junction Railway will be opened on the 20th of May, and the event will be inaugurated by a banquet.

The value of landed property within the walls of Alexandria (Egypt) has increased to an enormous extent; and the rents of houses have, within the last year, been in many cases doubled.

The ship *Governor Higginson* was totally destroyed by fire, in Madras roads, on January 15 and 26. No lives were lost.

The *Sligo Journal* states, that "hundreds" are preparing to leave that county. Large sums of money have been sent home by emigrants, and two or three of almost every labouring family in and about Sligo have had their passage paid.

A labourer man, named Dubs, lately died at Markham, aged 102 years and 2 months.

Most of the refugees in Turkey have asked permission to emigrate, and those who remain are to be incorporated with the troops stationed at Brussa.

The American army musters 10,000 men, on paper; 8000 being about its real strength. There are very few native Americans in the ranks, most of the men being Irish, Scotch, Swedish, Dutch, or German. In the field, the Irish are reckoned the best soldiers; in barracks, the Germans are most esteemed.

On Friday evening two convicts escaped from the new convict prison at Portsmouth, a place from which escape was thought impossible. One was captured at Kingston the same night; the other, the next day, at Langport.

The mails for the Cape of Good Hope, and intermediate places, have been taken out of the *Australasian*, and placed on board the *Lady Jocelyn*, which sailed from Plymouth for the Mauritius and Calcutta, on Tuesday.

John Williams, an American, was hung on Monday, at Greenlaw, Berwickshire, for the murder of Andrew Mather, a toll-keeper.

The New Jetty at Margate is about to be commenced. The contract has been let for £11,000 to Mr. Bates.

The sixteenth annual meeting of the Grocers and Tea-dealers' Benevolent Society was held at the London Tavern on Monday last. There are forty-one pensioners on the funds, and the total stock invested is £17,000.

The electors of Southwark have invited Sir W. Molesworth to a public dinner, on the 21st inst., at the Bridge-house Hotel, to celebrate his right hon. baronet's accession to office.

Two men, named James M'Mahon and John Robinson, have been examined, and remanded, on suspicion of the robbery at Mr. Howard's jewellery-shop, in Manchester, on Monday week last.

On Sunday last the Bishop of London preached a sermon at Trinity Church, Marylebone, in aid of the funds of the Medical Benevolent College. The collection produced £30.

Charles Saunders, the man who murdered Mr. Tellet, near Ilford, has been removed from Newgate to Chelmsford; his execution will take place on Wednesday next.

The residence of the Rev. F. A. Piggott, 31, Lower Belgrave-street, Eaton-square, has been burglariously entered, and some plate, coats, &c., valued at £21, stolen therefrom. The thieves have not been discovered; but the silver spoons and forks had scarcely been the robbery.

On Monday a man, in removing some gravel from the churchyard of Wigmore, Wilts, broke an earthen bottle containing 120 early English silver coins.

The trial of the man accused of having assassinated the Archbishop of Paris, in the insurrection of June 1848, is to take place before a court martial on Monday next.

A market gardener at the Merrie Creek, Melbourne, has, in eight months, cleared £6000 by fruit and vegetables.

Mr. Hudson, M.P., has appealed against the judgment of Sir John Romilly, Master of the Rolls.

By late advices from the Australian colonies we learn that 12,000 emigrants and 163 ships had arrived in Port Phillip during the month of December.

Some 150 men were at work on floats, repairing the bridge at Thorn, on the river Vistula, when the ice suddenly broke up, capsized the floats, and carried away some fifty men, twenty of whom were drowned.

A deputation of framework-knitters from Leicester has had an interview with Mr R. Cardwell at the Board of Trade, in reference to the heavy amount of deductions made from their wages under various pretences.

The newly-appointed Bishop of Lincoln, the Rev. John Jackson, previous to his consecration by the Archbishop of Canterbury, which is expected to take place early next month, will receive the degree of D.D. The congé d'élu has been received, and the election will shortly take place.

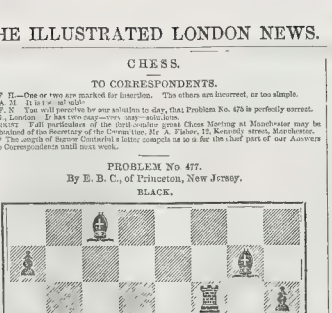
By E. B. C., of Princeton, New Jersey.

BLACK.



WHITE.
White to play, and mate in four moves.

THE "ALLGAIER" GAMBIT.
BY SIGNOR CENTURINI.
(To the Editor of the ILLUSTRATED LONDON NEWS.*)*

That branch of the King's Gambit—

1.	P to K 4th	P to K 4th	2.	P to K B 4th,	
	P to K 4th,	P takes P			
	Kt to K B 3rd	P to K R 4th			
3	P to K Kt 4th	4. P to K Kt 5th,	5.	Kt to K 2th	&c.—which

Mr. Kieseritzky has proclaimed "invincible" is called in Italy the "Great Gambit," and this denomination appears to me appropriate, from its indicating the large system of attack and defence, comprehending all the forces in hot, cannon, which the opening develops; and more reasonable than that of the "Allgaier" Gambit, because this German writer had nothing whatever to do with its invention, and has not even illustrated it by any profound or subtle analyses. He confined himself chiefly to the consideration of the variations arising from the first player moving P. to K Kt 5th; and it is that opening, rather than the one I am now considering, of 5 Kt to K 5th, which can, with any propriety, be called by his name. (*See The Pamphlet*, vol. II. (1842), p. 111). But, let us come to the substance. It is a fact that all the chief writers have examined the Gambit more or less, and have proposed a variety of defences, among which that by Mr. Knight (see the *Chess-Player's Hand-Book*, p. 267) excels. This defence, if not perfectly satisfactory, as it was at first thought to be (see "La Regence," 1841, p. 313, note 2), is nevertheless, of great subtlety. But, in the study of this Gambit, I have been more particularly struck with an idea of Dal Rio, who, at the seventh move of the defence, plays 7. Q to K B 3rd; a line of play, certainly, less solid than brilliant if he had previously defended his K B Pawn with the K Kt instead of the K Rook; for the opening player must then obtain the advantage of the exchange, *e.g.p*

1.	P to K 4th	P to K 4th	7.	P to Q 4th	*Q to K R 3rd*
2.	P to K B 4th	P takes P	8.	Kt to Q B 3rd	P to Q B 3rd
3.	Kt to K B 3rd	P to K Kt 4th	9.	Q Kt to K 2nd	P to Q 3rd
4.	P to K R 4th	P to K Kt 5th	10.	Q B takes P	P takes Kt
5.	Kt to K 5th	P to K R 4th	11.	Q R takes P	
6.	B to Q B 4th	Kt to K R 3rd		Winning the exchange.	

(See a game between Knights and Sloss, in the "Chess Studies," p. 149).

If, however, the second player, at his sixth move, has defended his K B P by moving 6 K R to K R 2nd, I believe he may play 7. Q to K B 3rd, not only without danger, but with great advantage. In proof of which I append a few variations that may prove interesting to those with whom the "Great Gambit" is a favourite:—

GAME I.

WHITE.	BLACK.	WHITE.	BLACK.
1. P to K 4th	P to K 4th	8. Kt to Q B 3rd (or again Game II.)	P to Q B 3rd
2. P to K B 4th	P takes P	9. Kt to K 2nd	P to Q 3rd
3. Kt to K B 3rd	P to K Kt 4th	10. K Kt to Q 3rd	P to K B 4th
4. P to K R 4th	P to K Kt 5th	11. P tks P (best)	P takes P (best) (see Var. A.)
5. Kt to K 5th	P to K R 4th	12. Q Kt to K Kt 3rd	Q takes Q P
6. B to Q B 4th	R to K R 2nd	13. K B to Q Kt 3rd	Q B to K Kt 5th
7. P to Q 4th	*Q to K B 3rd*		

And Black has a capital attack.

VARIATION A.

11.	Q takes B P	13. B to K Kt 5th	Q B to K 3rd
12. R to K B sq	Q takes K P	With a good game.	

GAME II.

(The first seven moves on each side as in the preceding game.)

WHITE.	BLACK.	WHITE.	BLACK.
8. P to Q B 3rd	K B to Q 3rd	10. P takes P (or Var. B)	B to Kt 5th (ch)
9. K Kt to Q 3rd	P to K B 6th	11. K to B sq.	

[If White play 11. K to K 2nd, Black responds with 11. Q takes P (ch); and if 11. K to Q 2nd, with 11. ——— : in each case having the better game.]

P takes P

11. P to Q 3rd

And Black has the advantage.

VARIATION B.

10. R to K Kt 5th	P takes P	12 Q to K 2nd	P to K B 3rd
11. R to K Kt sq	B to K Kt 6th (ch)	14. K B takes Kt	R to K Kt 2nd
		15. Q B takes P	Q takes B
12. K to Q 2nd	Q to K B 6th		

And Black gains the K R Pawn, with the superior game

I have ventured, sir, with deference, to submit these observations to your judgment should you deem them worthy of insertion in your Journal, it will be a source of pride to me that I have contributed, in however small a degree, to the elucidation of truth, and the amusement of your readers. I have the honour to be, Sir,

Your sincere and obedient servant,

Italy, 27th Jan., 1853. LOUIS CENTURINI.

White to play, and mate in three moves.

STAMPED AND UNSTAMPED NEWSPAPERS.

BOW STREET.—A short time since we called attention to a penny unstamped newspaper being started, entitled the *Potteries Free Press, and Weekly Narrative of Current Events*, in order that the Board of Inland Revenue should decide whether it was a newspaper or not. The proprietor having learned that a London agent was summoned to Bow street for selling the paper, addressed the following to the *Globe* newspaper

"STOKE-UPON-TRENT, March 15, 1853

"Sir—Permit me to correct an error in your paper of yesterday. The Government are proceeding against Mr. Truelove, a vender of the *Potteries Free Press* and not against me, who, as the proprietor and publisher, ought to be the person attacked.—Yours, &c., C. DOBSON COLLETT."

Accordingly, on Thursday, Mr. Truelove attended at Bow street, when the case was heard. The defendant appeared at the instance of the Commissioners of Inland Revenue, under the 6 and 7 William 4, c. 76, charging him with having knowingly and wilfully sold a certain newspaper printed on paper not duly stamped according to law, and called *The Potteries Free Press, and Weekly Narrative of Current Events*. The defendant is one of the London agents for the sale of the paper, the leading articles of which invite a Government prosecution of the journal, "in order that a jury of Englishmen might determine what description of news is to be entitled to exemption from the penny stamp."

Mr. Pinn, M.P., appeared in support of the information, and Mr. Humphries Parry represented the defendant

Mr. Wood, chairman of the Inland Revenue, Mr. Sclofield, M.P., and Mr. Ricardo, M.P., were present

Mr. Pinn, in opening the case, drew attention to the 17th sec son of the act, which enacted that any person who shall "sell, utter, or expose for sale" an unstamped newspaper, shall forfeit a sum of £20, and he presumed that no person who looked at the paper in question could have any doubt that it came within the clause here described, for it was aimed at the information of an ordinary newspaper. It was true that a recent decision in the Court of Exchequer limited the definition of a newspaper to certain conditions relative to size, interval, and price. The Government and the Stamp-office had always contested that decision and that application of it; and Baron Parke dissented from the judgment of the full bodges. He did not consider, however, that the question could arise in the present instance, from the obvious difference in the character of the two papers.

James Mackie proved the purchase of a copy of the *Potteries Free Press*, of the 2nd of the present month.

Witness, in cross-examination, said I don't know anything of a paper called the *Athenæum*. I never saw it, or heard of it lately. I know nothing of the *Builder*, either.

Mr. Parry.—Nor any other newspaper, I suppose?

Witness: I don't know.

The copies produced having been handed up to his worship, Mr. Pinn stated that this was the case for the Crown

Mr. H. Parry then addressed the Court, at great length, in condemnation of the conduct of the Inland Revenue in selecting a penny paper, of the description produced, for prosecution, while suffering such periodicals as the *Athenæum*, the *Builder*, and *Racing Times* to escape their notice. The real difficulty of his client had been to ascertain what constituted a newspaper; and in order to try the question he had taken upon himself the responsibility of the present publication. When he spoke of his client, he wished it to be understood that the proprietor of the paper, Mr. Collett, was the real defendant in this matter, and that he had published the paper on his own account, and not in connection with the society with which he was associated. When he resolved upon its publication, he made the officers of the revenue fully acquainted with his intention, and duly transmitted copies of the paper for their inspection, and the assessment of the advertisements. Then, why was he not at once informed that his paper would be prohibited? No proceedings were taken, and several numbers were circulated to be sold. The paper had been stopped at the instance of his paper, although it was duly registered; and, meanwhile, other journals in the trade, containing information of occurrences were proceeded against. The learned counsel then read several extracts from the *Athenæum* and *Builder*, which contained weekly information relative to the fine arts, scientific discoveries &c.; information, he would say, with great deference to the Legislature, far more interesting and public importance than the debates in Parliament. These papers had constantly been brought under the consideration of the Inland Revenue; but they had declined to take notice of them, and had capriciously selected the defendant's paper.

At the close of his address, Mr. Parry called Mr. Joseph Timm, solicitor to the Inland Revenue, to prove that information had been duly given to them of the intention to publish the *Potteries Free Press*, copies of which were duly transmitted to the office, and that no proceedings had ever been instituted against the *Athenæum*, *Chambers's Journal*, or such papers.

Mr. Collett was called to prove that he had published the paper avowedly to test the question, and that he was prepared to discontinue it if a jury should decide against him.

Mr. Henry announced his intention to reserve his decision, and to take time to look through the papers produced. The summons was then adjourned.

THE NATIONAL INSTITUTION.

THE sixth annual exhibition of this, the youngest of our art establishments, was opened on Monday, at the Portland Gallery, in Regent street. The collection consists of 410 pieces, about sixty of which are in water-colours, or crayons. As may be well supposed, where the power of excluding is but sparingly exercised—which, we believe, is the principle the directors here go upon—the display is one of various degrees of merit; but upon the whole it is creditable, whilst in several instances we have works showing considerable talent. Landscapes, of course, largely preponderate, in which the ordinary conventionalities are freely resorted to. The sameness of effect resulting from the indulgence in a prevalent mannerism, which strikes the visitor when passing along the line of these productions, perhaps never struck the several artists before the works left their easels; and if no other good result from the multiplying of art exhibitions, it will at least afford artists an opportunity of contrasting their own errors and shortcomings with those exhibited by their neighbours.

T. T. White has an effective view of "Uri Rothstock, Lake Lucerne, (11). The quaint old town, with its long taper spire, nestles in the hollow in the foreground; the middle is composed of wooded ground, about which hang mountain mists; and in the distance are the Alps.

He has also another pleasing moonlight view of the "Valley of the Handuk" (48).

A. Gilbert attempts, and with creditable success, to realise the glories of a sky such as Claude or Cuyp so wonderfully created. The picture (218) is entitled "A Hazy Day"—the eye of the spectator looking over Barmouth Water, in North Wales. The sun is high in the sky; but a light mountain mist intervenes between it and the earth; by which, however, the golden hues are not entirely obscured, but are reflected, and spread around. This sky—the great difficulty—is really well achieved; and would have been pictorially more effective and grateful to the eye, if the artist had not carried the same yellow tone over greater part of his middle distance and foreground; but had substituted some cooler local tints, which would have served as a frame to the scene, and afforded repose to the eye.

One of the best, if not absolutely the best, landscapes in the exhibition is a piece of "River Scenery, North Wales" (269) the joint production of F. W. Holme and H. B. Willis. The foreground, is composed of the flat bed of a mountain stream, which, here reposing from its headlong course, suffers its waters to spread far and wide into the very recesses of an umbrageous dell. This diminutive road-side lake is very artistically carried back far into the picture at the foot of a bold mountain, partially covered with trees, which rises in the midst and crowns the whole. In the foreground, and mid-distance, are some cattle, admirably life like in character—the white cow in the centre especially—and remarkable for finish of texture and other points of execution. The treatment, indeed, throughout, is highly conscientious.

H. B. Willis has thirteen other landscape subjects, of which we can only now particularise one—a very pleasing "Scene on the Severn—Evening" (53), with a sunset in the distance, and a real English landscape of lilt and vale, through which the stream flows leisurely in the middle ground, and in the foreground a tree-clad homestead, into which the struggling rays of the sun make their way here and there.

Conspicuous amongst the other contributors in the landscape department are Sidney Percy, who has several striking views in North Wales and Cumberland; G. A. Williams, who delights in green lanes and river scenery; A. M'Callum, who has some clever coast bits; and E. Williams, sen., whose "Farrier's Shop" (261), though one of the smallest of his works, is remarkable for quiet merit. It is a real farrier's shop, on a roadside; time evening, the moon in the sky; the smithy's fire is still kept going, whilst a horse and cart wait without to get some of their tackle adjusted. All is very soft and real.

Amongst the historical or history subjects we must give precedence in our notice to a very clever picture, by D. W. Deane (83), "A Monk Instructing Others in the Art of Illumination" (which we engrave). This picture does not depend for its effect upon anything particularly romantic or striking in the incident presented, or upon the development of any strong passion or sentiment; its character is rather that of repose, but in its unaffectedly sincere treatment it shows how much may be done even with the simplest materials by an artist who is content to study

ST. GEORGE'S CHURCH, DONCASTER, RECENTLY DESTROYED BY FIRE.

truth—the truth of nature—and to represent it without exaggeration or trick The faces of the four monks—he who is teaching the art of illuminating missals, and those who are looking on—are remarkable for manly gravity, and for the interest with which they watch the progress of a process in which their fraternity were once so extensively engaged. The figure of the youngest, who rests his hand on the back of the chair of his next-door neighbour, and stoops forward wrapped in admiration, is full of spirit, and is the principal life of the picture; the other two, his elders, look on with equal interest, but less of excitement, marked in their features. The features and hands of all are painted with great precision and correctness. A subdued light pervades the monastic apartment, in the *chiaroscuro* of which the outline of some of the mural decorations are discerned. Indeed, throughout, the colouring is mellow and harmonious, perfectly in keeping with the character of the subject.

ST. GEORGE'S CHURCH, DONCASTER.

This fine ecclesiastical structure (the destruction of which was illustrated and described in the Illustrated London News for March 5) was of the Perpendicular period of architecture. The noble tower, at the intersection of the nave and transepts, was of excellent proportions, and pure and effective details. The west window, of nine lights, was also a fine example of the style; and the north transept had a seven-light window, of very beautiful arrangement. The nave piers were octagonal, and massive and simple; as were also the central piers supporting the tower. These latter had richly-foliated capitals. The chancel contained some interesting remains of an Early English structure, parts of which have been exposed by the fire, and remain even now comparatively perfect amidst the general ruin.

The dimensions of the Church were, internally, from east to west, extreme length, 158 ft.; extreme width in the transept, from north to south, 85 ft. 6 in.; width of nave and aisles, 67 ft. 2 in.; height of the tower to the apex of pinnacles, 140 ft.; height of the nave from floor to paneled ceiling, 52 ft. The Church was built of magnesian limestone, upon which the fire necessarily acted most injuriously; and thus accelerated the entire destruction of the building in a comparatively short space of time. The origin of the conflagration is ascribed by Mr. Braidwood to the over-heating of the flues. The probable cost of an entire restoration of the Church will reach £30,000. The subscription list for this purpose is headed by the Corporation of Doncaster with the munificent sum of £5000; and the sum already subscribed is nearly £10,000.

We understand that Mr. Weightman, of the firm of Hadfield, Weightman, and Goldie, possesses accurate measurements of the tower of the Church.

"A MONK INSTRUCTING OTHERS IN THE ART OF ILLUMINATION."—PAINTED BY D. W. DEANE.—EXHIBITION OF THE NATIONAL INSTITUTION OF FINE ARTS.

FINE ARTS.

"HELEN VEILED." BY C. P. BACON.

THE only work of sculpture of any importance in the exhibition at the British Institution is the "Helen Veiled before Paris," executed in marble, by C. P. Bacon. The principal feature about it is the veiling of the face, after the manner of the "Veiled Vestal" and the "Veiled Slave in the Market-place," which attracted so much admiration from

MARBLE STATUE OF "HELEN" VEILED, BY C. P. BACON.

the undiscriminating multitude in the Austrian Room at the Great Exhibition of 1851; and this wonderful trick Mr. Bacon has accomplished with a success fully equal to that displayed in the works in question. The figure is gracefully conceived, though perhaps a little stiff as to the outline and draping; the execution careful and finished.

NOOKS AND CORNERS OF OLD ENGLAND.

HEIDEGGER'S HOUSE, AT RICHMOND.

Richmond is abundantly stored with courtly memories. Although nought of the Tudor palace remains but a single picturesque arch, there are many minor evidences of its kingly residence. The old church is eloquent with higher claims upon our respect, in its memorials of poets, philosophers, painters, and actors; and the graves of genius are everywhere thick around us. But there is another class of celebrities which speak more directly of regal Richmond in its records of gay wits and officers of the Court; reminding one of Theodore Hook's delicious hoax of Richmond being so courtly a place, and so completely under the influence of State etiquette, that everything here is called after the functionaries of the palace: what are called cheesecakes elsewhere, are here called maids of honour; a capon is called a lord chamberlain; a goose is a lord steward; a roast pig is a master of the horse; a pair of ducks, grooms of the bedchamber; a gooseberry tart, a gentleman usher of the black rod; and so on.

Two centuries ago, there was buried here Joseph Taylor, who was instructed by Shakspeare to play *Hamlet*, and who was appointed Master of the Revels to King Charles I. Another person of kindred note lies in a vault in the churchyard—John James Heidegger, who was Master of the Revels to George I. and II., and had a house in "Maid of Honour-row," on Richmond-green, where he died September 4, 1749. Heidegger was born at Zurich in 1659, and came to England in 1708; when, obtaining the direction of the Italian Opera, and its masquerades, the ingenious Swiss (who, by the way, wrote operas with wonderful facility), contrived to derive from it a fortune of £6000 per annum. The lover of pleasant gossip will, perhaps, remember Heidegger's magnificent masquerade at the opera-house, described in "Mist's Weekly Journal," Feb. 5, 1718. When Heidegger grew rich, he took on lease the manor-house at Barn Elms, which stood in a small paddock at some distance from the Thames; and here he got up the famous surprise *fête* of light out of darkness, at which the second Guelph "laughed heartily."

Heidegger was extremely liberal to artists for the opera; and he commissioned his best scene painter to decorate his house after his removal to Richmond. Under his direction they painted the panels of the principal room, or hall, with a series of views in Italy and of Heidegger's native country, Switzerland, including the Falls of the Rhine, at Schauffhausen, and the curious bridge at Basle, which are extremely accurate: the whole are beautifully executed; and, although painted some 130 years since, they are in perfect preservation; the house having been in the possession of persons of taste, who did not object to the appropriation of a large room, that the pictures might remain intact. The general ornamentation of the room is likewise pleasing.

Heidegger died at the great age of ninety. He was noted for being the ugliest man of his day, which earned his features' commemoration by Mrs. Salmon, of wax-work celebrity. However, the Master of the Revels left a more enduring fame than many of Mrs. Salmon's beauties could boast of: he was a benevolent, hospitable, and charitable man, and made his way in the world to wealth and good society; and any memorial of so estimable a character is worthy of record and respect.

PAINTED HALL IN THE HOUSE OF HEIDEGGER, AT RICHMOND

HAYMARKET THEATRE.—MR. WEBSTER'S FAREWELL ADDRESS.

ON Monday evening Mr. Webster took his final benefit at this theatre. After the performance of "The Pretty Girls of Stilberg," which was the third piece of the evening, Mr. Webster delivered the following address to the audience:

Ladies and Gentlemen,—No words can express to you how honoured and flattered I feel at this numerous assemblage of friends round me on this my last appearance in the character of lessee and manager of the little theatre in the Haymarket. My final official duty is to offer you a grateful farewell. Having grown in good opinion as an actor, it emboldened me to task your patience as a manager; and, in catering for your amusement, your patronage has given me no cause to regret the experiment—though I began without the assistance of a single farthing beyond what I had saved by rigid economy out of a very small income. I found this theatre in the lowest possible state, when compared with other establishments, and incapable of being kept open more than the four summer months, when the leviathans—Drury-lane and Covent garden—closed. but, feeling that patronage was not confined to period or place, I endeavoured to take John Bull by the horns, and persevered till the leviathans gave way, and this favoured spot became the only constant home of the drama for three years, without closing once a night; and I should have continued to pursue that course, had not the principal performers complained of want of relaxation; consequently I have since made what are termed seasons, averaging about ten months each. During the sixteen years I have held power here—the longest lesseeship in London on record—I have had many very trying political and other not dramatic influences to contend with; but no person employed by me has ever felt them, either in manner or money; and I can conscientiously state, in all my transactions as man and manager, I can leave an honourable and honest name to my children. I am sure you will excuse this warmth of egotism on a point so dear to me. A manager's life, ladies and gentlemen, is not a bed of roses. With the mind ever on the stretch for your pleasure, and his physical powers endlessly employed in carrying out the mental efforts of others, who would induce the thoughtless to laugh at scars who never felt the wound of such a position, though they have assisted to barb the arrow. To authors I find I have paid £20,000, if not more. 'Tis said, 'Uneasy lies the head that wears a crown,' but far more uneasily lies his head begirt with the tinsel crown of theatrical sovereignty, where every popular favourite is a viceroy over him, and where the ways and means are not compulsory, but solely dependent on the will and pleasure of our sovereign the public. However, if my labour in the cause of the drama, which has been a labour of love, has met with the approval of you, my tried and valued friends, it will not have been "Love's labour lost." Those who remember this theatre when I first took it, sixteen years ago (of course I exclude the ladies from so long a remembrance), must perceive the extensive alterations, and I think I may venture to say improvements, that I have accomplished during my tenancy abrupt angles have given way to curves, and my circles, especially from their present occupancy, appear graceful in the extreme. I have backed the pit, and could, in another sense, for respectability, against any pit in London. I have stalled off what was originally the orchestra, sometimes discoursing sweet sounds, though sweeter music to my ear has supplied its place in the audible approbation of my exertions, as, to quote the words of Triplet, "author, manager, and actor too." The proscenium I have widened eleven feet, and entirely remodelled it, and introduced gas for the use of £900 a year, and the presentation of the centre chandelier to the proprietors; and, behind the curtain, money has not been spared to render the stage as perfect for dramatic representation as its limited means will furnish. In fact, I have expended, with no ultimate advantage to myself, on this property over £12,000, besides paying more than £60,000 in rent, yet I have met with anything but a generous consideration in return by the party most interested in the result. I trust my successor, John Baldwin Buckstone, my old friend and brother actor, will, as a brother manager, experience a kindlier treatment; at all events, I am sure he will deserve it, as honestly as he will zealously endeavour to merit your encouragement. Having passed from the past to the future, you will, perhaps, pardon me if I inform you that I have not turned my back on the Haymarket, without knowing, with more certainty than Coriolanus did, that there is a world elsewhere, namely, the Theatre Royal Adelphi, peopled with imaginative passages of life, serious and comic, where I hope the exclusive devotion of my energies before and behind the curtain will insure me the gratification of seeing many of the old familiar faces that have so often gladdened my eyesight and heart here. I will, at least, with the blessing of health, deserve the favour, both in the quantity and the quality of the material I shall present for your inspection. I am bound to say that that successful establishment has been the mainstay of my management, and, with my previous successes here, placed me independent of the world. Ladies and gentlemen, I fear I have been too diffuse, but I am about to part suddenly from old friends. To the performers who have served under my banner I publicly tender my warmest thanks for their cordial co-operation at all times and under all circumstances. To the press generally I beg to acknowledge my sense of deep obligation; and in

MR. B. WEBSTER.—DRAWN BY BAUGNIET.

bidding you farewell on this stage, I do so with the most heartfelt gratitude, and with the sincerest wishes for your happiness and prosperity. Ladies and gentlemen, God bless you!

This address was deservedly applauded throughout; and the speaker was rewarded at the conclusion with three supplementary cheers, and various bouquets were thrown upon the stage. The story told in it is decidedly that of sincere and honest effort, and the hero of it merits especial notice.

After the performance on Monday, the company of the Haymarket Theatre did only due honour to Mr. Webster, by presenting him with a salver and loving cup. Mr. Buckstone was entrusted with this pleasing duty, and delivered on the occasion an eloquent speech; which was responded to with delicacy and feeling by Mr. Webster. A laurel wreath, to which was attached a silver medal, had been thrown upon the stage—a grateful tribute, which was also presented to Mr Webster, jointly by Madame Celeste and Mr. Manby. The inscription on the salver is as follows:—

TESTIMONIAL PRESENTED TO MR. B. WEBSTER.

This Salver, together with a Loving Cup, was presented to Benjamin Webster, Esq., by all the members of the Haymarket Company, and others who have fulfilled engagements with him at the Little Theatre including the band, artists, and every servant on the establishment, as an affectionate token of regard and respect, on his retirement from the management of that house after a long and honourable career of sixteen years.—March 14th, 1853.

Mr. Benjamin Webster is the descendent of an ancient and respectable house, his father having been the representative, by the mother's side, of the Buckes, who were engaged in the battle of Bosworth-field and retired with the Duke of Norfolk into Yorkshire. There are large estates at Sheffield which formerly belonged to the family, and bear their name to the present day. One of that name, wrote "A Vindication of the Life of Richard III." The work is quoted by Walpole in his "Historic Doubts." The immediate parents of Mr. Webster are thoroughly Yorkshire: his father was from Sheffield, his mother from Leeds. He was born on the 3rd Sept., 1800, at Bath. His father was in the army, and young Benjamin was designed for the navy. But his father, after long experience of his own service, in Ireland and the West Indies, saw that there was no chance of promotion, in times of peace, for his son in the naval profession. Music and dancing were next the choice of the youth; but these were soon exchanged for histrionic performances, for which he had already shown an instinct by constructing, at the age of twelve, a puppet-theatre, for which he had also prepared a pantomime. Driven, at length, from home, by the fact of his father's second marriage, young Webster found refuge in the Cheltenham Theatre; the manager of which engaged him at a salary of twenty-five shillings a week, for all sorts of utility business: but he made his first bow as an actor at Warwick, as *Thesseus*, in "Alexander the Great." Here he was introduced to Rowland Hill, the celebrated preacher, who sought to induce him to leave the stage for the pulpit. He proceeded with the company to Lichfield, Walsall, and Birmingham. At Walsall, his career as *Harlequin* was in danger of coming to a premature conclusion. A scene through which he was to leap had been placed within a yard of a brick wall, against which he would inevitably have dashed his brains out, had

he not been saved by Mr. Bunn, the young Rosalin. Mr. Webster's next manager was the strolling Irishman, Wilson, with whom he acted in an old barn at Brom-grove, near Bermondsey. When nearly eleven, Mr. Talbot, the conductor of the Belfast Theatre, came to his rescue, and [illegible] find him in England, at the Coburg (now the Victoria); and, after a provincial tour, at the English Opera. One own first acquaintance with him was at Drury-lane, for which theatre he was engaged by Mr. Elliston, and where he appeared, in 1825, as *Pompey*, the Clown, in "Measure for Measure"—a part which he studied in three hours (*vide* Mr. Harley), and acted with great success. His first appearance at the Haymarket was under Mr. Morris, in 1829, in the farce of "Lodgings for Single Gentlemen." He continued attached to the house until he became its lessee, in 1837. It was not until 1844 that he became lessee of the Adelphi.

Mr. Webster's career as conductor of the Haymarket commenced with Mr. Macready in *Hamlet*; in connexion with whom, also, he brought out Mr. S. Knowles's revival of Beaumont and Fletcher's "Maid's Tragedy" under the title of "The Bridal." This was Mr. Webster's introduction to the starring system, on which he depended until Mr. Wallack's retirement from the stage. Poor Power, Miss Ellen Tree, Mr. Charles Kean, and Mrs. Nisbett, Mr. Anderson, Mr. Nisbett, and the two Cushmans, in this way successively appeared; and, during each separate engagement, ruled the business and destinies of the theatre. Meanwhile, by Mr. Macready and the Mathews, great and powerful experiments were made with the two principal pieces—schemes which ultimately failed in the hands of all; and their conductors were glad again to find refuge at the little theatre, the fortunes of which survived those of the great ones. A great number of important new pieces were thus produced at the Haymarket; among which may be named "The Love Chase," "The Athenian Captive," "The Maid of Marauddrpt," "The Sea Captain," "Glence," "Money," "Nina Sforza," "The Rose of Arragon," "Marriage," "Old Heads and Young Hearts," "Time works Wonders," "The Beggar on Horseback," "The School for Scheming," "The Heart and the Word," "The Wife's Secret," "Strathmore," and "Woman's Heart." All these were pieces of the first class and pretension, and many of them such in merit. An infinite number less legitimate pieces also might be catalogued, including "The White Horse of the Peppers," "Tom Noddy's Secret," "Single Life," "The Roused Lion," "Catspaw," "Mind your own business," "Masks and Faces," &c. The management itself closed with the public production of Sir Bulwer Lytton's comedy "Not so bad as we seem." Such are some of the dramatic productions on which Mr. Webster spent on the average about £2000 a year. No other manager during the same period has bestowed so much theatrical patronage on the living drama. The errors of judgment in these extensive literary dealings have been remarkably few, and the pecuniary arrangements have uniformly been on a liberal scale. In the latter days of his management, Mr. Webster has laboured under the difficulty of obtaining a star sufficiently attractive, and the exceedingly powerful competition of a rival establishment. Time, it would, seem had not been allowed, him to recover from the habits of the starring system, and he naturally suffered from the inevitable reaction consequent on its extinction. A new system had altogether to be instituted, for which Mr. Webster was either not prepared or inclined. Such a system also would require a combination of talent and attention: this he preferred to bring, in all its force, to bear upon one single stage; and wisely preferred the Adelphi as the arena for new experiments, and where, unquestionably, his usual good fortune will attend Mr. Webster's efforts—that success which is commanded because deserved.

The Portrait of Mr. Webster, engraved upon the preceding page is from a large drawing upon stone, by M. Baugniet, published by M'Clean, Haymarket

PROVINCIAL INTELLIGENCE.

THE CONSERVATIVE LAND SOCIETY IN YORKSHIRE.—This society having been invited to extend their operations to Yorkshire, a deputation visited Leeds, Wakefield, and Bradford, on Wednesday, Thursday, and Friday week. The deputation at each place was cordially received, and the statements were considered with attention and approval. It was intimated that steps would be taken to purchase Yorkshire estates, and that the committee was prepared to undertake, if desired, land purchases in almost every county in England.

STEAM-CARRIAGES ON COMMON ROADS.—Notwithstanding the [illegible] many failures of the steam-carriage on common roads, it is [illegible] its appearance between Bath and Bristol; and this time [illegible] several most ingenious improvements in the machinery employed, have thoroughly realised the expectations of the projectors. The rate of travelling is said to be about twelve miles an hour, and the cost [illegible] trifling expense for the journey.

EXTRAORDINARY BLAST OF ROCK.—An explosion has taken place at the Cyfarthfa quarry, and the extraordinary quantity of fifteen yards of solid rock was rent by a keg of powder. It is stated that not less than 15,000 tons of solid rock were separated at the time. A very large party assembled to see the blast. The bore was twenty-four feet in depth, and four feet in diameter. No accident happened.

CONVEYANCE OF MAILS IN GREAT BRITAIN.—The Post-office authorities have, at the present time, to pay for mails being conveyed over nearly 20,000 miles of railway in Great Britain daily; and in addition to this they have to pay for the conveyance of mails over 20,000 miles of road in mail coaches and mail carts a distance of nearly 4000 miles daily.

SCHOOL SHIP IN THE MERSEY.—The Lords of the Admiralty have acceded to the wishes of the committee of the Soho-street Ragged School, in Liverpool, and will place a vessel at their disposal to be moored in the river for the reception of boys, who are to be trained for [illegible]

AUSTRALIAN VESSELS FROM THE MERSEY.—On Sunday three vessels left Liverpool—the celebrated *Marco Polo*, for Melbourne; the *Earl of Charlemont*, for Port Phillip; and the *Sabrina*, for Perth, South Australia: the former with 845 passengers and £50,000 in specie. Various wagers have been made on the passages of the *Sabrina* (screw steam-) *Marco Polo*, and *Earl of Charlemont*. There is one fact with reference to the *Marco Polo's* sailing on Sunday worth recording. It is her captain's favourite day. Upon his former arrival at Melbourne, he left on a Sunday, crossed the line on a Sunday, sighted the Cape on a Sunday, and arrived at Melbourne on a Sunday. His voyage home, he left Melbourne on a Sunday, sighted the Cape on a Sunday, re-crossed the line on Sunday, and arrived in the Mersey on Sunday.

FORGING CHECKS ON BANKS.—Peck (as we stated in our last) was charged with having forged a cheque for £2 2s. 6d. on Saturday he was committed for trial; but, in the course of the proceeding incident to this, it has been discovered that Peck has been carrying on a series of forgeries on the banks in Birmingham and elsewhere.

COLLIERY EXPLOSION.—A dreadful explosion occurred on Saturday evening last in the Risca Vale, near Newport, Monmouthshire. The "seam" of coal is called the Black Vein, is the property of John Russell, Esq., and has for some time past principally supplied the West Indian Mail steamers. It is the same "seam" in which, some seven years ago, between thirty and forty lives were lost. The pit had been examined in the morning, but there had no indication of anything wrong. By this sad accident seven young men and boys were suddenly hurried into eternity, and thirteen more or less injured, so that four of the unfortunate men not expected to survive the frightful burnings from which they are now suffering.

THE ACCIDENT ON THE BOLTON RAILWAY.—After a long investigation, and several adjournments, the jury have given a verdict to the effect "That the deceased, Thomas Cronin, was guilty of wilful manslaughter, through driving at excessive speed; that the engine was not a proper one; that the permanent way was not good; and, lastly, that a general arrangement of the company are not conducive to public safety; and that the management of the Bolton and Preston district of the line merits strong condemnation." We regret to add to this account, that on Friday, the 11th inst., at the Barrocks died on Tuesday last: both Betsy M'Cartney (Mr. Barbour's nursemaid) died on Tuesday last: both were injured by the railway accident, and both died in the Manchester Infirmary.

ASSAULT ON JUDGE PERRIN.—At the Traice Assizes, a prisoner named Connor, was sentence l by Mr Justice Perrin to a year's imprisonment for felony. The moment his lordship had concluded the sentence he fellon him a st [illegible] three pounds' weight at the head of the Judge, who fortunately observed the action and bent forward. The stone struck him, but not heavily, on the shoulder

EXPLOSION AT THE BRIGHTON RAILWAY.—A serious accident took place on Thursday morning, at the terminus at Brighton. At about ten minutes to seven, the engine of the short train, which leaves Brighton for Little Hampton daily at 7.15, and was standing attached to its train, exploded suddenly, and the various parts of the mach nery were driven through the roof of the shed. The driver, the fireman, and a fitter, who were upon the engine, were killed, and their bodies were found at some distance from the engine. Although some of the passengers were [illegible] in the train, they all escaped without the slight est injury. The directors have too much cause to believe that the accident arose from the driver having screwed down the safety-valve. The matter will be investigated without delay.

ROASTING BY GAS.—Two trials have recently taken place at the Royal Naval School, with an apparatus [illegible] by Mr. Sorby, West-yard Pimlico, under the superintendence of Mr. Soyer, which neither [illegible] the cost of roasting the beef, and the [illegible] [illegible] were cooked, and it was found that the saving by gas, against [illegible] mode, was, Meat, at 8d. per lb. . . 8d.; dripping, at 6d. per lb. . . 1d.; gravy, at 1d. per lb. . . 1d.; making a total of 11d. 0½d. In order to show the advantage of the system, a rump steak was broiled by Mr. Soyer, before the company, who partook of it, and who declared it was perfection, and free from all odour.

THE TOBACCO TRADE.—The Customs authorities being of opinion that all tobacco (except cigars), and also snuff detained for having been illegally imported, and for which no application has been made by the parties within one month, and all tobacco and snuff (except cigars) brought to the Queen's warehouse for the duties, if not cleared within one year, should be destroyed, they have directed their officers to govern themselves accordingly in future in the matter, declaring that it is not intended to disturb the practice which exists with reference to the 38th sec. of the Act 8th and 9th Vict., cap. 86, and the 16th section of Act 8th and 9th Vict., cap. 93, in relative to surplus stores of vessels warehoused.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Notwithstanding that a fair average money business has been transacted in the Consols alone during the week, the market for these securities has been by no means active, and prices have had a downward tendency The leading cause of the decline is the great increase in the demand for money for commercial purposes, and the probability that the rate of discount in Lombard-street and elsewhere will shortly be on the advance. The accounts at hand from Australia are very satisfactory. The produce of the mines is estimated at £1,000,000 sterling per month; and it is understood that nearly £16,000,000 has now been raised. From the colony, £1,200,000 in gold has arrived since we last wrote; and we understand that upwards of £2,000,000 is now on passage to England. Shipments of gold to some extent have been made to the Continent; yet it is evident that the returns from the Bank of England will, in the next two or three weeks, will show a steady increase in the stock of bullion.

The Chancellor's scheme for the reduction of the interest on Exchequer Bills has been successfully carried out. Few parties have presented their Bills for payment, and the premium has steadily improved.

On Monday the Three per Cents Consols for Money—were officially quoted at 100 to 100¼; and for the Account, 100¼ to 100⅜. India Bonds were marked 47s. to 48s.; and Exchequer Bills, 10s. to 14s premium Scarcely any change took place in prices on Tuesday; but, on Wednesday, they exhibited signs of weakness. Thursday the market was very inactive, and the Three per Cents—Money—were 100 99⅝; ditto, for the Account, 99⅝ 100. India Bonds, £1000, were 46s.; ditto, under £1000, 45s. premium. Exchequer Bills, June, marked 8s. to 13s.; ditto, March, 11s premium.

An improved business has been reported in miscellaneous securities Australian Agricultural have been done at 112 to 113; Peel River Land and Mineral, 8 to 8¼ prem.; Van Diemen's Land, 22½ to 23; South Australian, 60 to 62; North British Australian, 2½ to 2¾ prem Scottish Australian Investment, 2¼ to 2⅜ prem; Australian Coal Mining, 2 to 2 prem; New South Wales Coal and Intercolonial Steam, ⅞ to ¾ prem.; Nova Scotia Mining, 1¾ to 2; Union Bank of Australia, 77⅞ to 78; Bank of Australasia, 97⅞ to 98; Oriental Bank, 54 to 56. London Australian [illegible] [illegible] and Australian. [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] Great Nugget Vein, [illegible] [illegible] [illegible] [illegible] [illegible] to small Gold, 2⅝ to 2¾ prem. [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] prem.; Bank of British North America, 41 to 42; Canada Company, 82; Provincial of Ireland, 48; East and West India Docks, 167; St Katharine Docks, 99¾ to 100; Victoria Docks (£4 paid), 6; Crystal Palace (£6 paid), 6; London Docks New Shipping (£12 paid), 9. Shares in the Crystal Palace of France have marked 2½; General Steam Navigation Company, 31; Peninsular and Oriental Steam, 83 to 84; Royal Mail Steam, 85¾ to 87; South Australian Land, [illegible]

The [illegible] have commanded a steady [illegible] The reforms in the [illegible] in Mexico, are expected to lead to benefit results to the [illegible] The Mexican Loan on bonds to the amount of six millions of dollars; and, we understand that 70,000 dollars, balance of the cotton licenses, will be received by the next steamer. Cotton bonds have been in request. Spanish securities have ruled firm. The 3 per Cent Certificates of the Three per Cent D ferred Debt will be opened at Madrid on the 3rd inst The dividends on the Danish Three per Cents, the Brazilian 5 per Cents, and on the Peruvian Loan are advertised to be paid on and after the 1st proximo Transactions have taken pla [illegible] Russian Stock 93 ex.; Buenos Ayres, 82 to 84; Danish Three per Cents [illegible] Greek Bonds, ex. Coupons, 8¾; Spanish Committee's Certificates, 8; Swedish Loan, 1¼ dis.; Turkish Scrip, 1¼ prem; Venezuela, 16

The Continental exchanges are favourable—gold being 0.38 p. r cent dearer in Paris than in London, and 0.47 per cent higher at Hamburg than here. Upon New York they are in favour of England by 0.42 per cent.

On Thursday, Brazilian Five per Cents were 103; ditto [illegible] and Half per Cents, 85; Danish Three per Cents, 8 [illegible] ex Div., 1845, 92¾; Mexican Six per Cents, 20; Peruvian Scrip, 4¾; Portuguese ditto, new, Deferred, 6¼; Portuguese four per Cents, for the Account, ditto, Sardinian five per Cents, 98⅜; Spanish Three per Cents, 40; ditto, [illegible] [illegible] [illegible] [illegible] [illegible] Spanish Certificates, 8; [illegible] [illegible] [illegible] [illegible] [illegible] [illegible] Dutch Four per Cents, 97¾; [illegible] [illegible] [illegible] [illegible] [illegible] [illegible]

AMUSEMENTS, &c.

ROYAL LYCEUM THEATRE, Oxford Street. On Monday, Wednesday, Friday, and the following Mornings, at Three, from the French by Mesdames [illegible], a Series of Lectures on Chemistry, Light, Electricity, and Magnetism, at the Royal Polytechnic Institution, Regent-street. Lectures on Mechanics, Hydrostatics, Pneumatics, and Optics, at the Royal Institution, Albemarle-street. Lectures on Astronomy, at the Royal Observatory, Greenwich. Lectures on Botany, at the Royal Botanic Gardens, Kew. Lectures on Geology, at the Museum of Practical Geology, Jermyn-street. Lectures on Physiology, at the Royal College of Surgeons, Lincoln's-inn-fields. Lectures on Anatomy, at the Royal College of Surgeons, Lincoln's-inn-fields. Lectures on Medicine, at the Royal College of Physicians, Pall Mall East. Lectures on Natural Philosophy, at the Royal Institution, Albemarle-street. Lectures on Chemistry, at the Royal Institution, Albemarle-street. Lectures on Chemistry, at the Royal College of Chemistry, Oxford

CAST OF THE STATUE OF CHARLES I., AT CHARING-CROSS

MANY of our readers have, doubtless, seen the snug house-like hoarding recently placed round the statue of Charles I., at Charing-cross; and numerous have been the guesses as to its purposes: some reports stating it to be inclosed by order of the Commissioners of Works, in order that the pedestal may be re-cut and generally renovated; whilst other reports have assigned the purpose of the hoarding to its true use, that of enabling a cast of the pedestal and statue to be taken for the new Crystal Palace at Sydenham, as one of the illustrative examples of sculpture of the 17th century. As the occasion is both novel and interesting, we give a representation of the scene within the hoarding; premising that the operation of casting the pedestal is carried on *beneath* the flooring (shown in our Engraving), which is on a level with the top of the pedestal whereon the horse's feet are placed. The scene itself, when sketched by our artist, was most singular; the bronze effigies of King Charles and the upper part of his horse seeming to issue from a rough misshapen mass of plaster. In the background, the upper portion of the King's figure, in the snowy whiteness of new plaster, was being scraped from the incidental roughnesses and finished on the spot; whilst portions of moulds, sacks of plaster, a charcoal stove, ladders, and the miscellaneous appliances necessary to the casting—all white with plaster—were piled about, or placed most conveniently for use; and the bit and bridle, taken from the statue, were hanging on the sides of the hoarding.

The sword of Charles disappeared some years since, no one, seemingly, knowing by what means; but it is not, perhaps, generally known that the George pendent from the ribbon has also been taken away. That it once hung in its proper place is evident from a hole in the metal ribbon, whence the George should hang.

The taking of the cast has been confided to Mr. Brucciani, and the work is now in progress. The *mould* of the statue (horse and figure) is completed; it required three tons of plaster, and ten hundred weight of iron. The greater portion of the statue is also cast from the mould, and has further taken one ton and a half of plaster. The statue will be supported on the pedestal by irons, two inches square, weighing upwards of seventy pounds each, and carried through the legs into the body of the horse. It is calculated that in making the moulds, and cast, and erecting the latter, twenty-two tons of plaster, and fifteen tons of iron, will be used.

In forming the mould of the pedestal, not yet completed, it is believed that nine tons of plaster will be used; and in the cast of the same, six tons.

It may be interesting to add the dimensions of the statue and pedestal; the latter long admired as Gibbons's work, but recently proved to be the production of another artist.

The pedestal (the original in stone), measures 13 ft. 8 in. high, 9 ft. 11 in. long, 5 ft. 7 in. wide

The statue (in metal) bears the following measurement:—Height from foot to top of horse's head, 7 ft. 8 in.; height from plinth to top of figure, 9 ft. 2½ in; height from plinth to neck of horse, 6 ft.; height of plinth to top of hind quarters, 3 ft. 10 in.; length from head to tail, 7 ft. 9 in.; circumference of horse, measured from back of saddle-cloth, 8 ft. 2 in.; measurement of horse round chest and hind-quarters, 16 ft.

The metal casting around the left forefoot of the horse bears the following inscription:—HVBERT) LESVEVR (FECIT ▪ 1633 The pedestal does not bear any name.

The popular story of the statue at Charing-cross is beset with errors, that of the artist of the pedestal has been mentioned. The belief that the statue was made at the expense of the family of Howard-Arundel is unfounded. Although cast in 1633, it was not set up until 1674.

Walpole erroneously states it to have been "made by Grinling Gibbons." He characterises the Statue as a noble work, "in which the commanding grace of the figure, and the exquisite form of the horse are striking to the most unpractised eye."

We understand that the cast will be placed in the Sculpture Court of the New Crystal Palace, as a companion to a cast of the celebrated equestrian statue of Marcus Aurelius.

TAKING A PLASTER CAST OF THE STATUE OF CHARLES THE FIRST, AT CHARING-CROSS.

THE BURMESE WAR.—EUROPEAN TROOPS DESPATCHED FROM RANGOON TO THE PAGODA GARRISON, AT PEGU.—(SEE PAGE 222)

THE ILLUSTRATED LONDON NEWS.

No. 614.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, MARCH 26, 1853. [SIXPENCE.

MINISTERIAL POLICY AND MINISTERIAL PROSPECTS.

An early-arriving Easter has reduced the first span of the regular Session to a period of less than six weeks; and yet, within even that short space of time, the Cabinet has amply proved the sterling quality of its policy, and the solid materials of its structure. Already has the sneer of "coalition" become out of date and gone out of use. Already has Mr. Disraeli found the satiric phrase of "all the talents" drop pointless from his lips. The very idea of the varied materials of which the Cabinet was formed appears to have faded away; and the House and the country to have come to the practical conclusion that the union Ministry has settled down into a state of permanent firmness and prosperity. The plain truth is, that the material of the Cabinet was never in its nature mutually antagonistic or repugnant. It was simply different—brought from different quarters, and by different means; but the general nature of the whole was to cohere and coalesce—and cohere and coalesce it has done accordingly. The prophets who prophesied Lord Aberdeen and Lord John Russell leading separate and quarrelling cliques, and Sir James Graham and Lord Palmerston at fiercest loggerheads, have proved but false prophets, and now sit dumb upon the benches. Mr. Disraeli it was who concocted and led the single party attack which has been made upon the Treasury Bench, with the war-cry of disrespect to Foreign Powers upon his banners. The consequence was, however, an ignominious repulse. The accused member of the Cabinet was so ably defended by his colleagues; and the line was so deeply and clearly drawn between official and individual responsibility, that the onset, however brilliant and however fierce, ended in total failure. Since then the Derbyites have been falling deeper and deeper into disorganisation. As to their old leader, they have all but flung off their allegiance to him. Mr. Disraeli cannot now count upon the obedience of a single man of the "large-acred squires," who this time last year were following him so closely, and backing him so stoutly. Nor do the party show any signs of rallying. As in ancient days it used to be the practice of the barbaric hordes, who sometimes overwhelmed a peaceful country, and who only looked to plunder for their pay, to desert their leader as soon as he was beaten, and put up one of their own comrades in his place; so are there symptoms of Mr. Disraeli's bâton being wrested from his hands and entrusted to those of the bucolic Sir John Pakington, whom the country gentlemen can at any rate confide in as one of themselves. At all events, the Oppo-

sion is in a condition as dangerous [illegible] of the

[illegible]

[illegible] Russell has yet once more to make [illegible] in a single sentence. But from what h[illegible] may, or what will be done; and from the steadiness of the direction in which the Ministry have as yet steered their course, it is not difficult to prognosticate that the same hands will continue to guide in the same manner the vessel of state. As yet the attention of the Government has been [illegible] to practical legislation for [illegible] improvement, [illegible] Perhaps [illegible] never was a time when committees of inquiry were more numerous or more bringing information to the utmost variety of [illegible] reforms and improvements to be thus [illegible] and all, that air of sober practicability and evidence which, to a greater degree than any more prominent qualities, is best adapted to [illegible] The Government is wisely pursued [illegible] to go on. Lord John Russell's [illegible] upon the opening night of the [illegible] not only as to the measures, but distinctly intimated the tone of what would be the Ministerial policy. No rash and rapid social or political changes, yet a steadfast purpose to improve and advance; no reckless juggling with finance, but a resolute determination to develop to the utmost the principles of Free-trade, and to take all practicable steps towards a more equalised taxation than the system which we now possess. On the great question of the defences of England, the Ministry wisely proposed, and adopted, a middle course. To a certain extent they carried out, indeed, in this matter, the views of their predecessors; for it is a noticeable feature in the Aberdeen Cabinet, that all they found good in the policy and plans of the men whom they displaced, they have been eager to adopt, and candid to acknowledge. Thus, the question of the defences has been almost entirely put to rest. We now know that we are substantially safe; and that this happy result has been attained in a manner which has silenced the reckless on the one hand, and the alarmist on the other. As connected with the national defences, it may also be remarked that the confidence of the House and the country in the stability and good intentions of the Government has been strikingly shown in the unusually ungrudging manner in which, on the whole, the supplies were voted. True, they were made, as they always are more or less, the opportunities for those endless and fruitless discussions, the delight of impracticable and unreasonable men. Maynooth formed the usual stumbling-block to the progress of the votes; besides calling forth one of those fierce and morbid polemic discussions in which violent antagonistic religionists will engage when brought face to face with each other; and which, let them be waged with what ability and learning they may, have never yet been known to convert one man to the theological opinions of another. Still, that and other interruptions—the fruit of similar personal bigotry or party favour—sufficed but little to stay the progress of national reform. Perhaps the question of the Canada Clergy Reserves raised the greatest amount and most formidable species of opposition; but it was one as resolutely and successfully encountered both by argument and vote, and the commonsense principle of allowing colonies to whom we have given constitutions, to avail themselves of the privilege of employing them, was triumphantly affirmed.

Meantime, we are proceeding practically towards reforms of our mercantile marine laws, and of our Custom-house system, to the codification of the unwieldy statutes at large, and to a plan of improved railway management for the prevention of accident; the Home Secretary is waging war against the over-crowded metropolitan churchyards; the Sanitary Boards are to be put upon a better footing; and the House has passed the second reading of an important arterial London Drainage Bill. Add to these matters the inquiry and subsequent legislation to take place into the existing insurance system, and the immediate improvements in [illegible] and the ultimate discontinuance promised of transportation to remonstrating colonies; and even then we have enumerated but a few of the useful acts in fact and acts in purpose of the Government. No doubt, also, the election committees, which have been and are sitting, will place a most useful fund of warning information in the hands which are [illegible]—as we hear—preparing the provisions of the new Reform Bill. That that measure was solemnly promised by a Minister for a future session is, indeed, in itself, a proof of the justifiable self-confidence of the Cabinet of Lord [illegible]

THE NINEVEH-ROOM AT THE BRITISH MUSEUM.

THE unusual Easter weather [illegible] hundreds, and thousands of holiday visitors to the British Museum; [illegible] one of the most novel attractions will be the spacious saloon engraved upon the preceding page; wherein are deposited our newly-acquired sculptures from Nineveh. The room is entered from a gallery, at present unarranged, on the left of the entrance-hall, and a small gallery, [illegible] for Roman antiquities, also unarranged. The *Nineveh-room* [illegible] the Assyrian sculptures with the Egyptian gallery now in progress of [illegible] invites the amount of space being allotted to those huge fragments of Egyptian skill which they have hitherto had; and which gallery, when more nearly approaching completion, we shall illustrate, and fully describe.

Among the most prominent objects in our present illustration are two colossal human-headed bulls [illegible] the figures of kings, and several slabs and [illegible] the period of the sculptures being [illegible] landed. (See ILLUSTRATED LONDON NEWS, Nos. 415, 452, 460, 463, 561.)

ASTRONOMY.—Mr. C. H. Adams delivered his annual lecture on this subject at the Adelphi Theatre, and has been extensively patronised during the week.

THE NEW YORK CRYSTAL PALACE.—His Royal Highness Prince Albert is among the contributors of works of art to the Industrial Exhibition [illegible] opened at New York on the 2nd of May next. The portraits of [illegible] Prince Arthur, and of the late Duke of Wellington, [illegible] are pictures painted by Winterhalter, is his contribution. The Baron Marochetti has completed a colossal equestrian statue of General Washington, which is about to be embarked for the Exhibition. Mr. Crawford has exercised a colossal statue of the late Daniel Webster for the [illegible] The attitude [illegible] simple. The state of New York has appropriated 4000 dollars for its proper representation at the Exhibition; and Congress, on the 26th of February last, voted 20,000 dollars to defray the expenses of the Turkish steam frigate [illegible] from New York Harbour.

IMPORTS OF SPECIE.—The following are the returns of gold and silver for the week ending March 11, 1853:—Gold coin to Belfram, Bros. & Albert, Hamburg, 2000 oz.; Melbourne, 23,000 oz.; Barnard, Dowlgate, 2000 oz.; [illegible] 1000 oz.; [illegible] 2000 oz.; [illegible] 2000 oz.; [illegible] 2

filled, principally with flour, and two had been despatched with passengers to Valparaiso. We regret to be informed by the United States frigate *St. Lawrence*, arrived at Valparaiso on the 27th of January, from the Sandwich Islands. She brought advices of a very satisfactory nature from Honolulu to the 20th of November. [illegible] American whalers had visited the Sandwich Islands last fall season for supplies, and fifty or sixty more were expected there. Most of these whalers had met with good success last summer in the Arctic Seas and seas of China, and had few casualties to report. The total number of vessels belonging to the whaling fleet of the United States amounted to 668

Note.—The sign — denotes below the average.

The mean reading of the barometer for the week was 29.587 inches, and the range in the week for tenths of inches, the weather during the week has been very various. The mean has fallen frequently, but to no great depth; and the mean daily temperatures have been in defect from 7° to 10° below their averages. On the 18th, the mean temperature of that day declined to 23°, being the lowest mean temperature reached on that day since the year 1815. The mean temperature of the week was 32·7°, being 9·6° below the average. The range of the daily temperatures has been great; their mean for the week is 14·5°. Snow fell on the 18th, 19th, 20th, and 24th, and hail on the 22nd, 23rd, and 24th; producing 1·2 inches of rain and melted snow.

Lewisham, March 26th, 1853. JAMES GLAISHER.

ERRATUM IN LAST WEEK'S RETURN. The lowest reading of the thermometer on the 17th. For 29·5°, read 28·5°.

HEALTH OF LONDON.—During the week ending last Saturday, 1667 children were born in the metropolitan districts; of these, 855 were boys, and 812 were girls. The average number in the eight corresponding weeks in the eight corresponding years was 1484. The number of deaths within the same period was 1274, being less than in the preceding week by 149. It will therefore appear, that, as will stand are the frequent changes of weather, the prevalence of weather of a higher temperature than that expressed in January has somewhat beneficially influenced the results. The effect of the severe weather which set in last week, and continues, will be shown in future returns. To zymotic diseases, whose weekly average was 208, the number of deaths is 229; of these, 37 are attributed to scarlatina, whose average is 25; to hooping cough 70, whose average is 8; and to typhus 46, whose average is 4; to croup and cancer, 20, in unlike particular diseases. 159, whose average is 138—of these, 131 are attributable to consumption; to diseases of the brain 182, its average is 131; to diseases of the lungs, &c., 322, whose average is 242. Of these, 1 case due to convulsions, which has declined from [illegible] in the preceding week; and 37 deaths are due to violence, privation, cold, and intemperance.

THE LONDON DRAINAGE BILL.—On Monday night an adjourned meeting of delegates from the various metropolitan parishes was held in the Court-house, Marylebone, to consider the provisions of this bill. A series of resolutions approving the principle of the measure, but condemning many of its clauses, especially that providing a guaranteed dividend of 3 per cent, was proposed; but an amendment was moved in opposition to the bill, on the ground that it does not recognise the principle of local self-government, which has been lost sight of more and more. A second amendment was then proposed, declaring that the bill, with some modifications, deserved the cordial support of the meeting; but, it being [illegible] o'clock, the discussion was adjourned for a fortnight.

COURT OF COMMON COUNCIL.—CITY REFORM.—At a Court held on Tuesday, after much discussion, and a variety of suggestions, the following resolution was unanimously adopted:—"That the negative of the aldermen and mayors and present to the court a bill for extending the franchise for the wardmote elections in the city of London, to all persons occupying premises within the city, rated to the inhabitant householders' annum. The bill to include such other suitable alterations in the Corporation as may be deemed advisable, and the committee to obtain the support of the Government and others, and to report from time to time." It was also agreed that the committee should be a ward committee, consisting of five of the Aldermen present, and one member of the Court of Common Council from each ward.

THE ROYAL HIGHLAND SOCIETY.—The annual dinner of this ancient society, held in commemoration of the victory of Alexandria, took place on Monday night at the Freemasons' Tavern, under the presidency of the Duke of Argyll. Among the gentlemen assembled on the occasion, a fair proportion of whom were the Celtic garb. The toasts proposed, as usual, embraced among them some dedicated to the memory of those who fell with Abercrombie. There was a great muster of pipers, young and old, in the hall during the evening, and pibroch, strathspey, and reel were played with spirit-stirring effect.

THE CONSERVATIVE LAND SOCIETY.—The second quarterly general meeting of this society was held at the Freemason's Tavern, on the 17th inst. Since their last report the committee have purchased three estates: one at Hounslow, close to the railway station, another at Wood green, Tottenham, and a third in Hertfordshire, between the towns of Hertford and Ware. Fifty rights of choice were then drawn for among the unenrolled shareholders, and it was announced that seven would be placed on the list of right by seniority.

ARTISTS' BENEVOLENT FUND.—The anniversary festival was held on Saturday, at the Freemasons' Tavern. Mr. Rowland D. Alston, late M.P. for Hertfordshire, in the unavoidable absence of the Earl of Yarborough, undertook the duties of chairman. The Artists' Benevolent Fund was established in 1810, and obtained a royal charter of incorporation in 1827. It consists of the general and district branches, the Artists' Annuity Fund and the Artists' Benevolent Fund, the latter of which extends relief to the widows and orphans of deceased artists, at present under a sum of £170 p.a. to thirty one orphans. The total receipts for the past year, arising from subscriptions, donations, and the Garland upon £20,000 stock, amounted to £1,438 17s. 3d., and, after all disbursements, a balance of about £250 remained in the hands of the bankers. The secretary read a list of contributions given during the evening, which, including her Majesty's annual donation of 100 guineas, amounted to the sum of £350.

HOSPITAL FOR CONSUMPTION, BROMPTON.—A meeting of the friends and committee of this valuable charity was held on Thursday, at the institution, when the committee had the gratification of announcing that the Marquis of Westminster would preside over the ensuing anniversary festival of the hospital, which was appointed to take place on the 1st of June next, at Willis's Rooms. It appears that the portion of the building already completed and occupied affords accommodation to ninety inand includes the necessary offices, &c., requisite for the out-patients' department—from whence at out one hundred invalids suffering under different diseases of the chest are daily prescribed for. The new wing, or second half of the building, is now in progress of completion. By this addition the number of beds will be increased to 220; the necessity of which is evinced by the fact of there being 176 patients waiting for admission during the past month, the majority of whose cases grow dangerous and difficult by delay of treatment.

CITY OF LONDON HOSPITAL FOR DISEASES OF THE CHEST.—In our issue of last week of the meeting of this institution, we omitted to have stated that the number of [illegible] patients was [illegible], or [illegible] also that the patients in 1852 exceeded those of the previous year by [illegible]. The report stated that the present [illegible] diture amounted to £1764 19s. 7d., while the annual income did not exceed £600. The subscriptions at the dinner exceeded £6000.

EAST INDIA HOUSE.—A quarterly general court of this company was held on Wednesday, when a long debate took place on a proposal to alter the mode of electing the directors, but which was negatived. Some papers were applied for relating to the Affairs of Sinde, when leave was given for their production. The court then adjourned.

THE ROYAL CHINESE JUNK "KEYING."—This vessel, together with her interesting contents, illustrative of the arts, sciences, costumes, and manners of the Chinese, which during the last few years have been admired by thousands of visitors, are now to be submitted to public tender by the present owner. She was purchased for a large sum at Canton, and came to the Isle of Dogs on the 16th inst. Her Royal Highness Edmund, being accompanied by a mixed crew of English and Chinese sailors, and was the first Chinese vessel ever had which had ever touched at the shores of Europe or America.

THE HEAD MASTERSHIP OF CHRIST'S HOSPITAL.—The Governors of the institution have appointed [illegible] April 8, for the election of a head master in the room of the late Rev. Dr. Edward Rice. As soon as the intelligence of the vacancy spread through the country, applications for the appointment were forwarded from a large number of gentlemen distinguished for classical ability and general attainments. A committee was appointed to examine the testimonials, and have selected the three following gentlemen; and the governors [illegible] The Rev. Dr. G. A. Jacob, Principal of Brasenose College, Oxford; the Rev. Hugo Daniel Harper, M.A., head-master of the Grammar-school, Sherborne; and the Rev. Henry Newport, M.A., head-master of the Grammar-school, Exeter. Hitherto it has been customary for the head-master to hold, with the master ship, one of the livings in the gift of the governors; but in future this privilege will be disallowed. The stipend is £600 a year and residence. The present age of Horsley, held by the late head master, has been given to the Rev. W. H. Hughes, M.A., who for years past eminently discharged the duties of curate there.

THE FLUES OF THE BRITISH MUSEUM.—The fate of Doncaster Church holds out an impressive warning for extreme caution and constant vigilance wherever buildings are heated by flues. After that unfortunate occurrence, who will say that the British Museum is safe? The promulgation of open fire-places and candles or gas is an insufficient precaution against such an accident as that at Doncaster. It is not, indeed, at all likely that if a fire were to break out the whole of the structure would be destroyed; but great and irreparable injury might be done to the contents where a fire took place. Wherever there is a flue fire may be hatching without any symptoms of it to create alarm.—*The Builder.*

FINAL CLOSING OF ST. CLEMENT'S CHURCHYARD.—An order in Council has been issued under the "Nuisance Removal Act," by which act a month's notice is required to be given before the order can be carried into effect against burials. The notice has been given, and the ground will be finally closed on the 18th of next month. In the meantime, burials are proceeding almost daily. Other metropolitan parishes are adopting similar proceedings to obtain the closing of burial-grounds before the approaching summer.

THE SOUP KITCHEN.—Last Sunday the committee of the Leicester-square Soup kitchen conducted to the morning service at St. George's, Albemarle street; St. Paul's, Covent-garden; and five other churches, no less than 810 poor men and 76 women, all of whom, without such Christian interposition, would most probably have been absent from a place of worship. In the afternoon 110 men and 50 women attended Divine service at St. Anne's, Soho, on which occasion the Rev. Nugent Wade delivered a most interesting sermon, expressly to suit the condition and circumstances of his poor congregation.

CLOSING OF A CITY GRAVEYARD.—Lord Palmerston has notified to the officers of the united parishes of St. Laurence Jewry and St. Mary Magdalene, Old Fish street, that it is the intention to represent to her Majesty in Council, that for the protection of the public health, burials in the church and churchyard of the united parishes shall be wholly discontinued. The grave, and its [illegible] is situated in the 6in chain-yard; and it is said that this great feare of the aldermen have been the moving cause of this reform.

AFFAIR OF HONOUR.—It was very generally rumoured on Saturday in the clubs, that the preliminaries of a hostile meeting had been arranged between two gallant colonels, who have lately figured before the Select Committee of the House of Commons to inquire into the petition from Norwich borough, and its unauthorised withdrawal. At the eleventh hour the matter was fortunately adjusted by the friendly intervention of an hon. member who sits on the opposite side of the House.

DEPUTATION TO THE LORD MAYOR.—On Wednesday about 50 gentlemen waited upon the Lord Mayor, as a deputation from many of the city wards, to request that his Lordship would convene a meeting of the Common Council, to receive a petition in favour of Mr. Pearson's projected railway and street improvements. Several of the gentlemen composing the deputation spoke in support of the object of the petition; and the Lord Mayor, in reply, said he [illegible] whether he had the power to name a day for convening a special Court, but he would consult the town clerk on the subject, and trusted sure that the petition was [illegible] head of the business paper for the next Court

CRIMES. On Saturday morning, a fire broke out at the hatmanufactory of Messrs. Pritchard, and in which damage was done to upwards of £1000. At the same time, another fire took place at Park Lane, Mayfair, at the residence of Mr. Wilkinson, and much injury sustained

Early on Monday, the Crown Tavern, Long-acre, was discovered on fire; great damage was done, and the potman or [illegible] George IV. Newman Street, Oxford-street, was discovered [illegible] premises of Mr. [illegible] Little Trinity lane, were damaged [illegible] fire, and the inhabitants [illegible] The Oddfellows' Tavern, Woolwich, has been partly burnt, and the contents of two sheep [illegible] were destroyed.

NATIONAL SPORTS.

Should the weather turn out favourable, the holiday-keepers will have no reason to complain of lack of sport; as, apart from other seasonable diversions, there is plenty of work out of doors on the programme for those fond of country. The leading sports of the day stand as follow:—Cattrick Races; Birmingham and Oldham Steeple-chases [illegible] Leamington Races; St. Albans Steeple-chases, Wednesday; Nottingham Races (first day); and Driffield Steeple-chases. Friday, Worcester Steeplechase. Saturday: The 100 guinea Newton Spring Plate.

Bradley Wood [illegible] Athletic [illegible] Monday and Tuesday.

TATTERSALL'S.

MONDAY.—A rather thin room, and business not by any means a brisk showing, however, an improvement in Defiance and Contentment, for the events for which they are quoted. Closing prices:—

MONTHLY STAKES.

5 to 1 agst Defiance (t)	6 to 1 agst [illegible]	12 to 1 agst Llanfo
	15 to 1 agst Lindsay	
[illegible]	[illegible]	
8 to 1 agst Contentment	[illegible]	15 to 1 agst Pugsy
9 to 1 [illegible]	[illegible]	20 to 1 — Derbyshire
[illegible]	[illegible]	
10 to 1 agst Tydeus	20 to 1 agst [illegible]	50 to 1 agst Anne Page
20 to 1 — Lady Evelyn (t)	40 to 1 — [illegible]	

DERBY.

5 to 1 agst West Australian	15 to 1 agst Hollywood	18 to 1 agst Nonplussed
14 to 1 — Chanticleer	15 to 1 — The Nabob	20 to 1 — Queen Bee
	33 to 1 agst Somersetshire	

THURSDAY.—Too much time was taken up in settling on the Lincoln events to admit of much news from these to come; and the only movements to be noticed were the retreat of Lampedo and Llanforia, and the total disappearance of Maria, for the Northamptonshire Stakes:—

NORTHAMPTONSHIRE STAKES.

7 to 1 agst Defiance	25 to 1 agst Lampedo	
6 to 1 — Hollyhorse	25 to 1 — Llanforia	
[illegible]	[illegible]

LINCOLN SPRING MEETING.—MONDAY.

TRIAL STAKES.—King David, 1. Chilton, 2.

TWO YEAR OLD STAKES.—Queen, 1. Ludwig, 2.

STEEPLE-CHASE HANDICAP.—Purple & Pearl, 1. Bruce, 2.

SELLING STAKES.—The Gip, 1. True Girl, 2.

TUESDAY.

THE HURDLE-RACE FREE HANDICAP.—The Hero, 1. Fazely, 2.

THE LINCOLN SPRING HANDICAP.—Caurina, 1. Harp, 2.

THE TWO-YEAR-OLD SELLING STAKES were won by Mr. C. Napier.

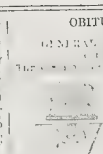
THE SELLING STEEPLE-CHASE STAKES were won by the Countess.

THE INNKEEPERS' STAKES were won by True Girl.

GEOGRAPHY.—Sir Roderick Murchison, as President of the Royal Geographical Society, gave his first soirée of this season at his house, in Belgrave-square, on Monday evening. It was numerously attended by the diplomatic body, members of both Houses of Parliament, and of the Scientific Societies of the metropolis, as well as by travellers from various parts of the world. Dr. Rae, the adventurous Arctic explorer, who received a gold medal of the Royal Geographical Society, last year, was present, and took leave of his friends on his departure to complete the survey of the vast territories, a large portion of which he has so successfully explored. Lt. Col. Rawlinson, C.B., was also present, and is said has intention of departing [illegible] Asia, on his third expedition to the Euphrates of a mission. The next soirée will take place on Monday, the 4th of April (Dr. Rae left London on Thursday for the Arctic Regions, and New York.)

OBITUARY OF EMINENT PERSONS.

[illegible]



Cross of Hanover; and in 1840, honoured with the Order of the Bath. Sir Edward was for nearly forty years a member of Parliament, first from 1818 to 1832 for Hythe, and afterwards [illegible] 1852 for Sandwich. He married, first, in 1819, Anne, eldest daughter of Admiral Sir Thomas Harrison, Knight, of Rose-hall, Suffolk, by Mary his wife, daughter of Edward Bullock, Esq., of [illegible] Esq., of Alexander Elliot, Esq., of [illegible] county of Fife, and leaves the son, the inheritor of the title, and extensive estates, the [illegible] Robert Hasler, born in 1820, and George Frederick, an officer in the army; and five daughters, of whom the eldest, Susan Adelaide, married to Sir Edward Hamilton Wellington, Bt., Stapleton-house, only son of Viscount Combermere.

The family of Hasler claims descent from the Anglo-Saxon ancestors. Francis Hurt, Esq., son of Jonathan Hurt, Esq., by Catherine, his wife, daughter of William Sewell, Esq., inherited the estates of his maternal uncle, William Hurt, Esq., of Ironshill, in the county Derby, and accepted, by Royal licence, the surname and arms of Sewell. He married Mary, daughter of the Rev. Dr. Warneford, of York, and died in 1795, leaving a daughter, Mary, married to Sir William Wake, Bart., and three sons: 1. Sewell of Kentishall, who was created a baronet in 1838, and was father of the gentleman whose decease we record; 2. Francis, of Barmoor Castle, Northumberland; and 3. Hurt, of Surney Hall, Shropshire.

SIR GEORGE SIDNEWELL, BART.

This respected Baronet died at Begnor on the 19th inst., from an attack of pain in the stomach. Sir George was born 20th April, 1797; succeeded to the title, as second Baronet, at the decease of his father, Sir William, in 1834; and married, in 1818, Susan, eldest daughter of Crawford Tracy, Esq., of Harviston, Clackmannan; by whom he leaves issue two sons—Sherrell Hereby, the present Baronet, born in 1820, and George Frederick, an officer in the army; and five daughters, of whom the eldest, Susan Adelaide, married to Sir Edward Hamilton Wellington, Bt., Stapleton-house, only son of Viscount Combermere.

The family of Sidnewell claims descent from the Anglo-Saxon ancestors. Francis Hurt, Esq., son of Jonathan Hurt, Esq., by Catherine, his wife, daughter of William Sewell, Esq., inherited the estates of his maternal uncle, William Hurt, Esq., of Ironshill, in the county Derby, and accepted, by Royal licence, the surname and arms of Sidnewell. He married Mary, daughter of the Rev. Dr. Warneford, of York, and died in 1795, leaving a daughter, Mary, married to Sir William Wake, Bart., and three sons: 1. Sewell of Kentishall, who was created a baronet in 1838, and was father of the gentleman whose decease we record; 2. Francis, of Barmoor Castle, Northumberland; and 3. Hurt, of Surney Hall, Shropshire.

GENERAL HAYNAU

Of General Jules de Haynau more has been lately told in this country than of any other foreign soldier. More mention of his name [illegible] signal to degradation and disgrace. The [illegible] events which made the notoriety are of no current [illegible] recent, and [illegible] to recall them, that it is not yet time to enter in detail upon the subject [illegible] judgment is due to be pronounced, not by posterity, [illegible] contemporaries of a mighty despotism in an age of [illegible] struggle made between [illegible] voked. Haynau did the work [illegible] often in hand was not a blind one. [illegible] the boundary of unbridled cruelty [illegible] dispute. Let us pass [illegible] and question to a summary of [illegible] Haynau (Josias).

Feldzeugmeister was born at [illegible] in Austria country was born at [illegible] In 1809 [illegible] [illegible] a Colonel [illegible] [illegible] [illegible] the head of [illegible] Lorraine [illegible] [illegible] Empress Maria Theresa, and Saint Stephen, the Russian Military Order of Honour, and the Austrian Order of Leopold. Governor of that division. [illegible] Maria Theresa and Saint Stephen, the Russian Military Order of Honour, and the Austrian Order of Leopold. Governor of that division. [illegible] Governorship of Hungary, but [illegible] [illegible] [illegible]

THE "WHITE HOUSE." VIEW IN WASHINGTON.

we cannot expect much; a drum, and a fife or two, and maybe a bugle, form the "band." It must not be supposed, however, that music was wanting. We had a band from New York, which came over with one of its splendid bodies of firemen, as good as any I ever heard.

The late excellent President Fillmore accompanied Pierce to the Capitol on the present occasion. The procession consisted of the military, some fire-companies, and some members of the Jackson Democratic Club. The Avenue was somewhat crowded, and the windows were garnished by prettily-dressed women, who waved their handkerchiefs, and received in return a bow from the new chief of the nation.

General Pierce took up his residence at Willard's City Hotel (*see Illustration*) until the "White House" the President's official residence which is seen on the left of the Engraving)—was vacated by Presi-

RESIDENCE OF GENERAL PIERCE, AT CONCORD, U.S.

dent Fillmore. The "stars and stripes" over the portico of the City Hotel attested the presence of the President elect, until the day of inauguration, when Mr. Fillmore occupied in turn the rooms just vacated by General Pierce.

The "Stump," another sketch from Washington, is a wooden hustings constructed for the speakers at meetings held in the open air. Hence, the phrase a "Stump-orator" denotes a speaker who is in the habit of addressing the lowest class of the community. The "Stump" in question bears the names of the President and Vice-President.

The second Engraving is a view of the recent home of General Pierce, at Concord, the capital of New Hampshire. It is a very humble residence, at the lower end of Main-street, which is ornamented with some stately elms of the olden times. Here lived the late Countess of Rumford; and here, embowered among trees, is the oldest house between Boston and Canada. It was the parsonage-house of the first minister, the Rev. Timothy Walter, and is now occupied by one of his descendants. The building in which General Pierce kept his law-office up to the 2nd November last is on the west side of Main-street. General Pierce occupied for his office two rooms in the second-story, immediately over the Franklin Book-store.

General Pierce's inauguration speech has been well received and approved. That it is good, you may judge from the fact that the "old fogies" and the "young American party" equally claim it as containing their views! The Southerners are not less satisfied, and the Abolitionists, no doubt, will consider it the best that can be expected, as things are. I apprehend that the administration of Pierce will be firm and American—that the interests of the whole Union will be equally considered—and that a little more vigour will be imparted to the department of Foreign Affairs. I do not say so because I think that Pierce would be inclined to be warlike, but because he will not permit this country to hold that third-rate position which most preceding Administrations have accepted, either from timidity and a sense of inferiority, or from a too great respect for the advice of General Washington, (perfectly adapted to the time it was given), or from both motives.

We may expect a more vigorous course of action with regard to Cuba. The petty despots whom Spain tolerates there (to my mind, very imprudently) will have to change their tone, or annexation to this country will become a reality. Give this Government the opportunities the last one threw away, and the freedom of Cuba will become a fact. I can see nothing more natural, than that the people of this country should sympathise with the Cubans, independent of all considerations of interest; and nothing is more natural than the wish to have that glorious isle open to their own and to the world's commerce and industry. You may look upon the gradual annexation of all the countries bordering on the Mexican Gulf as certain; already one or two provinces, sick of the distracted state of their government, are preparing for such an event. The better system must absorb the inferior one; and you may make up your mind to the fact that it is for the best.

I find Pierce very affable. He is rather gentlemanly in manner, and dresses with much neatness. He is much liked by all his friends; indeed, I have rarely met with a man who seemed so decidedly popular among them.

I was much surprised on meeting here this winter several gentlemen who had claims against the Government, and on hearing from them that though their justice is admitted, they cannot get them settled. This is as bad as in Europe. One old man had been ruined by the fickleness of a secretary, while the nation was benefiting by his services. He had been eight years wasting his time to pay him a sum not amounting to the fourth of his right. Another has been here six years. His claim is very large. Friends tried to get the House to attend to, and pass private bills, it met in the evening for the purpose, but ended in a disgraceful row, and the effort was abandoned. The fact is, I believe, when the private bill day comes on, a squad of men who set their faces against all acts of justice, get the House to pass on to public business, and thus a great amount of misery and ruin arises. By thus making Government the most unconscientious rogue of the nation in money matters, these gentlemen lower the tone of Congress, and of public morals, and this under a false idea, in some instances, of protecting the public funds! The effect of such an example, you may be sure, is not lost. Unscrupulousness breeds unscrupulousness, and this Americans themselves seem to feel. There is a case here of the Government withholding a large sum of money, paid by France, to compensate numerous persons whose property was seized during the last war. If I recollect right, there is a remedy in Europe for such dishonesty; but here the law is of none effect. These poor wretches have most of them been ruined. Every one knows that if by any accident an individual be turned from the natural course of his industry, it is almost impossible to recover the lost ground. Imagine then, for a moment, what must be the effect upon many? I have just come across an advertisement in the leading paper, the *National Intelligencer* of February 26th:—

NOTICE.—The undersigned, after a sojourn in this city for the last twelve years, endeavouring to obtain justice from the General Government, having at length succeeded, in part only, propo-ing to visit his family in North Carolina, from whom he has been so long separated, takes this method of returning his most sincere thanks to his congressional and other friends who have so nobly sustained him during so protracted a period of vexatious delays and cruel persecutions. During my absence from Washington, my so-, Jas. Taylor, is fully empowered to attend to any business in which I may be in any manner interested, and to whom I refer any and all persons having transactions with me.

his
DAVID ✕ TAYLOR.
mark

Feb. 23rd

The composition is curious and characteristic. Here is a man, having a claim, kept twelve years at bay, and persecuted, because he has a claim! The similarity between the Old and New World is wonderfully great in that as in many other respects.

You have heard, I suppose, of that singular delusion called the "spiritual rappings." The Misses Fox, who were among the first to make money out of it, are here now, and attracting much attention. They are bouncing, merry girls, and seem in no way to suffer mentally or physically by their exertions in this phase of mesmeric phenomena: such I suppose it to be, and not any "spiritual" manifestation. A deception it is; yet, perhaps, of a legerdemain character. The attention drawn to it in this country is almost universal. Many weak-minded persons have gone mad; other have injured themselves for life by trifling thus imprudently with the nervous system; and there is scarcely a house in this town where experiments have not been made by the curious to move tables, chairs, and other furniture—in most instances with success! A clergyman of this town has written a clever little book, showing the antiquity of such manifestations, and the danger attending them. I never met with a people more excitable than the Americans. Their money-loving and money-making character in no way diminishes their love of the marvellous.

"A STUMP," IN WASHINGTON.

The Hon. R. J. Walker, the late Secretary of the Treasury, of Free-trade memory, has been lying very ill for some months; he is now somewhat better. I had the pleasure of an interview with him lately. He talks with much enthusiasm of England and the English, and is highly gratified by his visit to the old country.

L.

NEW MEDICAL COLLEGE HOSPITAL, CALCUTTA.

THIS magnificent building has just been completed, at a cost of £20,000, and is one of the finest architectural ornaments of the City of Palaces, as it is, beyond all comparison, the finest hospital in India. It is calculated to contain 500 beds, and with it will be incorporated the old Police-hospital and Infirmary for Eye Diseases, which have hitherto been conducted as separate establishments. One wing of the hospital will be appropriated to sick women and children, including the midwifery ward of the college; and the most complete arrangements have been made for the comfort and accommodation of this class of patients. The building is divided into twenty-four wards, each capable of containing twenty-one patients. The wards are spacious and lofty, and arranged with due regard to the most complete and thorough ventilation. On the north side of the building, over the portico, is situated the council-room, a noble apartment, of large dimensions; and on the opposite or south side is the operating theatre, a room of nearly equal size, beautifully lighted from above by a large circular skylight of plate-glass. Immediately below the theatre, on the second-floor, is the dispensary, another lofty and spacious apartment, with every convenience necessary for the pharmaceutical operations of the hospital. Every room in the building is plentifully supplied with water, by means of cast-iron pipes connected with four large iron cisterns on the roof, which are kept filled by a powerful forcing-pump communicating with a tank in the vicinity. At the four corners of the building are constructed a series of closets and bathing-rooms, admirably adapted for the convenience of the sick. The wards are appropriately named after the principal donors and friends of the institution, including the members of the old Calcutta Municipal Committee, originated by Dr. J. R. Martin, Surgeon of the Native Hospital, in 1835, by whose zealous exertions a subscription was raised for the establishment of a great central hospital in the city, and which has since served to form a nucleus for the funds necessary to the erection of the present building. A large flight of stone steps leads to the great entrance on the second-floor, where there are two rooms, on either side, for the first reception of the sick. At the head of the staircase is a handsome stone tablet bearing the following inscription:—

THE NEW MEDICAL COLLEGE HOSPITAL, CALCUTTA.

The funds for the erection of this Hospital were obtained from the following sources:—Old Fever Hospital subscription, Rs. 61,248-7-10; New Fever Hospital subscription, Rs. 37,711-5-11; donation of Pertaub Chund Singh, Rs. 50,000. The building was designed by Messrs Burn and Co., architects, and constructed under the superintendence of Major Hugh Fraser, of the Bengal Engineers. The plan for supplying the building with water was furnished by Colonel Forbes, of the same corps. The foundation stone was laid by the most noble the Marquis of Dalhousie, K.T., Governor-General of India, on the 30th September, 1848, in the 12th year of the reign of her most Gracious Majesty Queen Victoria.

THE BARQUE "SIR FOWELL BUXTON" ON SHORE AT CAPIN ASSU, ON THE NORTH-EAST COAST OF BRAZIL.

WRECK OF THE BARQUE "SIR FOWELL BUXTON."

It is with great regret we have to announce the wreck and total loss of the *Sir Fowell Buxton* passenger-ship, 300 tons burthen, Captain Woodcock commander, bound from the port of London to Geelong and Port Phillip. The vessel was chartered by the firm of Messrs. Tyndall, jun., of Gracechurch-street, and was nearly new, having been built only three years. She had on board, with passengers and crew, upwards of 230 souls.

The vessel left London on the 16th of October, and Plymouth on the 6th of November; and on Thursday, the 16th of December, about half-past ten o'clock at night, the vessel struck on the sand-banks of Tapioca, point of Tuberao, on the north east coast of the Brazils, 4 deg. 50 min. south latitude, 36 deg. 30 min. west longitude; 120 miles to the west of Cape St. Rouke, in the province of Rio Grande de Norte. The alarm of the passengers, most of whom were in bed, was very great; but no immediate danger of the vessel going to pieces was apprehended.

The vessel struck on a reef of quicksand, that ran out upwards of four miles from the shore. From this position she was driven close in shore: from the strength of the current and sea-breezes. Before she imbedded herself in the sand, she beat violently for a few days, and then almost suddenly filled with water, from breaking her back; and her masts were cut by the side to prevent her falling over on her beam. The provisions, with a trifling exception, were all destroyed; and, as the passengers had only removed with them on shore the luggage they had in their cabins, most of their baggage was spoilt by the salt-water, or beaten to pieces in the hold by the sea from the ebbing and flowing of the tide. The passengers were all safely disembarked by the *jangadas*, a kind of raft with a sail, used with great dexterity by the natives, and particularly well adapted, from the nature of the coast, to land amidst the surf, running almost high upon the sands. When on shore, the passengers were temporarily sheltered by sheds which the natives had previously thrown up, by order of the authorities of Macao; these sheds were made of the branches of trees, as a protection against the burning heat of the sun, until arrangements could be made for their accommodation at Macao, an insignificant town, situated about thirty miles off.

The sufferings of the passengers were very great, from extreme scarcity of provisions and water, on an almost uncivilised coast, on the hot drifting sands by day, and exposed to the dew by night.

They arrived safely at Macao, where they were better sheltered and fed; but they anxiously awaited the arrival of the English Consul from Paraliba. It is but just to state that our countrymen received the greatest hospitality and kindness from the inhabitants, in giving up part of their houses, and sacrificing some of their own comforts.

The English Consul, Mr Power, arrived, after a tedious voyage of 300 miles along the coast in an open boat, and his appearance gave much satisfaction to the passengers.

The next step was the conveyance to Paraliba, which was accomplished at much trouble and expense, by two small craft, assisted by two vessels of the Brazilian Government.

At the date of this communication, the brig *Richard*, of Pernambuco, Captain White, was being fitted for the reception of the passengers, and for their conveyance to their original destination.

FUNCHAL, MADEIRA.—RESIDENCE OF THE EX EMPRESS OF BRAZIL.—(SEE NEXT PAGE.)

THE CITY COAL DUES.

The good denizens of London, and the neighbouring districts for twenty miles round, who gather about their snug parlour fires in the afternoon, little dream of the obstructions which legislative wisdom has, from the earliest time, thrown in the way of the importation of the staple of which it is made. At the first its use was prohibited, because the smoke was considered unwholesome; and Edward I. issued a proclamation, conformably to the prayer of the worthy citizens, enjoining vigorous measures to suppress the practice, the offenders to be punished by "pecuniary mulcts," and otherwise. In course of time, however, their prejudices against this valuable commodity were got rid of; and in the reign of Charles I. the use of coal became universal.

When we reflect upon the important services of this prime element of warmth and power, and its extensive consumption—a consumption only regulated by its price—both for domestic and manufacturing purposes, we might well expect it would have been exempt from every kind of tax; and every unnecessary act of interference calculated to restrict its use. The very contrary, however, has been the case, at least in this highly civilised metropolis; where, although the prohibiting proclamations of

CITY COAL-TAX OCTROI POST.

Edward I. are no longer of any virtue or efficacy, "pecuniary mulcts" are still inflicted upon all who light their daily fire, whether as a luxury, or for manufacturing purposes.

The importers of, and dealers in, coal, as well as the consumers of it, have been subjected, for more than a century and a half, to the most oppressive regulations and imposts; which, although somewhat mitigated within the last twenty years, still exist to an extent utterly unjustifiable and indefensible in an age which has witnessed the triumph of Free-trade in other important staples, and the proud assertion of that great principle, ignored by public men of old, "that honesty is the best policy."

What aggravates the case is, that this impost is not one of the ordinary fiscal kind, which the community at large contribute, and the produce of which is expended for the general interests; inasmuch as its collection is confined to a penal circle of forty miles diameter, or twenty miles round London, and its produce goes into the civic purse, out of which part of it is paid for city improvements and embellishments, and the remainder, rather indefinite in amount, upon those creature comforts which the civic

authorities know so well how to employ, and to which, if to nothing else to say truth, it may do ample justice.

The City Coal Tax arises out of the nature of a port due; and at a time when the coals conveyed in the southern and eastern parts of England were borne, this due was very inevitably levied upon all the coals consumed in London, and in all districts supplied from its canals and navigations. Interest of the City Corporation extending for twenty miles from Temple Bar, the tract of country thus laid under contribution to the Metropolitan authorities was a pretty extensive one. When the canal system began to come into operation, however, the rights of the City in this matter appeared to be seriously threatened; inasmuch as many ports might have been supplied without entering the port of London. But a great abuse is always viewed with great veneration, and guarded with jealousy. Accordingly, the law was so modified as to extend the claims of the city to all coals brought into it, or within the prescribed limit of twenty miles from the city, whether by sea or canal. Later still, the railways again threatened defeasance of these time-honoured perquisites; but, here again the conservative spirit of the day came to the rescue, and precautions were taken to avoid the possibility of a ton of untaxed coals finding its way within the *cordon octroi* the Legislature declaring the City to be entitled to levy "black mail" upon all coals brought within its "limits," by any mode of conveyance. Thus, Parliament strained to the utmost claims most unjust and obnoxious in their nature; and actually went out of the way to perpetuate these application under circumstances never contemplated at the time of their original creation. Armed with statute power, the City tax gatherers forthwith set up their toll-posts on every canal, and every railway, at measured distances of twenty miles from town; and there they stand holding out the city dagger against all comers; and under its terrors levying contributions upon every man's hearth within an area in all of nearly 400 square miles.

It is true that in amount the City Coal tax has been somewhat reduced since the good old times, when taxation and jobbing, and abuses of every kind were considered the peculiar birthrigh of Englishmen, and the test and measure of their prosperity and respectability. But still the principle of the grievance remains; and a reduced scale of taxation is applied to an increased and increasing consumption. In 1831 the duties of all sorts which were finely payable to the Corporation of the City of London were commuted to a duty of 4s. 1d. per ton, 8d. per ton of which was assigned to them as the necessary funds for carrying out certain City improvements. Deducting some other charges, a net 4d. per ton remained to the City, which has again been mortgaged, to a certain extent, to pay for other City improvements in Cannon-street and elsewhere; and that the net produce of the 4d. various imposts does not go freely to the Corporation as "pocket money," to do as they like with. But still, the principle is the same; the City is allowed to keep up the Cycle of twenty Rood Lemain Act, to the annual tune of nearly £200,000 a year, upon a commodity of prime and daily necessity, which the rest of the country generally is allowed to consume untaxed: it is so taxed, in an unEnglish manner, the vast majority of those paying the tax having no interest in common with those to whom the tax is paid, nor any voice in regulating the appropriation of the funds realised.

In 1841, the duty of 4s. 1d. per ton produced a gross revenue of £210 000. From a return recently presented to the House of Commons, it appears that the proceeds of this tax have considerably increased since that period, viz., in the years

	Gross Coals	Coals Rate	Amount
	Tons	per ton	
1841	1,012,412	£ s. d. 4 1	£ 210 11 1½
1842	2,000,000	4 1	410 0 0
1843	1,000,000	4 1	205 0 0
1844	1,000,000	4 1	205 0 0
1845	1,000,000	4 1	205 0 0

LATEST INTELLIGENCE.

BLACKBURN ELECTION.—The polling took place on Thursday, when the town was disturbed with some serious rioting; for, though Blackburn does not lack native ruffianism, large parties of navvies, colliers, and other persons will go to fight for Sir Stafford and their rations, were brought in from neighbouring districts upon the previous day, expressly to protect the voters. On the morning of the day they were brought in from Preston on Wednesday, composed in very great characters; and other bodies were announced from Accrington, Burnley, Church, and Clitheroe. It was feared that these fellows would attempt to carry off voters during the night, and there was good ground for this fear. The military were called in, and by noon something like order was restored, but the Mayor read the Riot Act, and the soldiers patrolled the streets. The following placard was posted on the walls: "Borough of Blackburn. The Riot Act has been read. All well disposed persons are called upon to disperse. Those who do not disperse will be apprehended and prosecuted. By order of the Mayor and magistrates.—Sessions-house, Thursday, March 24, 1853." The result of the election was—For Mr. Fielden (Liberal), 651; for Mr. Hornby (Conservative), 574: majority, 77.

HER MAJESTY'S THEATRE.—The question about this establishment is now definitively settled. Mr. Frederick Gye, director of the Royal Italian Opera, has become the lessee.

PROSECUTION OF UNSTAMPED NEWSPAPERS.—On Thursday night a public meeting was held in the National hall, Holborn, to express an opinion on the recent prosecution of Mr. Truslove by the Stamp-office, for vending a unstamped newspaper called the *Protestant Free Press*. A petition, in favour of all condemning the recent active prosecution of the vendors of cheap publications, contrary to the expressed wish of Government for the spread of knowledge and education amongst the people. It was stated that the *Free Press* "is a journal for the repeal of the Stamp-duty on newspapers, which duty has accomplished, to keep the Government officials to prosecute the high, useful, as the low priced unstamped publications. The meeting concluded by adopting a petition to Parliament for the repeal of the duty on paper, the newspaper stamps and the advertisement duty.

NEW LIFE-BOATS.—On Thursday some interesting experimental trials were made at Limehouse with two new life-boats, on the design of Mr. Peake, of Woolwich, Dockyard, built by the Messrs. Forrests, for the National Institution for the Preservation of Life from Shipwrecks, which are to be placed at Whitehaven and Lifeboat. The trials proved very satisfactory.

PLYMOUTH.—The new screw steam-ship the *St. Jean d'Acre* was launched at this yard on Thursday. She is to carry 101 guns: and her burthen is, o.m., 2200 tons, n.m. [illegible]

MAUNDAY THURSDAY.—The ancient Royal charities of the day were distributed to fifty four aged men, fifty four aged women corresponding with her Majesty's age, with the usual formalities, at Whitehall Chapel.

THE LATE FIRE AT WINDSOR CASTLE.—On Thursday a meeting of the inhabitants of Windsor was held at the Town Hall, for the purpose of adopting congratulatory addresses to her Majesty and his Royal Highness Prince Albert, on the preservation of the Prince of Wales, and the Royal family and Household, under the peculiar circumstances of the late fire at Windsor Castle." The chair was taken by the Mayor. Two addresses were agreed upon; which were ordered to be engrossed, in order for signature at the town-hall, until Saturday, when they will be forwarded through the Home Secretary and Colonel the Hon. C. Grey.

GREAT PANKRUPTCY.—A petition in bankruptcy has been filed in the Court of Bankruptcy against George Hemmit, railway contractor and shipowner, of Great Smith-street, Westminster. Similar petitions have been filed in the Court of Bankruptcy and in the Leeds Court. The debts and liabilities of the petitioner amount to a quarter of a million to £300,000. The assets are said to be [illegible]

FRIGHTFUL COLLIERY ACCIDENT AT WIGAN.—An explosion took place on Wednesday, at Arley Mine, Wigan, belonging to the Ince Hall Company. Several more men were at the pit at the time, of which twenty were killed, thirty burned, and twenty-five were still in the mine at noon on Thursday. It is feared some will be out of the thirty injured. How many of the latter will die is not known. Fifty-seven are supposed to be dead. The explosion took place at the bottom of the upcast shaft. A furnace there had been relighted, after repairs, and gas having accumulated, it ignited, and caused the accident.

FOREIGN.

FRANCE.—A violent storm had caused numerous casualties at Marseilles on the 20th. All the ships moored in the new port had more or less suffered. A hundred pleasure-boats had been sunk. The English barque *Cavalier*, dragging her anchors, was only enabled to secure herself by the use of seven cables.

The departure of the Levant packet *Lougsor* had been delayed, to wait for despatches from the Government.

The Bourse had again closed at a rise. The Three per Cents were at 70f. 20c. for the end of the month; and the Four-and-a-Half per Cents at 102f. 50c.

ITALY.—MILAN.—The military commander, Baron Martini, has permitted the sound of the bells of the cathedral to accompany the religious rites from one of the churches.

Two persons at Ferrara had been convicted of having been members of the Mazzini secret society, and condemned to death. Those who were absent were tried, and both shot; the punishment of the others has been commuted.

PRUSSIA.—The extensive premises of M. Rossbach, at Barmen, Rhenish Prussia, have been destroyed by fire, together with 16,000 tons of oil. The total loss is estimated at upwards of £100,000; some letters say £130,000. Several hundred persons are thus thrown out of employment.

PORTUGAL.—By the arrival of the *Tyne*, steam-ship from Lisbon, we learn that, at Lisbon, the proposed suppression of the Inquisition was strongly contested, and favoured equally popular in the provinces as in the capital. The Duke of Saldanha was reported to be going on favourably, although he had not been able to leave his house. H. M. steamer *Inflexible* was in the Tagus on the 19th inst. The Royal Mail steamer *Severn* left Lisbon on the 15th, for Madeira and the Brazils. A violent gale of wind from the westward, on the 16th inst., had greatly damaged the fruit crops.

AMERICA.—The *Humboldt* arrived off Cowes, yesterday, on her way to Havre. The *Africa* is reported as having arrived at New York. At New Orleans the English ship *Belmont* was burnt, with 8000 dollars on board. The Calypso and Isabel from Baltic, had arrived by Senator Clayton; Senator Douglas replied, and was very hostile to England; other speakers were more moderate. At New York the Money market was rather lively. Freights are improving. Cotton was dull at New Orleans, middling, and closed [illegible]

WEST INDIES.—The steam-frigate *Highflyer*, Capt. Heathcote arrived at Spithead on Thursday, and by her we have advices from Bermuda to the 9th. The West India Islands are tolerably healthy. The late devastation of Antigua, 500 soldiers, women, children, and four officers of the 50th Regiment, have arrived in the *Highflyer*.

H.M.S. *Dauntless* was daily expected at Bermuda, or she might sail for England direct. The loss from the yellow fever was 81, sixteen of whom were officers. The *Highflyer* had lost seven officers and men, and H.M.S. *Calypso* has lost two officers, who caught the fever by dining on board the *Highflyer*; and it is a remarkable fact that every stranger who went on board the latter took the fever, even the black pilot who navigated her round to Antigua.

GOVERNMENT ECONOMY.—A measure has just been adopted by Government, which will, it is conjectured, prove an important saving in one branch of the revenue. [illegible] of the Inland Revenue, together with all public [illegible] of Board and other offices, have already [illegible] of the Audit Office, and other departments, are to be supplied with manufactured into envelopes. Even the envelopes received at the different public offices are to be included in the general transformation. Hitherto all the Parliamentary documents and printed forms have been allotted to the Queen's printers, in the shape of waste paper, from which they made a large profit. The repeated robberies and misapplication of printed [illegible] from the various Government offices, is, it has been stated, the reason of the Audit-office authorities adopting this summary measure.

[illegible] A person [illegible] to-bery took place on Tuesday last, at [illegible] W. F. Cuthand, St. John's Wood, 5, three [illegible] window and seized a plate-basket from [illegible] on the pavement. On the servant [illegible] he struck her and pursued her against the wall, [illegible] the plate, scrambled [illegible] and a pair of sugar tongs before she could [illegible] alarm. The thieves got clear over the garden wall, and escaped.

STAMPED AND UNSTAMPED NEWSPAPERS.

Bow-street. [illegible] Mr. Henry [illegible] on in the case of the Inland Revenue against Edward Truslove, adjourned from Thursday last. The following are the main points of the decision: "The questions [illegible] are these:—First, whether the paper in question, which is called *The Protestant Free Press*, [illegible] a newspaper, within the meaning of the Act, whether it [illegible] and, secondly, whether it is published. The learned counsel for the defendant contended that *The Protestant Free Press* was not a newspaper that would fall within the meaning of the Act, and he therefore relied upon two points, the argument that, inasmuch as certain other weekly publications were permitted by the Board to be published without a stamp, it should not be supposed that the *Protestant Free Press* was not liable. With that view, he referred to the *Athenæum*, the *Builder*, the *Racing Times*, &c., and he instituted a comparison between their contents and those of the *Protestant Free Press*. Now I think that all those publications are mainly, if not wholly, confined to one particular or class subject, and cannot be said to contain miscellaneous news; whereas the very title of the *Protestant Free Press and Weekly Narrative of Facts and Events*, implies that it is published for the purpose of narrating events generally, and not upon any one subject.—The remaining question is, did the defendant knowingly and wilfully so [illegible] an unstamped copy of a newspaper which the law required to be stamped? It was proved that, upon two occasions, unstamped copies of the *Protestant Free Press* were purchased at his shop; and, upon looking at both these copies, I find the defendant's name printed at the foot of the paper, as one of the London agents for the sale of it. I cannot [illegible] that he was aware of the nature of the paper he so sold. [illegible] in the information having been thus established against the defendant, it only remains for me to fix the amount [illegible] which I think should be [illegible] and that the defendant must pay the [illegible] penalty of £5. Before I conclude, I think it right to notice a point and which was made by the learned counsel for the defendant, that this case was not submitted to a jury. The Stamp-act gives the Board of Inland Revenue the option of proceeding either by information before a magistrate, or by an information in the Court of Exchequer, to be tried before a jury. If the latter course had been adopted, a delay of at least three months must have elapsed, inasmuch as there will be no sittings in the Court for the trial of revenue causes until the latter end of June, and no judgment could be entered up until November. I think it would have been an act of injustice to the proprietors of all weekly newspapers who pay duty; it the Board of Inland Revenue were to allow an unstamped newspaper to be published and sold every week, during such a long interval, when the Act of Parliament provided an immediate remedy by laying an information like the present. If the defendant should be advised that [illegible] I am bound to say that [illegible] founded, it will be open for [illegible]

Mr. Parry gave notice of [illegible] in each case rejected.

NAVAL AND MILITARY INTELLIGENCE.

THE ROYAL NAVAL RESOURCES.

The very recent "diplomatic affairs" at Constantinople have drawn attention to the state of our naval armament. The following outline will at once show our efficiency:—

At Spithead, the squadron, both sailing and steam men-of-war, is ready for service, and all fully manned, with the exception of the *London*, 92, Captain Munday, which ship is about 120 short, it consists of the following:—

	Guns.	Men.	
Prince Regent	90	820	Capt. Hutton.
London	92	850	Capt. Munday.
STEAMERS.			
	Guns.	Men	h.p.
S'don	22	300	560 Capt. Goldsmith.
Odin	16	300	560 Capt. P. Scott.
Leopard	16	200	320 Capt. Gifford.
Megæra (screw)	8	102	350 Com. Johnson.

The *Agamemnon*, screw-ship, of 91 guns, has a large portion of her crew laid up with scarlatina, and is to be about 120 short of 820. The *Duke of Wellington*, 131, is fast progressing in her equipment, and will be out of hand by the middle of next month. She has a out 500 on her books out of 1100, but her 600 vacancies are for active seamen. The *Blenheim*, 58, Captain W. H. Henderson, is ready, with a full complement.

In addition to the above there are at Portsmouth the following advanced ships kept ready for sea:—

	Guns.	Men.		Guns.
Neptune, ordinary guard ship, in commission	120	Asia		84
		Powerful		84
Nelson		[illegible]		84
St. Vincent		[illegible]		84
Princess Charlotte	140			72

At PLYMOUTH there is the *Vengeance* 84-gun ship; her defects are made good, and she has been under orders for Lisbon: she only waits for her men on leave to return. At Plymouth the following sailing-brig squadron is in the sound:—

	Guns.	Men.	
Queen	116	400	Captain Michell.
Vengeance	84	750	Captain Lord G. Russell.
Leander	50	300	Captain King.

The *Queen* has only an advanced complement.

STEAM VESSELS.

	Guns.	Men.	h.p.	
Arrogant (screw)	46	400	320	Capt. S. Fremantle.
Ha[illegible]	14	[illegible]	[illegible]	Com. [illegible]
Vi[illegible]	14	[illegible]	[illegible]	Com. [illegible]
M[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
Lapwing	6	120	200	Com. Hall.
Desperate	6	120	200	Capt. Caldwell.
Vulture	6	120	200	Com. Grasse.
Magpie	6	120	200	Com. Cowell.

In addition to these, the

	Guns.	Men.	h.p.	
Hogue	58	500	450	Capt. Ramsay.
Edinburgh	58	444	450	Capt. Howlett.

Are in harbour, but ready for immediate sea-service.

At DEVONPORT are the following [illegible]

	Guns.	Men.	h.p.	
[illegible]	[illegible]	[illegible]	[illegible]	[illegible]
St. George, ordinary flag ship	[illegible]	[illegible]	[illegible]	[illegible]
in commission	[illegible]	[illegible]	[illegible]	[illegible]
Royal Wiliam	[illegible]	[illegible]	[illegible]	84
Royal Adelaide	[illegible]	[illegible]	[illegible]	72
Rembow	[illegible]	[illegible]	[illegible]	72
Calcutta	[illegible]	[illegible]	[illegible]	7

At SHEERNESS, a large and powerful available squadron of ships in commission is being fitted and advanced.

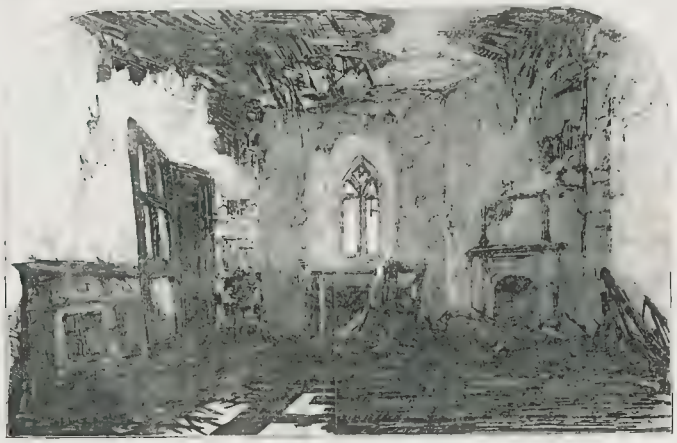
Should an emergency arise, it will be seen from our lists that we can muster, at comparatively a few hours' notice, three or four fleets of the strength of the compact force now under Vice-Admiral Dundas, and by which the united skill and resources of the Commander-in-Chief in the Mediterranean may be [illegible]

ELECTION AFFAIRS.—At *Bridport*, Mr. J. Pouffert Loch has been returned without opposition. *Ipswich*: Mr. W. A. Adamson has got in the late chambers is opposed by Mr. Pouffert. *Marlow*: Mr. P. B. Lenard is in the field, and it is said he will be opposed by Mr. Q. Dick. At *Chatham*, Admiral Sir J. Bumard is said into *Southampton* [illegible]

GOOD BEER.—At [illegible] Mr. [illegible] brewer, has [illegible] brewing [illegible] New York, [illegible] species, which [illegible] Australia for [illegible] the *Sheffield* [illegible] *Cockle*, [illegible] *Johnson*, [illegible] the *London* [illegible] way of the [illegible]

A COOL, CLEVER THIEF.—A man having been detected [illegible] weeks in robbing a house [illegible] proof, [illegible] dangerous to [illegible] was [illegible] is said to [illegible] appeared [illegible] when the [illegible] [illegible] Brave [illegible] [illegible] [illegible]

FIRE AT WINDSOR CASTLE.



REMAINS OF MR. NORTON'S ROOM, PRINCE OF WALES'S TOWER.

passages had been torn up, and copious streams of water poured in the direction of the fire. Mr. Braidwood made the best disposition in his power of the force at his command; and at half-past two o'clock the fire had perceptibly succumbed; before four o'clock it was entirely extinguished.

The damage done is confined to the two upper floors of the Prince of Wales's Tower. Both of these may be said to be gutted, the flames having penetrated the roof. The principal loss, however, will be the beautiful Gothic ceiling of the dining-room, through which the fire has penetrated in several places, while the remainder has been so injured by water that it will require a complete renovation. There is a space of nearly three feet between this ceiling and the floor of Mr. Norton's apartments (in the immediate vicinity of which the fire is supposed to have originated); and in this place the flames had, no doubt, played for a long period previously to their discovery. The fire seems to have burnt outwards to the exterior wall of the tower, away from the rest of the building. It did not descend into the ground floor, where, had it acquired a hold, it must have done infinite damage. To say nothing of the fine apartments already enumerated, which would have thus been exposed to destruction, there were the plate-rooms immediately beneath the dining room; and the jewelled armoury, a priceless collection, adjoining the Octagon-room. The safety of this armoury seems to have excited more anxiety than anything else, for the plate-rooms were constructed to be fire-proof, and were therefore considered out of danger. So precious is this collection deemed, that it is never shown to the public; and the Lord Chamberlain even has no power to grant admissions to it. The wonderful jewelled bird of Tippoo Saib has seldom been in greater peril than on this occasion, and it would have been an ignoble termination to its history, if, after surviving the capture of Seringapatam, it had been destroyed by the effects of an accidental fire in Windsor Castle.

The basement floor of the Castle, including the kitchen and confectionery-room were inundated with water to the depth of several feet, and a great deal of damage has been occasioned from this circumstance. It is satisfactory to know, however, that the most exaggerated estimate of the actual loss by the fire cannot exceed £10,000. Half the decorated ceiling of the Gothic Dining-room has been burnt, and the rest is no doubt so much injured that the whole must be pulled down. But the side walls of this fine apartment remain unimpaired: the handsome mirrors with which they are ornamented have not been in the least degree damaged; and, with the exception of a single pane which seems to have been cracked by a blow, the plate-glass windows are still perfectly entire. It is stated that the fire lasted from before ten o'clock on Saturday night till four o'clock on Sunday morning, and if it had possessed a greater extension it would have involved a greater destruction of property than at any other point, it is a subject of surprise and congratulation that so little mischief has been done.

It was a most fortunate circumstance that the fire was discovered so early. Had the outbreak occurred two or three hours later, when the Royal household had retired to rest, there can be little doubt that very serious loss of life, as well as vast destruction of property, would have resulted. Her Majesty and Prince Albert were in no immediate danger from the occurrence, as will be seen from a brief topographical description of the apartments immediately adjoining the fire. The Prince of Wales's Tower, in which the fire originated, stands at the north corner of the east terrace, and adjoins the Brunswick Tower, which forms the eastern termination of the north terrace. From this Brunswick Tower, on the ground floor eastwards, extends a suit of spacious and magnificently-furnished apartments, in the following order:—First, the Octagon-room, which, as the name indicates, takes the shape of the tower; second, the Gothic Dining-room in the Prince of Wales's Tower; third, the Crimson Drawing room; next, the Green Drawing-room; and then the White Drawing-room, from whence the private apartments of her Majesty are reached. The White Drawing-room, as we have already stated, was the apartment occupied by her Majesty and the Prince when the fire broke out; so that they were at some distance from the scene of the fire. The Queen and the Royal Family, who had retired to their private apartments at the south-east part of the Castle, remain d there the whole of the night.

All the parties employed in extinguishing the fire, including the military, were liberally regaled before they left the Castle, by order of the Prince Consort. Notwithstanding nearly 300 strangers were admitted within the Castle during the prevalence of the fire, only one loss—that of a gold watch, probably mislaid—has been reported.

Fortunately, there was a plentiful supply of water from the Cranbourne tank, which had only been laid on to this part of the Castle in the autumn of last year, or in all probability the whole of the Castle would have been burnt down. An explanation of the circumstances to which the safety of the Royal edifice must be attributed, and for which we are indebted to the *Morning Post*, cannot fail to interest our readers:

In the course of last year in consequence of its having been considered

THE PRINCE OF WALES'S TOWER, WINDSOR CASTLE.

that the Castle was not in a state of sufficient security against fire, Mr. Simpson, one of the Government engineers, was consulted, and, under his direction, an immense basin or tank, covering more than an acre of ground, was constructed at Cranbourne Lodge, one of the highest localities on the Royal property, about four miles distant from Windsor. A powerful engine was erected on the banks of the Thames immediately under the Castle, by means of which water was pumped into the reservoir at Cranbourne, through pipes about a foot in diameter. A second set of pipes was laid down from Cranbourne to the Castle; and, as the reservoir at the former place is on a level with the summit of the Round Tower at Windsor, an admirable supply of water is at all times on full service at every part of the Castle. The extent of the supply may be guessed from this fact, that after six hours' service from a great many plugs on Saturday night, the depth of water in the Cranbourne reservoir was only lowered two feet.

Her Majesty, accompanied by the Prince Consort, inspected the portion of the Castle destroyed on Monday morning. Prince Albert again visited the spot at an early hour on Tuesday, and seemed most anxious that the origin of the fire should be satisfactorily cleared up. A minute examination of the flue, and of the furnace which heated it, has been made, but very little light has yet been thrown upon the cause of the fire. Mr. Braidwood considers it the old story of converting ordinary chimneys into furnace flues, from which so many similar accidents have occurred. It is, however, thought by some persons to have arisen from the proximity of a beam of timber to the fire-place in Mr. Norton's room, over the Gothic dining room.

The preservation of the Castle from the imminent danger which threatened it is naturally a source of special thankfulness to the inhabitants of Windsor, but it will be heard with loyal satisfaction throughout the country, in every part of which the destruction of the greatest of our Royal residences would have been received as a national calamity.

THE GOTHIC DINING-ROOM, PRINCE OF WALES'S TOWER.—AFTER THE RECENT FIRE.

"THE RAISING OF LAZARUS."—FROM AN ETCHING BY REMBRANDT.—(SEE NEXT PAGE.)

REMBRANDT'S ETCHINGS.—"THE RAISING OF LAZARUS"

Great as Rembrandt was as a painter, as an engraver he was equally admirable; nay, perhaps he genius shone out even more conspicuously in the latter than in the former department of art. Certainly the instances are comparatively rare in which an original creative fancy has exerted itself through the medium of the graver; the use of which is for the most part restricted to the imitation of the conceptions of other artists, already pictorially realised, for the purpose of reproduction in a modified form. Etching, however, is a style of engraving which offers the best opportunities for the free exercise of a masterly hand obeying the impulses of a fertile invention; and this art Rembrandt resorted to with astonishing industry and success, in the height of his fame as a painter. The medium was one which afforded peculiar facilities for the development of his wonderful command of effect of light and shade: needing as they did, for most purposes, no other materials than a dark ink upon a white ground; whilst to a man greedy of gain, as Rembrandt was, the rapidity with which it enabled him to supply his customers was a consideration not to be overlooked. So true it is that in every stroke of his graver we discover the same spirit and bold creativeness as in the markings of his pencil; and those touches every day altered or added to, as was the case in many of his etchings, is it to be wondered at that his works in this line were eagerly sought after by *virtuosi* of his day, and have been ever since prized by collectors? As instances of the innumerable points of connoisseurship which have regulated the price, and aided the study of this master's etchings, may be mentioned the following:—The "Juno with the Crown;" the "Coppenol," with a white back ground; the "Joseph," with the face unshaded; and the "Good Samaritan," with the horse's tail white and regarded as priceless; whilst the same subjects without these distinctions are of little comparative value.

Suffice mention that in consequence of a commission from an eminent collector, he had 40 guineas for the Coppenol, with the white back ground—that is, in his unfinished state; though at the same time he bought a beautiful impression of that plate, in its perfect condition, for 14½ guineas. Since that time the prices of rare specimens have greatly increased. Well did Rembrandt understand and take advantage of the [illegible] of artists, who have always run after what is rare and curious, often to the neglect of what is intrinsically excellent.

The engraved works of this extraordinary artist, according to Bartsch, amounted to upwards of 370; Bartsch only mentions 340 at De Burgy, at the Hague, collected 365, including varieties. None of these is dated earlier than 1628, nor later than 1659. Amongst these productions those of the portrait class are considered the most admirable, and he produced no less than 37 portraits of himself—that with the sabre being the most celebrated. Of his others may be mentioned the "Christ Healing the Sick," usually called the "hundred guilder print," because the artist refused to sell it under that sum; the "Good Samaritan," the "Passion," and the "Resurrection of Lazarus," of which last subject he produced two prints—the one a small print, in rather a hard style, dated 1632; the other, a large print, arched top, 14½ inches, and 10 inches wide, with fine chiaroscuro. Of the latter print we present a copy, engraved on wood.

Of this print no less than seven states are known, of which several rare specimens are in the Print-room of the British Museum. In the arrangement, Rembrandt has, with much boldness and originality, departed from the ordinary rules as to placing the principal figure in the centre of the group, and supporting it in pyramidal arrangement (a liberty in which Raphael, on occasion, also indulged), and has placed the Saviour a little on one side, and considerably in the background from the figures in front of him. He is standing, in a dignified attitude, on a stone which appears to have formed part of the tomb of Lazarus. One hand is raised, in an authoritative manner, above his head the other resting on his side. Behind him are a group of figures expressing terror at the prodigy enacting before them. Below, at the feet of Our Lord, is Lazarus in the act of rising from the tomb, his death-like countenance and attitude expressive of the wondrous change working upon him. On the opposite side are several figures; one of whom, who is probably the sister of Lazarus, stretches forward her arms, as if in haste to receive him. Beyond her is a man, his head covered with a cap or turban, in the first impression this cap was omitted,* who starts back in terror and amazement; and others who participate in the general feeling of astonishment and curiosity. Above the head of the Saviour are some folds of drapery, forming a kind of funereal canopy, which adds to the background, hang the turban and sword and the bow and arrows of Lazarus. Taken as a whole, this is probably the most sublime of Rembrandt's productions, happily very little of his vulgar or familiar style.

* Only two impressions of the first state are known to exist—one of which is in the Print-room of the British Museum, and the other at Amsterdam.

Great Globe, Leicester-square.—Extensive alterations and additions have been made to the Model of the Earth, which will be completed before Easter Monday; and, to the more intellectual class of holiday-keepers, will, doubtless, prove a great attraction.

Testimonial to Mr. J. Barker.—Last week a number of gentlemen, comprising several connected with the Irish press, assembled at the Northumberland Hotel, Dublin, for the purpose of presenting Mr. John Barker, the able and efficient manager of the Irish establishment of Messrs. W. H. Smith and son, news agents, with a testimonial as a mark of private friendship, as well as of their appreciation of his public services. The testimonial (which was presented by Mr. C. P. Roney) consisted of a valuable tea and coffee service of very elegant design and first rate workmanship, from the establishment of Messrs. West, of Sackville-street. The coffee-urn bore the following inscription:—"Presented to Mr. John Barker by the Irish press and a few private friends as a mark of their esteem and regard. January, 1853."

The Art-Union of London.—At the dinner of the Artists' Benevolent Fund, at the Freemasons' Tavern, on the 19th inst., in reply to the toast "Prosperity to the Art-Union of London," Mr. G. Godwin reminded the meeting of the regular progress of the Art-Union of London. When first established a subscription of £500 could not be obtained; the second year brought £750; the third, £1000, the fourth, £1,500; the fifth, £2000; and the sixth, £3,000: the amount of subscriptions being now £4,000. The receipts had then subsided to a settled income of £3,000 a-year. The association has already spent as far £170,000 for the encouragement of art and artists. The prize-holders have expended about £60,000 in the purchase of pictures, the Council about £50,000 on these and other works of art. For pictures purchased from the Royal Academy alone the sum of £34,[illegible] have been paid. Engravers have received £16,000.

Poplar Institution.—The elocution class, which for three years and a half has been conducted with the greatest assiduity, and from internal commotion has several times [illegible] ment in the above institution. W[illegible] credit to all concerned; Messrs. [illegible] can distinguish among themselves [illegible].

New Comet.—Mr. Hind has communicated the following to the *Times*:—"In the 6th inst. a comet was discovered at the Observatory at Rome, which presents striking indications of identity with that of 1664, one of the most minutely-described comets recorded. Supposing these to be identical, the period of revolution will be 188 years, and the mean distance from the sun a little greater than that of the planet Neptune. On the 19th of March, at eight o'clock, its right ascension was 4h 33m., its declination 2 deg. 48 sec.; the former changes very little at present, but the latter is increasing at the rate of from 20 to 30 minutes of arc daily. Full descriptions, with engravings, of the comet of 1664, will be found in the Cœlographia of Hevelius, and in Dr. Thorpe's translation of Lalande's Astronomy. When best seen, it exhibited a bright nucleus with a tail 36 deg. long, and curved towards the extremity. If the orbit lately discovered be the same, its appearance would rather favour the idea that those bodies are gradually dissipated; yet, Halley's comet has been traced backward in history to the year 11 before the Christian era, or [illegible] years."

The Dublin Industrial Exhibition of 1853.—The building is now progressing with wonderful rapidity towards completion, not less than 1000 men being daily employed in its construction. The swelling rib of the Central Dome is finished, and the [illegible] of the circular timber ribs weighs upwards of seven tons, and spans a hall 28 feet wider than the transept of the Crystal Palace of 1851. The decoration of the South Hall is nearly finished. The hall is 400 feet in length, 50 feet in breadth, and will be devoted entirely to machinery in motion. A large fire brigade has been thoroughly organised; the men, who are selected from the Dublin police force, are stationed in the building night and day. [illegible] pipes of water pipes and tanks are of such a nature that it [illegible] to occur without being immediately discovered, and [illegible].

Sadler Robin.—Mr. Woodin continues his attractive performances, which he has removed to the above popular Lane in Piccadilly. The entertainment, however, still retains its old name of "Carpet Bag and Sack Book." The audiences have been numerous during this week.

MUSIC.

NOTES OF THE WEEK.

This week has been rendered remarkable by the many performances of Handel's "Messiah." On Wednesday the sublime work was given at Exeter Hall, under Costa's direct on, by the Sacred Harmonic Society; on Thursday in the evening, under Mr. Surman's direction, by the London Sacred Harmonic Society; and, on the same evening, in the Albion Hall, under Mr. Shoubridge's direction, by the choral Society. The Westminster Harmonic Society, and a society at Islington have also performed the "Messiah" this week. The vocalists who have sung on these occasions were Miss Louisa Pyne, Miss Dolby, Miss Stabbach, Miss Williams, Miss C. Henderson, Mrs. J. Rose, Mrs. Dixon, Mr. Benson, Mr. Lockey, Mr. Weiss, Mr. Lawler, Herr Formes, &c.

The Harmonic Union on Tuesday repeated Mr. C. Horsley's "Joseph," the chief singers were Miss Birch, Miss E. Birch, Miss Williams, Lockey, and Weiss.

A concert was given last Monday night at Sadler's Wells Theatre, under the direction of Mr. Lindsay Sloper and Mr. F. Mori.

Mr. [illegible] concert at Freemasons' Tavern [illegible] Tuesday, and concerts have been given this week, on a large scale, at the Olympic and Surrey Theatres.

Mr. Allcroft's monster concert took place on Monday, at Exeter-hall; at which a tremendous disturbance took place, owing to the order of the programme having been disturbed by the indisposition of Mr. Sims Reeves. The aid of the police was required to clear the hall, but not before the excited malcontents had committed so much damage Mr. Allcroft must learn from this scene to be more cautious in the insertion of names in his bills: the public have a fair right to expect the strict observance of the promised programme. At the above concerts just named to, the names of the vocalists and instrumentalists will certify what a mass of talent of all countries is now in London. Amongst the singers were Madame Parepa, Madame Rosa, Madame Noldeke, Miss Dolby, F. Lablache, Mrs. St. Reeves, Misses R. Isaacs, Messent, Harland, Ora and, Rowland, Stabbach, Fitzwilliam, MacAlpine, Poole, Sykes, C. Nott, Brougham, Maspamaras, L. Sloper, R. Graham, Russell, Mrs. A. Newton, Messrs. D. King, G. Tedder, Drayton, F. Boldia, Hobbs, Manvers, J. L. Hatton, Young, Corri, Brandt, Manley, Leffler; with Sainton, Bottesini, Nobili, Case, Richardson, Lazarus, Menque, the Distins, Pratten, Meine Cousins, Misses B. Williams, E. Badger, Du Barry, &c., in the instrumental department.

The first concert for the exhibition of the students of the Royal Academy of Music took place at the Hanover-square Rooms, last Saturday. A selection from Dr. Crotch's "Palestine" occupied the first part, in which Miss Sadler Spiller, Miss Freeman, Mr. Bolton, and Mr. Gray were the principal vocalists. The second part [illegible] the Specialty [illegible] Handel's [illegible] Miss Freeman, Mr. Thomson [illegible] Street and Miss Marie were the principal vocalists. Miss Hawkins performed Weber's Concert Stück; and Mr Comber, Mozart's pianoforte concert in C. Mr. Lucas conducted the concert, and Mr. Nicholson was the first violin. There was more than an average amount of ability exhibited on this occasion.

MEYERBEER'S "PROPHÈTE" IN RUSSIA.

(From our own Correspondent.)

St. Petersburgh, March 8.

After considerable difficulties in the alteration of the *libretto*—which was considered too democratic in its tendency by the Autocrat—Scribe and Meyerbeer's "Prophète" was at length produced on the 6th inst., for Mario's benefit, under the title of "The Siege of Ghent;" or, the Spaniards in Flanders. *Jean of Leyden* was changed to *Jean of Hainbaut*; the three Anabaptists were named, *Pierre Buckenau* (Tagliafico), *Rykart* (ete ollo Bottardi), and *Does* (Polonini); the *Comte de Ferrer* was assigned to Ivan Bassini. Mme. Viardot retained her well-known part of *Fides*, and Mdlle. Marsy was *Berthe*. Never, perhaps, was a more splendid mise-en-scène. The variations and changes were innumerable, but enough of the score of the composer was heard to render the production one of the most triumphant performances ever heard in the Russian Imperial capital. Any money, however, to obtain places was useless; as much as £10 was paid for a single chair in the pit, and £40 for boxes, to hold four or five persons, was refused again and again. The *mise en scène* was magnificent; it cost upwards of £5000: the opera from first to last created quite a *furore*. Mario was not in his best voice at his benefit; but at the second representation took his revenge. Varied were the variations of the air with variations. The Emperor and Empress, and all the Imperial family and Court, were present. Of course, as only the regular opera is before the public, it will be at an end, and the migration of the singing-birds will take place. Viardot, Medori, Mario, Tamberlik, Bouconi, Lablache, Tagliafico, and Polonini, go direct to London.

THE THEATRES, &c.

ROYAL ITALIAN OPERA.

The seventh season will be commenced next Tuesday. The prospectus of the directors has been issued, and proves that their determination to promote the advancement of art will not be abandoned in the forthcoming campaign. The novelties announced, particularly, are Verdi's "Rigoletto," produced with success in Italy and Russia; Donizetti's "Don Sebastian," originally brought out at the Grand Opera in Paris; Berlioz's "Benvenuto Cellini," which has been recently remodelled and studied, and recently at Weimar; Bonetti's "Juana bonc," recently played at Barcelona with enthusiasm; Rossini's charming "Matilde di Shabran," and Spohr's "Crocefisso in Atene," which has been the cause of long engagements with Spohr and Berlioz to superintend the production of their operas, the pledge that the subscribers may rely upon three out of the above-named novelties being produced. We will not escape the attention of amateurs that the fundamental principle on which the Royal Italian Opera was based, that of encouraging lyric progress without distinction of country, is strictly adhered to. Nothing can be more opposite than the schools of Spohr, Berlioz, Rossini, Donizetti, Bonetti, and Verdi. Germany, France, and Italy are worthily represented in these names: would we could add that of an English composer in the category.

The repertoire now consists of 20 operas: viz., 3 by Meyerbeer, 3 by Mozart, 3 by Verdi, 1 by Gounod, 1 by Auber, 1 by Spohr, 1 by Auber, 1 by Halévy, 1 by Cimarosa, 1 by Beethoven, 1 by Weber, 4 by Bellini, 3 by Donizetti, and 1 by Rossini. Subscribers, both of these operas may be deemed worthy of revival, there are the popular artists—Grisi, Mdme. Castellan, Mdme. Rosa, Mdme. Julienne, Mdme. Corti, Mdlle. Lotti; Mario, Gardoni, Tamberlik, Bouconi, Lablache, Ronconi, Rommi, Radice, Gregorio, Polonini, Tagliafico, and Formes (baritones and basses). To this list must be added the new engagements, consisting of Mdlle. Wagner, perhaps; Mdme. Viardot, possibly; and Mdme. Medori, Mdlle. Adini, Mdlle. Donzelli (soprani), and Mdlle. Nantier Didier (contralto), positively. Then important additions have been made to the company by the advent of Bosio and Gassier, two most admirable artist; and by the return of Zelger, an excellent basso. Costa, of course, remains the musical director [illegible] and conductor—a [illegible] of the operation of the [illegible] operations will [illegible] [illegible] Opera [illegible] acquired for a [illegible] *ensemble*.

Mr. William Beverley has been engaged as scenic artist; and Mr. A. Harris resumes his post as director of the *mise en scene*.

Divertissements are to be given at each opera; and, from the list of *danseuses* published in the prospectus, it would appear that the ballet department will not form an essential element of success in the Italian operatic arrangements, as it are quite ample to attract audiences, without any onerous choregraphic outlay.

In the absence of the drama, the usual Passion-week amusements have been substituted at the different theatres. The Punch wizard, M. de Louki, has appeared at Drury Lane: Mr. Robert Houdin at the St. James's; and Mr. Bland, the wizard of wizards, at the Marionettes. At Sadler's Wells Mr. Rosseau gave an operatic and amusing entertainment, entitled "Leaves from the Life and Lays from the Lyre of Shakespeare."

The Easter Pieces promise well. There is a rivalry between the Olympic and Princess's, as to the subject, both having accepted translations of the same French drama—"Mesdames de Sévigné" and "Mme. Sapata." Mr. Buckstone and Mr. Webster give their own names to the extravaganza and occasional piece respectively forthcoming at the Haymarket and the Adelphi. The former undertakes "The Ascent of Parnassus," and the latter advertises that he will be "At Home." From the character of the pieces announced and understood, it would appear that the Haymarket will be elevated to the class of production intended, by the change and division of management. The Lyceum will continue in itself by a Swiss piece, in nine chapters, entitled "A Strange History." Lumley will [illegible] present a burlesque, by Robert Brough, of Sir Walter Scott's [illegible].

The Strand Theatre will re-open for English operas [illegible] and Mr. [illegible] Beverley [illegible].

Bertoni's Panorama of Granada and the Alhambra.—This is one of the most superb pictures of the kind that we have seen. Moorish towers, convents, fortresses, palaces, and temples, here combine to make one of the grandest possible effects—wonderfully enhanced by the natural scenery, which is of the sublimest character. As we shall return to the subject, we pass further description at present. The view will take high rank among the holiday exhibitions of the season.

MONTHLY REVIEW OF THE DRAMA.

The present week brings usually to an end a series of season arrangements at all the theatres. With the next, the Easter pieces begin, and the general character of the performances undergoes "a sea-change." In bringing our review of the drama down to the present date, we have to register only a few occasional productions, and add a few remarks on the *rationale* of the facts as they arise.

The last night of the season at Sadler's Wells Theatre was signalised by the revival of the Second part of Shakspeare's "Henry IV." This is a play seldom performed. There are in the present day certain social objections to the position which *Falstaff* occupies in this drama. Nevertheless, it was one selected by her Majesty for performance at Windsor Castle, and we may take advantage of the circumstance to [illegible] importance of Royal encouragement to the drama.

No fact is more evident in the history of the drama than that, popular [illegible] elements of such an entertainment may appear, its rise and growth are in the nature of a revolution from above," rather than one from below. The clerkly and the noble were its first introducers; princely and ecclesiastical men were its authors and patrons. Under the auspices the drama began and flourished. They set the taste of the town. First, it was religious, afterwards poetical—and dealt, in both phases, with large and universal themes—tending, at first, to the instruction, and, next, to the elevation of the play goer. His amusement was quite a subordinate object. In process of time the drama became more and more dependent on popular caprice. As a natural consequence, the actor who stood higher to the pecuniary result than the dramatist became of more consideration in the estimation of the spectator, who had him always before his eyes, than the poet of whom the performer was only the medium. The acting of a play thus grew into much more importance than the play itself. All the relations of the drama became gradually reversed. Ultimately, people went to the theatre, not to be taught, but to be tickled and refined by poetry, but simply to be amused. Spectacle and the meanest compositions sometimes accomplished this object more effectually than the noblest dramatic works. At theatres where the audience were of the lower grade, this might, indeed, always be expected. Inferior tastes were catered for by greedy speculators, and theatrical entertainments lost caste with the intellectual and respectable classes.

One of the obvious remedies for this state of things was evidently to renew the relations of the drama with those high influences in which it originated. It speaks much for the intelligence of her Majesty, that she was willing to take the initiative in the process. And desirable as [illegible] on The Drama had long been in this country, why could it not have a Victorian age? The influence of Royal patronage was soon felt; and people who had previously thought it disgraceful, now believed it to be respectable to appear at the theatre. A visible improvement in the quality of dramas produced has proceeded from this return of the better classes to the boxes and pit.

To return to the curious revival of Henry IV., and particularly its relation to the second part, we may remark that the grace and animation of the dramatic narrative is as well sustained as in the first; and that the wit of *Falstaff* is especially rich and characteristic, but exhibited in its grossest forms. His conversations with the Lord Chief Justice, with the hostess *Quickly*, *Doll Tearsheet*, and *Justice Shallow* are wonderful specimens of the most extravagant humour. They owe little to the situations, which are not only generally uninteresting, but some of them repulsive, all belonging to the meretricious turns, the unexpected encounters, the striking and coarse, and laughable, which characterise with which they abound. The two imbecile characters of *Shallow* and *Silence* in this second part into more distinct outline and spirit "under the [illegible] their death," a "soul begins to be created" by the magic of Shakspeare's genius, which, like music, is to be traced in things apparently inanimate. The part of the *King* is most elegantly drawn, and the portion of dialogue assigned to him has received much poetical elaboration. How much of it is familiar with us as household words! Who ever embers not his soliloquy on sleep? his reflections on destiny? and his reproof to his son in that beautiful scene between them in Act IV.? Evidentiate to the meanest critic that the author's aim was, by depicting historical character and moral sentiment, to reach his audience, and make amusement simply the vehicle for poetic truth.

It so happens that the first original drama presented at the Court of Queen Victoria—the "St. Cupid" of Mr. Douglas Jerrold—is almost purely a literary composition; and does more to illustrate expressively grouped than melodramatic situation. Down to the end of the season this piece has continued to alternate with the gorgeous revival of the tragedy of "Macbeth," at the Princess's Theatre. Here an audience full of intelligence and good taste is nightly collected; and boxes that were empty under an inferior management, are fully occupied now that success is well merited. This is sufficient answer to the cry, so noisy of late, of the decline of the drama. Never was it in a more prosperous and palmy state.

We wish that we could say as much for the improvement of Drury-lane, under its present management. New pieces, indeed, have at this season been the order of the day. But they have been either ill-selected translations, or poorly written spectacles. The "Lords and Commons" of M. Casimir Delavigne is not without considerable merit. The character of the Monarch is strikingly and dramatically drawn. But the whole is [illegible] and [illegible] at the national theatre. We have a right to expect first-rate original writing, up to the mark of existing poetical appreciation. Neither "The School for Kings" nor "The Turkish Lovers" approximate to this standard. The first, after two nights' performance, was withdrawn; and the second has only maintained its [illegible] vehicle for the *ballet*. Well might an "air-walker" be called in, to supplement the non-attraction of such pieces. But athletic substitutes for dramatic excellence should not be permitted to usurp the place that ought to be devoted to the exercise of classical talent. They tend to ruin the reputation of the theatre, and to subvert in the public mind all recognition of a principle. The play-goer, therefore, never knows what to expect; until at length he loses all faith in the intelligence of the management, and all interest in its efforts. Drury-lane is probably the best theatrical speculation in the market; but its proper conduct requires the presence of a man of genius for its superintendence.

The Law of Divorce.—The first report of the Commissioners appointed to inquire into the Law of Divorce has been issued. The Commissioners having considered the law of divorce in its different bearings, thus sum up briefly the alterations and improvements which they think may be made in [illegible]:—That the grounds for [illegible] divorce a *mensa et thoro* shall be conjugal infidelity and gross cruelty.—That we fail to perceive that desertion can be also a ground for divorce *a mensa et thoro*, or else shall entitle the abandoned wife to obtain from her husband a proper maintenance by way of alimony.—That divorces *a mensa et thoro* may be granted on the suit of the wife for the above-mentioned causes as well as by the husband.—That divorces *a vinculo* shall be allowed for adultery, and for adultery only.—That divorces *a mensa et thoro* may be granted on the suit of the husband, and not (as a general rule) on the suit of the wife.—That the wife [illegible], may also apply for divorce *a mensa*, in cases of aggravated necessity, such as bigamy, [illegible] cruelty, and condonation shall, if proved, be deemed and treated as bars to the suit. That recrimination shall include any of the grounds for which divorce may be obtained on the part of the petitioner.—That the existing mode of obtaining a divorce *a vinculo* shall no longer be continued.—That a verdict at law, and an ecclesiastical sentence shall no longer be considered as prerequisites previous to any application with respect to [illegible] divorce.—That a new tribunal [illegible] shall be constituted to try all questions of divorce.—That all matrimonial causes now [illegible] shall be determined in the Ecclesiastical Courts, shall be transferred to the same tribunal. That this tribunal shall consist of a Vice-Chancellor, a common-law Judge, and a judge of the Ecclesiastical Courts.—That the party who seeks a divorce, whether it be a divorce *a mensa et thoro* or a divorce *a vinculo matrimonii*, shall pledge his belief to the truth of the case, and that there is no collusion between himself and his wife.—That each party shall be examined and taken down in the presence of the parties.—That in general the process, practice, and pleading shall conform to the process, practice, and pleading of the Court of Chancery, as recently improved: with [illegible] as may be beneficially derived from the codes actually [illegible].—That the rules of evidence shall be the same as those which prevail in the Ecclesiastical Courts.—That the party who seeks a divorce [illegible] the power of examining the parties, and also of obtaining any [illegible] to be produced, who in the opinion [illegible] may throw light on the question.—That the Court shall be empowered with a large discretion in [illegible] whether any and what proviso or [illegible] be made to the wife, in order to [illegible] the rights which she and her husband may respectively have upon each other's property, and in providing for the guardianship and maintenance of the children.—That there shall be only one appeal from the decree of the Court, and that the appeal shall be carried to the House of Lords.

PROVINCIAL INTELLIGENCE.

LORD DERBY AT OXFORD.—The authorities of the University of Oxford have appointed the 8th of June for the installation of the Earl of Derby, who succeeds to the office of Chancellor. It is expected that a [illegible] which would have of course attached to the proceedings will be wanting, in consequence of the proceedings in Convocation [illegible] Mr. Gladstone, as member for the University, [illegible] installation will partake very much of the character of a public [illegible] which it has always been one of the [illegible] to put forward.

TESTIMONIAL TO THE REV. M. J. WHISTON.—Upwards of £600 have been collected towards a testimonial to the Rev. R. Whiston, who was [illegible] of the head mastership of the Cathedral Grammar School by the Dean and Chapter of Rochester, on account of his appointment to the non-fulfilment of cathedral trusts, but who regained his position after a lengthened and expensive course of legal action. At the head of the subscription list stands the name of the Right Hon. Edward Strutt, M.P.

EMIGRATION TO AUSTRALIA.—The ship *Henry Green* has sailed from South-ampton with nearly all emigrants on board, bound for Adelaide. She is the [illegible] ship which has been provisioned in Southampton, which has occasioned an outlay in that town of £5000. Her sailing was [illegible] to sell her before she started, which it caused her detention for a few days. The [illegible] they her sale was found [illegible] her not having [illegible]

[illegible] CUTHAM.—Much surprise has been occasioned [illegible] which has become prevalent [illegible] late one of the Tory Lords of the [illegible] Mr. Rogers initiates [illegible] Southampton [illegible] Wootton [illegible] will be [illegible] last month, on Liberal principles, will again come forward as a candidate.

SANDHURST COLLEGE.—On Friday, a return of the number of gentlemen cadets at the Royal Military College at Sandhurst, also of the amount paid to the establishment in the year 1852 by the gentlemen cadets and [illegible] of the senior department, and the total cost of the establishment for the year, has been printed. There are 177 cadets, the sons of officers in the army, 10 of whom, 177 are the sons of civilians, 69 sons of officers in the army, and 1 son of officers in the navy. The orphans of officers in the army, and 1 orphan of an officer in the navy. The amount paid by the gentlemen cadets, and £644 12s 6d by the [illegible] for the year was £17,822 4s 6d. The total cost of the establishment for the [illegible] £27,000.

THE GLEN TILT CASE.—The litigation in this famous case, involving a public right of way through Glen Tilt, has at length been brought to a termination, the Lord Ordinary having on Wednesday week [illegible] the [illegible] of the defender" (Glen Tilt). The Duke of Atholl [illegible] public road through Glen Tilt. The Duke [illegible] the process. This termination of the case [illegible] in understanding that the pursuers will not resist [illegible] cation by the Duke to the road trustees for leave to make a new road, [illegible] from the present [illegible] in its lower part for two or three miles, to save the deer forest.

THE WAGES OF CARPENTERS AND JOINERS.—The working carpenters and joiners of Plymouth, Devonport, and Stonehouse, and the neighbourhood, have determined to [illegible] wages with a view to [illegible] amount [illegible] which [illegible] have been issued [illegible]

A CURIOUS WOUND BY A GAME COCK.—On Sunday last, a little [illegible] was [illegible] by a game cock in St. James's [illegible] The [illegible] had [illegible] and defeated almost all [illegible] Lord was attacking his face. Some [illegible] eyes were found bleeding profusely, and [illegible] sight probably have lost both [illegible] was [illegible] the fatal [illegible]

THE ISLE OF WIGHT TELEGRAPH.—The Isle of Wight Harbour [illegible] have [illegible] to erect a line of posts for the telegraph wires along the road [illegible] between Yarmouth and her Majesty's marine residence at Osborne. Yarmouth is the [illegible] which the submarine telegraph communication across the Solent sea is to be made to connect the Isle of Wight telegraphically with the mainland.

THE STEAMER "QUEEN VICTORIA."—Captain Walker, who was [illegible] as the owners of the vessel of the Irish steamer *Queen Victoria*, lately lost near Dublin, and by which fifty-nine persons perished, has made his report. The result of the [illegible] is to [illegible] that the *Victoria* was lost through [illegible] the [illegible] of the [illegible] stopping the engines, or taking proper precautions when the snow [illegible] so [illegible] conduct of the steamer was [illegible] supposed the master was below, and ought to have known that the danger was imminent, and should have stopped the speed of the vessel. 3. The steamer is well found in all respects, with the exception that the boats were not so placed as to be ready for immediate use. 4. Had there been a fog bell on the Bailey Light, it is probable the accident might have been prevented. 5. The lighthouse was not properly attended to." We gave our opinion at the time of the accident, that "some blame" would attach to the officer in charge.

A VESTRY-CLERK TRANSPORTED.—At Leicester Assizes, John Cole, vestry-clerk of St. Margaret's parish, was charged before Mr. Justice Erle with having forged a certain [illegible] He drew a cheque for £5 4s. 3d., for a special purpose; got it signed by three vestrymen; and then fraudulently changed the amount to £25 4s. 3d., which amount he received from the bank. Sentence, fifteen years' transportation.

THE EGHAM DUEL.—At the Kingston Assizes, on Monday, for [illegible] Frenchmen—Allain, Barronet, Du Helemy, and Mornet—were charged with murder, arising out of a duel that took place in October last at Egham. All the prisoners pleaded "Not guilty," and elected to be tried by a jury composed half of foreigners. They were found guilty of manslaughter. Mr. Justice Cresswell, in passing sentence, said they had already been in prison more than five months; he thought it also probable that, being foreigners, they were ignorant of the law of this country upon the subject of dueling, and that, therefore, they might have been misled. He then sentenced the prisoners to be further imprisoned for two months.

TRANSPORTATION OF A WEALTHY MAN.—Andrew Shalsbury, a Leicester pawnbroker, convicted of various property, and reported to be worth £100,000, has been sentenced to seven years' transportation. He had pawned upon his diaries, as "unredeemed pledges," articles professing to be gold which were [illegible]

THE FATAL EXPLOSION AT BRIGHTON.—The jury, on Monday evening, after several adjournments, returned a verdict to the following effect:—That the death of John Young, the engine-driver, was caused by his own [illegible] in placing a higher pressure upon the boiler at one time than it was fitted to bear, and that by such reckless conduct he did kill and slay John Elliott and Richard Thomas Baker."

MIDLAND RAILWAY ACCIDENT.—The jury have found a verdict of "Manslaughter" against Perkins and Maycock, the guard and stoker of the train, at the time of the accident (by which Mr. Jones and Mr. M. Elliot their lives); and the coroner has committed them to Gloucester gaol.

FATAL ACCIDENT.—On Saturday morning last, as the Rev. W. Beauchamp, rector of Chedgrave, was on his way to Norwich, his horse took fright on going down Bailey-hill, when he was precipitated from his gig, and fell upon his head, which caused instantaneous death. The rev. gentleman has left a widow and five children.

RESPITE OF THE CONVICT SAUNDERS.—The convict Charles Saunders, who was convicted in February last of the wilful murder of Mr. Tetley, and sent to Chelmsford for execution, was respited on Wednesday evening for the space of a week. Since his condemnation his relatives have entertained a confident expectation of his sentence, on the plea that he was not in a frame of mind to enable him to distinguish right from wrong; in fact, that he was insane. The convict has been informed that the respite is only for a week, to make inquiries.

BREACH OF PROMISE OF MARRIAGE.—On Saturday a very unusual case of breach of promise was tried at the Stafford Assizes. It was brought by Miss Sarah Ann Adcock, aged 22, the only daughter of a gentleman of some position in Bromley, against a yeoman named Thomas Russell, by reason of his failing to make her his wife. The preparations for the marriage had proceeded as far as the deed of settlement and the purchase of the household things, in this state of the happiness of the loving pair was destroyed by the reports of a neighbouring Mrs. Gossip. A letter was immediately [illegible] to the unsuspecting [illegible] to be a pure invention; but the evil tongue had produced its effect, and the gentleman, disgusted with the nature of the reports spread to his prejudice, broke off the match. So far, all would have been right, and he would have been perfectly justified in his conduct; but, unfortunately, his constancy with this intended bride and her family for [illegible] months, [illegible] his intended his intention of withdrawing from the [illegible] and [illegible] the marriage preparations were continued. Under these circumstances, the jury gave a verdict for the plaintiff, with £100 damages.

CHESS.

TO CORRESPONDENTS.

B. L., Dublin.—There are two or three points in the game you have forwarded which we do not understand. In the first place, where was the Knight in White's [illegible] the K.B. Pawn at move 14th? Secondly, why did Black [illegible] at move 20th? Thirdly, why did White [illegible] at move 27th? And, lastly, what was there [illegible]

J. J. S.—We know of no other perfect Chess [illegible] than the one invented by Dr. Regnet and that called the "Improved Parliamentary Chess-board." Neither of which [illegible] answers the purpose. It was intended for [illegible] to be addressed simply to "Chess, London."

A. C., Chatham.—The variation you suggest shall be looked into. It may, perhaps, have escaped us before.

W. Rowland.—Your games by the match are under consideration.

LEITA.—The second move not only suspends on Black's pawn. Try once more! discover the answer to move 3rd if you [illegible] and in some more solutions, and it shall be forwarded. We have not up to [illegible] to move in variations.

H. Lewis, Stroud.—If you will turn and [illegible] the solution shall be sent you. We are too [illegible] to assist in publishing.

FORTUNA.—You may [illegible] having done attention.

J. W., Rochester.—It is [illegible] for a position to be without flaw to be worthy the name of a Problem; it is obvious, [illegible] your attempt, [illegible] and [illegible] which those you have sent [illegible] daily alternatives for works together, are very deficient [illegible]

[illegible] Rowland.—Your [illegible] will [illegible] as solution.

J. W. Rowland, J. F.—You must have passed the mail [illegible] before it arrived.

[illegible] rounds at K Kt 6, [illegible] answer, there can be moved to K 7rd on the [illegible]

[illegible] In the early game of a [illegible] so frequently was it decided to use [illegible] as proves that he who was left with a Kt's [illegible] upon the 6th was considered the victor.

THE POULTRY CROSS, AT SALISBURY, RESTORED.

SALISBURY CROSS.

SALISBURY is rich in remains of antiquity; for, although it is also called *New* Sarum, at the commencement of the thirteenth century many persons had taken up their abode on the site of the present city, which, however, mainly owes its origin to the removal of the cathedral establishment from Old Sarum.

Among the antiquarian relics of Salisbury is the poultry-cross, which stands at the corner of Minster and Silver-streets. Like other market-crosses, it is polygonal in form, with an open archway on each of the sides, and vaulted within, large enough to shelter a considerable number of persons. Two other structures of this description formerly existed in Salisbury; the site of one of which is indicated in Barnard's-cross, at the top of Trinity street. Similar crosses exist at Chichester, in Sussex; and Malmesbury, in Wiltshire; both which, however, are of later date, and in more perfect condition.

The Poultry Cross having fallen into decay, the inhabitants of Salisbury, much to their credit, resolved to restore this interesting architectural monument of their fine old city. The work was accordingly confided to Mr. Owen Carter, of Winchester, from whose design, and under whose superintendence, the restoration has been completed, as shown in the accompanying Illustration. It is generally supposed by antiquaries to have been an expiatory cross, erected during the latter part of the fourteenth century (*vide* Hatcher's "Salisbury," &c.); and the style of the architecture is considered to verify this supposition. Towards the cost of the restoration, the corporation of Salisbury appropriated the very liberal grant of £300; the remainder of the expense being defrayed by subscription among the inhabitants.

Altogether, this is a highly-picturesque structure: the varied pinnacles of the angle buttresses, the pierced parapet, the figures in canopied niches, and the bold ribs of the crown, make a beautiful architectural and sculptural group, the character of which has been ably preserved by the restoring architect. In the View are shown a few of the lofty gabled houses of the very interesting city.

NOOKS AND CORNERS OF OLD ENGLAND.

SEAHAM-HALL, AND OLD CHURCH, DURHAM.

THE commencement of a railway connecting the ports of Seaham and Sunderland, illustrated in this Journal, Feb. 19th, took place in a locality celebrated as the scene of Lord Byron's marriage with Miss Milbanke. The poet was married, by special license, in the drawing-room of the old hall, at that time the seat of her father, but since added, by purchase, to the Londonderry estates in this county. The mansion looks over the sea, from which it is distant only a few hundred yards. It stands on a situation not naturally attractive, but rendered extremely pleasing by the taste and elegant simplicity with which the grounds are laid out. A warm sunny vale to the south, is filled with plantations, which blend agreeably with the graceful foliage springing from the "dene," or ravine intersecting the coast at this spot.

The church is a small fabric, with traces of high antiquity. The nave and chancel are narrow and of equal breadth, separated from each other by the segment of a lofty round arch, which seems to indicate that the building has once been of considerably larger extent towards the north. The tower at the west end is square and low. All the windows in the nave are narrow and round-headed, and the east window consists of two round-headed lights, under an ornament of Saxon zigzag or nail head. The font is a plain stone basin, the rim ornamented with tracery. Seaham was included in King Athelstan's donation to the shrine of St. Cuthbert; but three centuries later was severed from the church, and ultimately came into the possession of the Milbanke family.

Lord Byron left London to be married at Seaham, at the end of December, 1814, accompanied by his intimate friend Mr. Hobhouse (now Lord Broughton). Of the circumstances which led to his union with Lady Byron this is not the place to speak. The unhappiness which resulted to both parties and the painful publicity which followed their final separation are sufficiently public, and we shall make no more than a passing reference to them. Lord Byron first saw Miss Milbanke at her aunt's, then Viscountess Melbourne. He was at once stricken with the lady's attainments and beauty, and proffered his hand, which was rejected, but with so much kindness that a subsequent correspondence was kept up.

In a couple of years later he again proposed, and was this time accepted; although, as he himself admits, he had not seen the lady for ten months previously. A writer in the *Quarterly Review*, after Lord Byron's death, says:—"It is sufficiently obvious that Lord Byron did not solicit Miss Milbanke's hand under the influence of anything which could deserve the name of love; and we fear it must also be admitted that he entered on matrimonial life without any serious consideration of the solemn and sacred obligations he was taking upon him, but in a mood and temper of mind very slightly tinged with those feelings and reflections which, even where it is too late for the high and delicate romance of an unwasted heart, spring up naturally on such occasions, and afford at least the prospect of a tender watchfulness and a generous protection to the woman who, in the freshness of youth and innocence, surrenders her all to a manly bosom."

His own feelings on the occasion were thus written down at the period:—He describes himself as waking on the morning of his marriage with the most melancholy reflections, on seeing his wedding suit spread out before him. In the same mood he wandered about the grounds alone till he was summoned for the ceremony, and joined for the first time on that day his bride and her family. He knelt down—he repeated the words after the clergyman; but a mist was before his eyes, his thoughts were elsewhere; and he was but awakened by the congratulations of the bystanders to find that he was—married. The same morning the wedded pair left Seaham for Halnsley, another seat of Sir Ralph Milbanke, in the same county. When about to depart, Lord Byron said to his bride: "Miss Milbanke, are you ready?" a mistake which the lady's confidential attendant pronounced to be a "bad omen."

In justice to the memory of the bard, we may quote from a letter addressed to a friend, after his final separation from Lady Byron, the following touching passage referring to her Ladyship:—"I must say it, in the very dregs of all this bitterness. I do not believe there ever was a better, or even a brighter, a kinder, or a more amiable and agreeable being than Lady B——. I never had, nor can have, any reproach to make her while with me. Where there is blame it belongs to myself, and if I cannot redeem I must bear it."

SEAHAM HALL, AND OLD CHURCH.

MONUMENT TO THE LATE MR. G. R. PORTER.

SHORTLY after the lamented death of Mr. Porter (see ILLUSTRATED LONDON NEWS for September 11), a subscription was opened for raising a fund to perpetuate the memory of this distinguished statistical writer and public servant. The subscription was limited to £3 3s., and the fund now subscribed amounts to about £480, and the number of subscribers to about 180. The list includes the names of many eminent persons in politics and statistical researches; among others those of the Marquis of Lansdowne, Earls Grey, Granville, Harrowby, and Clarendon, Lords Overstone, Monteagle, and Sir Denis Le Marchant, Mr. Cobden, Mr. Bright, Mr. W. A. Wilkinson, M.P., Mr. Cardwell, the Right Hon. T. M. Gibson, Mr. T. Mitchell, Colonel Sykes, Colonel Sabine, &c. A committee was formed, who invited several artists to compete, including some of our most eminent sculptors. Thirteen drawings and models were submitted to the committee, whose choice unanimously fell upon that of Mr. E. W. Wyon. We have engraved this original and striking design.

The Monument is to be an obelisk. On three sides of the base are figures, by which Mr. Wyon has illustrated the pursuits to which Mr. Porter so successfully applied his genius. By the boat is symbolised navigation; and by the various lading, the interchange of corn and manufactures. On the left is a group of children, representing education; on the right, a group, with the hammer, anvil, and cog-wheel, to represent the iron trade, a great staple of British industry; while in the principal group the lamp of science is symbolical. The height of the obelisk is to be 20 ft. It is to be executed in stone; and the present intention of the committee is to erect the memorial in the churchyard at Rusthall, near Tunbridge Wells, where Mr. Porter lies buried. At the back of the Monument there is to be an excellent medallion portrait of Mr. Porter. The following will be inscribed upon the pedestal:—

THIS Monument is raised by the friends of the late George Richardson Porter, Esq., Joint Secretary of the Board of Trade, and author of the "Progress of the Nation," in testimony of their deep respect for his private worth as a man and as a citizen; his eminent ability and practical power as a statist; and his patient labour and unwearied zeal in promotion of the interests of society.

MONUMENT TO BE ERECTED TO THE MEMORY OF THE LATE MR. G. R. PORTER, IN RUSTHALL CHURCHYARD, KENT.

EXHIBITION OF THE NATIONAL INSTITUTION.

"THE BATTLE OF CULLODEN."—PAINTED BY R. R. M'IAN, A.N.E.A.

NATIONAL INSTITUTION.

(SECOND NOTICE.)

In the place of honour, in the first room, Mr. M'Ian exhibits his "Battle of Culloden" (61), a dashing affair enough, and with some originality in the arrangement. In the foreground are a group of combatants, engaged at close quarters; whilst along the line, into the perspective, is seen the fire, or rather the smoke from the fire, of the Royal troops, thinning the ranks of the rebel force in front of them. As a whole, the picture is extremely effective; though the colouring is wanting in depth of tone, and finish of execution.

F. Wyburn has a picture illustrating "An Incident in the Life of Luther" (23), the subject of which is thus related in D'Aubigny's "History of the Reformation":—

On one occasion, overwhelmed with sorrow, he shut himself up in his cell, and for several days and nights allowed no one to approach him. One of his friends, Lucas Edemberger, feeling anxious about the unhappy monk, and having a presentiment of the condition in which he was, took with him some boys, who were in the habit of singing in the choirs, and knocked at the door of the cell. No one opens—no one answers! The good Edemberger, still more alarmed, breaks open the door. Luther lies insensible on the floor, and giving no signs of life. His friend strives in vain to recall him to his senses: he is still motionless. Then the choristers began to sing a sweet hymn. Their clear voices act like a charm on the poor monk, to whom music was ever one of his greatest pleasures; gradually he recovers his strength, his consciousness, and life.

There is considerable merit in the design, and much carefulness of execution in this picture, though, unfortunately, there is more successful realization in the articles of furniture and decoration, books, &c., than in the figures, which betray a little weakness of treatment, and a manner of pre-Raphaelitism.

W. M. Egley out-herods the whole host of pre Raphaelites in his teaboard exhibition of "Katharine of Arragon and Anne Boleyn" (47) in a card-playing anecdote, thus related by Miss Strickland:—

To her rival (who was now well known at Court to be such) she behaved with invariable sweetness. Once only she gave her an intimation that she was aware of her ambitious views. The Queen was playing at cards with Anne Boleyn, when she thus addressed her:—"My Lady Anne, you have the good hap ever to stop at a King; but you are not like others, you will have all or none."

The rival Queens rival in stiffness and severity of colour and outline the King of Hearts which Anne Boleyn is just about playing; and, as if such creatures were above all the ordinary wants of humanity, there is not a hint of atmosphere in the Royal apartment.

F. Underhill has three very pleasing works—"A Sea-coast" (38), "Barnaby Rudge" (55), and a "Farrier's Shop" (316). The second of these we engrave. It represents the hero of Dickens's favourite story, seated or reclining at length in prison, with the raven perched on his knee. The figure is well designed, the attitude easy; the limbs well rounded, with a good effect of distance and air behind.

Immediately above this stirring battle-piece is the portrait of the veteran hero and historian of many fights, Sir William Napier, by G. Wells (65*). The head is extremely like, and full of character; but there are many points in which the execution is crude and unsatisfactory.

W. Hemsley has a clever little genre piece, "Young Love" (202). A young, rough-headed, country urchin, seated on a kitchen table, is ogling a girl about his own age, who is busy peeling turnips, and who looks up with genuine satisfaction, and a wonderful notion of sentiment, as much as to say, "Lor! do you mean it?" This little picture is carefully finished.

BARNABY RUDGE.—PAINTED BY FREDERICK UNDERHILL.

PARLIAMENTARY PORTRAITS.

MR. APSLEY PELLATT, M.P. FOR SOUTHWARK.

It has often been urged in favour of the new system established by the Reform Bill, that it has tended to increase the number of those who may be termed the working members of the House of Commons, distinguished from those who have been trained up to politics, as what may, without any very great stretch of language, be called a profession. The late Sir Robert Peel, although so strenuous an opponent of that great measure, while it was still under discussion, was one of the first

MR. APSLEY PELLATT, M.P. FOR SOUTHWARK.—FROM A PHOTOGRAPH BY BEARD.

to recognise and acknowledge the advantage conferred on the country by the presence in the House of Commons of men practically acquainted with the wants of the community; and who could aid with their experience in the many investigations and discussions on the details, as well as the principles of the more material class of questions. It has been found that the gentlemen selected by the various constituencies for such special qualifications, have in many cases also developed that larger statesmanlike knowledge which enables them to hold their places by the side of men whose previous training authorises them to take the initiative in legislation. Among these Mr. Apsley Pellatt holds a place fully justifying the choice of the important constituency which has returned him to Parliament. At the last general election, when party spirit ran so high, and when every engine was put in motion—in some cases too successfully—to thrust on great metropolitan communities representatives of reactionary opinions, it was peculiarly gratifying to those who desired to see the main objects of the Reform Bill carried out, that the borough of Southwark should have chosen a gentleman whose claims on its confidence were so legitimate as those of the subject of this memoir—one whose position as a commercial magnate of the locality led to his being spontaneously regarded as the most fit person to represent its interests.

The antecedents of Mr. Pellatt in every way legitimatised the choice of the electors. The son of the late Mr. Apsley Pellatt, who was for so many years, in conjunction with the late Mr. Green, proprietor of the

As early as he was intimately connected with the firm in St. Paul's Churchyard, and also at the Falcon Glass Works. When still a young man, he was elected on the Common Council of the City of London; and, in the deliberations and proceedings of that body he took an active part, always on the side of freedom. He was the means of carrying there the question of the emancipation of the Jews, which, at the present hour, is adopted as a Cabinet measure by the chief Liberal statesmen of the age, and by a large majority of the representatives of the people. He also took an active part, and successfully, in the movement to close the Sunday Farringdon market. Subsequently, on his removing to the premises in Holland-street, he resigned his connection with the ward in which he no longer personally resided; and as the duty of managing that establishment demanded more and more of his time, he threw himself into it with the ardour and enterprise which distinguish the higher class of English manufacturers. Considering how largely the comforts and elegancies of domestic life in this country are increased by means of the manufacture which Mr. Pellatt has conducted with so much knowledge and taste, it is only just to him to record the efforts he made to improve and elevate its character. He visited Venice; went to the glass-making district of Nevell, in the heart of Bohemia; and the great glass works in Liege. He also went to Baccarat, in France, where he was welcomed as a brother manufacturer, who had chosen to his French contemporaries every attention when visiting his own works in England. Profiting by the result of his observation, and having a good knowledge of practical chemistry, and a taste for the fine arts, Mr. Pellatt was enabled to aid largely in improving the fine glass manufacture, and was especially in reference to its use in high art in engraving. Mr. Pellatt published, some time since, a memoir, entitled "Curiosities of Glass-making," with the addition of interesting details of modern manufacture, and coloured illustrations of curious antique specimens of Egyptian, Chinese, Roman, and Venetian manufacture. This interesting work has filled up a blank in the literature of this department of the industrial arts.

Mr. Pellatt's extensive acquaintance with the subject, and the striking results he had produced in the manufacture of glass, naturally led to his being selected as one of the Council of the Sel sol of Design For seven years he was a regular attendant at the Board of Trade, a month Australian Commissioner, and subsequently as a Local Commissioner, he contributed to the growth and success of the Great Exhibition of 1851. The extensive and successful display of his own manufactures in that Exhibition will not be readily forgotten.

Mr. Pellatt has twice lectured at the Royal Institution, at I has delivered gratuitous addresses before most of the literary and scientific institutions in London and its vicinity. He h s been for many years an associate of the Institution of Civil Engineers, and has served upon its council. At his residence, at St. ... e, he has erected a model farm. Mr Pellatt was one of the originators of the British Orphan School, and has at present honorary secretary of the London Female Penitentiary at Pentonville; and to the many benevolent institutions existing, he has largely contributed by his purse.

Mr. Pellatt contested, unsuccessfully, the city of Bristol in 1847. His election for Southwark in 1852, was carried by a large majority.

Mr. Pellatt has already obtained the favourable ear of the House of Commons. He has spoken twice, and with success: first, on Mr Hume's motion for equalizing the Excise Duties, and, secondly, on moving a few days ago for a select committee to reform the entire cash code

RECEIPT AND BILL STAMPS.—The Chamber of Commerce at Leeds have memorialised the Chancellor of the Exchequer for an alteration in the sca e of receipt and bill stamps, with a view to an improvement of the revenue, as we ... as to the convenience of the public community After pointing out the decline in the revenue from bill and receipt stamps which has taken place since 1847, they suggest "that a new Stamp Act should be passed, retaining a universal receipt stamp of 1d., and a scale of bill stamps of 1s. per cent. on the amount; bills under £100 to bear a uniform stamp of 6d.; bills for £100 and under £200, 1s.; £200 and under £300, 2s.; and so on upwards, without limitation as to amount.

THE NEWSPAPERS FOR AUSTRALIA, &c.—It may, perhaps, be interesting to those who have sent newspapers to Australia, to know, that those for Port Phillip and Sydney were forwarded on board the *Adelaide*, which has sailed from Plymouth; and those for South Australia were despatched from Gravesend by the *Orestes*. The "letter" portion of the mails to Port Phillip and Sydney were forwarded by the *Indus*, with the India mails, from Southampton, and by the new contract mails from Singapore to Australia, &c.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

In the early part of the week the market for the National Securities—owing to the threatened rupture between Russia and Turkey, and the movement of the British fleet in the Mediterranean—was in a very depressed state, and prices were lower in consequence; however, the differences between those two Powers appear to have been adjusted, the fall in the value of Consols has since been recovered, with a steady business. Their rise has not been a forced one, as the great influx of capital seeking employment, no advance has taken place in the rates of discount. In Lombard-street, first-class bills are readily discounted at two per cent per annum. On Monday the Three per Cent Consols were officially marked 99¾ ¾ for Money, and 99¾ ¾ for the next Account. Exchequer Bills were done at 99. to 1is., and India for the next Account. Exchequer Bills were done at 99. to 1is., and India Bonds at 45s. to 48s premium. South Sea Stock was 109¾. The market, on Tuesday and Wednesday, was firmer; and the Three per Cents on the latter day advanced to 99¾ ¾, with every prospect of a further rise. The dealings in Exchequer Bills have been comparatively limited; arising mainly from large additional amounts having been invested in other, and possibly, more profitable channels. There was rather an active demand for Money stock on Thursday, and Consols were again on the ad...nce. The Three per Cents were done at 99¾ ¾ for Money, and 99¾ ¾ for the Account. Exchequer Bills were tolerably steady, at from 7s to 11s. for March, and 9s. to 13s. for June Bills. India Bonds have been 40s. to 43s. premium.

The report of the select committee appointed by the Colonial Legislature, in Sydney, to inquire into, and report upon, banking affairs in Australia, has come to hand. The committee recommend that a national Bank of issue be established at Sydney, in which the public accounts shall be kept, and the notes of which shall become a legal tender. The leading reasons assigned for the proposed establishment are, that the various banks are doing beyond their legitimate means, and that the cremation of new banks of issue would be attended with danger to the colony.

A full average business has been doing in miscellaneous securities. Australian Agricultural have been 10s to 13s; Peel River Land and Mineral, 6¾ to ¾ prem.; South Rhenish Railway, 23¾ to 24¾ prem.; Australian, 5¾ to 5¾; British American Land, 67 to 69; Nova Scotia Mining, 1¾ to 1¾ prem.; Australasian Coal Mining, 1 to ¾ prem.; Union Bank of Australia, 1¾ to 1¾; Bank of Australasia, 54¾ to 55¾; South Australian Bank of Australia, ¾ to ¾ prem.; English, Scottish, and Australian 2¾ to ¾ prem.; Colonial Bank, 7¾ to 8¾; North British Australian, 1¾ to 1¾ prem.; Scottish Australian Investment, 1¾ to ¾ prem.; Australian Agricultural Company, 2¾ to 3 prem.; Colonial Gold ... to ... prem.; Port Phillip, ¾ to ¾ prem.; Australasian, ¾ to ¾ prem.; Australian, par to ¼ prem.; Crystal Palace, ¾ to ¾ prem.; General Steam Navigation, 30 ex div. and bonus; and Peninsular and Oriental Steam, 9l.

Very large imports of bullion have been reported since our last, viz. £1,200 from Australia, £283,000 from the West Indies, and £543,000 from New York. The shipments have been large, and amongst which has been the export of £242,970 to the East. The whole of the Continental exchanges continue unfavourable; but those upon New York show a small profit upon the import of gold. It is stated that throughout Germany American eagles are in great request, owing to the large amount of emigration to the United States.

On the whole the Foreign Market has ruled firm, and prices have been fairly supported. It is understood that the balance in the hands of the agents of the Ottoman Government have will be given up, to produce more confidence amongst the bondholders; but the several amounts in the hands is too small to have any effect upon the credit arrangement that has been made for paying off the first instalment of the loan. Spanish Certificates have been firm, as it is rumoured that the Government at Madrid is making negotiations with parties in this country for the issue of new terms. The Brazilian Five per Cents were done at 103; Dutch Four per Cents, 97¾; Mexican Three per Cents, 23¾; Portuguese four per Cents, 34¾; Peruvian Deferred, 18¾; New Deferred, 18¾; Spanish Certificates, 5¾; Spanish Coupons, 5¾; Turkish Loan, 1¾ prem.; Venezuelan, 19¾; Dutch Two-and-a-half per Cents, 58¾.

In the railway share movement recovered from their late depression. The quantity of stock in the market this week has been somewhat less than for some time past; yet the actual transactions have been by no means extensive. The following resolution has been passed by the committee of the Stock Exchange:—"That the purchasers of railway stock, or shares, are justified in refusing to pay for a transfer unless on banner passed by companies or certificates, unless it be certified thereon officially that the said coupons or certificates are at the office of the company, but if the transfer presented be perfect in all other respects, the stock or shares must not be bought in until reasonable time has been allowed to the vendor to obtain from the office the verification required." The following are the official

Clauss, are engaged. Members, the Private Rehearsal will take place on the first time in England. Other particulars will be duly announced.

SACRED HARMONIC SOCIETY.—Mr. COSTA begs to announce that the Rehearsal for Female Voices, &c., and not as before announced, on Wednesday next, the 30th inst., will take place on Thursday, the 31st inst., at Eight o'clock Precisely. Tickets, 5s

LADY DAY.—DRAWN BY PHIZ.

(*Continued from page* 238.)

n the fluttering hope that the gentlemen will soon begin to make theirs. It is considered one of the starting-points of the season; and its arrival is not only welcomed by the best artists of the opera, but by a general chorus of songs and a long string of balls given in its honour Festivities begin to command the attendance of carriages till a very late hour at night: and the linkmen, who, like the dormice, have been sleeping somewhere all throughout the winter, wake up with their lanterns into fashionable life again, and disturb the sleepy echoes of the squares by bawling out for the carriages of noblemen, whose names and titles, strangely enough, are not to be found in Debrett's or any other "Peerage." Regent-street begins fairly its watering-season, until the water is laid on so liberally, that it becomes a question whether the mud is not a much deeper nuisance than the dust—only the crossing sweepers, and the young Swans-and-Edgars (who can keep their white neckcloths all the cleaner) think not. Concerts and floricultural shows begin to be in full blow; novels begin to shoot out thousands of leaves from the ever-teeming hot-bed of the Minerva Press; and flirtations begin to bud and blossom into something like orange-wreaths from being exposed so long to the gentle heat of some retired conservatory, be it at Chiswick, or the Regent's-park, or on your own landing-place. The Season, in short, has fairly begun; and, with its thousand enjoyments—its marriages at St. George's—its suppers at Gunter's—its pic nics—its many beautiful books, which, "once taken up, must be read to the last page with the most thrilling interest"—and its hundreds of tempting sights, monsters and wonders—all of which "must be seen to be fully appreciated," may offer some small compensation to those who, from certain pecuniary reasons, may not always offer their hand to Lady Day with the same pleasure as they would to a pretty partner in a quadrille. However, should any poor fellow be compelled to leave abruptly his own house, there are so many who keep "open house" during the season, that he need only be puzzled in the selection of one which, in the fullness of his soul and the emptiness of his pocket, he would prefer going to. His excuse is ready-made—"he comes recommended by Lady Day."

Horace Mayhew.

SNOW-SHOE HURDLE-RACE, AT MONTREAL.

The annual Snow-Shoe Races, amongst the soldiers of the Garrison at Montreal, in Lower Canada, came off on Thursday, March 3rd. The weather being very favourable, the meeting was numerously and fashionably attended, and the sprinkling of the fair sex considerable. General Rowan and Staff were on the ground, and appeared to take great interest in the sport, of which the following are the details:—

1st Race. Half a mile on snow-shoes Twenty-five started. Won by Private Cox, 20th Regiment.

2nd Race. A quarter of a mile on snow shoes Eighteen started. Won by Private Cox, 20th Regiment

3rd Race.—250 yards on snow-shoes over four fights of hurdles, three feet high Seven started. Won by Private Gee, 20th Regiment

4th Race.—1 or those beaten in the first three races Won by Private Carter, 20th Regiment

5th Race.—300 yards without snow-shoes. Twenty started. Won by Private Gee, 20th Regiment

6th Race.—For winners 200 yards on snow-shoes. Won by Private Moore (?) (band), 20th Regiment.

Then followed a prize for the highest jump on snow-shoes, which was won by Gunner Vane, Royal Artillery. This closed the sports of the day.

The Snow-shoe may be described as a large racket worn by men travelling on snow, to prevent their feet from sinking into it. The visitors to Catlin's and other museums will remember this aboriginal contrivance, which is here turned to sporting account. In Jews'-row, otherwise Royal Hospital-row, Chelsea, is a public-house, with the sign of "The Snow-shoes," a memorial of the American war.

SNOW-SHOE HURDLE RACE, AT MONTREAL.

THE ILLUSTRATED LONDON NEWS

No. 615.—VOL. XXII.] SATURDAY, APRIL 2, 1853. [SIXPENCE { WITH SUPPLEMENT GRATIS

ENGLAND AND RUSSIA.

If we look at the map of Europe, and consider the present condition of the various states which compose what ought to be a grand confraternity of peaceful and united nations, we cannot but be struck with the instability which characterises them all. Amid that vast assemblage of communities, more or less civilised, more or less powerful and humane, there are but two whose institutions seem deeply rooted, whose thrones seem secure, and whose future fate betokens influence, splendour, and power over the rest of mankind. The one is England—a state ancient and free;—illustrious for deeds alike splendid in peace and in war; whose name, whose laws, and whose language pervade the fairest portions of the earth; whose flag is the hope of the oppressed; and in the permanency of whose dominion every nation, that either possesses or aspires to possess the commonest rights of free citizenship or self-government, is in the highest degree interested. The other state is in every respect its opposite. Three centuries ago unknown even by name to the civilisation of the West, it overshadows at the present day all Europe and Asia with the dark image of its rapacity and its ambition. The name of England is synonymous with that of rational liberty; the name of Russia, on the other hand, betokens absolute and irresponsible power. The one is civilisation; the other is barbarism. The one represents the dignity, the other the debasement, of humanity. The one represents mental, the other physical, power. And these two, so different, and of such hostile principles, hold between them the balances of lordship and dominion; and direct, as far as merely human agencies are allowed to direct, the present and the future fate of the Eastern hemisphere. America is beyond their reach, and stands aloof in the proud self-sufficiency and vigorous majesty of a race that feels itself pre-destined, in the fullness of time, to be greater and more resplendent than either of them.

All else in Europe is utterly unstable and insecure. The most ancient state seems as feeble and as effete as if the breath of a strong man could overthrow it. Austria is rotten to the core; and, were it not for the aid of Russia—dearly bought at the cost of humiliation and dependence—would crumble to pieces from its own heterogeneity, with as little power of cohesion as the dry bones in the Valley of Golgotha. That venerable state is worn out; and her motley populations, hating, and commonly not understanding each other, having no interest in common—no bond of blood, of language, or of sympathy—have not in them the vitality which could make them coalesce or unite in the simplest effort to govern themselves. Germany is a name, but not a power on the earth. Her very boundaries are undefined, and her pretensions to independence and the right to exist are by-words of scorn to the most powerful potentates who speak her language and move upon her soil. Prussia, with all her bayonets, is a creature of yesterday—an interloper into a place that was already full; and, at the first breath of dissension in Europe, would lose her identity, and merge into an Empire, not of Prussians, but of Germans. Italy is nothing but a name: the victim of the stranger and the oppressor, she scarcely dares to hope, and lingers on in impatient humiliation; never forgetting that she was once the glory, and remembering, with a burning blush, that she is now the shame, of Europe. The other Monarchies whose places are marked on the map are Monarchies shorn of their ancient power. They are but shadows of what they once were, and live upon the memories of their own departed greatness. Belgium, Holland, Denmark, and Sweden possess few traces of their ancient renown; their history is that of the past, and they exercise no influence over the fortunes of to-day. Spain, once a first-rate, has dwindled into a seventh-rate power; and Portugal is almost of as little note and consequence as the Isle of Man. Turkey exists but upon sufferance. She troubles the waters where her wolfish neighbours make it their pleasure to drink, casts her imploring eyes to heaven, and submissively awaits the inevitable catastrophe of her extinction.

Russia in the east and England in the west are thus the sole representatives of the stability of empire, as well as of the great principles which since the world began have agitated the bosom of society. The keen eye of Napoleon the Great foresaw the struggle that sooner or later these powers would be compelled to wage against each other. Their antagonism is inherent, and not accidental; and would exist of necessity, were there no questions of religion, of commerce, or of territorial aggrandisement and dynastic influence to complicate and exasperate it. The sagacity of Napoleon was so far at fault that he imagined France, and not England, to be the fitting representative of the great principle of the dignity of humanity and of resistance to arbitrary power. His nephew and successor, as thorough a representative of ultra-despotism as the Czar himself—and, possibly, still more so, for he founds his tyranny on the consent and suffrage of the ignorant and blinded people—governs the only other country in Europe that possesses even the semblance of power, apparently unconscious of the fact that France is unstable as water under her present *régime*, and that she has no friend in the world unless she make a friend of England. He has somewhat inexpertly been endeavouring to play the arbiter betwixt the two great rival states of the West and the East, and for the sake of a miserable autograph, and a little judicious homage to his personal vanity, he has been striving hard to sap the foundations of his own throne. Whatever, in the pride of apparent success, he may think of the durability of his dominion, its only possible guarantees are the good sense and the material interests of the brave and intelligent French people. States and dynasties may totter and decay, but a nation like the French is ever vigorous and young, and in the day of fate and necessity will vindicate its own majesty, in spite of its rulers, whosoever they may happen to be, and assume its own place

CLEOPATRA'S NEEDLES.—ALEXANDRIA.—(SEE NEXT PAGE.)

in the councils of the world. If Louis Napoleon desire stability for his Empire, he must learn to extend by degrees the bases of the popular rights which he has hitherto denied, ignored, or taken away. He must learn to know who are the natural allies of his countrymen, and what states they are whose aid would be destruction to him. In the commotions that are preparing in Europe, and of which we see all around us the signs and the portents, the true place of France is on the side of freedom. Between Cossackism and Constitutionalism the instincts of France will lead her right, however much her temporary rulers may strive to lead her wrong; and in that struggle, should it ever come, the place of England will be in the vanguard of civilisation and if states and dynasties oppose her, the populations, the races, and the nationalities of Europe will work with her, and bid her God speed. The star of her glory has not yet culminated. Lake Toussaint L'Ouverture, she has "great allies," and "powers that work for her."

CLEOPATRA'S NEEDLES.

THIS celebrated pair of "Needles" (for the name is applied to the standing as well as to the prostrate obelisk at Alexandria) has excited considerable interest at various periods. They are placed about one mile outside the modern walls of Alexandria. Each obelisk is one vast block of red granite, measuring about 70 feet in length, and covered with hieroglyphics. The prostrate obelisk is the property of the English Government, having been presented to George IV by Mehemet Ali, Pachá of Egypt, in 1820. It is partly imbedded in the sand, close to the sea side, by the great wall of the fortifications. They are said to be two of four obelisks which formerly stood at Heliopolis, and were brought to Alexandria by the Cæsars. The third is in the Piazzo di Monte Citorio at Rome; while the fourth remains at Heliopolis, six miles distant from Cairo.

The late Sir R. Peel was of opinion "that this obelisk ought to be removed to this country, and erected as a memorial to Sir Ralph Abercrombie, who gallantly fought the British soldiers and fell in Egypt." The late Sir G. Murray also stated, "That he joined with all his military friends who desired that that obelisk should be removed to London. Its intrinsic value might not be great; but, as a monument and as a trophy, it possessed a value entirely its own."

In November last, the Earl of Derby consented to the removal of the obelisk, to be erected in the grounds of the Crystal Palace Company, at Sydenham, upon condition that the Government may hereafter reclaim it on payment of all expenses incurred in the transit. About a month since, Mr. Anderson, the managing director of the Peninsular and Oriental Steam Navigation Company, and a director of the Crystal Palace Company, left England for Egypt for the purpose of making arrangements for the transmission of the Needle from its present bed on the shores of the Mediterranean to the Park at Sydenham. Great difficulties have, however, presented themselves, in the way of the removal of this ancient memorial. The Needle is actually built into a part of the sea-wall and ramparts forming the fortification of the city of Alexandria; and to pull down so much of the fortification as would be required to disinter the obelisk and to launch it, and afterwards to rebuild the wall, would not only occupy a great space of time, but must involve a considerable amount of expense not originally anticipated. In addition to these circumstances, it is stated that the Viceroy himself has a very strong objection to a breach of such a nature being made or left open for any time, in the present state of European politics. With respect to procuring casts from ancient works of art in Egypt, which formed also one of the objects of Mr. Anderson's visit to Alexandria, that gentleman reports that he had an interview with the Viceroy of Egypt on the 8th of last month, and that the Pacha then kindly assured him that every facility should be afforded to any person commissioned by the company to collect copies of works in Egypt.

It will be thus seen that the fate of the obelisk has once more become matter of uncertainty. The accompanying illustration, from a sketch by Mr. A. H. Nicholl, shows the position of the two obelisks; and the sculptured figures are the signets of the Kings of Egypt engraved upon the prostrate obelisk—the "Needle" intended to be removed.

SIGNETS OF THE KINGS OF EGYPT ENGRAVED UPON "CLEOPATRA'S NEEDLES."

NAVAL AND MILITARY INTELLIGENCE.

NEW DOCK AND VICTUALLING YARD REGULATIONS.—A circular order of instructions for the guidance of the superintendents and other officers of her Majesty's naval yards in the selection of candidates for entry into dockyard service, and the promotion of those already employed under the Crown therein, has just been promulgated to the various naval establishments at home. These regulations may be summed up in few words:—No candidate for employment will be entered who is not qualified to perform the duties he seeks to be employed in. No recommendation other than that founded on the report of the Admiral or Captain Superintendent of Yards, after a rigid examination of the fitness of the candidate by a competent board, will be allowed to weigh in the claim of such candidate for entry. All applications or references to the Admiralty are to be through the heads of the Surveyor of the Navy. No person is to be promoted whose merits alone, coupled with long servitude, do not fully warrant the officers above him in recommending him for advancement.

LETTERS FOR THE ARCTIC SEAS.—Letters for any of the officers, seamen, and marines serving on any of the ships now in the Arctic Seas, will be forwarded by her Majesty's ship *Phœnix*, if sent to the Admiralty on or before the 14th of April.

GOOD SERVICE PENSIONS.—The pension of £300 per annum, which lapsed by the death of Sir T. Capel, K.C.B., has been conferred on Vice-Admiral Sir G. Seymour, C.B., K.C.H., on the West India station. And the pens on of £150 per annum, which reverted by the promotion of Captain Boxer to Rear-Admiral, has been conferred on Captain M. Seymour, Commodore-superintendent, Devonport.

IT is said that Captain the Earl of Hardwicke will supersede Captain Hutton in the command of the *Prince Regent*, 90, the latter having completed his sea-time for his flag, whereas the noble Earl has not.

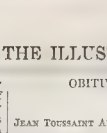
THE *Duke of Wellington*, 131, Captain H. B. Martin, C.B., is ordered to take in twelve months' stores for foreign service.

THE *Royal Albert*, 131, screw steam-ship, is progressing rapidly at Woolwich, upwards of 200 men and boys being constantly employed upon her.

A FLEET OF ENGLISH VESSELS NEARLY WRECKED BY THE ICE.—Intelligence has been received of a large number of vessels having been placed in a most perilous position on the coast, near Cuxhaven, by the immense masses of ice which were being drifted out to sea from the several inland waters. Amongst the ships on shore were the *Elke* steamer, *Odor* and *Washington* barques, the *Patrick, John Spencer, Ocean, Derwent, Bleasby, Jay, Effie, Galatea, Gem, Matilda*, and many others. The *Trident*, London and Hamburg steamer, was so much damaged as to put into Gluckstadt, as also the *Jupiter*, Grimsby and Hamburg steam-ship. The cold was most severe, snow was falling heavily, and the ice fast accumulating. Nothing like it had been seen on that part of the coast for some years.

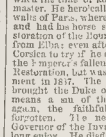
OBITUARY OF EMINENT PERSONS.

THE DUKE OF PADUA.

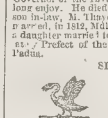


JEAN TOUSSAINT ARRIGHI, Duke of Padua, a distinguished soldier of the French Empire, died at the Château de [illegible], near Corte, the representative of an ancient noble Corsican family, from which was related by blood to that of Bonaparte. Jean Toussaint Arrighi was born the 8th [illegible], 1778. Early in his military career he served with [illegible], and followed Joseph Bonaparte into Holland. He was made Sub-Lieutenant of the 7th [illegible] regiment of the line, one of the troops raised in Corsica. On the establishment of the Consulate, Arrighi went as Secretary of Legation to Parma and to Rome. When he returned to Paris he was made Aide-de-camp to the famous General Bonaparte. Arrighi's brilliant conduct at the battle of Salahieh obtained for him the rank of captain. Henceforward his rise was described as rapid. On all occasions of danger he displayed the most daring valour. He commanded a chosen band of grenadiers at the assault of Jaffa, and was the first to enter the breach. He was made a Chef d'Escadron at Marengo, a General of Brigade at Austerlitz, and a General of Division at Essling. On the battle-field of Friedland, where Napoleon contributed to the victory, Napoleon made him Duke of Padua, a title marked the extent of the imperial estimation, since, like the dukedoms of Treviso, Feltre, and Pesaro, it was taken from a town where one of the Bonapartes had in early times been a podestat. The Emperor might well reward Arrighi, for he had not a truer or more energetic servant in his whole host. After further exhibition of distinguished courage and talent in Spain and Germany, and especially at Wagram, Arrighi, when the time of adversity came, fought inch by inch for his imperial master. He heroically defended Leipsic, his retreat in advance was to the walls of Paris, where he made head against the Grand Duke Constantine, and had his horse slain under him. He coldly yielded to the last reverse of the Bourbons, and was again at Napoleon's call on his return from Elba; even after Waterloo he was for contending still, and went to Corsica to try if he could not make that island a channel for receiving the Emperor's fallen fortunes. Arrighi had to quit France at the second Restoration, but was permitted to return in 1819. He was put in retirement in 1817. The wonderful events of the last few years [illegible], brought the Duke of Padua once more to the front. Ingratitude [illegible] means a sin of the Bonapartes, and when their cause [illegible] again, the faithful old Corsican warrior and relative was not forgotten. The new Emperor constituted Arrighi a Senator, and Governor of the Invalides. These honours the Duke of Padua did not long enjoy. He died on the 22nd ultimo, in Paris, at the residence of his son-in-law, M. Hervey, Baron de Saint-Denys. The Duke has [illegible] married, 1st, Mdlle. Zoé de Montesquiou, by whom he leaves, besides a daughter married to M. Edward Thayer, an only son, Ernest Arrighi, ex-Préfet of the Department of the Seine and Oise, now Duke of Padua.

SIR JOHN CAMPBELL, BART.



SIR JOHN CAMPBELL, Bart., of Ardnamurchan, recently Lieut.-Lieutenant-Governor of St. Lucia, died unexpectedly, 18th January, 1853, aged forty-four years, after a short illness of two or three days, of congestion of the yellow fever, at the Kensington town residence of the Hon. John Le Gall. As His Excellency, who was born 27th November, 1807, was admitted an advocate at the Scottish bar in 1831; and, in 1839, succeeded to the family Baronetcy, at the decease of his father, Sir John Campbell, who, after having for many years served Lord-mate to Sir [illegible] Campbell, the first Baronet, of Stirling [illegible]



He married, 21st November, 1832, Hannah Elizabeth [illegible], daughter of the late James Macleod, [illegible], and leaves several children.

GENERAL SIR ROBERT BARTON, K.C.H.

THE death of this lamented officer occurred on the 17th ult., at his residence, Montague-place. Sir Robert was the eldest son of Thomas Barton, Esq., of Grove, county Tipperary, by Grace, his wife, daughter of the Very Rev. Charles Massy, Dean of Limerick, and was born at Straffan Lodge, Massy, Bart., of Doonass, and the grandson of Thomas Barton, Esq., of Grange-more, county Fermanagh, by Margaret, his wife, daughter of Robert Delap, Esq., of Ballyshannon. The Irish family of Barton—one of considerable wealth and landed estate—claims to be a branch of the Bartons, of Barton-hall, county Lancaster. It is now divided into the several families of Grove, Clonelly, Lake Waterfoot, Straffan, Glendelough, and Rochestown.

Happening then to be in the South of France, General Barton commenced his military career as a volunteer in the first division of cavalry of the National Guards, in 1790, and received the thanks of the National Convention, and of General Cornwallis for his conduct on the affair of Morsea. Returning to England, he entered the British service in 1793, as an Ensign in Flanders in 1795 with the 11th Dragoons, [illegible] 1795. To the latter year he received on the field the [illegible] Previously for his conduct at Oude Carspel. In 1811 [illegible] Colonel of the 2nd Life Guards, he took part in the Peninsular campaign; and eventually, in 1814, attained the rank of Major-General.

Sir Robert married, first, Maria, daughter and co-heir of John Paynter, Esq., and niece of Lady Northcote, of Pynes, Devon: he wedded, secondly, Marian Colethurst, daughter of Addison Addison, Esq., Innspruck, the late John Addison, Esq., and great granddaughter of Archbishop Smith; by whom he leaves issue a daughter, Alexandrina Charlotte [illegible].

THE CHEVALIER KESTNER, M.R.

THE Chevalier Kestner late Hanoverian Minister [illegible] Portugal, died on the 8th ult., at Rome, in his 76th year. [illegible] more than forty years in that city, the Chevalier has justly become the favourite of the English residents and visitors. Although he never received remuneration from England, he had, even after the place of Hanoverian Minister at Rome was abolished, in 1849, performed, in the absence of an English resident, all those acts of courtesy and kindness for which foreigners generally look to the representatives of their own Government. Augustus Kestner is known to the English literary public by different essays on the fine arts; in particular, by a small, but highly-instructive, volume on painting, ably translated by Sir Charles Eastlake. Kestner was himself a distinguished draughtsman and practised [illegible], and possessed a profound knowledge of the arts, both ancient and modern, and keen sense of classical beauty. To him is owing, for the most part, the formation of the collection of casts of antique gems—the published by [illegible] archeologico, of which he was one of the founders. [illegible] it now, and at the rulings of which he regularly presided for many years. He also presented a choice collection of works of art which form a [illegible] Museum Kestnerianum. He had all but finished an accurate catalogue of this museum, and he has been for some time in correspondence with the [illegible] country, that of Göttingen. He also leaves, ready to appear in print, a volume of interest to add to the history of Goethe. The [illegible] contains the correspondence of the poet with Kestner, [illegible] other and the elder, in 17[illegible], the period of "Götz" and of "Faust," [illegible] the marriage of Kestner with Lotte, the lovely creature that poetic imagination of Werther's Charlotte.

THE VENERABLE ARCHDEACON HILL.

THE Venerable Justly Hill, Archdeacon and Commissary of Bucks, Rector of Tingewicke, in that county, and of Shanklin, in the Isle of Wight, died at Shanklin, on the 18th ult., aged 71.

He reverend gentleman was the youngest and last surviving son of Colonel Hill, of St. Boniface. In his early years, he gained distinction as a classical scholar at Wadham College, Oxford, of which [illegible] Society he was a Fellow. His pulpit [illegible] were devoted to those among whom he had been known from his childhood, and, when Bonchurch had become a resort of strangers and invalids, a new church was erected under his auspices. His appointment to the Archdeaconry of Buckingham, in 1836, was followed by strenuous and successful efforts to repair the sacred edifices under his jurisdiction. His published charges reflects an intimate acquaintance with the duties of his office and a steady adherence to the principles of the Reformed Church of England.

ARCHIBALD WILLIAM BLANE, ESQ.

THIS gentleman, whose death occurred on the 6th of November last, at Boorel, Port Stephens, in the sixty-fifth year of his age, was Deputy-Surveyor-General of Agriculture to the [illegible].

Under Mr. Blane's superintendence the colony may the wealth of the Port river district was brought to light. Some years pr[illegible] with the company, Mr. Blane held, at different times, various [illegible] offices in the Civil Administration of the Island of Mauritius, and [illegible] a seat in the Council of Government of that colony.

Mr. Blane was the only son of Thomas Blane, Esq., [illegible] of the late eminent physician, Sir Gilbert Blane, Bart., and first cousin to Sir Hugh Seymour Blane, the present Baronet. Mr. Blane married, 28 April, 1831, Mary Magdalene, 2 dest daughter of the late Thomas Dawes Broughton, Esq., eldest son of the Rev. Sir Thomas Broughton, Bart., of Broughton hall, Staffordshire, and of Doddington-hall, Cheshire. [illegible] lady who survives him, he leaves five children.

FOREIGN AND COLONIAL NEWS.

FRANCE.

PARIS, Thursday.

What shall we begin to entertain you with, dear readers? the *question d'Orient* or Lonzel [illegible] the [illegible] of the Bourse or the ball of the *Corps Législatif*? Poems, decidedly the *Times* can tell you more about the plans and movements of Prince or General, or General Prince Menschikoff Mentzikoff Menschikoff Mentchikoff Menstchikoff Mentschikoff Mentschikoff Menstchikoff Mentschikoff than such a butterfly chronicler as we are; so we think we had better let the matter alone. The same remark applies to the affairs of the Bourse, and there we maintain the same reserve: but we do think we can give him a point or two on such subjects as Longchamp and the ball of the Hôtel de Ville and the *Corps Législatif*, and the theatres, and other such matters as are of rather too harum a right for his capacity, but to which our said butterfly wings carry us easily.

To begin with Longchamp. Ah, dear readers, what a *triste* affair! What a cloud and dust, and shabby-genteel equipages and ugly horses, and cold and [illegible] finery, and folly and meanness, and painted "women of quality" and bed-ward actresses and *embonpanchés grisettes!* what cold and fevers and consumption laid by in store! What ostentation and bad taste, and vulgarity and absurdity displayed! What money wasted, what poverty betrayed! What Longchamp was in its palmy days, we do not pretend to say, that being Leisure our time; but what it is now, we boldly affirm to be the veriest insult to reason and good taste that modern times can boast of. Up and down the Champs Elysées goes the carriage, wild with triumph, shaking its bells enchanted, over the heads of the thousands of his votaries, who now, beyond all the other periods of the year, bow before him and do him homage. The [illegible] of the working people are [illegible] to a very considerable extent, a set of [illegible] folks, who, working the rest of the year, with little to divert [illegible] them—uneducated and untaught in more intelligent pursuits—spend their holiday and their money in wild attempts at a sort of [illegible] up finery, because they [illegible] know no better way of enjoying themselves.

This is not the case with Longchamp; the principal actors and actresses on the farce belong to a class who have no such excuses, meagre though they be, for making fools of themselves, and who, by position and education, ought to know better. They make no attempt at [illegible]; there is no pretence at any mirth or fun. It is neither more nor less than a set of people who dress themselves out as fine as they possibly can, for the most part in toilets which we *know* must cause them pain and dangerous suffering, [illegible] tightness and total inability to resist the intense cold of the March winds; and sit in equipages [illegible] and [illegible] which not always by mean and shabby, [illegible] and being stared at; and this in Passion-week, the most [illegible] day being Good-Friday.

The Government, [illegible] of the *liberty* which permitted the Republican party to manifest its existence in the most peaceful, the most respectful, and the most legitimate manner (as it seemed to our unenlightened minds), has published a circular, addressed to the Préfets, to prevent the members of the party assembling in any numbers at the funeral of members of their own opinion, not to allow them to form *ces trop grands réunions* at the house of the deceased, to hinder their entering the cemetery, and to *forbid every kind of discourse whatever*.

It is, therefore, no longer permitted to a *free* citizen to follow in a respectful silence to the grave the body of one he has loved, admired, or respected, if M. le Préfet of his department takes upon himself to consider his case to be too nearly in the profession. He is not to go to the house of his lost friend, nor is he to enter what all less enlightened nations than France are accustomed to consider free ground—the graveyard: if M. le Préfet thinks that the deceased no right to possess more than a certain number of friends to lament his loss—the exact cipher fixed by the will of M. le Préfet. He has no right to exercise the custom that from time immemorial has existed unquestioned in France, of expressing in a humble manner the regrets of the deceased—no matter in what terms—no matter if all allusion to politics be studiously avoided. He has no right, in short—he being a Republican himself—to allow any regret or respect for the memory of a Republican; or to say that he possessed any social virtues, or fine qualities whatsoever!

Of the ball of the *Corps Législatif* there are few particulars to be given here beyond the general facts that the *coup d'œil* was extremely magnificent, and that the expenses gained at the *bal du Sénat* was turned to much good account. The only [illegible] inconvenience, comparatively speaking, was caused by the crowd; while the arrangements we already detailed, respecting the invitations, secured a much more select company of guests. The Empress on [illegible] being was observed to look pale, and appeared nervous and agitated but, in a short time, recovered her composure, and seemed more amused and animated than she generally does in public.

A most interesting work, a *histoire dramatique et littéraire*, containing a complete account of the theatre of the nineteenth century, from the pen of the inimitable *feuilletoniste*, Jules Janin, has just given forth its first two volumes: it is to be completed in six. To those who are familiar with the style of Jules Janin, we need not say that it dwells on the piquant, the sarcastic wit, the brilliant anecdotes, the keen and delicate observations, sparkling in every page of the work; and to those who are not, we may tell them that the author has made the valuable material, the truth of detail, and the clear and just conclusion of men and times which form its foundation, and render it a history of the literature, manners, and characters of the period, interesting in the highest degree, even to those who care little for the theatre itself.

A comedy by M. Emile Augier, at the Gymnase, entitled "Philberte," rivals in public favour "Pilonneur et l'Argent" of M. Ponsard, of which we a short time since gave an account. The subject is novel, the scenes being distinguished from all other heroines of the novel and the stage by being plain we cannot bring ourselves to say of any woman ugly. This, at least, is the starting-point of the piece; but *Philberte* is really, and positively, and hopelessly plain. A want of actual beauty, exaggerated in the girl's mind by the taunts of a vain and unfeeling mother, and the comparison with a beautiful sister, render her so hopeless of pleasing, that she makes no attempt to cultivate or display what gifts nature has really bestowed upon her; and shy, and proud, and sensitive, she shrinks within herself, and thus induces others to accept as a fact what she herself has accepted her plainness. Love—a passion which she never dreams of inspiring, at least regards to her her mistake; with the consciousness of pleasing, of being viewed with eyes of affection, of admiration even, the charms, long dormant, burst forth in a luxuriance of beauty, and the timid, love-lorn, self-learning—all a woman should be to inspire a real and profound attachment; and we need not, of course, finish the story.

At the Grand Opera is preparing "La Journée de la Fronde," at the Opéra Comique "Le Barbier de Séville," and at the Italiens, has given a new and [illegible] debut to that theatre, which, from the commencement of the [illegible] has been in a most feeble condition

The Ball at the Hôtel de Ville [illegible] to be the great event of next week, and is, we hear, to be unusually brilliant.

In the French Senate, the Duke de Caumont Laforce has given notice of a motion for voting a donation of 500,000 francs to the Empress.

The *Corps Législatif* met on Wednesday, under the Presidency of M. Billault. The bill, reducing from 15c. to 10c the postage on prepaid letters, and that for the [illegible] of the Port of Paris was voted, as was also the Savings-bank Bill. Of the latter, the first clause reduces the rate of interest from 4½ to 4 per cent; and the second fixes the maximum of the deposits at 1000 francs.

The project of law of the Budget for 1854 exhibits an anticipated augmentation of revenue of 69,000,000f. This estimated amount is founded on the increase of the population, a renewed activity in commercial affairs, and a progressive augmentation in certain imposts. The Council of State has, however, reduced the credits. The Ministry demanded about 56,000,000f. more than in 1853. The Council of State has only accorded 40,000,000f., of which 8,000,000f is applicable to the department of the interior, and 5,000,000f. to that of Public Works. The chapter of the Budget entitled "Expenses of Public Security" is [illegible] by about 800,000f. The reduction in the War Estimates is about 10,000,000f. The effective force of the army, as regulated by the Budget of 1853, was 408,450 men and 74,423 horses; in 1854 the effective will be 388,618 men and 83,345 horses. The Navy Estimates, increased by 1,700,000f., are preceded by a note, which states that the augmentation arises from colonial demand, chiefly Guiana, and the continuance of the works of Gustavia. The estimates, receipts, and expenditure appear much more favourable than when they were presented to the Council of State. But in order that the surplus of receipts be a reality, the maintenance of peace is indispensable; and it may be said that the present Budget is to a certain extent a guarantee of peace.

LOUIS NAPOLEON AND THE LONDON MERCHANTS.

On Easter-Monday, at half-past one o'clock, the Emperor of the French received, at the Tuileries, the deputation of the merchants of London

The Ministers of State, of Foreign Affairs and of the Interior were present. The deputation was composed of Sir James Duke, Bart., M.P., Sir Edward N. Buxton, Bart.; Mr. Samuel Gurney, Mr. W. Gladstone, Mr. J. D. Powles, Mr. Glyn, Mr. Dent, Mr. Barclay, and Mr. Masterman.

Sir James Duke addressed the Emperor in the following terms:—

Sire,—We have the honour and the gratification to appear before your Majesty for the purpose of presenting to your Majesty, and to the French nation, a declaration from the commercial community of the metropolis of the British empire, embodying the sentiments of amity and respect by which they are animated towards their brethren of France.

The circumstances which have called forth this declaration being fully stated in the declaration itself, bearing the signature of upwards of 4000 of the merchants, bankers, and traders of London, we have only to add the expression of our conviction that this document conveys at the same time a faithful representation of the feelings of the people of England at large.

In conclusion, Sire, we beg to express to your Imperial Majesty our fervent hope that, under your reign, France and England may be always united in a friendly and mutually beneficial intercourse, and that, from the friendship of the two great nations results may ensue favourable to the peace of the world and the happiness of mankind.

The hon. Baronet then read the following, which he afterwards presented to his Imperial Majesty:—

DECLARATION OF THE MERCHANTS, BANKERS, TRADERS, AND OTHERS, OF LONDON.

We, the undersigned merchants, bankers, traders, and others, of London, feel ourselves called upon at this time publicly to express the concern with which we learn, through various channels of information, that an impression exists in the minds of the people of France that feelings of an unfriendly character are entertained towards them by the people of England.

We think it right emphatically to declare that we believe no such feelings exist on the part of the English people towards the people of France. We believe the welfare of each nation to be closely interwoven, as well in a mutually advantageous and commercial intercourse as in a community of sentiment in all the improvements of art and science.

Reposing in the reflection that nearly forty years have passed since the final cessation of hostilities between France and England, we record our conviction that European wars should be remembered only to be deplored, for the sacrifice of life and treasure with which they were attended—the hindrances they interposed to all useful enterprise and social advancement—the angry and unchristian feelings which they evoked in their train—and the heavy financial burdens which they left behind them at their close—considerations which supply the most powerful motives to every individual in the European community to avoid, and to employ by every means in his power, whatever may tend to cause the recurrence of such evils.

We desire to remark, that if, in that expression of opinion on public questions which the press of this country is accustomed to exercise, it is found occasionally to speak with apparent harshness of the Government or the institutions of other States, the same is not to be understood in a spirit of national hostility, or as offering to give offence. We feel that with the internal policy or mode of government which the French nation may think good to adopt for itself, it is not for British subjects to interfere, further than heartily to desire that it may result in peace and happiness to all interested therein.

We conclude this declaration by proclaiming our earnest desire for the long continuance of cordiality and good-will between Frenchmen and Englishmen; our determination to do all in our power to uphold the same; and our fervent hope that the friendliness of both nations may, in future, only vie with each other in cultivating the arts of peace, and in extending the sources of social improvement for their common benefit.

His Majesty replied in English:—

I am extremely touched by this manifestation. It confirms me in the confidence with which the good sense of the English nation has always inspired me. During the long stay I made in England I admired the liberty she enjoys—thanks to the perfection of her institutions. Nevertheless, at one period last year I feared that public opin on was misled with regard to the true state of France and her sentiments towards Great Britain. But the good faith of the great people cannot be long deceived, and the step which you now take is a striking proof of this.

Ever since I have held power my efforts constantly tend to develop the prosperity of France. My interests are not different from those of all other civilised nations. Like you, I desire peace; and, to make it sure, I wish, like you, to draw closer the bonds which unite our two countries.

The deputation then retired. The "Declaration" in question appeared as an advertisement in the *Times* and *Daily News* of Tuesday, with the whole of the names attached. It occupies a page and a column of the leading journal. It encompasses the names of many M.P.'s, and those of the first bankers and commercial firms of the metropolis. The gentlemen forming the deputation have received the greatest attentions from the members of the French Cabinet. On Tuesday they dined with the Minister of Foreign Affairs, on Wednesday evening with the Minister of State, and on Thursday they had the honour of dining with their Imperial Majesties at the Tuileries. The Paris papers are delighted with the expression of opinion from the commercial portion of the British metropolis, and they cordially reciprocate the sentiment that peace between the two countries may be perpetuated.

On Tuesday the Emperor granted an audience to a deputation of the English company who propose joining the Atlantic with the Pacific Ocean. The Ambassadors from Peru and New Granada joined the deputation, and were also received by the Emperor. Sir Charles Fox, the president of the company, addressed the Emperor in explanation of the project, in favour of which he solicited the patronage and support of France. The Emperor replied in English, as follows:

Gentlemen, I received with the liveliest in erest the intelligence of the formation of a great company for the junction of the two oceans. I have no doubt that you will succeed in an undertaking which must render so important a service to the commerce of the whole world, since such eminent men are placed at the head of your company. I have long appreciated all the advantages of a junction between the two seas, and when I was in England I endeavoured to draw the attention of scientific men to this subject. You may, therefore, rest assured, gentlemen, that you will meet with all the support from me which such noble efforts deserve.

The Company's report, plans, and maps were then laid before the Emperor, who examined them with particular attention. When the deputation withdrew, the Emperor said

I am happy to have seen your honourable deputation the very day after having received the one which, on the part of the merchants of London, expressed to me the most friendly sentiments in favour of peace—sentiments with which my own feelings have always been in complete accord.

On Good Friday there was a religious ceremonial in the Tuileries, when the "Miserere" was chanted, and a sermon preached. The Emperor and Empress were present, with about twenty or thirty ladies of the household, and as many gentlemen. The Empress appeared fatigued from standing during the ceremony, and, at the Emperor's request, she sat down. The promenade of Longchamp was very gay towards the evening. The Emperor and Empress passed up and down the Champs Elysées three times; they were in a close carriage.

Perichaud, who was sent for trial before a council-of-war for the assassination of the Archbishop of Paris, has been found "Not Guilty," but has been sentenced to transportation for having taken part in the insurrection of June, 1848.

GERMANY.

A telegraphic despatch from Berlin of the 29th ult. states a conspiracy had been discovered. Twenty persons had been arrested, 80 houses searched, and arms and ammunition found.

A letter from Vienna, of the 23rd ult. says:—"We learn from the Tyrol that the fête of riflemen given to celebrate the recovery of the Emperor, had the character of a national fête. It is said that a disagreeable incident has troubled the pleasure of this fête, the arms of England having been publicly outraged; and it is added that the Earl of Westmorland has already addressed a note on the subject to the Minister of Foreign Affairs. Some persons fired at the arms. The authorities then interfered, and put a stop to the demonstration."

The embassy of Prince Menschikoff to Constantinople excites great interest at Vienna. The Austrian *Lloyd* remarks:—"Should the matter be arranged peaceably, the Ottoman empire will fall in peace; if the reverse, it will fall in war. If the Emperor of Russia acquires the right to appoint the Patriarch at Constantinople, and with it the protectorate over the Greek Christians in Turkey (about 14,0000,000 or 15,000,000), the Empire which ended 400 years ago, when Constantinople was taken by the Turks, will be restored *de facto* in 1853." The present is regarded as one of the most critical moments that Europe has ever seen. The Viennese say that the power which must eventually suffer most, should the gigantic plans of Russia be realised, is Austria.

SWITZERLAND.

We hear of an attempted *coup-de-main* by some disaffected peasants under Romish influence in the Canton of Ticino. Influenced by the interested misrepresentations of their clergy, and as stated in the report of Colonel Bourgeois, well supplied with money and with weapons for the attack, some hundreds of the inhabitants of the Val Colla secretly made their way to Lugano, and, all at once, assembled on the principal piazza of the little capital of Embourg. Fortunately, the civic guards ran to arms, prevented the insurrection, and arrested fifteen of the leaders. The troops at Lugano have been reinforced, and the military have occupied the entrance of the valley. A letter from Berne of the 26th ult. states that the Canton of Ticino is tranquil. The governments of Zurich and the Vaud have declined to comply with the invitation of the Council of State of Geneva to convoke the Federal Diet. They say they have confidence in the Federal Council for the termination of all existing differences.

ITALY

We hear from Turin that the Austrian Cabinet has replied to the note of Count Revel on the subject of the sequestration of the property of certain Lombards who have been naturalised in Piedmont. This reply has failed to satisfy the Sardinian Government. M. de Cavour has accordingly sent Colonel Actis to Vienna. The Colonel is the bearer of fresh instructions to Count Revel. In these instructions provision is made in case the Court shall have left Vienna.

A letter from Rome states that there has been this year a great falling off in the number of strangers who usually resort to Rome to witness the Easter ceremonies. This is attributed to the persecutions of the Madiai, and other acts of intolerance on the part of the Romish Church. The Pope is said to be personally desirous to come to Paris to crown the Emperor.

SPAIN.

The report of the majority of the committee of the Senate favourable to the pretension of Narvaez, has been rejected by that body by 104 to 64. The Minister has signified his intention of depriving those senators of their functions as public officers who voted with the minority in favour of the claims of Marshal Narvaez.

GREECE.

M. R. Palamides, the Minister of the Interior, cedes his place to M. I. Ambrosiades, late Prefect of Attica and Bœotia. Palamides has, as a special favour, been created a Senator.

RUSSIA.

Some very interesting particulars of the position and efficiency of the Russian army are contained in the tenor of a series of letters on the subject published in the *Army Gazette* of Berlin. The following passage has a present interest:—

The construction of the great railway lines connecting Moscow, Petersburg, Odessa, and Warsaw, is changing the conditions under which military force may be transported, changes the principles upon which Russia has hitherto conducted her preparations for war. Supposing a war to threaten from the West, we may assume that the active army would not move until Poland had been occupied. Hitherto this operation must have consumed months; but let the railroad from Petersburg to Warsaw be finished, and a week will suffice for the purpose. Before the first rail of the lines is laid down, the future military use has been a matter of study, and with especial reference to the transport of large masses of troops. Thousands of solidly framed wagons are already made or making, and their construction is truly artistic. The packing or suspending of arms, knapsacks, cavalry saddles, and all the appurtenances of a battalion, are abundantly cared for. In three days the half, or in a week the whole, Guard and Grenadier corps may stand in Poland, while the reserves are coming up to St. Petersburg, by the Moscow and Petersburg Railway. The whole political significance of the new railway lies in the fact, that the Guard and Grenadier corps may in future be brought to Poland in a week instead of in months. Let that great artery be connected with Odessa, and with a railroad from Moscow to Warsaw, as well as with another from Warsaw to Odessa, and it cannot then be denied that Russia will have effected a revolution in her military relations to Europe.

It is reported that a division of the Russian army has entered Bucharest, the capital of Turkish Wallachia.

We hear of delications among high Russian official authorities. The sum embezzled was 1,800,000 silver rubles. The Privy Councillor, General Politkessky, who had the management of certain public monies, on his death-bed confessed how he had abused the confidence reposed in him. The corpse of the penitent man was degraded in its coffin by the executioner, and ignominiously shovelled into the earth. Several Generals have been arrested who ought to have examined the accounts of the deceased. The scandalous affair so vexed the Emperor that he was quite ill for a time.

TURKEY.

The much-dreaded interview between Prince Menschikoff, the haughty Envoy of Russia, and the Sultan, took place on the 8th ult. The result is reported to be satisfactory, and no pretensions or claims corresponding to the extraordinary deportment of Prince Menschikoff on his entry into Constantinople are said to have been put forward. The Prince is stated to have expressed himself satisfied with the removal of Fuad Effendi, and with the explanations of his successor. The new Minister, Rifaat Pasha, successor of Fuad Effendi, appears to be favourable to Russia. Both in London and in Paris the Italian Government is said to have declared, on the faith of the Emperor, that the formidable list of demands ascribed to Prince Menschikoff has no foundation in his instructions, which are confined to the matter of the Holy Places, and that even on this subject he has to claim no exclusive privileges for the Greek Church, but to find out some means of affording an equivalent to the priests of the Latin Church in the Holy Land. These communications have been made, in a very friendly and conciliatory tone, to the French Government, and apparently with a desire to remove the cause of difference arising out of the rival churches.

Letters from Constantinople state that the Russians throw away large sums of money in Constantinople, and make considerable presents to the old Turkish party. Colonel Rose, the English Charge d'Affaires, has been "snubbed." He proffered his services to the Grand Vizier, as mediator between Prince Menschikoff and Fuad Effendi; but, on calling at the Russian Embassy, M. d'Ozeroff informed him that, as the Ambassador was aware of the cause of his visit, he must beg to be excused seeing him; he wished to avoid all discussion, as he was only obeying the express instructions of his Sovereign in respect to the British Minister. Lord Stratford's arrival was looked forward to with extreme impatience. The new bank plan is neither more nor less than another kind of loan, which will cost the Porte more than Prince Callimachi would have done with it has, however, one advantage. It will not afford the Turkish employés such facilities for enriching themselves at the expense of the state.

MOROCCO.

Intelligence has been received of the deplorable state of the Emperor's health. His death, it is feared, will be the signal for a terrible crisis.

AMERICA.

By the United States mail steamer *Pacific*, we have advices from New York to the 15th ult. Strong debates have taken place in the Senate on Central America and the Monroe doctrine. The fact of Trunillo having been taken possession of by the British steamer *Devastation* on the part of the Mosquito King is confirmed. The United States Government, it is said, has called upon the English Minister for an explanation with regard to Honduras; and the Secretary of the Navy is to report what efficient naval force he has at his action. A treaty to liquidate mutual claims between the British and American Governments has been ratified by the Senate. The fortnightly steamers from California (seven in number) have brought about four millions and a half of dollars in gold. There is an active war between Honduras and Guatemala, the cause being a disputed boundary.

From Havannah we have advices to the 18th ult. The Commissioners despatched to meet Santa Anna and invite him to return to Mexico, had arrived at Havannah on their way to Carthagena. The general impression in Mexico was that Santa Anna would not proceed directly there, but await in Havana the formation of a party, which it is said is being got together to support his views. Seven States had voted for his Presidency. The other States had not been heard from, with the exception of Puebla and Guanaxuato, which had declared against him. A very decided majority of the people of Mexico were in favour of his return to power. General Blancarte had left Mexico with a brigade of 1500 men and six pieces of artillery, to bring to terms the State of Guanaxuato. Senor Villamil had arrived at Tehuantepec, Yucatanisident by the Government to deliver up the Isthmus to the representatives of the Sloo Company.

INDIA AND CHINA.

The following telegraphic message has arrived, dated Trieste, March 28:—

"The steamer *Bombay* arrived this morning from Alexandria, in 128 hours.

"Ambassadors from Ava, accompanied by two missionaries, had reached General Godwin's camp.

"The Emperor of Ava was besieged in a small fort by his younger brother, who had the whole army on his side; he was sure of reducing the fort, and desired peace with the British on any terms.

"In consequence of orders received from Ava, Prome had evacuated the province of Pegu, and General Steel had occupied all the strong positions in the district.

"The province of Bassein had been cleared of the enemy by Colonels Fytch and Rennie; but an expedition sent against a robber chief, near Donabew, had been repulsed with a loss of two guns and 83 killed and wounded.

"Among the officers killed were Capt Loch and Lieut. Kennedy, R.N.; and Capt Pryse, 67th Bengal N. I. . . . the severely wounded were Lieut. Bushell R.N. . . . Lieut. Hammond and Wilson, Mates of the *Wanderer*.

"Trade was brisk at Calcutta and Bombay.

"The rebellion in China was growing more and more serious every day."

The melancholy incident so briefly narrated in the telegraphic despatch has excited a feeling of deep regret for the premature loss which the service has sustained in the deaths of the officers killed. We knew, from the last advices, that an attack was to be made upon a strong position at Donabew, where a marauding chief, with upwards of a thousand followers, had occupied the square of the Pagoda, and ejected the head man of the town, who had been faithful to the British throughout the war. These marauders, or dacoits, as they were called in the army, had already given the forces some trouble, for they occupy a country covered with jungle and intersected with creeks, in the unknown delta of the river. Very recently a squadron of boats and a steamer had been sent against them, and had returned with loss, never having seen the enemy, though they ascended a narrow creek, staked in several places, and were exposed to a galling fire. (Vide ILLUSTRATED LONDON NEWS, March 19, in which appeared a Sketch by an officer of the Indian army, of the attack made upon the boats by the Burmese). It was, therefore, thought necessary to renew the attack on these formidable robbers with a larger force, and Captain Granville Loch, the flag-captain of the *Winchester*, who had already shown the greatest energy and ability in maintaining the communication by water between Prome and Rangoon, determined to lead this enterprise in person, but, since the arrival on the station, had received a letter forbidding him to go, as the enemy to be encountered or a service to be performed. The result of this attack proved most unfortunate. It was repulsed by the natives with very severe loss, amounting to no less than 88 killed and wounded out of a party which cannot have exceeded 300 or 400. Two guns were also lost; and, as if to render this disaster the most painful occurrence in the campaign, it was marked by the death of Captain Loch himself, who commanded the expedition, and of Lieutenant Kennedy, of the *Fox*, while several other officers and mates were severely wounded.

DESTRUCTION OF RANGOON BY FIRE.

By electric telegraph from Marseilles, we learn that the Overland Indian Mail contains despatches from China, Feb. 10; Rangoon, Feb. 14; Calcutta, Feb. 19; and Bombay, March 1.

Rangoon has been almost destroyed by conflagration.

AUSTRALIA.

The *Great Britain* steamer brought files of Australian papers to the Cape of Good Hope. These advices have arrived by the *Calcutta*, which sailed four days after the *Great Britain*. The *Great Britain* brings a rich cargo of wool, 136,000 ounces of gold, 175 passengers, and a mail. She left Port Phillip on Jan. 5, and arrived at Simon's Bay on Thursday, the 10th of February.

The Government escort from Mount Alexander arrived at Melbourne with 10,125 ounces of gold. The last escort from Ballarat brought down 11,000 ounces of gold. 2677 ounces of which were for Melbourne, and the remainder for Geelong. Another from Mount Alexander and Bendigo arrived at Melbourne with 9302 ounces of gold. The last accounts from the various diggings are by no means favourable; but all experienced persons agree in asserting that there is no probability of the gold fields failing. The price of gold was £3 3s. 9d. on Feb 7. A person recently returned to Melbourne from the Ovens with 15 lbs. of gold, got there by himself. The armed escort from the southern diggings arrived at . . . on the 7th December, with 14,230 oz. of gold. The shares in . . . and Sydney Gold Escort Company have been well received. . . . and it is expected that operations will be speedily commenced. . . . The last reports from the north and south diggings were favourable. . . . Several parties have recently arrived at Maitland, from the Lachlan, with parcels of 6 or 8 oz. of gold.

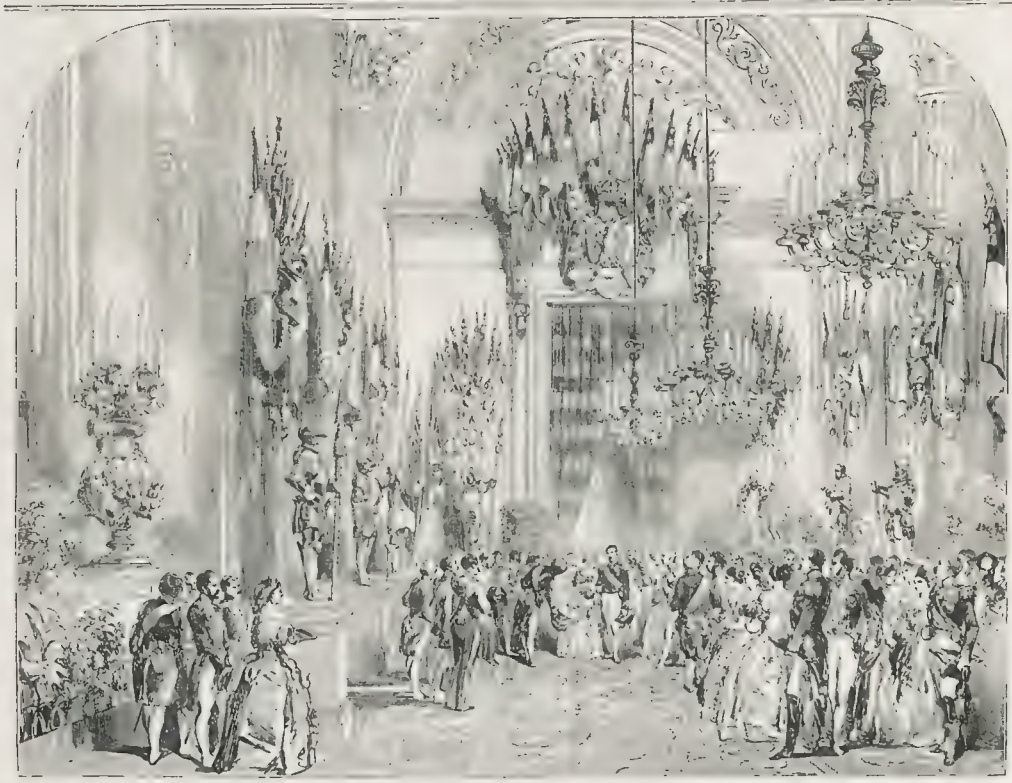
The first specimens of the sovereign coined in Australia have appeared in circulation. On one side is a crown, the year of coinage, and the words "Government Assay Office, Adelaide." On the other side are the words, "Value, One Pound," and weight 5 dwts., 15 grains, . . . carats.

THE BALL OF THE LEGISLATIVE BODY TO THE EMPEROR AND EMPRESS OF THE FRENCH.

THIS grand fête offered by the members of the Legislative Body, in the Palace, at Paris, to the Emperor and the Empress took place on Monday night with great magnificence. The persons invited began to arrive at nine o'clock, and from that hour until half-past twelve o'clock, an uninterrupted stream of carriages was to be seen, on each side of the river, advancing towards the scene of festivity.

These entrances were opened for the guests: the principal one, that by the Court of Honour of the Palace from the Place de Bourgogne, was reserved for the carriages of the Imperial party, of the Ambassadors, and of a few privileged personages; a second entrance was by the avenue of the hotel of the President of the Legislative Body; and the third, on the other side of the Palace, was by the steps in front of the Pont de la Concorde. To make this arrangement available, it was necessary to unite together the Hotel of the Presidency with the Palace of the Legislative Body; and this was effected by means of a temporary construction erected over the whole length of the garden lying between the two buildings. The building thus raised, and which formed the very centre of the fête, contained first of all a vast *jardin d'hiver*; next, of an immense ball-room; and lastly, of a supper-room, capable of accommodating 2500 persons at a time. The first-named of these constructions was separated, throughout its whole length, into three distinct galleries communicating with each other by means of wide arches; and all most tastefully arranged with flowers, evergreens, statues, fountains of falling water, mirrors, long lines of chandeliers from the ceiling, and thousands of lights also on the walls. These arrangements bespoke the exquisite taste of M. Duban, the architect, of M. Hubert, also of the Legislative Palace, M. Alexis Godillot. Upon the ensuing page we have engraved the reception-room, *Salle des Armures*; and beneath it, the *Jardin d'Hiver*

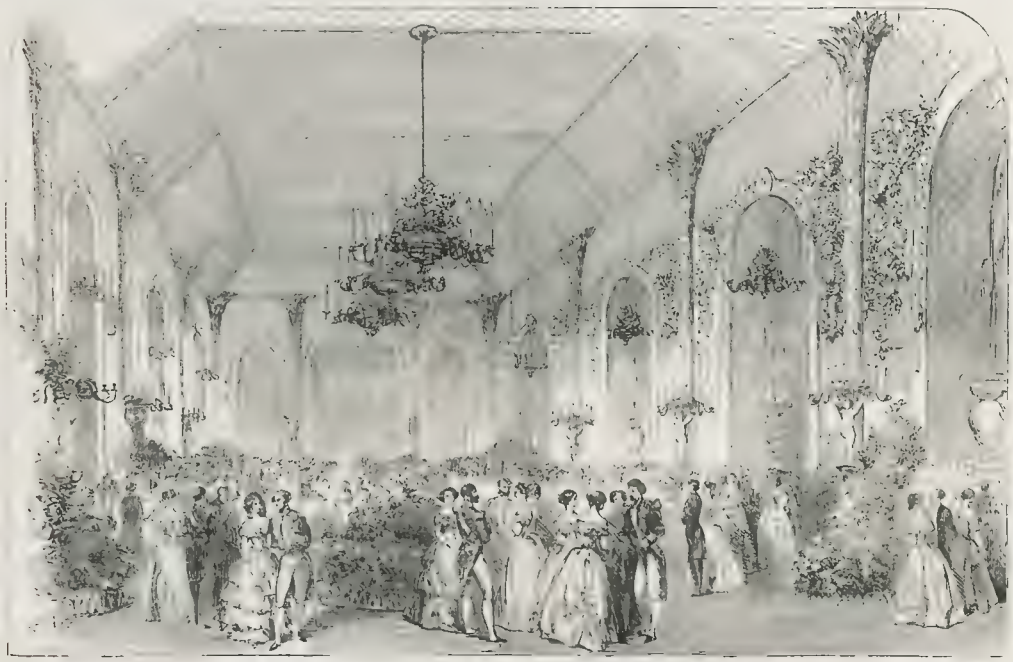
At half-past ten, the carriage of the Imperial Majesties entered the courtyard of the Legislative Palace. Their Majesties were received at the foot of the steps by M. Billault, the President, at the head of the members composing the Bureau of the Chamber, and the deputies appointed to act as stewards of the fête. Their Majesties were then conducted through the Salle des Armures, mentioned above (which they stopped a moment to admire), to the Salle du Trône, where the other members of the Imperial Family and the Ministers of State were assembled. Immediately after, their Majesties, followed by their numerous suite, proceeded to the Salle des Pas Perdus, and took their seats on the chairs of state prepared for them. The Princess Mathilde occupied the seat on the right of the Emperor, and Prince Jerome and Prince Napoleon were on the left of the Empress. The Emperor wore the uniform of a general officer, and the Grand Cordon of the Legion of Honour. He appeared in excellent health and spirits. The Empress excited, as usual, universal admiration. Her Majesty wore a pale pink satin robe, with magnificent point lace, and trimmed with white roses surrounded with their green leaves. Her hair was worn off the face, and at the back of the head bearing a quantity of flowers and splendid diamonds. On her neck was a necklace of diamonds of great value; and her Majesty wore *en sautoir* the cordon of the Order lately sent to her by the Queen of Spain. After having graciously saluted several persons whom they recognised as they passed before them, and had conversed with some of the Ambassadors, the Imperial quadrille was formed to open the ball. The Empress was there with Count Walewski, President of the Legislative Body, and the Emperor with Mdlle. Billault, daughter of that functionary. The other personages in the quadrille were the Princess Mathilde, who had M. Fould, the Minister of State, for her partner; their vis-à-vis being M. Rouher, the Minister of Religion, and the Countess de Hatzfeldt, wife of the Prussian Minister. As soon as the quadrille had concluded, their Majesties resumed their seats, and conversed for some time with the personages around them. The Emperor also descended from his chair to speak to others. Their Majesties then walked through the rooms, and appeared struck with the taste displayed in the decorations. They then withdrew to the Salle du Trône, where they remained conversing for some time with the persons admitted to their presence; and about half past eleven proceeded to the Salle des Conférences, which was fitted up as a supper-room, tables being set out round three sides of it, capable of allowing 500 persons to



RECEPTION OF THE EMPEROR AND EMPRESS OF THE FRENCH BY THE LEGISLATIVE BODY.—THE SALLE DES ARMURES.

partake of refreshment at the same time. After partaking of some slight refection, their Majesties returned for a few minutes to the Salle du Trône, and then took their departure at about twelve o'clock the Emperor expressing to M. Billault his entire satisfaction at the admirable manner in which the fête had been conducted.

Looking generally at this fête, the guests were unanimous in declaring it to be one of the most successful seen in Paris of late years. The number of beautiful women present was extraordinary, and the display of diamonds unusually fine. The vast variety of official costumes imparted a peculiar appearance of animation to the scene; and the uniforms of most of the military services of Europe were to be seen there—the scarlet of the English army being pretty numerously represented. Some English court-dresses were also to be seen worn, it is said, by some of the gentlemen who had in the morning presented the Peace Address to the Emperor. It was calculated that about 8600 persons passed through the rooms in the course of the night. About three o'clock the company began to thin, but dancing was kept up with great spirit until half-past four in the morning.



GRAND BALL OF THE LEGISLATIVE BODY TO THE EMPEROR AND EMPRESS OF THE FRENCH.—THE JARDIN D'HIVER.

THE AUSTRALIAN ROYAL MAIL STEAM SHIP "SYDNEY."

THE AUSTRALIAN ROYAL MAIL STEAM-SHIP, "SYDNEY."

This noble vessel (commanded by Captain Franklyn) has excited considerable interest, by her return from Australia with a very rich freight of gold—valued at £800,000 sterling. Her passengers were 122 adults, and 17 children. In addition, the *Sydney* obtained £2000 for intercolonial passengers only.

The *Sydney* left Plymouth on the 4th of August, 1852, at 9 30 A.M., and arrived at St. Vincent in 10 days 5 hours; she was detained there 3 days 6½ hours. From St. Vincent to Ascension she was 12 days 13½ hours on the voyage, and was detained there 6 days 6½ hours. The run from Ascension to the Cape of Good Hope occupied 9 days 20 hours, and she was detained there 5 days 6 hours. She left the Cape of Good Hope October 3, and arrived at King George's Sound October 24, making the passage in 21 days 12 hours. She was detained at that place, coaling, for 4 days 21 hours, from the impossibility of procuring labour, and sailed October 29; arrived in 5 days at Adelaide, remained there 1 day 7 hours; sailed November 5 for Port Phillip, arrived November 7, remained discharging passengers and cargo there 5 days 19 hours; and on November 13 sailed for Sydney, where she arrived November 16, in 71¼ hours.

On her return voyage she sailed from Sydney, December 4; arrived in 69 hours at Port Phillip, and remained there 8 days 7 hours. On Dec 11 she sailed for Adelaide, where she arrived December 14, in 61½ hours, remained there taking passengers and treasure 3 days 9 hours; sailed for King George's Sound, December 17; arrived December 21, in 4 days, remained coaling 3 days 3½ hours; sailed January 1, arrived at the Cape on February 1, in 30 days 23 hours; remained at the Cape 4 days 1½ hours coaling, sailed February 6; arrived at St. Vincent February 26, in 20 days 13½ hours, remained coaling 3 days 21 hours; sailed March 4, and arrived at Plymouth in 14 days 3 hours.

The *Sydney* was built by Denny and Co. Her dimensions are:—Length, 216 feet; beam, 34 feet; depth, 25 feet. She is 1500 tons burthen, and 500 horse-power

THE HAM FAIR AT PARIS.

The yearly fair for the sale of hams, which takes place on the Tuesday, Wednesday, Thursday, and Friday of Holy Week, was held on the 22nd ult., according to an ordinance of the Prefect of Police, upon the Boulevard Bourdon, extending from the Grenier d'Abondance to the Quai Morland. Two days previous to the fair the dealers entered their names, in order to obtain places at the fair for the sale of their goods, which arrived in carts and other vehicles on Monday night. On Tuesday morning, at daybreak, the workmen began to unload the hams, and to construct the booths for their reception. The latter were ranged in two rows—the one abutting upon the Grenier d'Abondance, and the other upon the canal. Some of the booths first constructed were ornamented with gay ribbons and evergreens. Altogether, there were not less than from 300 to 320 stalls, at which were sold, throughout the fair, not only hams, but sausages, salt and hung pork, lard, *andouilles*, and other dainties. A fine sucking pig, smoked, of the crossed Leicester breed, from the agricultural colony of Petit-Bourg, excited some attention.

In proceeding from the Bastille to the Seine, the ham-merchants were ranged in the following order:—On one side were the wholesale dealers of the Moselle, la Meuse, les Vosges, le Nord, l'Aisne, l'Eure, la Haute-Marne, la Marne, l'Oise, Seine-et-Oise; on the other side those of la Seine, la Nièvre, l'Orne, l'Eure-et-Loir, l'Indre, la Vienne, le Maine-et-Loire, et les Basses-Pyrénées. In the middle of the macadamised road some merchants of the above departments who could not find room on the two other lines, formed a third row. The Department of the Meuse, as in former years, contributed the greater number of dealers to the fair, viz., 64. After them came the Departments of the Seine and the Moselle, the latter numbering 28 dealers. The number of dealers, alto-

EASTER HAM FAIR, AT PARIS.

gether, was much less than last year. The price of ham of all kinds varied from 80 cents to 1 franc 20 cents the demi-kilogramme, or from about 8d. to 1s. per lb.

The Ham Fair is of very ancient origin. The Gauls and the Gallic Romans have transmitted to the French their taste for pork-flesh—a taste so exclusively their own, that, according to Legrand d'Aussy, there were up to the twelfth century, feasts where only the flesh of pork was served up. At Paris, the Cathedral Chapter, upon certain days of ceremony, were treated in a similar manner, and such, it is stated, is the origin of the Ham Fair of Paris, which was originally held around the eminence in the Cathedral. When the festival of Easter arrived, the French, who observed Lent very scrupulously, solaced themselves with a ham, and this was considered the dainty *par excellence*. The ham destined to this re-invigoration of the physical system was blessed by the clergy.

At the foot of the Column of July, upon the Place de la Bastille, and on the Boulevard Bourdon, as far as the Ham Market extended, dealers in various fancy wares constructed booths and exposed their goods for sale. This usually solitary and tranquil quarter was thus transformed, during the whole of last week, into a noisy and animated fair.

During the last two or three days the fair was more numerously attended than at the commencement, and a large amount of business was transacted. Seven persons were taken up during the time the fair lasted for theft. One of them is a native of London, who admits that he came over on purpose to attempt something during the fair; and another, a woman, aged 53, who was furnished with a dress made into a sort of bag, in which 15 kilogrammes of *charcuterie* were found when she was arrested. Another of the persons taken up was a convict, discharged from the bagne of Toulon in 1849.

CALENDAR FOR THE WEEK.

SUNDAY, April 3. First Sunday after Easter.
MONDAY, 4. St. Ambrose.
TUESDAY, 5. Goldsmith died, 1774.
WEDNESDAY, 6. Richard Cœur-de-Lion killed, 1199.
THURSDAY, 7.—Don Pedro, Emperor of Brazil, abdicated, 1831.
FRIDAY, 8.—Fire Insurance due
SATURDAY, 9.—Battle of Toulouse, 1814. Lord Bacon died, 1626.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING APRIL 9.

THE ILLUSTRATED LONDON NEWS VOLUMES, from the Commencement in May, 1842, to December last, 1852, consisting of TWENTY-ONE VOLUMES, may now be had through all Booksellers and News-agents.—Price of the Complete Set, ... Each Volume separately, £1 4s. 6d., neatly in cloth, elegantly gilt. Any single Volume can be had separately. Price of Volume I., cloth, 21s.; II. to XVII., 18s. each; XVIII., 21s.; XIX., 25s.; XX., 18s.; XXI., 24s.; or in Paper Covers, at 2s. per Volume less. The price of a Single Back Number a month after the date of publication. The Covers for Binding the Volumes, 2s. 6d. Handy Cases, 3s. Portfolios, 4s. A liberal discount to Merchants and Subscribers.—Office, 198, Strand.

TO CORRESPONDENTS.

H. F.—The *Arms* of Fullerton are.—"Arg. three otters' heads erased gu. Crest: An arm erected and couped at the elbow erased ppr." *Motto:* Lux in tenebris."

ARMIGER.—Is of Dickinson.—"Arg. a cross sa., in the dexter chief a fleur-de-lis gu. *Crest:* A magpie ppr."

PEN.—We do not find any arms registered to the name of Hickling.

DELTA.—*Arms* of Tatlock: "Az. a bend cotised or, in chief a dolphin hauriant of the *Crest:* Out of a mural coronet az. a dexter arm brandishing a sword waved ppr."

K. A. W.—We have no details or information about the name of Kynoch.

TIMOTHY SY.—*Arms* of Davidson required.—"Az. on a fesse arg. between three pheons or a buck couchant gu."

A CONSTANT READER.—Daughters take the same precedence as the eldest son. The point submitted would depend on the relative rank of the husbands.

A WALSAL SUBSCRIBER is desirous to obtain information regarding a General Harry Innes, who died s. p. in 1807. Can any of our readers assist him?

A SUBSCRIBER may be legally assumed, or changed, by the simple act of the name by Royal license does not add to the but is desirable as rendering the alteration proper, and ac- Some testamentary bequests require the name to be the husband, when such heirs must be o- license, procured through a member of the ; but there is an additional sum guineas required for the stamp, when the name is under a will.

AN OXFORD SUBSCRIBER.—A younger son, whose mother was a co-heir-, is fully entitled to bear her arms as a quartering; but he has no right to take her for- of-.

X. Y. Z.—Y- of Islington, whose eventful heiress married Spencer ", was, about between three and four years ago.

LEX.—The calendar of each generation use the same courtesy designations.

ARCHEOS.—The late Right Hon. Sir Robert Peel succeeded to the baronetcy which had been conferred in 1800 on his father, the first Sir Robert.

AN OLD SUBSCRIBER.—*Arms* of Vaughan, Earl of Carbery: "Per fesse arg. and sa., a lion rampant, reguardant, counterchanged." There does not appear to have been any descent from the Vaughans in the Evans family, which has taken Carbery for the title of their peerage. John Vaughan, 3rd and last Earl of Carbery, died January 12th, 1712, leaving an only child, Anne, Duchess of Bolton; at whose decease, *s. p.*, in 1751, the old family estate of Golden grove passed to her heir male, John Vaughan, Esq., of Shenfield, whose great grand-son and representative is the present John Lloyd Vaughan Watkins, Esq., of Pennoyre, Lord-Lieutenant of the county of Brecknock.

A. and B.—The question cannot be solved without reference to the original patents of arms. If his arms of the first Nova Scotia Baronet were those of his father, and not a grant, personally, to himself, the grandson of B. is clearly entitled to adopt them, on becoming head of the family.

A SEEKER AFTER TRUTH, Oxford.—The pedestal of the statue of Charles I., at Charing-cross, was certainly sculptured by Marshall, as proved by the payment of the expenses of the Right Master of the Board of Works, preserved in the Audit-office, and recently printed, by Mr. P. Cunningham, in the *Gentleman's Magazine*. Wren may possibly have designed the pedestal.

A CONSTANT SUBSCRIBER.—*Arms* of Shelley: "Sa. a fesse engr. between three whole shields or. *Crest:* A griffin's head erased arg. beaked and ducally gorged or."

A. P. G.—Lord Campbell was Lord Chancellor of Ireland in 1841. Lord Denman never was Lord Chancellor. He obtain- his peerage in 1834, being then Lord Chief Justice of the K- g's Bench.

A SUBSCRIBER.—A lady, without title or courtesy style, marrying the younger son of an Earl, becomes entitled to the style of "Honorable" during her husband's lifetime and her widowhood; but she forfeits it on marrying a commoner.

EDWARD COPLAND.—The second picture is taken at the same distance from the object, but with an alteration of the angle of about 30°, a second pair of photographs will be obtained. The proto nitrate of- is the best re-agent for developing the calotype picture.

A SUBSCRIBER.—Mr. Woodbridge.—"Hunt's Manual of Photography" or "Lorne and Thornthwaite's Instruction in Photography." The specification of the Daguerreotype patent is in abeyance; the process is extensively practised without a license.

MAXWELL.—The lamp-black, wherever it may be obtained, must be absolutely free from any gritty or sharp particles.

J. J.—Photography offers the only means for quickly and accurately obtaining views on paper.

A SAILOR, at Sheerness: and J. D., Isle of Wight, declined.

C. J. C., Plymouth, should address his compliment to the General Post-office.

T. H., Islington.—Under any is the proper seaman's phrase.

AN OLD SUBSCRIBER.—We will, perhaps, send further particulars of the steam-engine proposal.

G. J., Edinburgh.—"Alison's History of Europe." Foucault's Pendulum experiment was made in 1851. (See "Quarterly Review" of that year; also, a *precis* of the results of the several Experimenters, 10 pages, in the "Year book of Facts.")

W. H. C.—See Mitchell's "Bell room Companion."

S. H. P.—"Logic is the art of thinking and reasoning justly."—*Watts*

A. Z.—The value of your Hertzrath's grants depends upon the state of discussions between the Hertzrath's Government and the Ottoman Porte.

J. S.—"The Return of the Dead," by Chas. Mackay, LL.D.

T. H. O.—The gentleman in question is an Alsatian Israelite Domain. See the glyphographic process described in the specification of the patent.

Ferax.—Ink-nuts may be removed by chloride of lime.

H. H. F.—A Key to "Coningsby" was published soon after the first appearance of that novel.

ENQUIRER.—"Entire," or entire butt, was the name given to a liquor partaking of the flavours of ale, beer, and twopenny, by Harwood, the brewer, about 1730.

A SINGER.—Wade's "Handbook to the Pianoforte."

OMEGA.—For a list of noblemen, see Lowe's "Charities of London," or the "Family Almanack and Educational Register" for 1853.

J. W. W., Hull.—Spoonfuls is used by Arbuthnot, a writer of sound English.

OCTAVIUS W.—See the ILLUSTRATED LONDON ALMANACK for 1846, for the origin of "All Fools Day."

S. C. Leeds.—Hippolyte was the son of Theseus and Hippolyte, and Aricia the name of the city reliant in Italy. (See Dymock's "Bibliotheca Classica"; also, Galignani's "Picture of Paris.")

H. H. O.—The line

Men are but children of a larger growth,

is from Dryden's play of "All for Love."

E. L. D. D.—See "Hunt's Guide to Photography." Third Edition.—Griffin and Co.

SHORT-HAND, Warwick.—See "Short Short-hand," lately published.

NEW YORK.—Apply to an American bookseller.

A. L., Leicester.—See the "Treatises on Sheep and Cattle," in the "Farmers' Library."

A CONSTANT READER.—Members of the House of Commons do not receive any remuneration for serving on private committees.

ARTISTIC SUCCESS, Mr. George Cruikshank, 86, Fleet-street.

ALPHA, Greenwich.—Apply respecting the annuity for a professional man, at the Athenæum Institute, Sackville-street, Piccad lly.

J. R.—"So much for Buckingham," in "Richard III.," is not Shakspeare's, but one of Cibber's interpolations.

KATHLEN.—See the "Illustrated London Cookery-book."

F. S., Coventry.—Is thanked. Will have not space for his letter.

A SUBSCRIBER.—Mrs Chisholm's address is Angel-terrace, Islington.

J. A. B., E. S. I. United Service Club.—See Webster's "English Dictionary," or Richardson's.

SIGMA, Edinburgh.—Hunt's "Guide to Photography," published by Griffin and Co., Glasgow.

BILBAO, Spain, is thanked; but we have not room for the Sketch.

A SUBSCRIBER, Bristo.—Apply for Calotype Slides for the stereoscope to Horne, Thornthwaite, and Co., Newgate-street.

A CORRESPONDENT, who inquires for a short work on "Taxidermy," will find some useful "directions for collecting zoological specimens" in the "Companion to the Almanac for 1838;" they are compiled principally from Dufresne's "Taxidermie," Dr. Chichester's "Instructions," and Samouelle's little work.

B. B., Upton.—The couplet

For he that fights and runs away
May live to fight another day,

is not from "Hudibras," but from the "Musarum Deliciæ," 12mo, 1656; but a correspondent of "Notes and Queries," No. 12, traces it to the following apophthegm, in a collection first printed by Grafton, in 1542:

That same man that runneth away,
Male again fight, another day.

P. R.—See Sharpe's "Gazetteer," lately published in two large vols., 8vo.

G. C., Great Milton, Oxon.—The office of Lloyd's Register of British and Foreign Shipping is at No. 2, White-Hon-court, Cornhill.

W. W., Glasgow.—Declined. G. S., Stepney.—Received.

*** Mr Bacon writes to state that his statue of "Helen Veiled before Paris" was modelled previous to the Great Exhibition of 1851; but that he was deterred from sending it there, because he could not obtain for it the situation which he considered it was entitled to

WITH THIS WEEK'S "ILLUSTRATED LONDON NEWS" IS PUBLISHED A SUPPLEMENT, GRATIS.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 2, 1853.

THE "Turkish difficulty," and the mission of Prince Menschikoff to Constantinople, which at one period threatened to disturb the peace of Europe, will have one satisfactory result, if they relieve Christendom from the scandal which the quarrels of certain Christian sects in the Holy City have brought upon the Christian faith. The dreadful scenes of which the Church of the Holy Sepulchre has been the arena, the superstitious practices of the rival sects, and their wretched bickerings and vindictive jealousies, have long excited the supreme contempt of the Jews and Mahometans in the Holy City, while their irreconcilable pretensions have occasioned incessant trouble and annoyance to the Ministers of the Porte.

Difficulties of no ordinary magnitude present themselves in the way of an amicable and final settlement of this question, arising not less from the arrogant and conflicting claims of the Christian communities who have established themselves in the Holy Shrines of Palestine, than from the political and religious policy and pretensions of the two Great European Powers who respectively protect the Greek and Latin Churches of the East.

Ever since the reign of Francis I. the Kings of France have, by treaty, claimed the right to be the Protectors of the Holy Places, and of the Latin monks who guarded them. The Greeks have, of late years, by means of firmans from the Porte, successfully contested with the Roman Catholics the right to the exclusive guardianship of the Shrines; and the Greek monks proceeded from one encroachment to another until Louis Napoleon, listening to the urgent representations of every French traveller to the Holy Land, has vindidated his title of "hereditary Protector of the Catholics in the East." The Emperor of Russia, on the other hand, as "the Sovereign of the greater number of the followers of the Greek Church," has always abetted the claims of the Greeks, as well because millions of his subjects feel the deepest religious interest in the guardianship of the Holy Shrines, as because Russia has long had its eye upon Palestine, and would not fail, in any partition of the Turkish Empire, to contest the claims of any other Power to the possession of Syria. Recent travellers inform us that the Greek clergy, a few years ago, while infusing education among the rising generation of Mahometans, took care to propagate the notion that the Grand Duke Michael was the second Michael designed by certain Greek interpretations of the Prophecies, as the person who was to wrest the sway of Syria from the Mahometans, and establish the Russian Government on the ruins of the Turkish Empire.

It may seem matter of regret that the Holy Land should still remain the territory of a Mahometan power. But the animosities and intrigues of the Christians compel every traveller of fairness and moderation to avow the conviction that the Turks are for the present the best and safest guardians for the Holy Places, and that the control of an infidel, and, therefore, indifferent arbiter is necessary to restrain within some bounds those vindictive feuds which have occasionally broken out into acts of open and even fatal violence. The moment seems favourable for renewing the negotiations which were commenced in 1849 between France, Russia, and the Porte, with a view to define the prerogatives and possessions of the rival sects, but which were unfortunately interrupted by the battle of Navarino.

The claims of the Latin Church, as they were defined by M. de Marcellus from an investigation upon the spot, show, if they prove nothing else, how many absurd and unreasonable pretensions each community must be prepared to concede before a satisfactory conclusion can be arrived at. That the Christian sects who wrangle with each other in the Sacred City could be brought to any common agreement upon the multitudinous and pitiful subjects of dispute between them is not to be expected. But both the Czar and Louis Napoleon are, fortunately, potentates with sufficient strength of will to disregard the jealousies and heart-burnings which have brought scandal upon the Greek and Latin churches; and they would earn the gratitude of every European nation if they would determine to put an end to these melancholy religious dissensions. France and Russia might define the prerogatives, and establish a common enjoyment of the Holy Places, by the rival sects; but no settlement would be likely to be satisfactory, unless by a liberal subvention the Greek and Latin monks, who at present act as *custodes* of the Holy Shrines, could be removed, and their places filled by ecclesiastics selected by the Greek and Latin churches for their piety and moderation, and strangers to the miserable feuds and jealousies of their predecessors.

THE festivities of Easter have been agreeably marked by the arrival of intelligence which gives reason to anticipate the cessation of hostilities in two distant portions of our Colonial empire towards which public attention has been of late painfully directed. The termination of the Kaffir war and the Burmese war, and the harassing, expensive, and inglorious campaigns by which they have been attended, has diffused general joy throughout the Empire, and will enable Ministers to meet Parliament on Monday with increased confidence. The news from the Cape appears to us more hopeful and decisive than it is regarded by some of our contemporaries. Sandilli has retreated from Kaffraria, and has signified his submission; he has retired across the Kei with Macomo and other chiefs. The independent chief, Kreli, has sent a bundle of assegais in token of his submission; so that the Kaffir war may now be considered at an end. The Kaffirs have shown remarkable bravery and cunning throughout the last war; and we now possess this additional guarantee for pacific relations between them and the colonists—that both races must respect the valour and prowess of the other—a conviction which often prevents nations, as well as individuals, from rashly engaging in conflicts. If it should be found that our frontier is, from its extent, indefensible without the maintenance of a large military force, we cannot doubt that our Government, warned by the past, will abandon a barren and useless territory, which would have been dearly purchased at a tithe of the blood and treasure expended on our wars with the Kaffirs.

The approaching termination of the Burmese War is attributable as much to civil commotion and intestine dissension as to the strategy of General Godwin and the success of the British arms. There is reason to suppose that the Emperor of Ava has been deposed by his brother, who has sent an embassy to the British. If the Governor-General should recognise his pretensions, and place him, with the assistance of the disaffected Burmese, upon the throne of Ava, the Government of India will probably establish a Resident at the capital, and security will be taken for the establishment of pacific relations between Ava and the British power in India.

To the loss of Major Hogge, Major Wilmot, and other officers at the Cape, and the death of Admiral Austen, by cholera, at Rangoon, is now to be added the death of Captain Loch, R.N., Lieutenant Kennedy, R.N., and Captain Pryce, in a boating expedition against a Burmese robber chief. The British lost 88 in killed and wounded before the order was given for the boats to retire. The loss of so many valuable lives, while it tempers the joy with which the intelligence would otherwise have been received, will increase the desire that the next mail may bring us more conclusive news of the termination of hostilities with these obscure but desperate and barbarous enemies,

THE COURT.

HER Majesty and the Prince Consort, with the youthful members of the Royal family, left Windsor Castle at half-past two o'clock on Thursday afternoon, for their return to Buckingham Palace. The Royal party travelled by a special train on the Great Western Railway, and were escorted from Paddington by a detachment of Light Dragoons.

The incidents at Court life during the week have been almost exclusively confined to the domestic circle. The Earl of Aberdeen arrived at the Castle on Saturday last, and remained the guest of her Majesty until Monday.

On Sunday the Queen and the Prince with the Prince of Wales, the Princess Royal, and the Princess Alice, and accompanied by the Duchess of Kent, the Earl of Aberdeen, and the Ladies and Gentlemen of the Court, attended divine service in the private chapel of the Castle.

On Monday the Queen, with the Princess Royal and the Princess Alice, took a drive in an open carriage and four. The Prince Consort accompanied her Majesty on horseback. In the afternoon the Duke of Newcastle arrived on a visit to the Queen. The Duchess of Kent and the Princess Adelaide of Hohenlohe joined the Royal dinner party in the evening.

On Tuesday morning the Queen and the younger portion of the Royal family walked in the Home Park. The Prince Consort rode out on horseback, attended by Capt. the Hon. Dudley De Ros. The Prince of Wales and Prince Alfred also rode out, attended by Mr. Gibbs. In the afternoon Lord Granville arrived on a visit to her Majesty. The Duchess of Kent and the Princess Adelaide of Hohenlohe again joined the Royal dinner party this evening.

On Wednesday the Queen and the Prince Consort took a drive in an open carriage and four. Earl Granville took his departure this morning, and Sir James Graham arrived at the Castle.

Yesterday (Friday) the Queen held a Privy Council at Buckingham Palace.

Since the fire in the Prince of Wales's Tower, the Royal dinners have been served in the Oak Dining-room.

Lord Waterford has succeeded Lord Camoys as Lord in Waiting, and Colonel the Hon. R. Boyle has succeeded Major-General Berkeley Drummond as Groom in Waiting to her Majesty.

His Excellency the French Ambassador and the Countess Walewska, arrived in town on Thursday evening, from visiting the Earl and Countess of Sandwich, at Hinchinbrooke.

The Duke and Duchess of Norfolk, and Lady Adeliza Fitzalan Howard, arrived in town on Thursday, from Arundel Castle.

The Duke and Duchess of Sutherland have been passing the recess at Stafford-house. Lady Blantyre is not yet perfectly recovered from the severe illness from which she suffered a short time since.

The Marquis of Lansdowne has issued invitations for a Cabinet dinner on Wednesday next, at Lansdowne House.

The Earl and Countess of Clarendon have returned to town from visiting the Earl and Countess of Verulam at Gorhambury.

The Earl of Derby returned to St. Leonard's-hill, near Windsor, on Friday, from visiting Lord and Lady Southampton, at Whittlebury Lodge, Northamptonshire.

Viscount and Viscountess Palmerston come to town to-day (Saturday), from Broadlands.

Lady John Russell gave birth to a daughter on Monday last, at Pembroke Lodge. Her Ladyship and the infant are going on very favourably.

The Chancellor of the Exchequer and Mrs. Gladstone return to town to-day (Saturday) from visiting the Right Hon. Sydney Herbert, M.P., and Mrs. Herbert, at Wilton-house, near Salisbury. The Chancellor gives a grand dinner this evening (Saturday) to a large party of his political friends. Mrs. Gladstone has issued cards for assemblies on Wednesday next, and on Wednesday the 13th instant.

The Right Hon. B. Disraeli, M.P., and Mrs. Disraeli have been passing the recess with the Duke and Duchess of Rutland at Goodwood.

A grand ball, under the most distinguished patronage, is fixed to take place at Willis's-rooms on Thursday, the 7th of April. The ball is in aid of the funds of the German Hospital. His Royal Highness the Duke of Cambridge has signified his intention of being present at the festival, and it is anticipated a very large number of the aristocracy will attend.

LATEST INTELLIGENCE.

THE REPRESENTATION OF SOUTHWARK.—On Thursday evening the electors of Southwark entertained Sir William Molesworth at a public dinner, given to celebrate his recent re-election for the borough. The dinner was given at the Bridge House Tavern: it was presided over by Dr. Challice, and was attended by nearly 300 gentlemen, including among those the High Bailiff and the most influential men here at the present day. Mr. A. Pellatt, Sir William's colleague; Sir Alexander Cockburn the Attorney-General; Mr. Monsell, M.P., and Mr. Oliveira, M.P., were also invited guests upon the occasion. The usual loyal toasts were received by the company with great enthusiasm. "The health of Sir W. Molesworth," was given by the chairman, and responded to by Sir William; who thanked the electors of Southwark for returning him four times to Parliament: alluded to his exertions for improving colonial affairs, and expressed a hope that before long the colonies would be permitted to legislate for themselves. He assured his hearers that he was sincerely and earnestly anxious, to the best of his power, ability, and judgment, to give prudent and practical effect to those political principles which induced them to return him to the House of Commons: and he was convinced that they, prudent and practical men of business, would pronounce a fair and candid judgment on his conduct in office, believing that his colleagues and himself had only one object in view—the good government of this mighty empire, and the well-being of its inhabitants. "The health of the Attorney-General" was given, and Sir Alexander Cockburn, in responding to the compliment, remarked that England was the last strong hold of the sacred altar of liberty—the freedom of opinion. Our constitution wisely tempered the ardour and violence of democracy with the salutary restraint of monarchical government, but popular representation especially he regarded as being the basis of peace, good order, prosperity, and freedom among the people. He (the learned gentleman) was convinced that principle must be carried out to a still further extent, and when (as had been said by the chairman) they must have another "Russell purge." The company would remember the story of the medical man who sent the direction with his medicine, "when taken to be well shaken." (Laughter). Members of Parliament were being well shaken at present, and happy the man who came out of the ordeal unscathed (Cheers and laughter)

Let the ev'ls fall as where,
Soldiers and sailors may,

and he defied any man to say that he had tampered with the elements of corruption (Cheers). He concluded by expressing a hope that the constituency might long be represented by such a member, and such a member long represent such a constituency. Mr. A. Pellatt acknowledged the toast of "Prosperity to the Trade and Commerce of the Borough;" and, in doing so, dwelt strongly on the necessity of providing sound work with municipal institutions. The health of the High Bailiff and of the Chairman were among the other toasts of the evening.

ABERDEEN.—INSTALLATION OF THE LORD RECTOR.—On Wednesday the Earl of Carlisle was installed as Lord Rector of Marischal College and University. The attendance comprised the Senatus, the students, and a select number of the professional and learned bodies of the city. His Lordship delivered his inaugural address, which was received with the most cordial satisfaction, and elicited great applause. The Lord Rector then delivered the prizes to the students for proficiency in their respective classes; after which he dined with the Senatus. On Thursday he was entertained at a banquet by the students, and had the honour of the city conferred upon him; and in the evening he delivered a lecture on the poetry of Pope to the mechanics in the great hall of their institution.

GOVERNMENT EMIGRANTS.—The commissioners have just issued a notice, that all Government emigrants will be required to sign a written agreement that, if they go to the gold fields, or quit the colony within four years after landing, they must pay to the Colonial Government a proportionate part of their passage-money, at the rate of £4 per adult for each year wanting to complete four years from landing.

THE "CITY" OF MANCHESTER.—By the *London Gazette* of last night, we find that "The Queen has been pleased by letters patent under the Great Seal of the United Kingdom, bearing date the 1st of March instant, to ordain and declare that the borough of Manchester in the county of Lancaster, shall be a City, and shall be called and styled 'The City of Manchester, in the County of Lancaster.'"

RAILWAY SERVANTS AT MANCHESTER.—The porters in the goods departments employed in some of the railways, meeting in Manchester, have recently shown strong symptoms of "a strike." On Tuesday Mr. Salt, of the London and North-Western, waited by telegraph on that line canvassing the matter, at once assembled them, and informed them that the chief manager in London was disposed to listen to the just and moderate demands of the intelligent servants, but that at the very time, there was a most rigid determination to resist anything like extortion or tyranny. The workmen met Mr. Salt in a very fair spirit, the matter was doubted; and in the end, the men agreed to go to their work; and that gentleman informed them he would, in the meantime, lay the case before the directors, and that he had authority from Captain Huish to say that all reasonable and proper demands should have favourable consideration; and concluded by saying, "If you are satisfied with this promise, and willing to return to your work, say so by holding up your hands." The workmen all held up their hands, and appeared to leave the conference with feelings of great satisfaction.

TALLOW-CHANDLERS' BENEVOLENT SOCIETY.—On Thursday, the anniversary festival of this society was celebrated at the London Tavern; Thomson Hankey, Esq., in the chair, supported by about one hundred friends of the institution. Subscriptions amounting to upwards of £600 were received during the evening.

THE NEW LAW COURTS.—A meeting of representatives from the hackney cab proprietors and drivers took place on Thursday evening, at the Cranbourn Tavern, at which a deputation was appointed to wait on the Home Secretary, on Saturday next, to request from him the oppressive police regulations lately issued by Mr. Commissioner Mayne.

SHOCK OF AN EARTHQUAKE.—The town of Hereford and neighbourhood were alarmed, on Sunday night last, about half-past eleven, by what appeared to be a terrene convulsion. At first there was some doubt as to the nature of the shock; but so many persons corroborated the fact, that no doubt is felt on the matter. A correspondent in the *Times*, says:—"At about twenty-five minutes past eleven p.m. the policemen on duty distinctly heard a rumbling noise, and felt the usual undulations. The wife of a highly respectable solicitor says that the shock was exceedingly violent, so much so as to suggest the idea of an explosion. The chaplain of the county gaol and his wife experienced a similar sensation; and I have heard of many persons who were so alarmed that they arose and dressed themselves in the utmost trepidation." The inhabitants of Gwyas Harold, Peterchurch, Kentchurch, Abbeydore, and Llanvihangel—all on the Welsh side of Hereford—were generally aroused by the shock.

DEATH OF H. J. CONYERS, Esq.—We have to record the death of this veteran sportsman, the father of the Essex hunting field, as he might well be called, since he was looked on as the head of a pack of foxhounds for half a century. He died on Thursday morning, at Copt Hall, his seat, near Epping.

DREADFUL CATASTROPHE AT SEA.—A most melancholy disaster took place on Tuesday night, in the Irish Sea, by the steamer *Athenian*, from Liverpool to Belfast, coming in collision with a vessel unknown. In the space of a few seconds the ill-fated vessel and her crew were engulphed.

FOREIGN.

FRANCE.—The London Commercial Declaration continues to be the chief topic of conversation in Paris; and the more it is reflected upon, the greater is the importance attached to it, from the influence it must have upon the pacific relations of the two countries.

The Emperor has extended his clemency to 651 soldiers under punishment in Algeria; some of the number having had the remainder of their sentences remitted, while others have had them reduced.

The Four-and-a-Half per Cents closed at 103f. 25c., and the Three per Cents at 73f. 70c.

ITALY.—Advices from Genoa state, that an insurrection had broken out at Palermo, but it was soon put down. Five persons, it is added, were executed, and 200 arrested.

TURKEY.—The following despatch has been received from Trieste, dated March 31:—The steamer from the Levant has arrived from Constantinople, with news of the 21st. The conferences had been recommenced between the Divan and Prince Menschikoff. The attitude of the Russian Ambassador was much more moderate. The project for the establishment of a bank had been sanctioned by the Sultan. An alarming disease has decimated the vines of Cephalonia.

AMERICA.—The following items from the papers received on Thursday from America will be found interesting:—The navigation of the Hudson river was expected to be resumed in a few days; and it was thought that the lakes would soon open for navigation. Large fires had occurred at Buffalo, Troy, Newhaven, Boston, and Rochester: at Buffalo the loss sustained was 10,000 dollars; at Troy, 40,000 dollars; at Newhaven, 16,000 dollars; and at Rochester, 10,000 dollars. A Baltimore mechanic had applied for space in the New York Crystal Palace to erect a steam-engine, which he asserts will carry a steam-ship across the Atlantic in thirty-six hours. The steamer *Bee* had exploded her boilers on the Ohio, killing four persons and scalding five others. Mr. Meagher (who escaped from New South Wales) was lecturing in several cities in the United States to crowded audiences.

METROPOLITAN NEWS.

RESULTS OF METEOROLOGICAL OBSERVATIONS, [illegible] THE WEEK ENDING THURSDAY, MARCH 31

Month and Day	Corrected Reading of Barometer, 9 A.M.	Mean Temperature of Air. Highest Reading.	Mean Temperature of Air. Lowest Reading.	Mean Temperature of Air. Mean for the Day.	Mean Departure of Temperature from the Average.	Degree of Humidity	Direction of Wind.	Wind Force and Rain in Inches.
March 25	[illegible]	[illegible]	[illegible]	[illegible]	— 1.2	76	N	[illegible]
" 26	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]	[illegible]

Note. The sign — denotes below the average, and the sign + above the average. The numbers in the seventh column are calculated on the supposition that the saturation of the air is represented by 100.

The mean reading of the barometer for the week, at the height of 82 feet above the level of the sea, was 29.981 inches. The weather, during the former part of the week, was extremely mild, and the reading of the thermometer on the 26th descended to 17.7°, which is the lowest reading attained this winter. The mean temperature of this day was 29.8° on the 27th, being 12.6° below its average of thirty-eight years. The lowest mean daily temperature of the several 25ths of March since the year 1814, was 32.2°, which took place in the year 1837. From March 15 to the end of the month the average daily deficiency of temperature has been 6.6°. The mean temperature of the week was 38.9°, being 4.2° below the average of the last thirty-eight years. The range of temperature during the week has been [illegible] the least reading being 28.7° on the 30th; and the lowest [illegible], showing the large range of 41°. The differences of [illegible] have also been very great; that on the 30th being 0.92, and the mean of the week being 25.6°, which is 13.2° above the average of the twelve preceding weeks. Snow fell early on the 26th, mingled with some slight rain in the afternoon of the 27th, and produced five-hundredths of an inch of water. The mean [illegible] of the barometer for the month of March at the level of the sea was 29.791 inches. The mean temperature of the air was 43.2°, being 2.0° below the average of thirty-eight years, and the coldest March since the year 1845, when the mean temperature was 39.6°. The mean temperature of the dew point was 36.2°. The mean degree of humidity was 82°; complete saturation being represented by 100. The mean daily range of temperature was 17.9°; and rain fell to the depth of 1.4 inch.

Lewisham, April 1, 1853. JAMES GLAISHER.

HEALTH OF LONDON.—During the week ending March 26, the births of 752 boys, and of 728 girls (in all, 1480 children), were registered in the metropolitan districts. The average number in the [illegible] corresponding weeks of the eight preceding years, was 1456. The number of deaths was 1021, exceeding the number in the preceding week by 47, and that of the average in the same week in the preceding ten years, corrected for increase of population by 73. To zymotic diseases there were 223 deaths, their average is 208: of these 5 are referred to small pox, whose average is 15; to measles 16, [illegible]; to scarlatina [illegible]; to hooping cough 6, its average is 48; to typhus [illegible]; to the remaining 193 regular diseases 217 deaths, their average is [illegible]. 10 persons are referred to consumption, whose average is 141. To diseases of the [illegible] corresponding weeks of the eight preceding years, was 1255. The number of deaths by apoplexy; 20 to [illegible] to diseases of the heart [illegible] to disease of brain. There were [illegible] of the lungs, and of the organs of respiration, their average is 204: [illegible] 315 are referred to brain baths (one of which was that of a gentleman aged 102 years), and 53 deaths are referred to violence, privation, cold, and intemperance.

BUCKINGHAM PALACE IMPROVEMENTS.—The extensive works which have been going on for some time past at Buckingham Palace, in Arabella-row, Pimlico, have so far progressed towards completion, that the whole of the extensive and massive scaffolding has been entirely removed, and the new building, so far is the outer portion is concerned, to all appearance entirely finished. The removal of this wooden framework shows the addition which has been made to the Palace, for the convenience and comfort of their Majesties, and the Royal family to the fullest advantage. It is superior in architectural beauty and finish to the other portions of the Palace, and also more simple in the design with respect to ease of execution. The summit of the new building is ornamented with four groups of emblematical devices, illustrative of the military and naval prowess, of Great Britain, and serve to finish off to great advantage. Two handsome and separate entrance-lodges have been built for the convenience of ingress and egress to this new portion of the Palace.

ASLEY HOUSE.—This mansion was finally closed to public visitors on Saturday last. The original cost—on the general desire to view the elegance of the fittings, decor of exterior, was [illegible] the end of January, but the Duke of Wellington most liberally extended the period. His very gratifying to add, with his Grace's usual liberality, although many thousands of persons have been admitted, and although all classes were in particular included, the Duke has, in no instance, been led to regret his liberality by any misconduct or indecorum on the part of the visitors.

DOWNING-STREET.—The improvements for some time being carried out in the official residence of the Chancellor of the Exchequer, in Downing-street, are nearly completed. The whole of the [illegible] during the new and costly furniture, were from the designs of Mr. Disraeli.

STATUE OF SIR ROBERT PEEL.—The statue of the late Sir Robert Peel, by Behnes is rapidly approaching to completion. It will be cast in bronze at the foundry of Messrs. Robinson and Co. Pimlico, and is a colossal size, standing ten set ten inches in height, exclusive of the [illegible]. This very fine specimen of art is to be erected in the open space opposite the Mansion-house, on the spot where the pump now [illegible] which is to be taken down, in order to make room for it. When finished it will enhance the fame of the artist, and add another striking and splendid ornament to the metropolis.

DINNER AT THE MANSION-HOUSE.—The Easter banquet given by the Lord Mayor to her Majesty's Ministers came off on Monday, with the usual eclat. It was well attended. Sir James Graham responded to the toast, "The Army and Navy," and was very laudatory in his reference to those professions. The Earl of Aberdeen, in responding to the toast of "Her Majesty's Ministers," took occasion to refer to the industrial prosperity, and to state that it would be the earnest endeavour of her Majesty's Government to preserve that state of peace, without the aid of which they would never have enjoyed the blessings they now possessed; and endeavour, also, to protect and extend, as far as lay in their power, the commerce of this country in every quarter of the globe. Earl Granville, in acknowledging "The House of Lords," adverted to the harmony which prevailed in respect to the use of business of that branch of the Legislature. The Duke of Argyll proposed "The Health of the Lord Mayor," and said that, he believed that the progress of commerce, civilisation, and Christianity, and in a Christian spirit, would lead to the great dissolution, if not extinction, of those wars which had hitherto desolated the world. The Chancellor of the Exchequer and Mr. Cardwell also addressed the assembly—the former adverting to the [illegible] different parties to participate in some imaginary surplus of the [illegible] revenue, which very commonly outran the care to inquire where the surplus existed, or what was its extent.

INQUISITION OF THE POOR-RATE.—A public meeting of the city of London Union Rating Association was held on Tuesday evening in the New Court, Old Bailey, for the purpose of considering the propriety of adopting a petition to Parliament in favour of repealing the existing laws of settlement and removal, and for the more equitable distribution of the charge for the relief and maintenance of the poor. Alderman Thomas Sidney in the chair. Resolutions and a petition in accordance with the objects of the meeting were passed unanimously, and the meeting separated.

OLD MAN WORKING SCHOOL.—On Wednesday night the governors and friends of this institution, to the number of upwards of a hundred, celebrated the ninety-fifth anniversary of the charity by dining together in the London Tavern. The Lord Mayor occupied the chair, and among the gentlemen present we observed Mr. Oliveira, M.P.; Mr. Pellatt, M.P.; Mr. T. M. Coombs, Mr. Smith, and others. Nearly £700 were added to the funds during the evening.

SCOTTISH HOSPITAL.—On Wednesday, the usual quarterly court of this corporation was held in the board room, Crane-court, for the purpose of taking into consideration a motion made on the 16th of February last, to erect a model lodging-house for the recipients of the bounty of this corporation. The financial statement for the past quarter showed the total receipts to be £624 18s. 6d. There has been expended in charity £539 9s. 6d., leaving a balance in hand of £227 17s. 10d. The motion for the new dwellings was adjourned to the 19th inst., when it was hoped that Dr. Cumming would attend.

STATIONERS' MUTUAL BENEFIT SOCIETY.—The eighth anniversary festival of the useful institution was celebrated on Wednesday evening, at the Freemasons' Tavern; Mr. F. Wyatt Truscott presiding. In consequence of Mr. Charles Venables, who had promised to take the chair, having met with a severe accident. During the evening, a very liberal subscription was raised in aid of the funds. The chairman was supported by Messrs. Mitchell, Nichols, Escott, J. Cogein, Newman, Ford, Coffin, and about 120 other friends and members of the institution.

ROYAL GENERAL DISPENSARY.—A public dinner of the friends of the above charity was held on Wednesday, at the Queen's Head, St. Martin's-le-Grand, for the purpose of presenting Mr. T. B. Stott, the resident apothecary, with a silver tea and coffee service, as a mark of their esteem for his public worth and private virtues.

REVISION OF THE STATUTES.—Mr. Chisholm Anstey, late M.P., has been appointed one of the commissioners to revise the statutes. The first meeting of the commissioners was held on Thursday.

THE FAIR IN THE THAMES TUNNEL.—On Saturday last the annual fair in the Thames Tunnel closed, after five days' amusement, during which time upwards of 40,000 persons passed through the Tunnel: it was most brilliantly illuminated in oil and gas devices. The musical arrangements were under the direction of Mr. Moscheles Perry, the decorations in the tunnel were also kept on view during the Easter holidays.

MUNIFICENT BEQUEST.—A munificent bequest has just been distributed among the City charities by the trustees of the will of Miss Hardwick, late of Chesterfield, in Derbyshire. This lady's father was in early life a surgeon in the mercantile navy, and afterwards carried on business in Bishopsgate-street as a chemist. Miss Hardwick, his only daughter, at his death withdrew herself from the world, and lived in a small cottage, which her property was permitted to accumulate. She died in the university of Aldermann Hunter, leaving the bulk of her property to the Lord Mayor and the Chamberlain for the time being, to act with her executor, Mr. Joseph Shipton, an eminent solicitor at Chesterfield, as trustees, to be disposed among such of the charities of the city of London as they might in their discretion select for the purpose. The total amount of the money to be so distributed amounts to about £20,000, and, among collateral charities, ranges from £1000 to Christ's Hospital to £100 to a Ragged school; a medical, and other charities, from £1000 to St. Bartholomew's Hospital to £100 to a Prescot Infant's School.

INCREASE OF POST-OFFICE BUSINESS.—In 1840 it was said that 60 letters left London daily and the entire number amounted to 15,000,000 annually. The next year, at the reduced rate, they were more than 30,000 daily, and every year the increase has been large. During the last six years the average increase amounts to no less than 260,000 letters and 14,000 newspapers daily. The number of letters which will pass through the General Post-Office in the present year will be about 95,000,000—the newspapers nearly 2,000,000—over and above the numbers which passed through it in 1840. The Report of the Post-office of the State of New York for twelve months ending the 30th June, 1852, shows that the number of letters that passed through the American post-offices was under 80,000,000, or less than a quarter of the number transmitted in this kingdom; but it is worthy of notice that 80,000 newspapers and other packages of printed matter were charged with postage during the year, and that, in addition, 27,079,348 passed free.

SALE OF POSTAGE STAMPS.—The following notice has been issued by the General Post Office:—"In order to facilitate the sale of postage stamps and to promote the public convenience, licenses for the sale of postage stamps are now granted, free of expense, by the Commissioners of Inland Revenue, Somerset House, to all respectable persons who apply for them."

STEALING NEWSPAPERS.—At Bow-street, on Monday, *Edward Jackson*, a porter in the service of Mr. Wood, newspaper agent, Fleet-street, was charged with stealing 22 copies of the Illustrated London News, the case was proved by John Bayley, one of Mr. Wood's clerks, who deserved the prisoner in the act of concealing the stolen property under the counter, while engaged in folding papers. It appeared that the prisoner had formerly opened a small shop in the same line, in consequence of which he was required to give up his stand on, but subsequently he was taken into the same employment. He was committed for trial.

NATIONAL SPORTS.

The [illegible] appointments for the ensuing week are confined to Croxton-park meeting (on Tuesday and Wednesday), and the "Great Metropolitan," on Epsom Downs (on Thursday), where a fine day's sport may be anticipated. The Steeple chases to come off are the Cheltenham (on Tuesday and Wednesday) and Epsom (on Friday). The Coursing season in England is over, and in Ireland it will terminate with the Cork (Southern) Club meeting, on Tuesday.

TATTERSALL'S.

MONDAY. The attendance was unusually full, and the business transacted on the Handicap at Newmarket led to the extension of the [illegible], and some alterations.

[illegible] Defiance	12 to 1 against Tom Bowline (it)	12 to 1 against Alp (it)
[illegible] Lucy	[illegible]	to 1 against Lucy Neal (it)

NORTHAMPTON AND PYTCHLEY HUNT RACES.

WEDNESDAY

BRIDGE STAKES.—Lord Don, 1. Ebor, 2.

WHITTLEBURY STAKES.—Brigadier, 1. Lady Audrey, 2.

GRAND HAMPTONIAN STAKES.—Decance, 1. Hobby Horse, 2. Two others.

THE DERBY YEAR OF THE TRIENNIAL STAKES.—Frantic, 1. Convulsion, 2.

HER MAJESTY'S PLATE.—Brigadier, 1. Beerhound, 2.

PYTCHLEY STAKES.—Skipjack, 1. Janina, 2.

THURSDAY.

CUP STAKES.—Sheravorne, 1. Peradious, 2.

EARL SPENCER'S PLATE.—Liberia, 1. Ernestine, 2.

DELAPRE STAKES.—Lord Don, 1. Kingston, 2.

ALTHORPE PARK STAKES.—Ruby, 1. Naomi, 2.

THE NEWMARKET.—Beerhound, 1. Hemerida, 2.

LORD CRAVEN'S PLATE.—Elsenhow, 1. The Alp, 2.

LEGITIMATE MATTERS.—*South Hants*.

IT is announced that the Hon. Mr. Dutton, son of Lord Sherborne, will be a candidate for the representation of South Hants at the next election. The hon. gentleman will support the present Ministry. *Huddersfield*.—Mr. Williams has withdrawn from the field, leaving Messrs. Crossley and Beaumont, of Bradford, in possession. *Norwich*.—Mr. Stuart and Mr. Gurney are determined to fight vigorously for the Whig interest. The contest will probably be a numbers one. *Ipswich*.—The election for this borough concluded on Thursday last, each candidate polling the full number of electors for the following places:—Dartmouth, Taunton, Leicester, Tynemouth, Cockermouth, and Athlone. Notices have been given that it is not their intention to proceed with the petitions lodged against Messrs. Gurney, Rainsborough (defeated return of Mr. B. T. Woodd), Southampton (return of Mr. Cochrane), Westmeath, and Meath.

THE LABOUR MARKET.—SIGNS OF THE TIMES.—Some of the establishments in Southampton are endeavouring to prevent their clerks leaving them by including them to enter into bonds to remain with them for a certain number of years. Mr. Mare, the eminent shipbuilder, who has commenced the building of works close to Southampton, for repairing the steamers of the General Screw Company, is about to build 100 cottages for his workmen.

A CLERK OF MODERN DAYS.—Mr. Macaulay, in his review of the [illegible] memoirs, says that "in the two scenes of the 'Fairy Queen,' of which that very fanciful and very unequal poem is the most beautiful, there is not, we believe, a single word which any lady would hesitate to read aloud in the circle of her family." We do not believe that there was any doubt on one of the few words in the whole work, for the blatant beast is not killed, and the very last verse is one of the purest, as is that Spenser kept him alive for a purpose.—*Notes and Queries*. *Companion to the Almanac*, 1853.

CAPTURE OF A RUNAWAY BANKRUPT.—Some months since, a warehouseman, under the name of Spriggs and Co., in the City, and who had obtained goods on credit to the amount of £30,000, which he converted to cash, absconded, and went to the Continent. He *disguised* as Australia. A fiat in bankruptcy was filed against him, and a warrant issued for his apprehension. Mr. Charles Falconer, who was for many years attached to the detective police, was appointed by the creditors to pursue him; and, with the concurrence of the Commissioners of Police, he embarked on board the screw steamer *South South*, for Port Phillip. The ship left Cork in October last, and arrived safe at Port Phillip, three days before the *Sarah Sands*, as the fraudulent bankrupt was coming on shore, he was made prisoner, and £10,000 in cash, in his possession, seized on behalf of the creditors: he was then lodged in gaol. The bankrupt was brought before the authorities at Melbourne, and delivered into Mr. Falkner's custody for transmission to England.

UNPRECEDENTED IN THE EASTERN SEAS.—A dreadful earthquake—or, rather, a violent commotion of nature—has taken place in the Indian Archipelago. It began on the 20th November, and lasted until the 22nd December. The sea was frightfully agitated, several ships have been destroyed, and upwards of sixty lives lost. The principal place of destruction was Banda Neira.

TESTIMONIAL DINNER TO SIR GEORGE GREY.

THE signal success attending the career of the commercial policy of Free-trade, as adopted by the Legislature and sanctioned by the people, was celebrated on Monday, at Alnwick, the chief town of the county of Northumberland, and under the very walls of the feudal fortress of the Percys. The celebration assumed the form of a testimonial dinner to Sir George Grey; the price of admission being fixed, in order to meet the wishes of all parties interested, at the comparatively low charge of 5s., wine and other alcoholic stimulants having been dispensed with; and a stanch teetotaller in practice and precept was invited to preside over the festivities of the occasion. In the person of Sir Walter Trevelyan. The dinner took place in a spacious wooden pavilion (erected for the purpose by Mr. Thompson, of Alnwick, and tastefully decorated with evergreens and artificial flowers), in the Market-place, opposite the Town-hall; and on the very spot upon which the hustings were erected at the last general election, when Sir George Grey was thrown out of the representation of the Northern Division. The place was calculated to accommodate about 1600 persons, but the number present must have very closely approached 2000, for every seat and nearly every inch of ground within it was occupied; and many were unable to obtain entrance. The tables were ranged longitudinally, with elevated cross benches at each end for the principal guests; and on each side arrangements were made for the entertainment of ladies, among whom were noticed several female members of distinguished county families. The apartment was brilliantly illuminated with gas.

On the right of the Chairman were Sir George Grey, M.P., the Earl of Carlisle, W. B. Beaumont, Esq., M.P., the Hon and Rev. John Grey, Capt. the Hon. H. C. Grey, Rev. R. W. Goodenough, M. W. Bigge, Esq., Anthony Lambert, Esq., Hon. E. Howard, Rev. Thomas Ridsdale, and Major Orde. On his left were Earl Grey, Lord Panmure, the Hon. and Rev. F. R. Grey, Rev. R. Croft, R. Ingham, Esq., M.P., J. B. Blackett, Esq., M.P., William Grey, Esq., George Wilson, Esq., Rev. Percy Gilpin, Mr. M'Kelvin, and Capt. Drummond.

The vice chair was occupied by Prideaux Selby, Esq., who was supported on his right by the Mayor of Newcastle (H. G. Lamport, Esq.)

The substantial portion of the repast having been discussed, the Chairman gave the usual loyal and constitutional toasts, which were responded to with enthusiasm.

Immediately afterwards, according to previous arrangement, a splendid silver Candelabrum and Salver were formally presented to Sir George Grey by Mr. Young, of Bedlington Ironworks. On the Candelabrum were represented figures of Industry, illustrative of the productive interests of the country—the village blacksmith, the agricultural labourer, and the miner. The inscription upon the Salver is as follows: "To the Right Hon. Sir GEORGE GREY, Bart., M.P., G.C.B., from more than 13,000 of the Working Class of Northumberland, in testimony of their gratitude for his support of the just, wise, and beneficial measures of Free-trade; and their respect for his private worth; and for the eminent integrity and ability which have distinguished his public career.—Alnwick, 28th March, 1853."

The Candelabrum and Salver were designed and manufactured by Messrs. Garrard, of the Haymarket, London.

Mr Michael Young, of Bedlington, rose to present the testimonial to Sir George Grey. They were met, he said, to do honour to a distinguished statesman (Cheers); one who is admired by his friends and respected by his opponents (Applause); one who adorns and ennobles the order to which he belongs (Cheers); a friend of civil and religious liberty (Hear); and an able advocate of a policy which has conferred great and innumerable blessings on the people of this country (Loud cheers). Until lately North Northumberland was honoured in having such a statesman for one of its representatives in the House of Commons (Applause). A contrast might be drawn between him and the noble lord who had succeeded him as their representative, and he might call upon them to "look on this picture and on that" (Laughter). The question might be properly asked, Why is it that one of the most distinguished statesmen of the present day is not one of the representatives for North Northumberland in the Commons House of Parliament, where his splendid talents and eminent abilities have won for him the admiration of all parties, and where his integrity and consistency, his high character and true patriotism, have added lustre to his fame (Applause)? The answer was at hand, and they knew it; the bond knew it as well as the free, the oppressor as well as the oppressed; it was because the voice of Northumbrians had been stifled (Long-continued cheering).

Sir G. Grey, when the applause with which he was received had subsided, said The circumstances under which I have now to address you are such as cannot fail to inspire me with heartfelt and peculiar gratification (Cheers). Holding no public situation, and having ceased—as you have been reminded by Mr Young—to stand, with regard to the greater part of you, in the relation of a representative to his constituents, though I am happy to find such a feeling entertained towards me by those who were my constituents, and happy to feel that my political ties with this division of the county are still not wholly dissevered (Cheers), owing to that seat in the House of Commons which, within this division of the county, I have now the honour to hold—holding, as I say, no public situation, and no longer standing, with regard to far the greater part of you, in the relationship in which I stood and honour to hold for more than five years, I have come to-day, by your kind invitation, to receive at your hands—to receive at the hands of the working classes of this county, represented as they have been with so much talent and ability by Mr. Young—to receive a testimonial of your approval of my public conduct during the time I held that trust you generously confided to my hands (Applause), at a moment when personally I was a stranger to most of you, and known only by the name I bear, and my public conduct in Parliament (Cheers).

I could have to receive a testimonial that would be more gratifying to me, than that which I have received from you to-day, as the judgment of those 13,000 of the working-classes whom Mr. Young has represented, those measures which in my place in Parliament I felt it my duty, while one of the representatives of this division, to promote and advocate by my vote and influence—and especially those measures which relate to the financial and commercial policy of the country—were measures dictated by sound policy, and measures conducive to the permanent welfare and interest of the great body of the people of this country (Loud applause). I feel altogether undeserving of much that he has said regarding me (No, no); but I can say, I have honestly endeavoured to discharge my duty (Cheers). Gentlemen, I accept that testimonial (Applause) valuable in itself, representing as it does the varied industry of this great county—a testimonial valuable in itself, and justly worthy of admiration in its design and execution; but to me—and I am proud to say it—possessing infinitely beyond its intrinsic value, as it will be a permanent record to me—and I hope also, with Mr Young, to my children's children—that I have been fortunate enough to obtain what I must consider the highest prize in political life—the warm, generous, and sincere regard, and the good wishes and attachment, of that large and important industrial class of my fellow-countrymen who possess as yet no direct voice themselves in the choice of members of Parliament (Cheers); but whose interests, whose daily comforts, whose happiness and permanent welfare are intimately concerned in the good government of the country and the acts of the Legislature, and in whose moral and social well-being the prosperity of this country is so intimately bound up.

Bearing in mind the occasion on which we have met, bearing in mind the inscription place d on that testimonial, recording the opinion of those who presented it to be that those measures to which reference has been made were "wise, just, and beneficial" (Cheers), and remembering too that we are on the very spot on which the electors of North Northumberland were assembled when I addressed them from the hustings last July, it is not possible for me to avoid making some allusion to the altered position the advocates of Free trade now occupy, and the remarkable circumstances which since that time have occurred (Hear). There can, I think, be no doubt now entertained—though a slight attempt was made at the time to dispute it—that the real question then at issue, the question submitted for the decision of the constituencies at the last election, was whether the Free-trade policy should or should not be maintained—whether the commercial system which has been recently adopted by successive Parliaments should be upheld as conducive to the best and permanent interests of the country, or whether—as some strenuously contended—it should be reversed as prejudicial to those interests (Hear). I felt the difficulties and disadvantages which I, as a candidate, would have to encounter, avowing myself an advocate for the maintenance and extension of that system of Free trade, and addressing myself to a constituency consisting in a great part of agriculturists

Under these circumstances, asking, as I did, for a renewal of the trust which in 1847 was reposed in me, I felt it my duty to make a clear, unequivocal, and explicit avowal of the opinions I entertained (Cheers); and, having made that avowal, I was willing to abide whatever might be the issue of the contest (Applause) Of the result of that contest I have not the slightest reason to complain. The result was the defeat, by a small majority, of the Free-trade candidate; but as soon as Parliament met, by the complete, unambiguous, and unequivocal triumph of the Free-trade policy (Loud cheers). An attempt, it is true, was made by the leaders of that party since called Protectionists, to avoid an express recantation of the opinions they had long and strenuously urged on Parliament and the country; but ultimately a resolution was passed by such a majority of the new House of Commons as to amount almost to unanimity a resolution in which stands recorded on their journals their verdict that the present commercial system of Free trade ought to be maintained, and on the especial ground that it was conducive—eminently conducive—to the welfare and comforts of the industrious classes. The right hon. Baronet concluded (amidst rapturous cheering) a brilliant speech by declaring his resolution to promote, with all his ability, the political, social, and physical welfare of the whole body of the people.

The Vice-Chairman then proposed the health of the Lord-Lieutenant of the County, Earl Grey (Cheers).

Earl Grey said he had the greatest satisfaction in attending on this most interesting occasion. He had with the greatest pleasure joined in paying this compliment to one with whom he had been so long connected in the closest manner, both by unrivalled friendship and by complete agreement on public questions; nor had he had the less pleasure in showing his sense of respect for the man with whom he had been acquainted from the outset of his political life, and from whom he had often experienced so much kindness—he meant the inhabitants of Northumberland (Cheers). The testimonial which had been presented to Sir George Grey was honourable to them as it was honourable to him. He could not but deeply regret that they had been brought together here, rather to show that they were still undismayed in spite of defeat, than to express their satisfaction at a victory (Hear). The noble Earl then proposed the health of the worthy Chairman

The Chairman, acknowledging the toast, created some amusement, and also some embarrassment, by his warm advocacy of "temperance" doctrines

Ralph Carr, Esq., of Hedgley, gave "The Earl of Carlisle and the House of Lords," which was received with loud applause.

The Earl of Carlisle, in responding to the toast, begged the audience not to measure either his gratitude for the very cordial reception they had given him, or his sympathy with the occasion which had now brought them together, by the brevity—the necessary brevity—of the remarks he must now address to them. But the fact was, he had been labouring under a somewhat heavy indisposition, and he happened to have rather a busy week before him; so that he ought rather to be by a very quiet fireplace not, he could assure their worthy chairman, with any inebriating liquor before him (A laugh), but in what he should quite agree with him in considering some more healthful doing—than thus to stand up in the middle of the market-place at Alnwick; at a time, too, when the unmelted snows still capped the Cheviots (Laughter). To this act of impudence he only could have been tempted by united respect for their guest, Sir George Grey, and for their hosts, the men of Northumberland (Cheers). With respect to Sir George Grey, he felt that words were not wanting from him; for the feelings which were entertained for him were such as had brought them together, and such as now throbbed and glowed on that vast assembly, embracing so much of the industry, the enterprise, and the worth of the stout and hardy Northumbrians (Cheers)

The Hon. Charles Howard, M.P., proposed the health of Lord Panmure and the illustrious guests (Loud cheers).

Lord Panmure responded

Robert Ingham, Esq., M.P., proposed the health of W. B Beaumont, Esq., and the other member for South Northumberland, to which

Mr. Beaumont responded in appropriate terms.

Mr. Fenwick, Esq., proposed the health of the members for Newcastle.

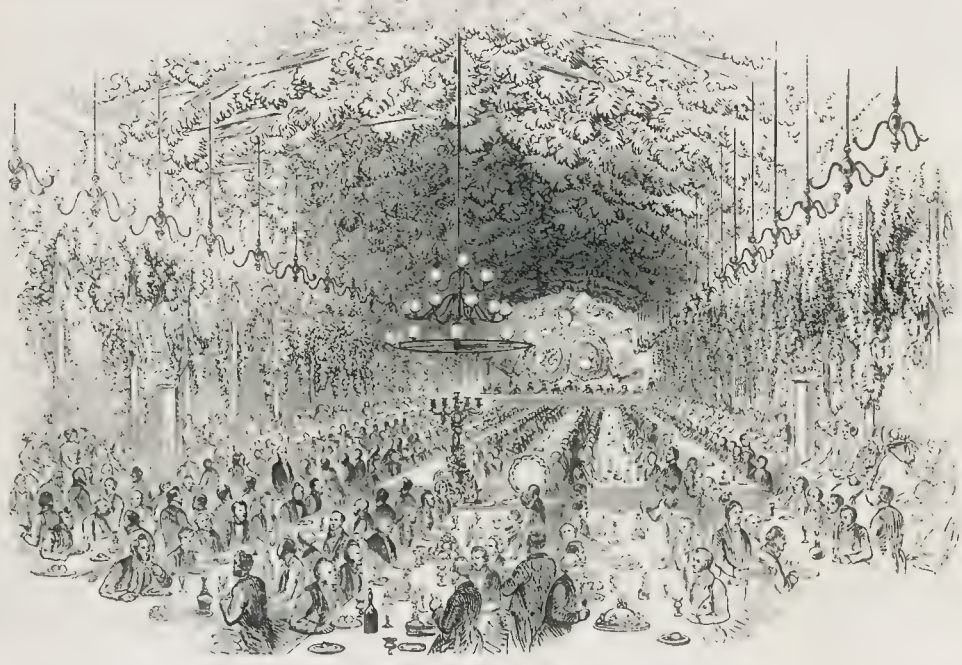
Mr. Blackett, the junior member, returned thanks for himself and his colleague, Mr. Headlam, who, he said, had been prevented from attending the meeting by a severe domestic calamity.

Sir John Fife then proposed "The Members for Berwick"

Mr. Daniel Robertson gave "The Independent Electors of North Northumberland;" which was responded to by Mr. Samuel Donkin, who reminded his hearers, in alluding to a future election for North Northumberland, that so long as the same weapons remained in the hands of terrified power, which caused the last defeat, they must not be too confident of victory (Hear, hear)

Several local toasts were afterwards given, and the party separated about six o'clock.

SILVER CANDELABRUM PRESENTED TO THE RIGHT HON SIR GEORGE GREY, BART., M.P., G.C.B.



TESTIMONIAL DINNER TO SIR GEORGE GREY, AT ALNWICK, ON MONDAY LAST.

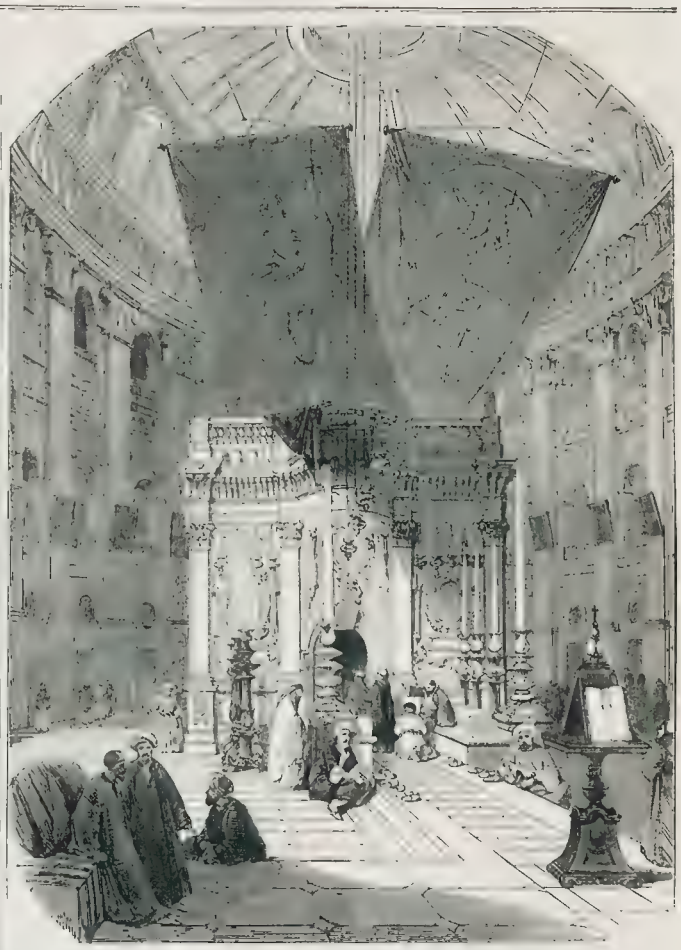
CHURCH OF THE HOLY SEPULCHRE.

The dissensions of the Greek and Latin Churches in Jerusalem have for many years been a scandal to the Christian religion, and a perpetual stumbling block to Jews and Mahometans. These disputes are carried to Constantinople and submitted to the decision of the Ottoman Porte, to be ruled, not according to the principles of justice and equity, but as bribery, or private influence, or political interests may chance to prevail. Since the great fire in th Church of the Holy Sepulchre, in 1807, the Latins—as the Roman Catholics are called in the Holy City—have been rather oppressed. The Greeks, by means of their riches, were at once ready to rebuild and repair the sacred edifice; by doing which, they acquired a claim to the whole; not exclusively, indeed, but so far that they are considered as the keepers. Thus, the guardianship of the Holy Sepulchre, which belonged to the Latins, was transferred to the Greeks, who, besides, likewise possess the largest Church, the Altar of the Crucifixion at Golgotha, and several subordinate places. The Greeks and Latins both enjoy the countenance of powerful European Monarchs, whence they derive an importance at Constantinople which, independently of this, they would not possess. Last autumn, the French Ambassador at Constantinople, the Marquis de Lavalette, used all the arts and intrigues of diplomacy to obtain a firman from the Sultan in favour of the Latins. His efforts were crowned with success; but the triumph of the Latins has caused such vindictive resentment among the professors of the Greek Church in various countries, who look up to the Emperor of Russia for protection, that Prince Menschikoff has been despatched from St. Petersburg with the most peremptory instructions to procure a revocation of the exclusive privileges conceded to the Latins. The Greek Church forms the most numerous and powerful body of Christians in Jerusalem: out of a Christian population of 6500, no less than 5000 are of the Greek faith. The number of worshippers of this church is also swelled by the 3000 or 4000 Russian pilgrims who annually visit the Holy City; many of whom are charged with valuable presents from the Czar, consisting of silver lamps, candelabras, and rich brocade for the decoration of the altars. The average population of Jerusalem is between 15,000 and 20,000. The Roman Catholics are said not to exceed 900 in number. There are also a few hundred Armenians, Copts, and Syrians. The Armenians make up by their wealth what they lack in political influence, and have thus been able to sway the decisions of the Porte. The Syrians and Copts have been too poor and insignificant to contend with all these powerful rivals; but, being in communion with the Armenians, they are for the most part identified with their interests, and enjoy their protection, in return for which they are expected to submit to such spoliation as their protectors think right to inflict.

There is no single building within the walls of Jerusalem which excites a more intense interest in the mind of the Christian traveller than the church of the Holy Sepulchre, built by the Empress Helena, mother of Constantine. It covers the supposed spot of our Saviour's interment. It is situate at the north-west corner of the city, and has gathered around it most of the convents, and the principal portion of the Christian residences. The exterior of the edifice is that of the middle ages, and is of rather an uncertain character of architecture. The façade of the church, which is richly adorned, but half decayed, presents a singular contrast of beauty and meanness, capitals and friezes of elaborate workmanship being surmounted by a bare wall with broken windows. The appearance of the church is confined, being shut in by the adjoining buildings which belong to the Greek monastery, situated on the opposite side of the way. The prevalent style of architecture in Jerusalem is the dome, which could not be combined with the tower; and as the domes are not to be seen when standing in front of the façade, the edifice has scarcely the appearance of a church.

The interior of the Church of the Holy Sepulchre is a world of churches, chapels, and altars. Here are all creeds and sects of the Christian religion, except those that emanated from the Reformation. The large central dome of the church is about 70 feet in diameter, and of nearly the same height. Around the open space under the dome are small chapels for the Syrians, Copts, Maronites, and other sects of Christians, who have not, like the Roman Catholics, Greeks, and Armenians, large chapels in the body of the church. The Greek church is splendidly and richly ornamented, is kept up in a magnificent style, and is unquestionably the most imposing. The church of the Roman Catholics is confined, mean, and dark; the Latins being not only destitute of the great riches of the Greek and Armenian churches, but being in fact very poor. The chapel of the Syrian sect of the Jacobites is close to that of the Latins. A very wretched chapel belonging to the poor Copts stands in the rotunda at the back of the wall of the most holy place, and consists of a small wooden box, not much larger than a confessional.

Directly under the dome, in the centre of the area, is a small oblong building, within which is the Holy Sepulchre. The visitor mounts a few low steps to the marble platform before the entrance, and enters a small dimly-lighted room, which serves as an ante-chapel to the Sepulchre itself. A few steps further, and passing through a low narrow portal, the worshipper is alone in the inner sanctuary, the holiest of holy places, where thousands and tens of thousands kneel, weep, and prostrate themselves in the full faith that this is the very site of their Master's burial place. The spot which is shown as that of the holy resting-place, is a sort of sarcophagus of white marble, six feet one inch long, which occupies about one-half of the chamber. The sarcophagus surrounds and conceals from the eye everything in relation to the tomb, and is about two feet above the level of the floor. The sepulchre retains nothing of its primitive material, except the oblong stone on which the body was laid, and even the upper surface of this is covered with white marble; it looks like an altar, and, indeed, serves as such when mass is celebrated here. Forty-three lamps, of gold and silver, ever burning, light this solemn spot, which is probably the only one upon earth that no one ever trod without seriousness and deep reflection, and where tears have flowed and prayers have been offered such as no other spot ever heard or witnessed. The air is kept redolent with perfumes night and day.



SHRINE OF THE HOLY SEPULCHRE, AT JERUSALEM.—FROM "VIEWS IN PALESTINE, EGYPT, ETC.," BY DAVID ROBERTS, R.A.

LOWER ARCADE OF THE CHURCH OF THE HOLY SEPULCHRE.—FROM "PHOTOGRAPHS OF THE MONUMENTS OF EGYPT, NUBIA, AND SYRIA."

Chateaubriand, in an eloquent passage, has painted the church of the Holy Sepulchre:—

The Church of the Holy Sepulchre, composed of several churches, erected upon an unequal surface, illumined by a multitude of lamps, is singularly mysterious; a sombre light pervades it, favourable to piety and profound devotion. Christian priests, of various sects, inhabit different parts of the edifice. From its arches above, where they nestle like pigeons, from the chapels below, and subterraneous vaults, their songs are heard at all hours both of the day and night. The organ of the Latin monks, the cymbals of the Abyssinian, greet the voice of the Greek caloyer, the prayer of the solitary Armenian, the plaintive accents of the Coptic friar, alternately, or all at once, assail your ear; you know not whence these concerts proceed; you inhale the perfume of incense, without perceiving the hand that burns it; you merely perceive the pontiff, who is going to celebrate the most awful of mysteries on the very spot where they were accomplished, pass quickly by, glide behind the columns, and vanish in the gloom of the temple.

Travellers all unite in reprobating

the deceit, dissension, and evil passions which characterise the Christians of the Holy City. Their jealousies and heart-burnings are not unfrequently accompanied with sanguinary quarrels and acts of violence which call for the interference of the civil powers. The Turkish officials treat with the utmost scorn and contempt these jealous and vindictive Greeks and Latins, whose mutual hatred knows no bounds. We will not sweep our readers by attempting to describe all the subjects of their quarrels—to whom the several churches, chapels, and altars belong—how many ever-burning lamps each denomination is entitled to light—where, and in what sequession, they read mass—what rights each claims in ecclesiastical functions—how they curse each other, and always fancy that they are over-reached and supplanted by other persuasions—and in what perpetual hatred, strife, and enmity they live. Greek priests, Armenians, and Franciscans reside together on the most holy spot in all Christendom, day and night persevering in prayer; and the pious thoughts which they ought to have in common inspire them with no feelings of brotherly love. The following statement of the possessions and peculiarities of the Latin Church of Palestine, which was drawn up by Count Marcellus, a French Envoy in 1849, will indicate the nature of the points in dispute between the two churches. The "possessions" of the Latin Church are as follows:—

1.—IN THE CITY OF JERUSALEM.

1. The Church of the Holy Sepulchre. 2. The Monastery of Deir-el-Amoud, or the Holy Saviour, its appurtenances and dependencies. 3. The Sepulchre of our Lord Jesus Christ, which is in the centre of the church of the same name. 4. The great and the small cupola, with the lead which covers them. 5 The arches and columns which are round them, as far as the iron gate placed to mark the line at which the part of the church belonging the Greeks commences. 6. The galleries and dwellings of the Latin Monks which are over the aforesaid arches or columns. 7. The great arch which is surmounted with the cupola, which is over the above-mentioned iron gates. 8. The chamber which is at the end of the wall of the above mentioned great arch. 9. The chandeliers placed by his Majesty the King of France, outside this same great arch. 10. The stone called after St. Mary Magdalen, and the entire space which extends from the step of the Vestry of the Franc Monks to the steps of the gate of the Cistern, and from beneath the column to the step of the Calvary chapel. 11. The upper part of the seven arcades called the Arches of St. Mary. 12. The lower portion of the arches. 13 The small altar which is beneath the said arches. 14. The entire space from the stone of St. Mary Magdalen to the large gate which is beside the door of the Greek Chapel, and from the wall of the said chapel to the wall of the Church of the Holy Sepulchre. 15. The lower part of the pinnacle of the finding of the Holy Cross. 16. The half of Mount Calvary, called the Place of Crucifixion. 17. The four arches of Mount Calvary, in the lateral part of the Church of the Holy Sepulchre. 18 Its two altars. 19. The marble resting chair. 20. The stone of unction. 21. The entire space which extends from the steps of Mount Calvary to the lower part of the arcade in possession of the Armenians, and from the wall of the Greek Chapel to the steps of the door of the Temple of the Holy Sepulchre. 22. The chapel called the Exterior Calvary placed on the top of the temple, to which the ascent is by a stone staircase

The "prerogatives" of the Latin Church are still more fertile of dispute:—

PREROGATIVES.

1. The Fathers of the Holy Land, Latin Monks, alone possess the keys of the gates of the convents or sanctuaries above-mentioned, and particularly the three keys of the manger at Bethlehem. 2. They have a right to guard those places, to repair, maintain, decorate, and light lamps there. 3. To celebrate the Holy Mass there, and to exercise the rites and ceremonies of worship. 4. To take the lead over all other nations in their visitation of the pilgrimages of the Holy Places. 5. They have a right to visit the half of Mount Calvary which does not belong to them, to celebrate mass on the aforesaid half, and to light lamps there. 6. The Frank Monks have an exclusive right to exercise their worship in the lower part of the crypt of the great Church of Bethlehem. 7. To prevent other nations from lighting lamps there, to colour rate their offices, and to exercise their religious worship there. 8. To oppose the visit of other nations to the other Places possessed by them, Frank Monks. 9. The actions at law brought against the Frank Monks shall not be submitted to the authorities of the country, but referred to the Sublime Porte at Constantinople. 10. The Scripturists are forbidden to offer any violence to the Frank Monks at Ain Karim under any pretext. 11. The Turkish Customs officers are forbidden to search the baggage of the monks or Catholic pilgrims, which has been searched in the Lovant, where they landed. 12. It is likewise forbidden to take or delay the clothes of the monks or the ornaments of the Latin Churches. 13. To compel the Frank Monks to receive base coin. 14. To take money from them. 15. It is forbidden to demand the smallest fee from the Frank Monks for the privilege of burying their dead. 16. To ill-treat the monks who bring the usual tribute from Europe, in case they arrive too late. 17. To disturb in any manner the monks and pilgrims of the Holy Land in the course of their visitations or pilgrimages. 18. To disturb at any time in the exercise of their religious worship as long as that worship out of doors is not contrary to the Mussulman law. 19. If Turkish authorities are forbidden to pay more than one visit each year to the Holy Sepulchre. 20. To protect the Frank Monks to purchase damaged wheat. 21. The Latin Fathers possess an exclusive right to send members of their communities or couriers to Constantinople on business, without opposition.

The View of the Interior of the Church and Shrine of the Holy Sepulchre, upon the preceding page, has been engraved from Mr David Roberts's splendid work on Palestine, Egypt, &c., by permission of Messrs. Day and Hughe. The second Illustration—the Lower Arcade of the Church, is one of a series of large Photographs of the Monuments of Egypt, Nubia, and Syria, published by MM. Gide and Baudry, Paris; agent in London, M. Gambart.

GOLD REGIONS.—Another series of Parliamentary documents have been issued, under the title of "Further Papers relative to the recent discovery of Gold in Australia." A brief outline of the contents of these papers will show the interest attaching to the subjects of which they treat. Reports of further gold discoveries in the northern parts of New South Wales; indications of quicksilver and the discovery of gems; correspondence on the probable existence of gold, not only in the alluvial deposits, but also in the rock; the employment of clergymen at the principal gold-diggings; expenditure consequent on the gold discoveries; maintenance of order in the gold districts; state of the aborigines of New South Wales; probable area of the gold regions; the present state and future prospects of the western and southern gold fields; migration of the population to the interior; desertion of the crews of merchant ships; military arrangements, and the administration of justice, &c.

THE JOHN BULL NUGGET.—A Mr. Potter, one of the successful adventurers in the gold diggings of Australia, has brought home an enormous nugget, which he has christened the "John Bull," and proposes exhibiting it before it goes to the crucible. The finder was one of a party of three, in the Ballarat district, Wardlaw, Bendigo, and we have enough to turn up the giant of the mine within eighteen inches of the surface. The solid mass weighs 45 lb. 6 oz., and is worth £2184.

ROTATORY STEAMER.—A new description of steamer, the invention of David Napier, Esq., named the "Rotatory," has commenced plying on the Clyde. The peculiarity of the steamer lies in her compactness, her paddles being much lower than the bulwarks; and, as her engine is on the rotatory principle, it occupies very little space. The advantages of these engines are, that they are more compact, consume about one-fourth less fuel, and require no engineers; the steersman, by a peculiar valve, proves the vessel ahead or astern without communicating with any one. The furnace-bars contain water; consequently, the hot ashes, which are destructive to the common furnace-bar, in this case tend to the production of steam. There is also a simple apparatus of the fan, to assist combustion. These two parts of the patent might be applied with advantage to most of the steamers.

THE GOVERNORSHIP OF NEW ZEALAND.—It is stated, on the authority of papers published in the Canterbury settlement that Sir Geo. Grey is about to resign the governorship of New Zealand, and it has since been rumoured that Lord Lyttelton, Under-secretary for the Colonies in Sir Robert Peel's Administration, will succeed to the office. The noble Lord has always taken a deep interest in the affairs of New Zealand, and particularly in the Canterbury settlement, of which, indeed, he may be said to have been the founder.

EFFECTS OF CHEAP POSTAGE.—Uniformity of postage, combined with a low rate of charge, forms the conspicuous and chief benefit which the monopoly of the carriage of letters and packets of correspondence confers upon the whole body of the subjects, by almost annihilating distance, and placing it within the power of almost every individual to communicate freely with all parts of the country. It makes the post-office the unrestricted means of diffusing knowledge, extending commerce, and promoting in every way the social and intellectual improvement of the people.

THE FREE HACKNEY-COACH STAND IN LONDON.—The cab-stand in the Strand, from Catherine-street to Somerset-house, has just been removed, by order of the Commissioners of Police. This has been described by a contemporary as "one of the oldest stands" in the metropolis; but, it was a continuation of *the very first hackney-coach stand* thus, we read in Stratford's Letters, April, 1653: "One Captain Bailey hath erected some four hackney-coaches, put his men in livery, and appointed them to stand at the May-pole in the Strand (where St. Mary's Church now is), giving them instructions at what rates to carry men into several parts of the town, where all the day they may be had." In the next year the coaches had so increased as to be considered a nuisance by the Court, and to be limited by Star Chamber.

CHESS.

TO CORRESPONDENTS.

M. F. K. and T. D. Fairlie.—Your solutions are correct, and we must refer you to the series of papers on [illegible] that and their Chief Notabilities, now publishing in the [illegible] spaces in our list.

J. P. M. [illegible] Capt. hereby up to our standard for publication. With [illegible] your renders by attempting to describe all the subjects of their quarrels—to whom the several churches, chapels, and altars belong—how many ever-burning lamps each denomination is entitled to light—where, and in what succession, they read mass—what rights each claims in ecclesiastical functions—how they curse each other, and always fancy that they are over-reached and supplanted by other persuasions—and in what perpetual hatred, strife, and enmity they live. Greek priests, Armenians, and Franciscans reside together on the most holy spot in all Christendom, day and night persevering in prayer; and the pious thoughts which they ought to have in common inspire them with no feelings of brotherly love. The following statement of the possessions and peculiarities of the Latin Church of Palestine, which was drawn up by Count Marcellus, a French Envoy in 1849, will indicate the nature of the points in dispute between the two churches. The "possessions" of the Latin Church are as follows:—

1.—IN THE CITY OF JERUSALEM.

1. The Church of the Holy Sepulchre. 2. The Monastery of Deir-el-Amoud, or the Holy Saviour, its appurtenances and dependencies. 3. The Sepulchre of our Lord Jesus Christ, which is in the centre of the church of the same name. 4. The great and the small cupola, with the lead which covers them. 5 The arches and columns which are round them, as far as the iron gate placed to mark the line at which the part of the church belonging the Greeks commences. 6. The galleries and dwellings of the Latin Monks which are over the aforesaid arches or columns. 7. The great arch which is surmounted with the cupola, which is over the above-mentioned iron gates. 8. The chamber which is at the end of the wall of the above mentioned great arch. 9. The chandeliers placed by his Majesty the King of France, outside this same great arch. 10. The stone called after St. Mary Magdalen, and the entire space which extends from the step of the Vestry of the Franc Monks to the steps of the gate of the Cistern, and from beneath the column to the step of the Calvary chapel. 11. The upper part of the seven arcades called the Arches of St. Mary. 12. The lower portion of the arches. 13 The small altar which is beneath the said arches. 14. The entire space from the stone of St. Mary Magdalen to the large gate which is beside the door of the Greek Chapel, and from the wall of the said chapel to the wall of the Church of the Holy Sepulchre. 15. The lower part of the pinnacle of the finding of the Holy Cross. 16. The half of Mount Calvary, called the Place of Crucifixion. 17. The four arches of Mount Calvary, in the lateral part of the Church of the Holy Sepulchre. 18 Its two altars. 19. The marble resting chair. 20. The stone of unction. 21. The entire space which extends from the steps of Mount Calvary to the lower part of the arcade in possession of the Armenians, and from the wall of the Greek Chapel to the steps of the door of the Temple of the Holy Sepulchre. 22. The chapel called the Exterior Calvary placed on the top of the temple, to which the ascent is by a stone staircase

The noble Lord has always taken a deep interest in the affairs of New Zealand, and particularly in the Canterbury settlement, of which, indeed, he may be said to have been the founder.

EFFECTS OF CHEAP POSTAGE.—Uniformity of postage, combined with a low rate of charge, forms the conspicuous and chief benefit which the monopoly of the carriage of letters and packets of correspondence confers upon the whole body of the subjects, by almost annihilating distance, and placing it within the power of almost every individual to communicate freely with all parts of the country. It makes the post-office the unrestricted means of diffusing knowledge, extending commerce, and promoting in every way the social and intellectual improvement of the people.

THE FREE HACKNEY-COACH STAND IN LONDON.—The cab-stand in the Strand, from Catherine-street to Somerset-house, has just been removed, by order of the Commissioners of Police. This has been described by a contemporary as "one of the oldest stands" in the metropolis; but, it was a continuation of *the very first hackney-coach stand* thus, we read in Stratford's Letters, April, 1653: "One Captain Bailey hath erected some four hackney-coaches, put his men in livery, and appointed them to stand at the May-pole in the Strand (where St. Mary's Church now is), giving them instructions at what rates to carry men into several parts of the town, where all the day they may be had." In the next year the coaches had so increased as to be considered a nuisance by the Court, and to be limited by Star Chamber.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Only fifteen public Acts of Parliament have been passed in the present session, which assembled in November; and after a short sitting adjourned to the beginning of last Month.

A working man at Brentwood, named Hall, has received two letters from Australia, containing £50, a present from his two sons, who were transported some years ago. They report themselves to be worth nearly £1000.

A tornado recently visited Clarksville, Tenessee (U.S.), levelling dwellings, stables, barns, and trees to the ground; but, as far as heard from, no life was lost. The track of the storm was but a mile wide.

Lord Willoughby de Broke has offered to hunt the North Warwickshire boundary next season, providing the noblemen and gentlemen following the hunt will contribute £10.0 per annum.

By accounts received from Sydney, a number of Frenchmen had returned from the gold diggings, and had demanded from the French Consul to be sent home.

By *Chambers' Journal* we learn, that, in forty cities and towns in Scotland, every 140 of the population support a dram-shop, while it requires 981 to keep a baker, 1667 to support a butcher, and 2281 to sustain a bookseller.

It is understood that the object of Sir George Russell Clerk's mission to the Cape is the settlement of boundaries, and particularly of the boundary of the Orange River Sovereignty.

The dead wharf at Cronstadt had been destroyed by fire on the 22nd ult., involving a sacrifice of half a million of silver rubles. The proprietor is insured.

The emigration movement has given a fresh impetus to the Irish shipping trade; and there is an increased demand for tonnage in Dublin Bay. *Kronprinz*, steamer, inquiring of *Foshan*, and *Fortune* (for W. Farren and Mrs. Fitzwilliam) the way to success. Creditably for both, they recommend honest endeavour; and Mr Barkstone himself confesses to certain poetic aspirations which Mr. C Marshall has prudently unfolded. The panoramas of "the ascent," including a general prospect of Parnassus, and views of the Village of Krissa, the Schlote and the Sacred Way, Delos of the City of Delphi, the Castalian Fountain, the Corycian Cave, and the Snowy Peak of Liakura, are all admirably and beautifully painted. Of the general hits at things as they are—especially "things theatrical" we may distinguish the scenes from the "Corsican Brothers," and the "Gold-diggings." These were finely painted and humorously accompanied. The dialogue abounds in witty allusions, and, of itself, is an earnest of the promises held out by Mr. Buckstone as to his future management. His predilections in favour of the poetic drama are highly commendable to him, and will, we hope, prove successful. The performance of Sheridan's lively comedy introduced two new candidates for metropolitan favour—Mr Frederick Lee and Mrs. Poynter; the former as *Sir Anthony Absolute*, the latter as *Mrs. Malaprop*. Both have merit; the first in particular has an original vein of humour and style of acting, which, when more developed, will establish a reputation; and the latter will prove an acquisition in parts better suited to her powers and appearance. Miss Reynolds, too, was welcomed back, as *Lydia Languish*, and Mr. Frewer as *Sir Lucius O'Trigger*.

ADELPHI.—By way of signalising his exclusive management of this theatre, Mr. Webster opened the season with a slight occasional piece, entitled "Webster at Home, an Adelphi fare of Three Courses and a Dessert," introducing the performers who have supported him from the Haymarket Mr. Leigh Murray, Mr. H. Bedford, Mr. Keeley, Mr. Parselle, Miss F. Maskell, and others, and who will much strengthen the company at this establishment. The piece is replete with Green-room allusions; and was followed by four other pieces: "A New Experiment," "The Parents and Guardians," "The Pretty Girls of Stilberg," and "Pepino, the Dumb Boy." Each performance gave what very the usual run of entertainments at this theatre, and would therefore be considered uninteresting in the broken character of the pieces henceforth to be produced. The House was crowded.

PRINCESS'.—M. Scribe's libretto of "Marco Spada," as modified to English taste by Mr Palgrave Simpson, was produced on Monday. The scene is laid in 1725, and the story is acted by Mr. Hyder Ingard with vengeance against the Roman Government, *Marco Spada*, as a brigand leader, has filled the country with terror; but remains undetected, while living in magnificent style in a forest chateau, with his supposed daughter *Andrea* (Miss Heath), who has no suspicion of his being a bandit, under the assumed name of the *Baron di Torlonia*. This young lady has a lover, *Prince Frederico*, nephew of the Governor of the City, with his nurse, the *Marchesa San Felice* (Miss Leclerq), are, by accident, forced to seek refuge in the secluded chateau *Marco Spada*, though he has due his reasons in his power, declines to take advantage of the circumstance; and accepts, at *Andrea's* desire, an invitation to a fête at the Governor's palazzo in the city, and to spend the night. *Marchesa*. *Marco* is also recognised by a priest, who, however, is immediately spirited away by some of his troops disguised as servants. In the next act the same scene appears, but more splendidly decorated. Here the *Marchesa* and *Count Popbelli*, a captain of dragoons (Mr. W. Lacy), are brought in as prisoners, and forced to wed, so that *Frederico* may be free to fulfil his pledge to *Andrea*. The bandits are discovered, and attacked by soldiers. In the conflict *Marco Spada* receives his mortal wound, and then confesses that *Andrea* is the child of a woman who with his attendants, had been formerly slain by his hand. The *mise en scene* of this drama, and the whole of the arrangements are of the most costly kind. The acting throughout was special and well studied. Mr. Hyder Ingard has formerly shown more power in their different rôles. The dialogue, also, has been neatly rendered, and the whole forms a melodramatic spectacle of an extraordinary character. The house was well attended.

LYCEUM.—Having succeeded well in a seven-act play, the sharpwitted management of this theatre, [illegible] relish with the ever-ready Mr. Dagley Lacrete, has ventured on a "Dramatic Tale in Nine Chapters," for Lenten-tide Easter piece. As on the former occasion, they have been assisted by the pen of Mr Buckley, whose scenes are worth all the money required for the performance. We have here the panoramic [illegible] tions of an Alpine [illegible] a traveller's room in [illegible] same, a hut in the mountains, with an avalanche, a farm, grounds of a chateau, [illegible] room, the still carnivally moonlight, an elaborately constructed and grandly-painted waterfall in a glen, and a rustic pavilion, which magi ally converts itself into a saloon of mirrors. These nine scenes constitute the nine chapters; the drama appointed to them is the merest [illegible] and justification of their presence. But it would be injustice to suspect that the outline has been carelessly or neglectfully [illegible] *On contrary*, the authors have worked together most earnestly to present an elaborate, philosophical, and novel series of effects. If they have failed to amuse, it is not for want of the desire to please. In the management this clever, but not altogether successful, piece of stagecraftwork, the authors have sought adroitly to win upon the audience by [illegible] and exceedingly simple chapters, and then introducing others more complex in their arrangement and effects. These latter were not so happy as the first. The simple pictures of the drum-Lead marriage of a Swiss Sergeant and a Vivandiere—of the latter being wounded—of her recovery and delirium and of her being arrested for a supposed theft, while in the act of rejoining her children: these were speedily and effective, and required no [illegible] The drawing of some natural interest. All this changes, however, in the fourth part, for some baseless conventional scen a, in which, after a series of [illegible] poor Vivandiere's children, introduced by a surprise, are brought into social relations of considerable difficulty. One of them, *Estelle*, is loved by the son of the Comtesse, who seeks to prevent the match, by disposing of her hand to a young farmer, *Jerome* (Mr. W. C. Mathews) Rude of speech and manner, *Jerome* is honest and kind; and, understanding the case, having made a fortune with the dowry received with her, resigns her, after a course of years to her lover. Meanwhile, the Sergeant, become a Colonel seeks his long lost wife and children, and arrives at the château just as *Estelle* is left it with *Leonel*, no one knows whither. *Geraldine*, too, is fought, and her [illegible] disguises herself as a servant, in order not to interfere in the marriage of her son with the daughter of a mysterious Baron, who turns out to be *Jean Lafgard* (Mr Basil Baker) the thief for whom the Vivandiere has suffered as a convict. At length the terrible crime is fixed on the real culprit, who dies therefore of a broken heart. In conclusion, *Jerome* resigns *Estelle* to her proper lover; and having sacrificed his own prospects for the good of all parties, retires from the splendours he has created to his [illegible] farm. In the manipulation of this "Strange History" the authors have evidently been desirous of substituting the interest of a novel for that of the drama; and, apart from the mise-en-scene and machinery, have evinced stage talents in the general action and dialogue. The tone, therefore, is throughout in a fanciful strain, and the usual exponents of passion in poetical diction or histrionic embellishment are skilfully avoided. The dramatis personæ and actors have combined to present as close a copy of actual manners as they well could, and have done their best in order to realise a predetermined theory. It cannot be said that their success has been triumphant. The feelings of the audience have certainly not responded: and yet the appeal has been cleverly made. Another proof, this—though none was wanting that true and effective art is not a copy, but an imitation. The slows of life, to please in play or poem, must be raised to some accordance with the dewes of the mind. These literal renderings are no interpretations of nature.

OLYMPIC.—Mr Mort Brough has been engaged to place on this stage a version of "Marco Spada," which is here produced under the title of "Salvator." The adapter has expanded the original dialogue, and augmented the situations—giving to Mr. H. Marston, Miss Anderton, and Mr. Robson some capital opportunities for fine, pathetic, and comic acting. *Salvatori*, as interpreted by Mr Marston, is a generous, jovial, and valorous man, overflowing with paternal tenderness for the supposed daughter, and these different phases were brought out with a decision and mastery of touch distinguishing not only a good, but a great actor. There can be no doubt but that this performer's engagement will raise him considerably in public estimation. Mr. Robson, too, is a comedian of intelligence, who make s his points with a natural and engaging facility. The Line of the drama is thrown back to the age of Pope Innocent X; the costume, accordingly, is remarkably picturesque, and the scenery is not only appropriate, but brilliant. The performance is likely to win on public favour, and merits encouragement. It is seldom that we have seen a piece so well acted.

ASTLEY'S.—This theatre has passed into the hands of Mr. Cooke. The new manager has surrounded himself with a most effective dramatic and equestrian troupe. The interior has been entirely redecorated, and the ventilation properly attended to—a particular of great importance at this establishment. The drama produced on Monday was by Mr. Pitcairn. It is entitled "Amakosa; or, Scenes of Kaffir Warfare," and furnishes abundant opportunities for striking spectacle and equestrian feats of the most extraordinary kind. It was well acted throughout. The house was densely crowded.

SURREY.—The name of the spectacle here is "The Spirits of the Night." It is written by Mr Markwell, who has rather too ambitiously entitled his production, which deals more with ordinary domestic interests than supernatural wonders The plot turns upon family feuds, to the great discomfort of two *Romeo-and-Juliet* kind of lovers—*Augustus Vernon* (Mr. J. Lanin) and *Blanche Blackleigh* (Miss A. Clifton)—the gentleman being killed in the *melee* of discordant incidents. The piece was well received by a crowded audience.

HOLIDAY AMUSEMENTS.—The public have, during the week, had the usual opportunities of the season to disport themselves agreeably, and have succeeded in doing so, much to their satisfaction, at Cremorne, the Zoological Gardens, the Colosseum, the Polytechnic, and Madame Tussaud's. Neither have the Dioramas been wanting in attractions: witness the Wellington, at the Gallery of Illustration; Pront's Panorama of Antwerp, and that of the Nile, at the Egyptian Hall. We are glad, also, to learn that Mr. Wyld's Great Globe has been well attended.

RISE AND PROGRESS OF ENGLISH POETRY.—On Monday evening, at the Whittington Club, Mr. T. Miller delivered the first of a series of six lectures developing the history of English poetry, from the earliest period to the commencement of the present century. The lecture of the evening comprised all that is known of our nat onal poetry, from the time of the Ancient Britons to the period of the Norman Conquest. Mr. Miller rendered his lecture extremely attractive by illustrative extracts, selected with much taste and judgment, from various authors, and which were received with frequent applause; providing the audience that on the next occasion he would conduct them through the period between the Norman Conquest and the invention of printing. The lecture was well attended.

MUSIC.

NOTES OF THE WEEK.

Greenwich Fair and the burlesques and spectacles form the staple commodities of an Easter week. Music plays on such an occasion but a secondary part, the concert-givers biding their time.

Herr Jansa, the violinist, however, ventured on his third soirée, on Easter Monday, and was paid for his zeal by a good attendance at the New Beethoven-rooms. His sonata in D, Op. 66, executed by himself and Mr Aguilar very creditably, has many fine points, if not original ones. Herr Pauer, Herr Gottrie, and Mr. W. F. Reed assisted Jansa in the quartets; and the German Male-Vocal Union sang three harmoniously.

Last night the Sacred Harmonic Society repeated Mendelssohn's "Hymn of Praise" and Mozart's "Requiem," under Costa's direction, with Miss Louisa Pyne, Miss Williams, Mr. Lockey, and Herr Formes. Referring to oratorios reminds us that Madame Fiorentini is again in the field, having at last conquered a most trying influenza which had wrecked her for the last three months. Such a voice as that of Madame Fiorentini cannot be spared at this moment.

At the Horns Tavern, Kennington, last Monday, an evening concert was given, at which Madame Doria, Mr. Land, Mr. Terwilliam, the Misses Dolby, Miss Messent, Miss C. Nott, Miss E. Day, Messrs. A. J. Herre, Leiter, Cabatta, F. Bodda, Salmon, Patto, Bottesini, Pilotti, Bilette, and F. Mori, were the principal vocalists and instrumentalists.

Dr. Bexfield has been delivering a series of lectures on music, at the London Institution; and Mr Thorpe Reede has been lecturing at Crosby-hall on the National Music of England.

The first meeting of Mr. Ella's Musical Union will be on Tuesday, and the second Philharmonic Concert (Hanover-square-rooms), on Monday. Next Wednesday will be the anniversary festival of the Western Madrigal Society. The anniversary performance of the "Messiah," for the Royal Society of Musicians, will take place at Exeter-hall, under Costa's direction, on the 22nd inst. The Orchestral Union, under Mr. Mellen's direction, will give a series of four morning concerts this season.

Madame Viardot and Madame Clara Novello are both on their way to town for the concert season.

FATE OF A MATHEMATICIAN.—Robert Recorde, physician to Edward VI. and Queen Mary, was the first who wrote on arithmetic and geometry in English: the first who introduced algebra into England; the first who wrote on astronomy and the doctrine of the sphere in English; and, finally, the first English author of all probability who adopted the system of Copernicus. He died in [illegible], in the King's Bench prison, where he was confined for debt!

EDUCATION IN ENGLAND AND WALES.—It is stated in the amended votes and proceedings of the House of Commons, printed since the adjournment, that on Monday next "Lord John Russell is to state the intentions of the Government with respect to education in England and Wales, and to move for leave to bring in a bill on the subject."

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

THE thirtieth Exhibition of the Society of British Artists, in Suffolk-street (which opened on Monday), displays considerable improvement over many previous ones, both in the character of the works presented and the artistic skill displayed in them. Though landscapes and *genre* subjects are, of course, the prevailing features, there are here and there efforts in the historic and poetic line which afford gratifying evidence that aspirations after the highest honours of art are not extinct amongst us.

Mr. Hurlstone, the President of the Society, has been as industrious as ever, producing no less than eleven pictures, most of them characteristic studies of Italian boys and shepherd boys, after the manner of Murillo (barring a little muddiness of brush here and there, which the latter had not), and of which Mr. M. Angelo might struggle against it, will probably never entirely get rid of); but in the midst of all these domestic subjects is one of a higher order, and in every respect entitled to take rank with the most capital performances of modern art. This picture (170) hangs on the south wall of the Great Room, and represents "the First Appearance of Columbus in Spain." The incident represented, though a trivial one, led to the most important results, and deserves to be commemorated in historical. After the duplicity of the Portuguese, by which his grand projects of Transatlantic discovery were for a time defeated, Columbus made his way to Spain, in search of more honourable co operation in his gigantic views. Here, wending his patient way on foot, he stopped one day at the Franciscan Convent of La Rabida, to beg for some bread and water for his young son, who accompanied him. The boon was granted; and, whilst the humble refreshment is then devoured, the Superior in the Franciscan Convent, Columbus is receiving, at the hands of the Franciscan Superior, the bread and water he has begged for his son; and his dignity of bearing, and unmistakeable superiority of aspect, are such as well account for the interest and respect already manifested towards him in the expression of the Superior. The attitudes of the three figures are unconstrained, yet full of life and purpose; and the colouring exhibits a vast improvement on too many of this artist's performances, being composed chiefly of genuine green, red, and brown, without any mixture of doubtful hues to spoil them. Perhaps, however, it might be suggested that the blue of the boy's dress is too pale and cold for the deeper tone prevailing over the

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

other parts of the picture. Amongst this artist's other works those which will attract more especial notice and admiration are (145) "Descendants of Marius and the Gracchi"—Italian beggar boys playing marbles, &c., in the streets of Rome; (220) a "Shepherd Boy in the South;" (298) an "Italian Shepherd Boy," carrying a sheep across his shoulders; and (443) "An Italian Girl putting on a Necklace." The rest are portraits, a class of work more interesting to the artist and the originals, than to the public.

Salter (who has been rather idle some years past), comes out with eleven pieces also, which, with the exception of four or five, are historical or poetic subjects. First in attractiveness is a picture of considerable dimensions in the Great Room (119), "Cupid's Amusement.—Venus teaching her Son the use of the Bow." The idea is entirely fanciful; Venus is encouraging her chubby and mischievous son to play havoc with his little bow and arrow amongst several nymphs who happen to compose her court. One has already been mortally wounded, and is lying at the feet of her mistress; another still braves the little god's power, and is about to suffer for her temerity; the rest look on with a mixed feeling of curiosity and misgiving at the dangerous pastime. The subject and grouping are ingenious and well studied; but it is obvious that the artist has bestowed even still more attention upon the colouring, which is highly ambitious, and, we may add, is generally successful. Mr Salter appears to have aimed, in this one work, at a complete illustration of the principles of colouring, and upon the relations of colours as displayed by the prism: a subject upon which much learned disquisition has been written, from the time of Newton down to our own day, but which practically was much better understood by the early painters, with Da Vinci and Titian in the van, and Murillo bringing up the rear, than it is likely to be for some time. Nevertheless, in the picture before us, a noteworthy attempt is made to carry into practice the rules of scientific theory; so as, by a proper disposition of colours, both as to relative position and quantity, the whole range of the colours of the rainbow and their combinations may be brought into harmonious association on the same canvass. The details of the process would be too technical for our present purpose; we will merely remark that the colouring of the principal group in the centre is made up of the three primitive colours—red, blue, and yellow—with a very small addition of green near the right; conducting the eye to the next principal group on that side, in which the secondary colours —green, orange, and purple—prevail, with a very small portion of red; whilst on the opposite side is a third group, also harmoniously connected with that in the centre, in which the tertiary colours as olives, browns, and slates—are introduced; whilst various modified compounds are spread over the rest of the picture. As a whole, the effect is of extreme brightness, which may be improved by the subduing effects of age, or a little judicious glazing. Amongst this artist's other exhibits we remark, with approval (60), "A Bacchus and Ino;" (149) "The Nosegay," a female figure smelling flowers; (137) "A Bacchante;" and (297) "A Bacchanalian Dance;" the second of which is perhaps a little deficient in tone—the last very spirited. Two portraits of female children, (253) "with a Kitten" (query "Dog"); and (266) "Playing with Wild Flowers," are remarkable for their happy simplicity of treatment and naturalness of expression.

"RUSTICS."—PAINTED BY C. BAXTER.

Woolmer displays his accustomed fertility of invention in the use he makes of his peculiar style of colouring—consisting chiefly of pale greens, yellows, and satin whites, with a dash here and there of vermillion; all very smooth and attractive, and upon the whole, truth to say, not inelegant. "The White Rose" (39) is a rather happy conceit; the said white rose resting tenderly on the amber-coloured drapery of the shoulder, where it forms a cold focus of light; appropriately enough in illustration of the lines—

Beautiful maid, and snow-white flower,
Well are ye paired in your opening hour!"

The companion piece in the Great Room (87)

Oft pining care in rich brocade is dressed,
And diamonds glitter on an anxious breast—

represents a young lady preparing for bed, after her return from a masquerade (a *Juliet*, perhaps—certainly no masquerader of the modern school), and who has evidently left her heart behind her. "Titania Imprisoned," from the German, is in a superior vein; the grotty recess in which the figure reclines forming, as it were, the setting round a pearly gem. The drawing of the right side, however, is slightly "out."

West's Coast Scenes, whether in Norway or nearer home, are well appreciated, for their excellence of colour and naturalness of treatment. The one which we engrave (517) represents a bold sea-bord, with a wrecked ship on shore. The scene is replete with nature, and the execution in every respect is satisfactory. In another picture by the same artist (244), "Recollections of the Devonshire Coast, near Lynmouth," we admire the bold reality of the presentation, and more particularly the accurate realisation of the stratified rocks with which on one side the view is bounded.

Baxter has several pleasing subjects of female beauty and freshness, treated, perhaps, a little tamely, but still with great delicacy of finish. From these we have selected for engraving (19), one entitled "Rustics," representing children returning from gleaning—a group very happily conceived and executed.

We shall return to this Exhibition next week; when we shall notice some admirable landscapes by Tennant and Boddington, and some clever productions by Pettit, G. Smith, Buckner, Hill, and many others.

"A WRECK.—THE SEA-BORD."—PAINTED BY W. WEST.

BURFORD'S NEW PANORAMA OF GRANADA.—VALLEY OF THE DARRO.

BRITISH MUSEUM.

The paucity of objects of mediæval art in the British Museum collections, invests any accession to the long-promised Gallery of Antiquities of the Middle Ages with considerable value. Accordingly, the item here engraved is of interest. This rare example was lately found in the river Tyne, and purchased a few days since by the trustees of the Museum. It is a brass vessel, about twelve inches high, in the form of a knight on horseback, in the war panoply of the early part of the thirteenth century. The surcoat is richly diapered, and the flat-topped helmet (the upper part of which served for the lid), and the hauberk, of

MEDIÆVAL BRASS VESSEL JUST ADDED TO THE BRITISH MUSEUM.

ringed or chain mail, afford excellent examples of the armour of the period

MR. BURFORD'S PANORAMA OF GRANADA AND THE ALHAMBRA

We now give, according to promise, an Illustration of this grand Painting. The section we have selected represents a vale by the river Darro, under the summit of Silla del Moro, with the gay and the fair engaged in music and dancing, that harmonise with the beauty of the scene This charming spot, entirely surrounded by mountains, is unequalled for its picturesque attractions. The Panorama presents not only the finest of plains, but the grandest of cities. It is taken from the Generalife, and embraces the Alhambra and the Vega, with the encircling mountains; including ravines, woods, fortress-battlemented walls, palaces of Arabian architecture, churches, and convents [illegible] streets, and public buildings," says the [illegible] easily traced as on a map; the [illegible] the ancient [illegible] and numerous minarets rising conspicuously above the vast masses of brown roofs, form striking features, and contrast pleasantly with the numberless little gardens and orangeries in the open courts below, and the flower-decked terraces on many of the roofs above. Towards the right is seen the Base of the mulberry and the valley of the Darro, through which the river so named winds its way, under embowered terraces, fruit groves, and flower-gardens—the favourite retreats of the Moors; in the small pavilions of which, then so numerous, they enjoyed at once seclusion, the finely-tempered breeze, and the flowers and fruit to which they were so partial." We quote the following animated picture of the Darro from Mr. Ford's "Hand-book of Spain":—

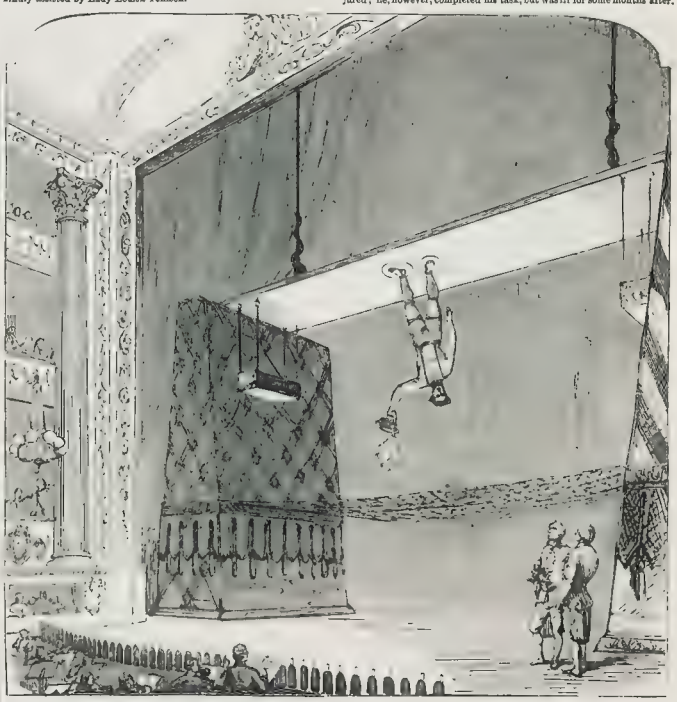
The *Darro* rises from the hill of myrtles near Huetor, and approaches Granada under the *Monte Sacro*; so called from the finding certain sacred bones and relics, to which is attributed the sweetness and fertilizing quality of the stream. Thus, among the Pagans, the waters in which Juno bathed the morning after her marriage, retained their perfume, *Manait odor possis scire fuisse deam*. The walks on both sides of the swift arrowy Darro up this hill are delicious: the stream gambols down the defile; hence its Arabic name *Hadarah*, from *Hadar*, "rapidity in flowing." Gold is found in the bed; whence some, catching at the beloved sound, have derived the name Darro, "quasi *dat aurum*;" and, in 1568, a crown was given to Isabel, wife of Charles V., made from grains found in this Pactolus Here amphibious gold-fishers still paddle in the eddies, earning a miserable live-hood in groping for the precious metal. The Romans called the river *Salon*, the gorge through which it flows, under the Generalife, was the *Hazarra*, or "Garden of Recreation," of the Moors, and was studded with villas. The Darro after washing the base of the Alhambra, flows under the *Plaza nueva*, being arched over; and, when swelled by rains, there is always much risk of its blowing up this covering.

This exceedingly fine picture was painted by Mr. Burford himself, assisted by Mr. H. C. Selous, from drawings taken by J. Uwins, Esq., kindly assisted by Lady Louisa Tenson.

THE "AIR-WALKER" AT DRURY-LANE THEATRE.

Many years since, we remember a certain Sieur Sanches accomplishing the feat of walking on the ceiling at the Surrey Theatre. *How* this was effected we are not prepared to say: it is stated to have been by the employment of hooks; be this as it may, the feat which has for some nights past been performed at Drury-lane Theatre, and which our Artist has illustrated, is asserted to be altogether of another class from the "Surrey" marvel.

The Drury lane novelty is a Transatlantic contrivance. The performer is Mr. Sands, who has been an equestrian from his childhood, and is now proprietor of the Hippodrome at New York. He acknowledges to have received the *secret* from a scientific man, and first accomplished the feat at Auburn, on the 29th of May last. Whilst attempting it, at Penyann, in July last, Mr. Sands fell, and was much injured; he, however, completed his task, but was ill for some months after.



FEAT OF MR. SANDS THE "AIR-WALKER," AT DRURY-LANE THEATRE.

The arrangements for the performance at Drury-lane Theatre were as follows:—On two lofty draped supports was placed a temporary ceiling, 28 feet in length, and consisting of a stout timber framing, with a smooth surface; at each end was a slung seat; and beneath the ceiling was a net, provided in case of accident. Mr. Sands prepared himself by lacing sandals over his boots, to which were attached brass loops; and these were connected, by springs, with a pair of platter-like soles, in which lay secret, as they were brought to the theatre in a locked box, and conveyed away with similar caution at the close of the performance. Mr. Sands commenced by ascending by a ladder to one of the slung seats, and, lying upon his back by aid of the ropes, placed his platter-shod feet upon the ceiling, then gently detached himself, and very slowly walked across the platform, occasionally pausing to sing himself on one leg; thus he reached the seat at the opposite end, and descended by the ladder. It is surmised that the support is occasioned by the hollow soles being exhausted of air, upon the same principle as that by which a fly walks upon the ceiling—the performer's feet being detached by the pressure of a valve, which re-admits the air. The performance has been throughout very neatly executed.

PHOTOGRAPHY.

THERE has been a sudden re-awakening, in the public mind, to the advantages and beauty of the process of sun-painting. Hence there has originated an exhibition of photographs, and a Photographic Society has been established, under the Presidency of Sir Charles Eastlake, P.R.S. This society has held two evening meetings, the first of which is fully reported in the journal which it has commenced.

Sir William Newton communicated some "Notes on Photography, in an Artistic View, and in its Relations to the Arts," with a view to establish that photography can only be considered as a science to those who investigate its properties; but that, to the public, its results, as depicting natural objects, ought to be in accordance (as far as it is possible) with the acknowledged principles of Fine Art. Sir Wm. Newton contends that many of the more natural effects are to be produced in photographic pictures, by sacrificing some of the sharpness of outline, which is usually regarded as the perfection of a photograph, and thus secure "a greater breadth of effect, and consequently a picture more suggestive of the true character of nature, though we may not be prepared to receive Sir William Newton's canon of working with a camera out of focus, we fully coincide with his concluding remarks. He says:—

I consider it to be a sort of duty, as an artist, to recommend the student in art not to take up the camera as the means of advancement in his profession until he has made himself well acquainted with the true principles of his art, as well as acquired considerable power of hand, with a view to draw with ease and correctness the outline of any object he may wish to represent. If however, any student should imagine that the camera will help him to this desirable attainment without the requisite study on his part, he will find himself much mistaken, when, perhaps, it may be too late to repair the injury. I am the more des rous of directing the attention of the student in art to his foregoing observations, because I am well aware of the seductive nature of the practice of photography, and how it is calculated to divert him from his principal object in the earlier part of his studies.

Dr. Percy read a paper "On the Waxed Paper process, as applicable to Hot Climates." It was proved by experiments made during the hot summer months, that the waxed paper is especially applicable to the conditions of high temperature. One special advantage in the use of the waxed paper is that it will keep "for a year or two rather." As the "waxed paper," says the author, "will keep so well after excitement and exposure in the hottest weather, it might be anticipated that, *cæteris paribus*, it would keep proportionately longer than ordinary paper, under ordinary circumstances of temperature in this climate. And the anticipation generally accords, I think, with the experience of photographers. One of the best negatives I ever saw was on waxed paper. It was taken by Vicomte de Vizier, a month after excitement. The same was part of the Forest of Fontainebleau. I have also myself obtained pretty good results with the use of waxed paper, excited several days previously."

The process employed by Dr. Percy is as follows:—

1. The paper is iodised by the single wash. Twenty grains of nitrate of silver require for complete solution, in one fluid ounce of water, about 980 grains of iodide of potassium.

We must now explain, for the benefit of our young photographic readers, that the paper is soaked in this solution, and then immersed in water, by which process an iodide of silver is left in the paper.

2. *Exciting Liquid.* Fifty grains of nitrate of silver to one fluid ounce of water. One or two drops of this are added to one drachm of distilled water, and one or two drachms of aqueous solution of gallic acid.

3. The picture is developed by the aceto-nitrate of silver and gallic acid, diluted with one or two the volume of water.

Mr. Fenton stated that he iodised his wax-paper by the following preparation:—

Rice water.	1000	grammes
Iodide of Potassium,	30	"
Bromide of Ditto,	3	"
Cyanide of Ditto,	1	"
Fluoride of Ditto,	½	"

We beg to inform our English readers that the French gramme is equal to 15½ grains nearly, English. We cannot but object most seriously to the use of this weight when it is so readily, by those familiar, converted into English grains. The communication made by Mr. Fenton, an instructive error on this point occurs in the following sentence:—"The solution for exciting the paper was the usual one of thirty *grms.* (meaning really *grains*) of nitrate of silver, and half a drachm of acetic acid to the ounce of water."

On the second meeting of the society, a paper was read by Mr Robert Hunt, "On the Principles upon which Lenses should be Constructed for the Photographic Camera." We believe that paper will appear *in extenso* in the next number of the journal of the society; but the following is a general outline of the conditions involved:—

According to Mr. Hunt's views, the solar ray consists of three distinct agencies or principles—light, heat, and chemical power. These produce, at all events, distinct phenomena, and exhibit very different degrees of refraction in passing through transparent media. Heat is the least refracted by a lens, and light the next in order; the chemical principle or agency is more than the others, and consequently, in correcting a lens for chromatic aberration, it is not corrected for the chemical rays, and a good achromatic lens may still be an inefficient one for the photographic camera. Taking an ordinary non achromatic lens, it will be found that the focal point of these three principles—*light, heat,* and *actinism*—will fall in the inverse order to that in which they now stand, at different distances from the inner surface of the lens; and, although with an aplanatic lens, these points are brought nearer together, they are seldom coincident. This want of coincidence in the luminous and chemical focus for achromatic lenses was first pointed out by Mr Claudet. It is usual to correct lenses upon the old hard rows by Fraunhofer, measuring from certain well-defined fixed dark lines which are visible in the prismatic spectrum.

The indices of refraction for the several rays have been most carefully determined by Fraunhofer; and for a standard medium, a flint glass prism, they are respectively:—

Red	..	1·627749	dark line B
Orange	..	1·629681	C
Yellow	..	1·634582	D
Green	..	1·642024	E
Blue	..	1·648269	F
Indigo	..	1·659286	G
Violet	..	1·671762	H

When the coincidence of the lines H and B have obtained, it was thought that all that was necessary was effected.

Mr. Stokes has shown that an extensive set of rays, far beyond the violet, may, under certain conditions, be rendered visible; and, therefore, we have now a guide in the formation of lenses which we did not previously possess; for, if all these rays can be brought into coincidence in the construction of a lens, we secure, as nearly as possible, the coincidence of the luminous and the chemical forces

The achromaticity of a lens is not, therefore, all that is required; but optimum must combine refractive and dispersive powers of glasses, and give them the necessary curvature so as to form a *diacteinic* lens, or a lens perfectly transparent to actinism, are we can hope for perfection in photographic pictures. In addition to this, to secure sharpness of definition over the whole of a perfectly flat field, the general form of the compound lens should be determined by two facts—that one surface being a section of an ellipse, the other, be it a section of a circle struck from the farthest of the two foci of that ellipse, prevents aberration, and secures the desired effect.

By attention to these conditions, it was thought lenses of the best possible kind could be formed; and Mr. Ross, in the discussion which followed, admitted the correctness of Mr Robert Hunt's views; and stated that he had always been guided by these principles in the construction of his photographic lens.

Mr. Sanford, of Fitzmaster row, has constructed a most ingenious and inexpensive camera-obscura for photographers The whole of the arrangements, with the exception of the legs, pack up into a box not more than six inches deep; and the weight is very trifling. By the arrangement adopted, a photographic artist can take out into the country a number of pieces of prepared paper, obtaining, without exposure to any light except the radiations in the camera, pictures of [illegible] spots, which can be developed at any convenient place and time, on the avoidance of the difficulty which has been a constant source of complaint with travelling photographers.

It was our intention to have devoted some space to the construction of cameras; but we find the Photographic Society intends, at their next meeting, to consider this question; and, no doubt, a large number of these instruments will be exhibited. We, therefore, prefer waiting until next month, when we hope to give our readers all the advantages of this meeting.

We find that, in Paris, some very fine photographic copies of old and rare prints, of the full size, and in every respect fac-similes, are in circulation. These are executed by mere superposition, and differ in no respect—except their perfection—from the earliest positive pictures obtained on paper saturated with chloride of silver

The Rev. Professor Stokes, of Cambridge, has proved, as above stated, the existence of a set of invisible rays not hitherto known in the ordinary Newtonian spectrum. These are best seen by dissolving sulphate of quinine in some distilled water slightly acidulated with sulphuric acid—the very outer edge of that fluid possesses the power of turning back the purple rays of the spectrum, and thus forming a set of *reflected violet rays*. Many other substances possess the same property as the sulphate of quinine. These are thought by Mr. E. Becquerel and Mr. Stokes to be the chemical rays render it visible, since some peculiar photographic phenomena appear to depend upon their presence or absence

Professor Schonbein, of Balse, states that oil of turpentine, exposed in a lightly-covered vessel to sunshine for some time, and frequently stirred, acquired some very powerful properties, such as the power of decolourising indigo, deconposing sulphuretted hydrogen, and the like. It is not improbable but it may thus be rendered a most important photographic auxiliary agent.

We have lately seen some very good lithographic impressions, the original picture on stone being obtained by a photographic process.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Advices having come to hand from the Cape to the effect that the Kaffir war is at an end, the market for Consols has been very firm during the whole of the week, and the quotations have been on the advance. The Three per Cents have risen from 96¾ to 97¼. The favourable accounts from Australia and California in reference to the produce of gold, and the steady imports of the precious metals, have tended to produce more confidence amongst the speculative class. There has been an active demand for money for commercial purposes; nor ribleless, the rates of discount have not advanced. In the open market, as well as with the various bill-brokers, have still large surplus means on hand; hence, an advance in the value of money can scarcely be anticipated.

Some excitement has been observed amongst the frequenters of the Stock Exchange, from it being understood that, in future, Government will not grant charters of incorporation for any banking interest hereafter proposed to be established in Australia. The reason assigned for this determination is, that the various companies do not possess sufficient stake in the colony—in other words, that the whole of their profits are forwarded to England, to the great detriment of colonial interests, besides which, it is asserted that most of the banks are trading beyond their legitimate means, and, further, that a large portion of the subscribed capital is invested in securities in the mother country.

On Monday the Three per Cent Consols, for Money, were done at 99⅝ to 100; and for the Account, 100 to 100⅛. Exchequer Bills were 2s. to 3s. pm., and India Bonds, 40s. prem. The Market, both on Tuesday and Wednesday, was firm, at the above quotations. On Thursday Consols were a shade higher, with a very firm market. The Three per Cents, both for Money and the Account, were marked 100 to 100⅛. Exchequer Bills sold at from 2s. to 1pm.; and India Bonds, 40s. prem.

The business done in numerous securities has been comparatively small. Australian Agricultural have sold at 10½ to 10¾; Peel River, Land and Mineral, 6⅞ to 7⅛ prem.; Van Diemen's Land, 23 to 24; South Australian, 9 to 9½; Western Australian, 10 to 10⅜; North Australian, 1½ to 1¾; Australian Investment, 1⅝ to 2 prem.; Scot ish Australian Investment, 1⅝ to 2 prem.; Nova Scotia Mining, 1½ to 2 prem.; Australasian Coal Mining, ½ to ¾ prem.; Union Bank of Australia, 70½ to 71½; Bank of Australasia, 9¼ to 5½; Oriental Bank, 7⅞ to 8⅝; London Chartered of Australia, 4¾ to 4¾ prem.; English, Scottish, and Australian, 5⅞ to 6; British Columbia, China, and Australian, 2 to 2½ prem.; Bank of Western Waterworks, 1½ to 2 prem; Great Nugget Vein, 2½ to 2¾ prem.; Port Phillip, ½ to ¾ prem.; Colonial Gold, 2½ to 2¾ prem.; Australian Agricultural, 1 prem.; Australasian, 2⅝ to 2¾ prem.; North of Europe steam, par to ½ prem.; Crystal Palace, 1¼ to 1½ prem.; General Steam Navigation, 3½ ex div. and bonus.; General Screw, 1½; Peninsular and Oriental Steam, 8½ to 8¾ New (239 paid), 46; Subm rine Telegraph, 1½ shares in Hungerford-bridge have marked 12; Waterloo, 3⅜; Vauxhall, 21; East London Waterworks have been done at 83½; Grand Junction, 84; West Middlesex New Company, 60; Southwark and Vauxhall, 90; West Middlesex, 110.

The whole of the Peruvian Six per Cent Stock has now been converted according to the arrangement already noticed. Prior to the close of the month a notice was issued to the bondholders, to the effect that unless the bonds were presented by or before the 31st ult., the holders would be paid off at par. As have arrangement would have entailed a heavy loss to the creditors, the only alternative has been adopted. Greek Bonds have been firm; and Turkish Scrip has kept at a good premium, notwithstanding the unfixed condition of the Ottoman Government. Most other Foreign Securities have remained steady. Transactions have taken place in Austrian Five per Cents at 99; Brazilian Five per Cents, 103⅞ to 104; Ditto, Four-and-a-Half per Cents, [illegible]; Buenos Ayres, Cordova, and Rosario, One-and-a-Half per Cents, [illegible]; Chilian, [illegible]; Danish, [illegible]; Dutch, [illegible]; Ecuador, [illegible]; French, [illegible]; Granada, One-and-a-Half per Cents, [illegible]; Portuguese Five per Cents, 42¾; Ditto Four per Cents, [illegible]; Russian, Two-and-a-Half per Cents, 66¾; Russian Five per Cents, [illegible]; Four-and-a-Half per Cents, [illegible]; Sardinian, [illegible]; Spanish Threes per Cents, 49; Ditto, New Deferred, [illegible]; Committee's Certificate of Coupon, 8¾ per cent.; Spanish Loan, [illegible]; Turkish Loan, 98 prem.; Ditto, for the Account, 98¼ prem.; Venezuelan and a-Half per Cents, 103 francs; Exchange, 25 francs 10 cents; and Belgian Four-and-a-Half per Cents, 98¾ to 99.

During the settlement of the Account, Railway Shares have been very inactive, and prices have not been supported

The amount of railway "calls" for the present month is £381,166, against £272 777 in 1852, and £327,000 in 1851. The total "calls" for the first four months of the three years are shown below:—

1853.	1852.	1851.
£2,351,748	£1,964,917	£1,819,401

The total traffic receipts for the week ending March 19, were as under.

	Total Receipts.	Miles Open.	Average per Mile
1853 ..	£277,579 ..	6696 ..	£41 9 0
1852 ..	255,388 ..	6,600 ..	38 6 0
1851 ..	261,870 ..	6,500 ..	40 5 0

The following are the official closing prices of shares on Thursday:—

ORDINARY STOCKS AND SHARES. Aberdeen, 23¾; Ambergate, Nottingham, and Boston, 13½; Eastern Junction, 4¾; Birmingham, Wolverhampton, and Stour Valley, [illegible]; Caledonian, 69¾ ex div.; Chester and Holyhead, [illegible]; Dublin and Drogheda, [illegible]; Dublin Junction, 4¾; Dundee, Perth, and Aberdeen Junction, [illegible]; Eastern Counties New Six per Cent Stock, 8½; ditto, A Stock, 48; ditto, B Stock, [illegible]; Great Western (Ireland), 10¾; Great Western, 59¾; Lancaster and Yorkshire, 75½; Ditto, Fifths, 11; Leeds Northern, 16¾; London and Blackwall, 9½; London and North-Western [illegible]; London and South-Western, 93½; Londonderry and Coleraine, [illegible]; Manchester, Sheffield, and Lincolnshire, 53½; Midland, 74; Midland Great Western, 8½; Newport, Abergavenny, and Hereford, 12½; Norfolk, 8½; North British, 9¾; North Staffordshire, 11¾; Oxford, Worcester, and Wolverhampton, [illegible]; South Wales, [illegible]; Waterford and Limerick, [illegible]; Waterford and Kilkenny, [illegible]; Wilts, Somerset, and Weymouth, [illegible]; York, Newcastle, and Berwick, 19½; York and North Midland, 28½; Extensions, 12¾; York and North Midland, 58½.

LINES LEASED AT FIXED RENTALS.—Buckinghamshire, 16½; East Anglian, 1½; Hammersmith, 6½; Lancaster and Carlisle, 3; Midland Bristol, 105¾; Wiltshire and Somerset 102¾.

PREFERENCE SHARES.—Bristol and Exeter 4 per Cent Stock, 106; Chester and Holyhead Five per Cent Guaranteed, [illegible]; Eastern Counties (No. 2), 18¾ prem.; Eastern New 5 per Cent Stock, 15; Great Northern 5 per Cents, [illegible]; [illegible] Cents, 111; Ditto, 4½ per Cent Scrip, 53; Great Western 4½ per Cent, No. 1, Ditto, 5 per Cent, 1863; London Derby and Enniskillen Half Shares, 13¾; Manchester (New £10), 10¾; North British, 187¾; North Staffordshire, 26; Oxford, Worcester, and Wolverhampton 6 per Cents, 13¾; York, Newcastle, and Berwick, 10½.

FOREIGN Charleroi and Erquelines, 1½; Great Indian Peninsular, 7 Luceca and Tarifa, 3 per Cent Preference, 3¾; Luxembourg, 8; Madras, 9½; Paris and Strasbourg, 32¾.

On Tuesday, Mining Shares were in very moderate request. Acmi Peña were done at 2¾; Anglo-Australian Gold, 1¾; Australian Agriculture, 1½ British Australian Imperial, 5½; Ditto, Consolidated Cuyuba, 6¾; Carson's Creek, 2½; Copper Miners of England (7½ per Cent.), 8¾; English and Australian Copper Smelting Company, 9¾; Great Nugget Vein, 4¾; New Grenada, 1¾; Nouveau Monde, 2¾; Port Phillip, 1¾; South Australian, 1¾; Yuba, 1¾.

FRIDAY EVENING. The Consol Market has not been quite so active yesterday, and prices have given way a trifle lower. The Three per Cents, for money, have been done at 99¾ to 100; for the Account, 100 to [illegible]. The Unfunded Debt remains to-day firm. Foreign Bonds and India Bonds were in command very little transacting.

THE MARKETS.

CORN EXCHANGE (Friday). During the present week the arrivals of English wheat up to Monday were somewhat limited, but since that day they have somewhat improved and the receipts this morning from Kent and Essex were fresh up to [illegible] inclusive. With less English and foreign to-day we were rather short of wheat, and the trade was heavy, at a decline of 1s. per qr. on the prices of Monday last. Barley was in a sluggish state. In the quotations, however, no change took place. Oats and beans remained the same. With less English and foreign to-day we were rather short of wheat, and the trade was heavy, at a decline of 1s. per qr. on the prices of Monday last. Barley was in a sluggish state. In the quotations, however, no change took place. Oats and beans remained the same. With less English and foreign to-day we were rather short of wheat, and the trade was heavy, at a decline of 1s. per qr. on the prices of Monday last. Barley was in a sluggish state. In the quotations, however, no change took place. Oats and beans remained the same. Malt, the show of which was small, was in moderate request. We were but moderately supplied with oats this week

ILLUSTRATED LONDON NEWS SUPPLEMENT.

VOL. XXII.] SATURDAY, APRIL 2, 1853. [GRATIS.

Literature.

DISCOVERIES IN THE RUINS OF NINEVEH AND BABYLON, with Travels, &c.; being the Result of a Second Expedition, undertaken for the Trustees of the British Museum. By AUSTEN H. LAYARD, M.P., Author of "Nineveh and its Remains." John Murray.

"History repeats itself;" and we, even in this age, have doubtless above ground, powers and dominations, which, if the world lasts long enough, will be studied in their ruins three thousand years hence, by scientific and learned antiquaries, speaking tongues, now perhaps unformed, and belonging to communities now without a name. Of what use will our annals be to those remote masters of a future world? Shall we teach them anything, or shall we teach them much; out of our graves? Shall we merely furnish an interesting story? Shall we be the theme of memories, entertaining, indeed, but serving none of the practical ends—entering into none of the real business—adapting themselves to none of the serious labours which may be destined then to occupy the solicitude of men and nations? It would be a feeble and insufficient answer to this question to point to the records to which so many recent augmentations have been made by a marvellous system of recovery, and which hold up to us in dim outline the shadow of Assyrian and Babylonish power—the shadow, scant indeed, of substances once so real and so huge. For the knowledge of our fate and character will go down to posterity incomparably more full, familiar, and distinct than any acquaintance which it is possible for us now to acquire of the great primæval empires under whose unsparing and heavy hand the richest and brightest portions of early Asia groaned.

Here, in truth, is an enormous distinction between the virtual relation which we bear to the past, and that which we are likely to bear to the future. Independently of the indisputable fact, that our moral and material civilization is more worthy to be preserved in human remembrance than is the most perfect development ever attained by idolatrous Egypt, or by idolatrous Ashur, there is another fact equally certain that our times *will* be thus preserved. The same phenomenon which characterises our age in the communications of country with country, characterises it in the communications of the dead with the living, and of the living with the unborn. The art of printing supplies to the human race an indestructible depository for its archives for evermore. It is impossible—and impossible physically, as well as morally—that, after any lapse of ages—after a lapse of ages five times as numerous as those which separate the present era from the era of Ninus, the same shadows should envelop the memory of Victoria or of Napoleon III., or indeed of any historical character of the last four centuries, which shroud from our most eager inquiries the deeds, and the doom, and we had almost said the very name, of Ninus himself. And little as we may know of such a personage, that little bears still the further incertitude of date; we believe, perhaps, that such men bent the stiff necks of their enemies before they were, in fact, born; or that their chief exploits had effect when their remains were already moulded in the barbaric pomp of an Eastern mausoleum.

There is a most impressive line, the exact words of which we cannot recall, in some old Latin poet, suggested or inspired by the sight of a strong castle going to ruin, on the banks of a river which still flowed equably beneath it, exactly as the same river had flowed ages before the foundation-stone of the decaying structure had been laid. The meaning is to this effect—("the motionless fall, while the mobile remain")—"*En immota ruunt, dum fluxa manent*"—a familiar fact, conveyed in a paradoxical and startling form of expression. The quotation may describe not inaptly the advantage which a printed re-

* * * * PAINTED BY JOHN ABSOLON.

THE very graceful and touching composition which we engrave, is one of the most attractive pieces in the "Winter Exhibition of Sketches and Drawings" (Pall-mall), for the current season. It illustrates the beautiful passage in one of Kirke White's poems:—

Mary, the moon is sleeping on thy grave,
And on the turf thy lover sad is kneeling,
The big tear in his eye.—Mary, awake!
From thy dark house arise, and bless his sight,
On the pale moonbeam gliding.

The artist represents the object of this passionate appeal, as rising in spirit from the grave, and looking down in pity upon the bereaved one whom she has left behind, and who, unconscious of her presence, waters the ground with unavailing tears.

cord with its multiplicate and ever reproducible copies, diffused in a thousand places, and consigned to the frailest of material substances possesses over an inscription, however deeply graven, entrusted, one and for all, to brass or granite. The brass and the granite are, in immensities, less perishable than the perforated and refined rag of linen called paper, and the deep cut of the chisel leaves an impress infinitely more permanent of its own nature than the delible fading stain of the ink with which that paper is traced. Yet what comparison is there between the durability of a monumental inscription, in which a great many persons take interest, and the durability of a book equally interesting? To destroy the book, so that no copy (perchance parent of millions of subsequent copies) shall remain, is simply an impossibility. Among the unknown thousands, or hundreds, who have bought the book, how make sure that you have discovered all? How be sure, after destroying many copies—say even the immense majority of the copies which saw the light—that one survives not somewhere? And one is as good as ten thousand for the final re-production, re-distribution, and immortality of the work. Indeed many works, now in the hands of readers in every civilised community, have been thus called, as it were, out of the grave, and only thus. It would be the privilege, not of a man, but of a disembodied spirit, to know the chattels that may be in the possession of every other man; and, therefore, the indestructibility of a book (Tract-man; and, therefore, the indestructibility of a book (Tract-ing to a great number of minds is evident and certain. But when a similar record is confided to the hardness of one marble monument, and when that is wantonly or accidentally defaced, where is the remedy? A thought is gone; a fact is lost; a memory has perished—and it is—person for ever. Thus it is that life and progress are stronger than the monumental bronze, *ære perennius*; thus it is that diffusion and the very uncertainty of place and deposit, in respect to multiplied copies of a work, form a far better guarantees of its vitality than could be got out of the promise of silence!

At present, the efforts made to retrieve the vestiges of Assyrian history by means of certain mutilated characters left on Mesopotamian bricks, and left in a kind of, and left in a cipher based upon languages almost lost, are really stupendous; stupendous in their noble audacity and unexpected success. But *le feu sent il la chandelle?* Some may ask "What does it profit us to know all about a people for which there is no resurrection?" When Greece died as a body, she still lived in the minds of her lawgivers, conquerors, historians, architects, sculptors, painters, orators, and sages. . . . *Græcia sic stetit domuit victores.* Never was there a vanquished, and certainly never was there one more true. Is the legacy which Assyria had to bequeath to the human race of a similar character? If we could recover all that she left, and interpret all that we recovered, should we be inclined to purchase this gain on condition of losing for ever only one of the nine books of Herodotus, who is himself but one out of the myriad of starlike and "sphered" spirits that shine in a civilisation so much younger, yet so ancient? Let us see what it is that a nation may bequeath when it falls away into nothingness, and has done with its active destinies. By far the least valuable part of such legacies is the physical or material—such as the roads and aqueducts of the Romans, the pyramids of the Egyptians, bridges, statues, temples, and artificial structures in general. We say by far the least valuable for two strong and obvious reasons: first—every age, and almost every generation, have their own wants and interests; and those remnants are but insufficiently and clumsily supplied by the past; secondly, most works of the kind here mentioned are transitory at the longest, and perishable at the best. Let us then consider these things to be, as they are, the least precious portion of the bequest which a great people, whose active career is closed, can leave to posterity. What else, then, is there? All is comprised under two heads: first, that of moral examples; secondly, that of intellectual lessons. These are, in all cases, unpurchasable intrinsically; and, since the invention of printing, imperishable extrinsically also. For moral examples in private life, we need not go to Greece or Rome; but still less would we turn to Nineveh. For moral examples in public life, in all the virtues of civil and of military magnanimity, we may well search, for we shall be sure to find them numerous and reiterated, in the two great classic polities which still "*rule us from their urns*," and have been the education of seventy generations. But, here, what of Assyria? If we could make with her as close an acquaintance, would the mental intimacy be equally or similarly rewarded? How prodigious is the contrast! All that is most exalted, and much of what is most degraded, is the public life of Pagan antiquity, or by this suggestive comparison or allusion brought into juxtaposition and proximity.

Let us turn to the last of the three divisions, which we made of an old empire's testamentary wealth—that of the intellectual lessons. These, in their turn, are all included in three subdivisions—science, and literature. Such a classification, we admit, is, in a logical point of view, very slovenly, since literature is itself an art; and all other arts and the sciences themselves find her their nursing mother. In the matter of physical, moral, and metaphysical—can we learn anything from Assyria? In mechanics, in astronomy, and in physics in general, science can now teach us but little and teaches us, in fact, nothing. We have long since surpassed the Egyptians in the right light of Christianity; and if, in the grave and vain subtleties of metaphysics, we were to consult any of the mightier races of the elder world, it would again be that which dwelt at Athens as its intellectual metropolis, and certainly not that of the city of Bel and Dagon. In what, then, can "the remains" of Assyria render the world richer, or better, or wiser? Literature was the concluding particular to which our inquiry referred. Alas! here the case is worst of all. Can Assyria speak still? Yes, like a particularly arid almanack, which may at least be safely regarded as the "oldest" of the old. The great King took the town of Samaria, and the tribute amounted to talents in gold and talents in silver, in number, as follows: captives, in number, as follows; slain, of the foe, in number, as follows.

Are, then, all these antiquarian labours—these labours so prolonged and so abstruse—so remarkable for the learning, the ingenuity, the patience, and the perseverance with which they have been prosecuted—are they all wasted? Was Assyria but a casual instrument for a day's work, and good for nothing beyond? Was it but a scourge to chastise the people whom Providence intended to punish? We have no hesitation in saying that we deem the Oriental labours of Mr. Layard as useful as his spirit is candid and his learned enthusiasm exalted. First of all, there are minds among us who want confirmation, not "strong as Holy Writ," but strengthener—confirmation in fact, of Holy Writ itself. They may find it here. They may find here the unpremeditated and involuntary testimony of the "Scourges of God," to the "Oracles of God." The minutest and most incidental of the most collateral and fortuitous—details mentioned by the Prophets in Scripture, are here corroborated by the independent and unsuspicious testimony of those who believed not, and who perished for not believing; though they were chosen to accomplish, unwittingly in one way, many a mighty act of vengeance or of covenant. The sacred histories are thus variously elucidated by these investigations.

Again, those monstrous old monarchies, if they were important enough to occupy the providence of the Seer of the Almighty among his own chosen people, were surely no unworthy object of our retrospective contemplation. Great was their destiny in their day; and they went out among the nations, for the most part, with disasters in their hands, but sometimes with memorable dispensations of mercy ("And he stirred up the heart of his servant Cyrus to build a house in Jerusalem"). It is natural that we should be curious; and right that we should be interested. All stores are valuable which are destined to the use and the learning of mankind. The immediate utility may not be apparent; the possible utility is obvious; the attraction and the spell of such revelations are irresistible, and probably not without a design nor without an object. We might not wish to be killed merely because we could not specify the gain of seeing many things on which we gaze; nor will we reject information curious and recondite in its character and procured with immense and generous labour, merely because we cannot discern in what way that information may materially affect us in our modern social condition.

Frequently we are reduced to prize discoveries less in proportion to their abundance than to their rarity, and to their costliness in money. The almost always is the case when we feel that none of the information gained could have been reached without the most trying difficulties. Such is the character of Mr. Layard's contributions to our antiquarian literature. He gives a whole life, and we give him honour in return. All we hope is that he may not say (in a sense at once smaller and greater) with Septimus Severus—"*Omnia fui, et nihil expedit.*"

Having put our readers, as we hope, upon their guard against estimating the value, and certainly against estimating the merit, of Mr. Layard's labours, by the positive amount of intelligence which he has added to our ancient historical lore—we will now state, in brief and general terms, the sum and result of his discoveries. If these were even more—only economically speaking, as he not to put the matter on the very lowest ground—he need to enrich our national Museum with new, curious, and venerable contributions.

First of all, then, we will say that, by the application, in its very highest form, of the art which to ciphers were in strange . . . almost lost language . . . those not always employed, but replaced by . . . and hieroglyphics, through the application, we repeat of the deciphering art to the imperfect and defaced inscriptions of the monuments which he had previously exhumed, he has succeeded in giving us a more complete view of that part of the giant statue which appeared to the King, and which Daniel explained of that part of it, we say, which the Assyrian Empire itself represented. We have not enlarged notion of the monarchical succession of that remote sway, with whose memorials we are so eager to decorate our national collection of antiquities.

Mr. Layard has succeeded in detecting the names of seven Kings preceding him of whom he has supplied us with a detailed account. . . does Mr. Layard imagine that even the earliest of those seven sceptres shadows was the founder of Nineveh; which, in his opinion may have existed nearly two thousand years before the coming of our Redeemer. This would make Nineveh the earliest known very great city ever raised, and scarcely four centuries postmost in date to the universal deluge. This, however, though countenanced by certain Egyptian monuments, is but hypothesis at present. The first King whose name Mr. Layard records was Derceto, who flourished 1950 years before Christ. The succession proceeds thus: Divanbal, or Divanurish, 1900 B.C.; Anakbar-beth-Hira, or Shamish bal-Bokh, 1100 B.C.—then two Kings whose names are unknown, or only read. . . . then Sardanapalus the First . . . B.C. Here the annals become clear and abundant; and the last-named King was the builder of the North West Palace at Nimroud. After him come Divanbur; Si anna Ydar, Adramalech the Second; two Kings unidentified; Pul, or Tiglath Peleser; Sargon (ought not this to be Salmanasar?); Sennacherib, and the other Sardanapalus. Each of the two last has furnished a subject to Byron's muse. We must add, and it is a circumstance of the greatest interest and importance, that among the figures decipherted on the Nineveh monuments, not fewer than fifty-six occur also in Scripture.

If we add that Mr. Layard gives us the designations of twelve out of the thirteen principal gods or demons worshipped by the Assyrians, we shall have stated the main fruits of his laborious investigations. The names of these deities are—Ashur, Anu, Sun, Merodach, Yuv, Bar, Nebo, Mylit or Gula, Dagon, Bel, Shamash, and Ishtar.

The present work contains sixteen maps or plates, and upwards of two hundred and thirty wood-cuts, all in one handsomely-printed and solidly-bound volume. Many modern particulars of travel and incident, and many statistics, geographical, agricultural, and moral, add to the varied and extensive usefulness of this truly valuable work. Mr. Layard's own adventures lighten the more severe and antiquarian tenor of the production, and make it by no means unattractive reading even for the idler.

The learned men to whom we are most indebted, along with Mr. Layard, for the results of Assyrian history, language, and manners thus elucidated, appear to be Colonel Rawlinson, Dr. Hincks, and M. Botta. Earl Granville has earned by his enlightened encouragement the honour of the dedication. It is no ordinary work with which that accomplished nobleman's name is thus associated, nor can it be an ordinary mind which, in the heat and dust and turmoil of modern politics, having found the leisure, and having felt the inspiration to appreciate the solemn interest of studies so calm, so remote from all personal considerations, could sit down and meditate among monuments of a power which is no more, and vestiges of a fierce life which had run its mortal term five-and-twenty centuries ago.

We look on this body or skeleton which stands before us, exhumed by antiquarian erudition, less as an apparition evoked by sorcery than as a mummy discovered by ingenious and felicitous labour; nor can we forbear to quote, as an appropriate conclusion to our remarks, the whimsical but immortal verses of James Smith

> I need not ask thee if that hand, when armed,
> Has any human sculptor matched and matched;
> For thou canst count, and hast counted, one embalmed
> Ere Romulus and Remus had been suckled
> Antiquity appears to have begun
> Long after thy primeval race was run.

HARRY MUIR. By the author of "Margaret Maitland," "Merkland," "Adam Graeme," &c. Three volumes. Hurst and Blackett.

We congratulate the fair author of that most pleasant book, "Mrs. Margaret Maitland of Sunny-side," on the novel which we have now before us. It possesses the same merits, and none the same quaint Scottish forms of expression, the same minute and graphic sketches of scenery, and the same forcible character-painting, which had previously won for her so great and well-deserved a reputation. The feelings throughout the whole range of fiction have ever been better or more artistically contrasted than the Uncle Sandy and the Sister Martha of the present volumes, the single-hearted and benevolent old man, who renews his own youth in the happiness of the young, who lives among flowers and sunshine as in his peculiar element, and selects as his favourite music the voices of pure-hearted and innocent young girls, and as his best guerdon the gratitude of their loving hearts, with the strong-willed, deep-thoughted, and self-sacrificing whose love for her weak and erring brother enforces upon her a patience and an endurance which renders her existence one long and hopeless martyrdom of self. Nor is the "Harry Muir" less artistically and beautifully conceived. Not one character, in short, which figures in the work, but has its distinctive excellence, save, indeed, that one which gives its name to the book; and we except this one with the less reluctance, that Mrs. Oliphant can well afford to be told that there is a drawback to her otherwise charming tale. We, therefore, do not hesitate to declare that we protest against Harry Muir; and not only against Harry Muir personally, but also against his influence upon the affections of those around him. We do not require to be told of the weakness of human nature; neither are we (unfortunately) in a position to assert that such an individual never existed, contemptible as he is; but we do protest against the possibility of a dozen virtuous, self denying, and estimable relatives sacrificing their own comfort and peace of mind, month after month, and year after year, to the selfish indulgence of a wretched profligate; who, after having been unexpectedly rescued from poverty, and blest with comparative affluence, through the exertions of others, weakly and wilfully abandons his wife, his sisters, and his infant children, to plunge into dissipation with vulgar companions; varying his disreputable and useless career by maudlin fits of repentance and promises of amendment, which are as quickly succeeded by intemperance and disgrace. For a time, we were inclined to say, with the author, "Poor Harry!" but we were unable, like her, to expend our pity on him beyond a few passing pangs; after which the selfish profligate, degraded gentleman, the heartless husband and father, and the ungrateful brother, elicited in our minds nothing beyond contempt; and of this much we are certain, that the tale of "Harry Muir" never rose to such a pitch of interest as that which was excited in Lady Ingilby's fine, old Dragon, with his harmless vanity, his wierd tales, and his far-off memories, is an admirable sketch, which we even prefer to Miss Jean, powerfully as the character is wrought; while the minor personages are, one and all, skilfully and vigorously flung upon the canvas. As a whole, therefore, there can be no doubt that the present fiction will sustain the reputation of its author; although we feel that the graceful mind and kindly nature of Mrs. Oliphant are more at home with the worthy and the good than with the despicable and the weak. Apart from the hero himself, we have seldom read a more pleasant fiction; but his appearance on the scene continually produced upon us the effect of nightmare, oppressing all our sensibilities and deadening our sympathies.

We shall look with anxiety for the next production of this lady's gifted pen.

WHITE, RED, BLACK. Sketches of Society in the United States during the Visit of their Guest. By FRANCIS and THERESA PULSZKY. Three volumes. Trübner and Co.

Mr. and Mrs. Pulszky, exiled from their country for the cause of liberty, deserve much commendation for their devotion to literary pursuits, and making honourable exertions under great difficulties to preserve a high and independent station. To compose in a foreign language, however, judging by their example and the example of Kossuth, seems for the Hungarians an easier task than for most other people, and it may not be as great a merit in them to write a book describing the United States in our somewhat rugged language, as it would be in Italians, French, or Spaniards. They have succeeded well, and have given us three volumes of masculine writing, descriptive of society as it appeared to them in the United States, during their visit in Kossuth's company, to whom they are closely and intimately attached. Mrs. Pulszky kept a diary, and Mr. Pulszky seems to have gathered political and statistical information, and to have put down such observations as he thought worthy of public notice, and of these different materials the book . . . first . . . from Mr. Pulszky, . . . departure from England, and a dissertation on the discovery of America before Columbus; and these we have extracts from Mrs. Pulszky's diary, narrating, to lessen the weariness of a sea voyage, the events of Madame Kossuth's escape from Hungary, and so, all through the book, dissertations and descriptions by the gentleman alternate with extracts from the lady's diary. The difference between the two is not great as to make the transition harsh and repulsive. On the contrary, the lighter style and more anecdotical manner of Mrs. Pulszky only relieve the graver authority and more serious manner of Mr. Pulszky. Together they have made, not a first-rate, but a reasonably good book, distinguished more by common sense and rational views than by very striking remarks or much original genius.

We have said, as Mr. Pulszky remarks in his preface, so many books on America recently published as to make the publication of another questionable; but, independently of the rapid growth of the States presenting continually new aspects, and speedily leaving all descriptions far behind, the English public will receive with pleasure a work on the subject by foreigners, who take their own views, and, in describing America, do not overlook what appears to them strange or unamiable in England. We do not purpose to break a lance with Mr. Pulszky in defence of our manners, nor to rectify some of his very obvious political errors derived from the state of society in which he has lived more than from a large appreciation of the history of mankind. We must merely remind our readers that he makes some remarks on our national character, and remind him that his errors—or, if he like the word better, his differences from the majority of the English—may suggest to him the reason why the cause he espouses does not appear quite so rational and elevated to them as to him; and other political foreigners. We pass by all subjects of controversy to notice what appears to us nice but and not in the book. Pulszky devoted as the generality of the Continental people are—particularly the Germans and the allied and kindred nations—to the fine arts, and especially music, the chief means amongst them of passing a life not otherwise very energetically employed, it is only natural that these travellers should detect in the Americans a great want of taste, and find them deficient in that concerns the master art of passing life agreeably. That difference forms one great staple of the observations, both of the Lady and the gentleman. In the eyes of the Continental people, devoted to amusement, and therefore, we fear, careless of liberty, and "oppressed by despots," America, like England, appears a land of sorrow and tribulation—though it be a land of freedom. The following extract from Mrs. Pulszky's diary will give the reader a clue to a great many remarks in the book, and bring before him the one conspicuous difference between it and the books of English authors descriptive of America:—

> Sunday is here a day of prayers exclusively, not likewise of relaxation and enjoyment, and the Anglo-Saxon race has forgotten how to amuse itself with trifles. You find the merry old Englishman only in poetry. Since the time of Cromwell and his puritans the people have a gloomy cast, and the business habits of our modern society, the golden gay character of the race. A sprightly Englishman or American is an exception. The dance under the maypole, social music, and the deep feeling for the beauties of nature, so profoundly rooted in the German mind, are unknown to the American people. He toils hard, and does not know contentment, he always longs for more. Give to a Hungarian or a German a moderate house just enough to maintain the family, a blue sky, a green meadow, a shady tree in summer, a comfortable stove, a song, and a chat in winter, and he does not care for the pleasures of the world. The American restless mess is therefore tedious to the German peasants, and especially to the more merry and less comfortable in this steeple-chase for fortune. A German lady who visited me here told me how her husband had come over with a moderate capital from Germany, how they lost it in a paper manufactory, and how they retrieved their property, first by keeping a school, and then by buying land, which since had risen to more than three hundred thousand florins (more money here," she said, "who enters into speculation. He is not sharp enough for the Americans. But every one of us prospers who buys land and works hard. But not," continued she, "I long for our old home, the quiet, hearty life of Germany. Were it not oppressed by despots, and stripped of all freedom, we should have long ago returned. A poor man there has more enjoyment than the rich here. Nothing but the freedom of America makes life here supportable. Were Germany politically free, not one of us would cross the ocean to live amongst *this joyless people*."

Men who care not about the riches of the world, are likely to be careless about that freedom of locomotion, of enterprise, and freedom of thought by which all these riches are to be gained. The Germans might learn from their own authors, who have told them that life is serious, *Ernst ist das Leben*, that nothing can be won and preserved and eventually not freedom—without pains and labour. It seems Likely, too, from the many noble improvements in the useful arts made in America, for which the Old World is already much its debtor, and from the fact that it was long before she became celebrated in the fine arts, while her superiority in these did not continue after she lost her superiority in trade, that political freedom once achieved, and wealth once gained, a more refined taste in the arts, and a greater enjoyment of life, will follow, more than can be found by the sheepskin-clad Hungarian or the waltz and stove-loving German. If the Germans and Hungarians have all they wish in a blue sky, a green meadow, a shady tree, a comfortable stove, a song and a chat, the Americans and the English require more than these and they get it. Many of the Americans themselves, not duly appreciating their situation, mourn, like Mrs. Pulszky, over "an eager anxious expression in the men, and a careworn look in the women," but still it never has been the lot of mankind to strive after something better than their present condition. The desire of improvement, the restlessness of which the sluggish and the torpid complain, is the great source of continued and progressive civilisation; and it betrays a want of knowledge of the history of mankind, and some local prejudice, to complain of that which is a permanent element of man's nature. The travellers may be right in the fact they notice, but it remains a question whether it should be mentioned with regret or rejoicing.

They discriminate more justly when they notice, as they frequently do, especially Mrs. Pulszky—and an American lady who corresponds with her, and whose letters are quoted at the end of the work—the great deference that is shown to women in America. The statement is not exactly novel, but it forms a more prominent feature in the present book than in any other we have met with, even Miss Martineau has not studied this trait of American society so fully as Mrs. Pulszky. The ladies are said to "rule in the States." "The American wishes that his wife should have no care." "The liberal expenditure" of the American women is supposed to be "shocking to the thrifty English woman." "They have all the money," and "the men even live in hotels to save them the trouble of housekeeping." "The women" are admitted "to be very extravagant in their dresses and furniture." What ever may be the case in the towns, in the towns "the ladies are expected not to work," and "learn nothing of cooking, sewing, and washing." The men continually employed in the active business of life, and compelled to preserve a certain equality of appearance, seem to leave the whole expenditure of their money much to the women, and to expend them very much for their gratification. In the towns they are, accordingly, the only idle classes, and as such classes in the old society of Europe are continually scheming something or other against their husbands, for the gratification of their restless, to make society different from what nature has made it, or revolutions, or mere vulgar, appropriations of property, in America it is the women who are the prey of "nervousness," who crave for artificial excitement; who, going as children into public life, become, as the French say, "*blasé*" before they are out of their teens; who give encouragement to mesmerism and pretism, and all the other isms that now, to the astonishment of Europe, prevail in the United States. It is principally amongst the ladies that are found the "Media" for communicating with the world of spirits; and who, being doomed to idleness, suffer its penalties, and serve, either as dupes or agents, to inflict them, by the delusions they encourage, on the other sex. Neither Mr. nor Mrs. Pulszky, like some English travellers, was taken in by these spirit manifestations; and the lady, not incorrectly, we are afraid, ascribes to this nervousness of idle women, and their pietistic and similar pursuits, the somewhat melancholy fact that insanity prevails to a greater extent in the New States than in Hungary." In no work have we seen the constrained idleness of women in the towns of America, and its consequences, so well portrayed as in this work of Mr. and Mrs. Pulszky.

Another circumstance which much interests our travellers is the general industry, so contrary to what prevails on the Continent. Not to work is looked upon as thoroughly degrading. "In the Old World physical labour is considered ungentlemanlike." But this is confined to the men, and they one and all labour continually and excessively. In the early ages of society, amongst all barbarous people, the women are doomed to excessive toil; the Americans will scarcely allow them to work: both extremes are wrong. Woman has her sphere of exertions in the natural order of society; and labour must be fairly divided between the sexes, as between all classes, for each to attain perfection. The American practice is not borrowed from their own early condition, in which, as now, on the frontiers of civilisation, the women cannot but

take their share in the family labour; it is an imitation of the aristocracies of Europe, and, for American society, is full of evil.

In Mr. Pulszky's part of the book there is much about colonization, about the physical configuration of the United States—"a limitless plain, intersected by countless navigable streams" which determines, in a great measure, its political configuration, and makes it a common home for almost all the nations of the earth. The travellers accustomed to the variegated and often picturesque costume of the peasantry of Europe, are struck with the uniformity of the appearance of the multitude throughout the States. Greater variety of costume is often to be seen in a single village of the Continent of Europe than is to be met with in all the States. The reason is obvious: there, the fashions of European cities, which are everywhere now much alike, are adopted, and at once a uniformity of appearance is produced—the herald and the sign of that uniformity in rights and privileges, combined with an endless diversity of occupations, not to be found in Europe, except in England, which begins to prevail, and appears destined to prevail throughout "the land less plain" that now opens its bosom to receive swarms from all nations.

A great deal of valuable information, collected from books, or the result of his own observation, is supplied by Mr. Pulszky, and the work does credit to the combined authorship, which it will be seen he claims.

We cannot enter into the many questions discussed: but there is hardly one of present interest concerning the States but receives elucidation.

Kossuth's visit, which it describes, is already in its progress and its results known to our readers. In opposition to some journalists, Mr. Pulszky contends that it was eminently successful. For the evidence on this subject we must refer our readers to the book.

We will, in conclusion, quote a short passage, containing a little common but useful information, less as a specimen of the work than as suitable, from its dimensions, to our columns. The Americans are fond of titles, and delight in nicknames. Their great men are all nicknamed. Gen. Jackson was *Old Hickory*, Gen. Harrison *Old Tip*. Douglas, the Democratic senator, of Illinois—scarcely taller than Louis Blanc or M. Thiers, both remarkably small men—is the *Little Giant*; Gen. Cass, the senator of Michigan, the *Great Michigander*, and so on.

But not only the great men (says Mr. Pulszky), even the cities and the states have their nicknames. Washington, for instance, is the city of *Magnificent Distances*; New York, the *Empire City*; Philadelphia, the *Quaker City*; Baltimore, the *Monument City*; Boston, the *City of Notions*; or the *Pacific City*; Newhaven, the *Elm City*; Buffalo, the *Queen City of the Lakes*; Pittsburgh, the *Iron City*; Cleveland, the *Forest City*; Cincinnati, *Porcopolis*, or the *Queen City of the West*; St. Louis, the *Mound City*; Louisville, the *Falls City*, New Orleans, the *Crescent City*; the State of New York, bears in its arms the rising sun, with the motto "Excelsior," as the *Empire* or *Excelsior State*; Connecticut, the *Provision State*; Massachusetts, the *Old Colony*; Vermont, the *Green Mountain States*; New Hampshire, the *Granite State*; Rhode Island, *Little Rhody*; Pennsylvania, the *Keystone State*; Virginia, the *Old Dominion*, or the *Mother of States and of Statesmen*; Delaware, the *Diamond State*; South Carolina, the *Palmetto State*; Louisiana, the *Pelican State*; California, the *Golden Region*; Mississippi, the *Bayou State*; Arkansas, the *Bowie-knife State*; Texas, the *Dark and Bloody Ground*. The inhabitants of Florida are *Cowboys*, those of Georgia are called *Buckeyes*; those of Iowa, *Hawkeyes*, those of Kentucky, *Suckers*. The Missourians call themselves *Pukes*; the Indianians, *Hoosiers*; the Michiganians, *Wolverenes* (Wolverines?); and the Illinois, *Sawyers*. All these nicknames are familiar to, and frequently used by the Americans, and not only in jest; in the same way as they collectively accept the designation of *Yankees* if this word is used in contradistinction to *Englishmen*. In the States themselves the Southern people claim this appellation. They use it to designate the New Englanders; whilst in New England, again, every state disowns it except Connecticut, which is proud to be the original *Yankee State*.

THE COURT AND CABINETS OF GEORGE III. By the DUKE OF BUCKINGHAM and CHANDOS. Two vols. Harst and Blackett

Seldom has it been our task to comment upon such a work as that now before us. In the volumes entitled "The Court and Cabinets of George III," the Duke of Buckingham presents one of those rare and conscientious productions which are of inestimable value, alike to students and to historical students of every nation. Valuable as were the letters which he has here given to the public, their utility and importance are enhanced by the calm, unprejudiced, and lucid form in which they are strung together. The noble author tells all relevant matter, and all political bias, we have facts instead of argument; the noble author wisely eschews himself and his personal predilections, and leaving his readers to observe for themselves, pursues a clear and straightforward and honest narrative. Such works have been a great desideratum in our historical literature hitherto; for it has too frequently happened that where documents, in themselves invaluable, have from time to time been rescued from the inanimate chests of noble families, they have been so overlaid with party spirit, and so weakened by erroneous and prejudiced comments, that, like a prophecy uttered after the occurrence of an event, they carry no authority with them, and fail to satisfy the mind.

The letters here given to the public extend over a period which can never cease to excite the most lively interest, as one of great and absorbing importance to this country, commencing in 1782, and ending, concluded in 1800, and many illustrious names consequently figure from the first page to the last of the correspondence. Pitt and Fox, Wellington and Wellesley, Sheridan and Burke, North and Thurlow, Wilberforce and Grattan, and a host of others, all of which are "familiar in our mouths as household words," as those of great and gifted men, inseparably linked with the history of their country; but it is not alone their names, or even their public actions, which are to be found recorded in the work before us. Each and all are here invested with an individuality which could have been produced through no other means than that of confidential correspondence; we see them once more "in their habits as they lived;" the graphic exhibition of personal character at once fascinates and convinces the mind; the hidden springs of action are laid bare; and more than one political problem is solved. The events of the times were as remarkable as the men who figured in them. The close of the war with America, the Coalition Ministry—the long and glorious Administration of Pitt—Regency question, consequent upon the malady of the Sovereign—French Revolution, the first seven years of the European war—which enacted even more than event, and, finally, the Irish Rebellion, and the Irish Union, are all comprised within the period over which these letters extend; nor do we hesitate to affirm that a new and remarkable light is thrown upon each and all of their contents. The character of George III. was assuredly never so graphically portrayed: his firmness, his conscientiousness, his never failing family unity with public affairs, and his determined acidulity in public business, prove him to have been "every inch a king," while even his failings detract no whit from the respect enforced by his virtues.

We could select a score of letters from the volumes before us which could not fail to command the interest of our readers; but, as our space compels us to forego this gratification, we must be content to leave them such as have more particularly struck us: the first was written by the Marquis Wellesley (then Lord Mornington) to the Marquis of Buckingham, on his second appointment to the Viceroyalty of Ireland; and it appears to us to be singularly interesting, from the fact that it makes mention of the late lamented Duke of Wellington, then a youth of eighteen, "for the first time emerging from boyhood into that public life in which he was afterwards destined to act so conspicuous a part:"

I scarcely wish you the same success in Ireland which attended your last government. Your only difficulty will be to maintain the high character which your administration bore in the minds of every description of people. You will certainly be received by the sanguine expectations of the whole country; and from my heart and soul I sincerely hope that you may return home with the same popularity and credit that you carry out. I must be lost to all feeling if I did not take the warmest interest in the honour and prosperity of your government, and if I did not acknowledge to myself to be bound by the strongest ties of friendship and gratitude, to contribute everything within my power to promote its strength in any way in which you may call upon me.

You may well believe with what pleasure I received your appointment of my brother to a place in your family, not only as the most kind mark of your regard for me, but as the greatest advantage to him. I am persuaded that, under your eye, he will not be exposed to any of those risks which, in their first appearance, all the duties of life present. I do assure you, sincerely, that he has every disposition which can render so young a boy deserving of your notice; and if he does not engage your protection I am confident I am much deceived in his character. My mother expects him every hour in London, and before this time I should hope that he had himself waited on you. Once more, my dear Lord, before I close this part of my letter, let me thank you most warmly for this flattering instance of your friendship. Grenville, I hope, has shown you my letters, in which I declare that I would not have asked you for this favour, knowing your inclination to attend to my requests, and upon reflecting that you might suffer your regard for me to influence your judice of your government; but certainly this is the most overwhelming very near my heart, and I accept it with a gratitude proportionate to the anxiety with which I desired it, and to the most friendly manner in which it has been granted.

And [illegible]

I am sorry to find by a letter from my mother to-day, that her extreme anxiety to get my brother into your family induced her to make an application to you through Mr. Grenville on the subject; I have already stated, that I never would have urged the point, though I accept it as a favour from you with the utmost gratitude. However, the eagerness which has led her to this step, affords a sufficient proof of the satisfaction which she must feel, in the very kind manner in which you had anticipated her wishes.

Nor is it less interesting to learn that the establishment of the young Arthur Wellesley, as one of the aides-de-camp of Lord Buckingham, was temporarily deferred by a proposal made by Sir George Yonge, then secretary at-War, to reduce the vice-regal aides-de-camp to half-pay—an arrangement in which Lord Mornington instantly acquiesced. On the 8th of January, he thus writes to the Lord Lieutenant:—

Sir George Yonge had retreated into Devonshire before I received your letter, but I have ventured to disturb his retirement by an epistle of four sides of paper, to which I could not yet have received an answer. I cannot conceive what he can mean by this manœuvre, because I cannot see any advantage to him in the reduction of any, or of all your aides-de-camp, to half-pay; and I am clearly of opinion that there is no argument which can be drawn in favour of the reduction of any, which will not apply to all. I do not exactly understand by the paper which I received from you, what was the nature of his proposal with respect to the 9th and 10th companies. I have threatened that my brother shall pay an annuity in lieu. This business is now very unfortunate for Arthur, as his men are now all raised, and he has concluded an agreement for an exchange, which only waits the mighty fiat of the Secretary-at-War. I feel so much ashamed for the meanness of this great character; for I think, under the present circumstances, he cannot safely leave England. However, I hope the secretary will deign to temper his grandeur with a little common sense in the course of a few days, and then I will consign your aide-de-camp to you by the first mail coach.

The bulk of the letters contained in these volumes are written, as might have been anticipated, by the Grenville family; and of these, incomparably the best, as regards both subject and style, are those of Mr. W. W. Grenville, of whose clear and dispassionate judgment and admirable feeling it is impossible not to bear record; but decidedly the most lively epistles in the work are those of Lord Buckingham, of whose graceful gossipy affords most extraordinary glimpses alike of men and things.

In conclusion, we have only to return our best acknowledgments to the Duke of Buckingham for one of the most valuable and able contributions to our national history which has for a long period been given to the public.

A VISITATION OF THE SEATS AND ARMS OF THE NOBLEMEN AND GENTLEMEN OF GREAT BRITAIN. By JOHN BERNARD BURKE, Esq. Vol. II. Harrison and Bluden

No other country in the world but Great Britain could have yielded the materials for this work, which describes, in separate sections, the proper houses and homes of our noblemen and gentlemen; and there "father' worth," as pictured in the mysterious significations of maidenspeare. In the earliest ages we trace the conqueror in his castle-hold, and the holy man in his cell, alike embosomed in the nooks of the country. Poets have sung in rhapsody the praises of the country-seat; philosophers have meditated their wisest speculations amid their rural quiet; and heroes, covered with glory, have wooed, in peaceful contrast, their sweet shades; statesmen have sought amid their quiet, relief from the cares of public life; merchant princes have retreated from the woes of wealth to their retirement; and even fashion has been glad to quit her painted pomp, and betake her recreant limbs to the pure delights of the country life. How many episodes in the history of our country date from her ancestral halls—by turns the scene of hospitality and strife, as the gentler or fiercer fortunes have predominated! How many of these pictures does the "Visitation" before us hold up. We start from Compton Park, in picturesque Sussex, the ancient seat of the Earl of Northampton, with its curious documents and relics, not forgetting the lace-trimmed night-cap which Sir John Pennyadicke wore when he was beheaded by warrant of Cromwell; nor the letter from Charles I., soliciting the loan of a hundred pounds in his distress, endorsed by a name which bears the ohm of the family since 1698. Then we have Haigh-hall, Wigan, with its legend of Mab's Cross, which furnished Scott with his romance of "The Betrothed" Netherby, Cumberland, rich in border story; Ramsay Abbey, Hants, once the seat of Oliver Cromwell's family; Mount Edgcumbe, Devon, a place of picturesque celebrity, Wrest-park, Beds, for six centuries the seat of the De Greys, and noted for the number and excellence of its portraits: the house was designed by Inigo Jones. LONGCHAMPS, 1853.—FASHIONS FOR APRIL.

The cold weather has increased; and Longchamps, which held out high expectations of new fashions, as usual in preceding years, has not proved very productive. We are waiting patiently for warmer weather. Meanwhile, the shops make a fine show of the shapes and materials.

For bonnets the shape is still very wide round the cheeks to make room for the puffed *bandeaux*; they are ornamented in the lower part so as to fill up the space with a large tuft of flowers and ribbons, mixed with net or blonde lace.

A novelty has just appeared in plaid ribbon, of bright and lively colours for bonnets, which for some years past were trimmed with plain ribbon.

Dresses are all worn *à basquines*, or small skirts. The toilets continue very rich, and, what is worthy of remark, the young persons alone adhere to simplicity; the ornaments increasing with the years of the wearer. Taffetas dresses are most worn; taffetas being the only real transition material between the heavy winter dresses and the light costumes for the approaching season.

For balls, organdis, net, crape, gauze, are most worn. The bodies are of course without *basquines*, which are only for walking dresses. The waists, after having for a short time been worn round with long and rarely more. For in-doors we have dressing gowns of Scotch cashmere merino, printed with very delicately-coloured patterns. The ground is China rose, water green, pearl grey, and a new shade called pure violet, which is between violet and lilac. The printing is made of very lively shades, running all over the material, or an imitation of flounces parted by the plain ground of the dress.

fringe of silk, all over the mantelet, making a kind of pelisse, of which the folds are indicated and formed by the gatherings.

Various bonnets of different shapes and trimmings of velvet taffetas, white ribbons, have returned to the usual point, preserving the long ribbon or sash. The fear of short waists has altogether vanished, thanks to the good taste of the Empress of the French, whose dictum fashion would of course have followed. Chambery gauze is a

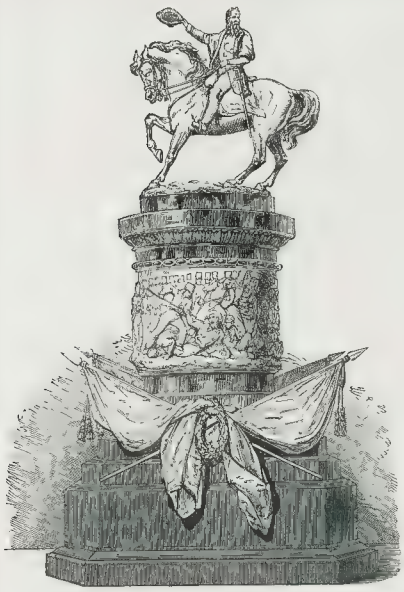
flowers, ribbons, and feathers; theatre cap, small-shaped, with flowers and velvet.

Morning cap of embroidered muslin, with delicately-coloured silk ribbons.

THE ILLUSTRATIONS.

No. 1. *Taffetas Bonnet*, trimmed with flowers in bunches on each side. *Pouff de Soie* mantelet and dress; the edge of the mantelet embroidered with silk of the same shade all round, and on the breast with tambour embroidery; the dress, with three flounces, is bound to match the mantelet, and is of the same pattern; belt with two long falling ends; pagoda sleeves, also embroidered round the edges with a simple under-sleeve of cambric muslin, closed at the wrist by an embroidered cuff.

No. 2. *Velvet Bonnet*, with a loose crown, and a bunch of flowers; and trimmed inside with flowers under the front—violet and pink, with velvet foliage. Mantelet *casaque* of black velvet, trimmed plainly



TESTIMONIAL PRESENTED BY GENERAL SIR C. J. NAPIER TO HIS BROTHER OFFICERS.

THE NAPIER TESTIMONIAL.

This very handsome group of plate has been executed for the hero of Scinde by Messrs. Hunt and Roskell. Its appropriation is thus narrated in the inscription:—

Presented by General Sir C. J. Napier, Commander-in Chief in India, Colonel of the 22nd Regiment, to his brother officers, as a mark of his friendship, and in commemoration of the conquest of Scinde, resulting from two great victories—Meeanee and Hydrabad in which H.M 22nd was the only European regiment. Bravely it led into battle; courageously was it followed by the native troops Dugshai, 1850.

THE BAILEY MEMORIAL.

This interesting monument to the memory of the late Joseph Bailey, Esq., M.P., originated with a public meeting held at the City Arms Hotel in Hereford, in the spring of 1851; when, after discussion of several propositions for the appropriation of the fund already raised for the purpose, it was determined that an altar-screen, in accordance with a design then exhibited by Mr. N. J. Cottingham, architect, should be erected in Hereford Cathedral, with a suitable inscription; and at a subsequent meeting of the committee appointed to carry this work into effect, it was resolved that, in addition, a marble bust of the deceased by Mr. J. Evan Thomas, sculptor, should be placed at the rear of the screen, within the ambulatory of the Ladye Chapel. The entire undertaking has been completed in accordance with the above plan.

The screen is erected at the eastern end of the choir, across the great Norman arch. The entire work has been carried out from the drawings and models, and under the direction, of Mr. Nockalls J. Cottingham, architect, 6, Argyll-place, London, by W. Boulton, architectural carver, Bridge-road, Lambeth.

The Bust (which we have engraved) is a fine work of art and an excellent likeness. It is placed at the rear of the screen on a massive pedestal of polished granite, with the following inscription, and is the work of Mr. J. Evan Thomas, sculptor, 7, Lower Belgrave-place, Pimlico.

To perpetuate the memory of Joseph Bailey, Junior, Esq., son of Sir Joseph Bailey, Bart., M.P. (for more than nine years representative of this county in the House of Commons), this bust and altar-screen are erected in the cathedral which his piety assisted to restore, not only by those united to him by the ties of kindred or private friendship, but by a general and voluntary subscription of the many, who knew and appreciated his worth. For the great benevolence of his disposition and courtesy of his manners, he was universally beloved. For the sound judgment, the strict integrity, and the active energy, manifested in the many and arduous duties of his station, he was valued and admired. Firmly relying on the merits of his Redeemer, his fortitude unshaken by the pressure of a lingering and complicated disease, he was removed out of this world the 31st day of August, 1850, in the 39th year of his age. Wife, children, father, brothers, friends, his county, deplore their loss.

It had been hoped that the subscription would have been adequate to filling with painted glass the two side-lights of the eastern triplet of the choir, thus completing this end of the church, the sum at the disposal of the committee was, however, insufficient for this purpose.

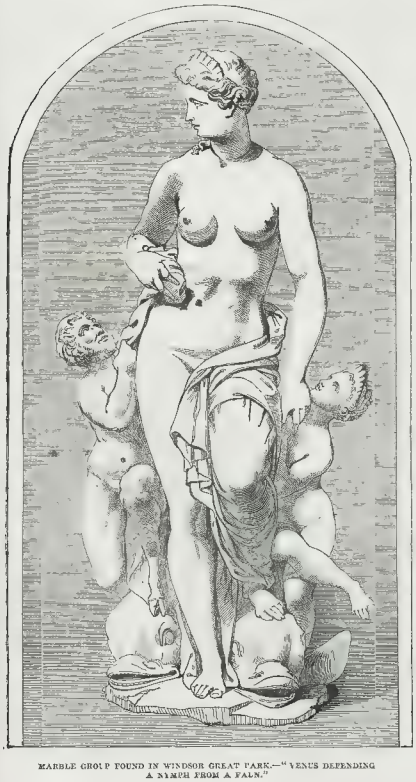
It is impossible to conclude without adding an earnest appeal to all who may visit this grand old cathedral church, for their assistance, in however small degree it may be in their power to offer it, towards the resumption of the works, which have now been for some time wholly suspended.

MEMORIAL BUST OF JOSEPH BAILEY, JUN., ESQ., BY J. EVAN THOMAS, LATELY PLACED IN HEREFORD CATHEDRAL.

VENUS DEFENDING A NYMPH FROM A FAUN.

BY FRANCA VILLA.

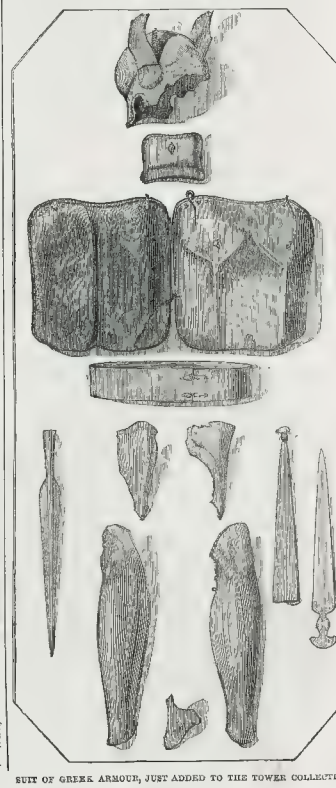
Early in the present year we gave some account of several pieces of sculpture, which had been recently discovered in a secluded part of Windsor Great Park, and we have Engravings of three of them. We now give a representation of another of them, being a group, supposed to represent Venus defending a nymph from a faun. In common with all the rest of the works so discovered (one alone excepted, which is antique), it is from the hand of the Flemish artist Franco-Ville—Italianised, as Franca-Villa—of whom we have already given some account. The scale of the group is colossal; the figure of Venus being not less than nine feet high. It is conceived in a masterly style; the action of the goddess being full of grace and life. The figure, however, is exaggerated in height when judged by comparison with the proportions of the head—a fashion which began to prevail at the latter period of this artist's career. The figure of the faun is vigorous in design, and the anatomical details admirably executed; that of the nymph looking up imploringly at the goddess, is highly expressive of the incident supposed to be represented. This group, which was mutilated in parts, has been successfully restored by Mr. Thornycroft.



MARBLE GROUP FOUND IN WINDSOR GREAT PARK.—"VENUS DEFENDING A NYMPH FROM A FAUN."

SUIT OF GREEK ARMOUR.

A very interesting addition has recently been made to the admirable collection in the Tower of London, in the suit of Ancient Greek Armour, which, it will be recollected, was purchased a few weeks since. It was found in a tomb at Cuma; and consists of a helmet; breast-plate, with embossed head of Medusa and other ornaments; back-plate; neck-plate, embossed with comic mask; belt, knee-pieces, greaves, and ankle-pieces; and with the suit was found a spear-head, and dagger with case. This armour is in the finest preservation, and of the utmost rarity. The extraordinary formation of the helmet, which is winged, and has the spiral for holding the waving plume of the wearer, would lead one to suppose him to have been an eminent soldier, who had distinguished himself by great achievements in the field, and rendered himself worthy of an heroic age.



SUIT OF GREEK ARMOUR, JUST ADDED TO THE TOWER COLLECTION.

NOMENCLATURE OF THE RUSSIAN CHESSMEN.

BY C. F. DE JALNISCH.

CONSEILLOR OF THE IMPERIAL COURT OF RUSSIA.

There has been much discussion as to the origin of the game of Chess, and the modifications to which it has been subjected by the lapse of time. It is now acknowledged that the best means to dissipate the obscurity which envelopes this subject, consists in the philological analysis of the terms of this game used among the different nations, and in the examination of the rules to which they submit in playing. We shall not repeat here all the results of this research, it will be sufficient to mention that we now know 1st, that this noble game is of India, a Persian origin; 2nd, that it was unknown to Grecian-Roman antiquity; 3rd, that it was the Arabians who, in the course of their conquests, introduced it into Spain and Sicily, whence it spread into Italy, France, England, and Germany; 4th, that in Europe it has experienced many important changes in the terms, as well as in the rules of the game.

These results, though very accurate, being principally drawn from certain linguistic and historical data, it would surely be extremely interesting to confirm by the witness of a nation which should have received the game of Chess, not of the Spaniards and Italians (who themselves only received it through the medium of the Arabians), but directly from East India—Persia itself. This nation is the Russian or Muscovite, which, in the almost complete state of isolation in which it remained during several ages, after its conquest by the Mogols (and even a century before), up to the time of Peter the Great, could only learn the game of Chess from its ancient conquerors*, who themselves learnt it from the Persians.

It has never been doubted that Chess was already played in Russia during the interval of time of which we have just spoken. We shall, therefore, only cite one historical testimony from a hundred, it is that of Czar John the Terrible, playing a game of Chess with one of his favourites, at the moment of being struck with apoplexy. This happened in 1585 (see the "History of Russia" by Karamsene).

Besides, were there not any historical proof, any public notoriety, philology is there with its clear and incontestable facts to dissipate the least doubts which might exist. As the Russian language is so little studied in the west of Europe, all that I am going to cite must be nearly new and unexpected to the readers of this journal.

We know the very extraordinary etymology of the Queen of the game of Chess, an etymology which has only latterly been clearly made out. From the primitive Persian word *ferz* (corresponding to the Turkish vizier), which means the commander-in chief of the army, the ancient French have first made *fierce*, then *fierche*, then *vierge*, which they afterwards replaced by the Queen. In the same manner the Italians, the Germans—and, in imitation of them, all the Western nations—have taken the *ferz* for a virgin or Queen. Well, how do you think this piece is called in Russian? It is called precisely *ferz*; a word which in the language of the country signifies nothing at all; so that the Russians who are not linguists (that is to say the greater number) are absolutely undecided as to the gender of this substantive, and decline it sometimes with the mas-

* The Mogols, like all the Orientals, were very assiduous in Chess. It is known that the celebrated Tamerlane excelled in the game.

culiar so names with the feminine, proceeded as they are with the names of the queen. Any more strikingproof needed as to the origin of the game? Besides the interpretation *schakh*, which signifies Queen and King, the German is it not directly addressed to the Persian name?

But the following philological datum quite as striking. We know that from the Sanscrit (as is the name of the game), which means the elephant, the Italians have made *scacco*, and the French *échec*. Well, then, *le fol*? Well, how is this person named in the Sanscrit? Precisely *alone*, the elephant. Certainly these denominations seemed to come from the West.

The Knight is either *Knight* or *Cavalier*, as ought to be. The Knight, *kagne*, which is also called *kagne*, or *Knight*,

"These little books are not only good in themselves, but promise a whole crop of goodness in educational literature."—SPECTATOR.

THE REV. G. R. GLEIG'S

NEW SCHOOL SERIES:

A SERIES OF ELEMENTARY SCHOOL BOOKS;

EACH BOOK (in most instances) COMPLETE in itself, Price ONE SHILLING.

Intended to comprise a complete course of Elementary Education. Projected and edited by the Rev. G. R. Gleig, M.A. Inspector-General of Military Schools. Assisted by eminent Scholars and Teachers.

Works already published:—

A GRADUATED SERIES of NINE COPY-BOOKS, mainly on the method of Mr Hulme. By WALTER M'LEOD, F.R.G.S., Head Master of the Model School, Royal Military Asylum, Chelsea. Oblong 4to. price Threepence each Copy-book.

MY FIRST SCHOOL BOOK to Teach me READING and WRITING. By W. M'LEOD, F.R.G.S. 18mo. price Sixpence.

SIMPLE TRUTHS, IN EASY LESSONS. 18mo. price Sixpence.

EXPLANATORY ENGLISH GRAMMAR for Beginners. By WALTER M'LEOD, F.R.G.S. 18mo. price One Shilling.

FIRST BOOK of HISTORY.—ENGLAND. By Rev. G. R. GLEIG, M.A. 18mo. price 2s. 6d.; or, in 2 Parts, One Shilling each.

The BRITISH COLONIES. Forming the Second Book of History. By the Rev. G. R. GLEIG, M.A. 18mo. price One Shilling.

BRITISH INDIA. Forming the Third Book of History. By the Rev. G. R. GLEIG, M.A. 18mo. price One Shilling.

SACRED HISTORY. Forming the Fourth Book of History. By the Rev. G. R. GLEIG, M.A. 18mo. price Half-a-Crown; or in Two Parts, price One Shilling each.

HISTORICAL QUESTIONS. Part I.—On the Histories of England, British India, and the British Colonies, and on the *Sacred History*. 18mo. price One Shilling.

HISTORY of FRANCE. By Captain A. C. GLEIG, Royal Artillery. 18mo price One Shilling.

HISTORY of ROME. By the Rev. R. W. BROWNE, M.A., Professor of Classical Literature in King's College, London. 18mo. price 1s.

HISTORY of GREECE. By the Rev. R. W. BROWNE, M.A. 18mo. price One Shilling.

GENERAL GEOGRAPHY. For the use of Beginners. By WILLIAM HUGHES, F.R.G.S., late Professor of Geography in the College for Civil Engineers. 18mo. price One Shilling.

GEOGRAPHY of the BRITISH EMPIRE. For the use of Beginners. By WILLIAM HUGHES, F.R.G.S. 18mo. One Shilling.

ASTRONOMY and the USE of the GLOBES. Simplified for the Instruction of Beginners. By THOMAS TATE, F.R.A.S., of Kneller Training College, Twickenham. With Woodcuts. 18mo. One Shilling.

A MANUAL of ARITHMETIC; containing a Graduated Series of Questions for Elementary Instruction. By WALTER M'LEOD, F.R.G.S., Royal Military Asylum, Chelsea. 18mo. price One Shilling.

ELEMENTARY ALGEBRA for Beginners. By W. J. REYNOLDS, B.A., Royal Military Asylum, Chelsea. 18mo. price One Shilling.—KEY, price Threepence.

The FIRST THREE BOOKS of EUCLID'S Elements of GEOMETRY. By THOMAS TATE, F.R.A.S. 18mo. price One Shilling.

HYDROSTATICS, HYDRAULICS, and PNEUMATICS. For the use of Beginners. By T. TATE, F.R.A.S. 18mo. price One Shilling.

*** The object of the School Series here offered to the public is to produce a succession of little books, each complete in itself, and containing lessons suitable to the capacities of every description of learners. Thus, after making himself familiar with the shapes of letters, the pupil is taught in *My First School Book to Teach me Reading and Writing*, how the union of two or more letters produces an articulate word, how articulate sounds awaken images in the mind, how numbers are represented as wholly figures as by letters, and how the printed and written characters of the English language correspond one with another. This done, . . . learns in *Simple Truths*, to connect words of one syllable with grave ideas, and so to . . . the faculties which it is the object of all education to strengthen without . . . ing. It is a step in *My Second School Book*, how to . . . *The First Book of Hist . . .* in which he finds what is . . . ing from one syllable to four, on such . . . the annals of . . . native country. When he shall have gone through these, and the . . . learning how to read may . . . assume it to be complete, and the next book in succession, he . . . with important information. We have . . . the history of the *British Colonies*, of *British India*, of *Greece*, *Rome*, *France*, and *Modern Europe*, as the events . . . placed in his hands, while from the *Sacred History* he acquires . . . knowledge of those . . . truths on which all that is . . . is based.

Meanwhile, the principles on which language universally depends, as well as the sources whence his own . . . derived, and the inflections to which it is liable, are explained to him in the *Explanatory Grammar*—a treatise so composed as to suit at once the most cultivated taste and the . . . of the beginner. The pupil is next made acquainted with the laws which regulate the movements of Nature, in Treatises on *Astronomy*, *Hydrostatics*, *Hydraulics*, *Pneumatics*, &c.; *Light*, *Heat*, *Magnetism*, *Electricity*, *Natural History*, and the *Steam Engine*—all of which, as he . . . will be found to convey both entertainment and instruction. In the department of accurate science means have been . . . to assist the pupil forward . . . Treatises on *Arithmetic*, on *Geometry*, on *Algebra*, on *Mechanics*, . . . of which . . . are in England as . . . generally on from the simplest to the most complex . . . in a manner . . .

The Series contains, besides all these, elementary treatises on Geography, Logic, Grammar, and Literature. In the book of *General Geography* the great features are set . . . with a . . . hand. . . . the natures of the . . . from one another, while the . . . of . . . and Empire . . . as an infant, all that appertains to . . . diligently and practically, to Great Britain, as the . . . to . . . objects that open upon . . . In . . . the . . . Mr Gleig . . . to . . . book, . . . the pupil, by easy . . . progressive . . . , until . . . at different . . . .

In addition to these universally important branches of education, it is intended to introduce into the series a *Book of Health*—that is to say, a description of the construction of the human frame, and of the causes which, under ordinary circumstances, tend either to keep it in a high state of vigour and ease, or to induce suffering and derangement. A *Book of Biography* will likewise be added, containing sketches of the careers of . . . , . . . , . . . , whose . . . have . . . themselves . . . and . . . exercised a powerful influence over their . . . men.

In conclusion, it may be said that this School Series differs from all that have preceded it in this—that its lessons are so . . . , not only upon a scale of . . . gradually rising, but . . . owing to a just estimate of the . . . powers of the learner, as times may be brought day by day to develope themselves. There is not one among them all, for example, after the forms and sounds of letters are rendered familiar, but teaches the pupil some practical truth, or solid principle, which it will be worth his while to remember through life. Hence the series is adapted not only for children's seminaries of every description, but also for schools of adults whose education may have been neglected.

That the public in general has not been blind to the merits of these works, is proved by the very wide circulation to which most of them have attained. Of the *Grammar*, there have been sold above 10,000 copies; of the *History of England*, nearly 6,000; and of the other *Histories*, nearly 5,000 copies,—and the projectors beg to state that no pains will be wanting to make this Series still more worthy of public favour.

"This well-chosen series places an excellent order of light literature at the command of all with whom reading is a travelling necessity."—EXAMINER.

THE

TRAVELLER'S LIBRARY,

IN COURSE OF PUBLICATION

In PARTS at ONE SHILLING and In VOLUMES price HALF-A-CROWN each.

Comprising books of valuable information and acknowledged merit, in a form adapted for reading while Travelling, and also of a character that will render them worthy of preservation; but the price of which has hitherto confined them within a comparatively narrow circle of readers.

Already published:—

WARREN HASTINGS. By THOMAS BABINGTON MACAULAY. Reprinted from Mr. Macaulay's *Critical and Historical Essays*. Price One Shilling.

LORD CLIVE. By THOMAS BABINGTON MACAULAY. Reprinted from Mr. Macaulay's *Critical and Historical Essays*. Price One Shilling.

*** Mr. Macaulay's Two Essays on Warren Hastings and Lord Clive may be had in One Volume, price Half-a-Crown.

THE ILLUSTRATED LONDON NEWS

No. 615. VOL. XXII.] SATURDAY, APRIL 2, 1853. [SIXPENCE { WITH SUPPLEMENT, GRATIS

ENGLAND AND RUSSIA.

If we look at the map of Europe, and consider the present condition of the various states which compose what ought to be a grand confraternity of peaceful and united nations, we cannot but be struck with the instability which characterises them all. Amid that vast assemblage of communities, more or less civilised, more or less powerful and humane, there are but two whose institutions seem deeply rooted, whose thrones seem secure, and whose future fate betokens influence, splendour, and power over the rest of mankind. The one is England—a state ancient and free;—illustrious for deeds alike splendid in peace and in war; whose name, whose laws, and whose language pervade the fairest portions of the earth; whose flag is the hope of the oppressed; and in the permanency of whose dominion every nation, that either possesses or aspires to possess the commonest rights of free citizenship or self-government, is in the highest degree interested. The other state is in every respect its opposite. Three centuries ago unknown even by name to the civilisation of the West, it overshadows at the present day all Europe and Asia with the dark image of its rapacity and its ambition. The name of England is synonymous with that of rational liberty; the name of Russia, on the other hand, betokens absolute and irresponsible power. The one is civilisation; the other is barbarism. The one represents the dignity, the other the debasement, of humanity. The one represents mental, the other physical, power. And these two, so different, and of such hostile principles, hold between them the balances of lordship and dominion; and direct, as far as merely human agencies are allowed to direct, the present and the future fate of the Eastern hemisphere. America is beyond their reach, and stands aloof in the proud self-sufficiency and vigorous majesty of a race that feels itself pre-destined, in the fullness of time, to be greater and more resplendent than either of them.

All else in Europe is utterly unstable and insecure. The most ancient state seems as feeble and as effete as if the breath of a strong man could overthrow it. Austria is rotten to the core; and, were it not for the aid of Russia—dearly bought at the cost of humiliation and dependence—would crumble to pieces from its own heterogeneity, with as little power of cohesion as the dry bones in the Valley of Golgotha. That venerable state is worn out; and her motley populations, hating, and commonly not understanding each other, having no interest in common—no bond of blood, of language, or of sympathy—have not in them the vitality which could make them coalesce or unite in the simplest effort to govern themselves. Germany is a name, but not a power on the earth. Her very boundaries are undefined, and her pretensions to independence and the right to exist are by-words of scorn to the most powerful potentates who speak her language and move upon her soil. Prussia, with all her bayonets, is a creature of yesterday—an interloper into a place that was already full; and, at the first breath of dissension in Europe, would lose her identity, and merge into an Empire, not of Prussians, but of Germans. Italy is nothing but a name: the victim of the stranger and the oppressor, she scarcely dares to hope, and lingers on in impatient humiliation; never forgetting that she was once the glory, and remembering, with a burning blush, that she is now the shame, of Europe. The other Monarchies whose places are marked on the map are Monarchies shorn of their ancient power. They are but shadows of what they once were, and live upon the memories of their own departed greatness. Belgium, Holland, Denmark, and Sweden possess few traces of their ancient renown: their history is that of the past, and they exercise no influence over the fortunes of to-day. Spain, once a first-rate, has dwindled into a seventh-rate power; and Portugal is almost of as little note and consequence as the Isle of Man. Turkey exists but upon sufferance. She troubles the waters where her wolfish neighbours make it their pleasure to drink, casts her imploring eyes to heaven, and submissively awaits the inevitable catastrophe of her extinction.

Russia in the east and England in the west are thus the sole representatives of the stability of empire, as well as of the great principles which since the world began have agitated the bosom of society. The keen eye of Napoleon the Great foresaw the struggle that sooner or later these powers would be compelled to wage against each other. Their antagonism is inherent, and not accidental; and would exist of necessity, were there no questions of religion, of commerce, or of territorial aggrandisement and dynastic influence to complicate and exasperate it. The sagacity of Napoleon was so far at fault that he imagined France, and not England, to be the fitting representative of the great principle of the dignity of humanity and of resistance to arbitrary power. His nephew and successor, as thorough a representative of ultra-despotism as the Czar himself—and, possibly, still more so, for he founds his tyranny on the consent and suffrage of the ignorant and blinded people—governs the only other country in Europe that possesses even the semblance of power, apparently unconscious of the fact that France is unstable as water under her present *régime*, and that she has no friend in the world unless she make a friend of England. He has somewhat inexpertly been endeavouring to play the arbiter betwixt the two great rival states of the West and the East, and for the sake of a miserable autograph, and a little judicious homage to his personal vanity, he has been striving hard to sap the foundations of his own throne. Whatever, in the pride of apparent success, he may think of the durability of his dominion, its only possible guarantees are the good sense and the material interests of the brave and intelligent French people. States and dynasties may totter and decay, but a nation like the French is ever vigorous and young, and in the day of fate and necessity will vindicate its own majesty, in spite of its rulers, whosoever they may happen to be, and assume its own place

CLEOPATRA'S NEEDLES.—ALEXANDRIA.—(SEE NEXT PAGE.)

in the councils of the world. If Louis Napoleon desire stability for his Empire, he must learn to extend by degrees the bases of the popular rights which he has hitherto denied, ignored, or taken away. He must learn to know who are the natural allies of his countrymen, and what states they are whose aid would be destruction to him. In the commotions that are preparing in Europe, and of which we see all around us the signs and the portents, the true place of France is on the side of freedom. Between Cossackism and Constitutionalism the instincts of France will lead her right, however much her temporary rulers may strive to lead her wrong; and in that struggle, should it ever come, the place of England will be in the vanguard of civilisation: and if states and dynasties oppose her, the populations, the races, and the nationalities of Europe will work with her, and bid her God speed. The star of her glory has not yet culminated. Like Toussaint L'Ouverture, she has "great allies," and "powers that work for her."

CLEOPATRA'S NEEDLES

THIS celebrated pair of "Needles" (for the name is applied to the standing as well as to the prostrate obelisk at Alexandria has created considerable interest at various periods. They are placed about one mile outside the modern walls of Alexandria. Each obelisk is one vast block of red granite, measuring about 70 feet in length, and covered with hieroglyphics. The prostrate obelisk is the property of the English Government, having been presented to George IV. by Mehemet Ali, Pacha of Egypt, in 1820. It is partly imbedded in the sand, close to the sea-side, by the great wall of the fortifications. They are said to be two of four obelisks which formerly stood at Heliopolis, and were brought to Alexandria by the Cæsars. The third is in the Piazzo di Monte Citorio at Rome; while the fourth remains at Heliopolis, six miles distant from Cairo.

The late Sir R. Peel was of opinion "that this obelisk ought to be removed to this country, and erected as a memorial to Sir Ralph Abercrombie, and the other British soldiers who fought and fell in Egypt." The late Sir G. Murray also stated, "That he joined with all his military friends who desired it at that obelisk should be removed to London. Its intrinsic value might not be great; but, as a monument and as a trophy, it possessed a value peculiarly its own."

In November last, the Earl of Derby consented to the removal of the obelisk, to be erected in the grounds of the Crystal Palace Company, at Sydenham, upon condition that the Government may hereafter reclaim it on payment of all expenses incurred in the transit. About a month since, Mr. Anderson, the managing director of the Peninsular and Oriental Steam Navigation Company, and a director of the Crystal Palace Company, left England for Egypt, for the purpose of making arrangements for the transmission of the Needle from its present bed on the shores of the Mediterranean to the Park at Sydenham. Great difficulties have, however, presented themselves, in the way of the removal of this ancient memorial. The Needle is actually built into a part of the sea-wall and ramparts forming the fortification of the city of Alexandria; and to pull down so much of the fortification as would be required to disinter the obelisk and to launch it, and afterwards to rebuild the wall, would not only occupy a great space of time, but must involve a considerable amount of expense not originally anticipated. In addition to these circumstances, it is stated that the Viceroy himself has a very strong objection to a breach of such a nature being made or left open for any time, in the present state of European politics. With respect to procuring casts from ancient works of art in Egypt, which formed also one of the objects of Mr. Anderson's visit to Alexandria, that gentleman reports that he had an interview with the Viceroy of Egypt on the 5th of last month, and that the Pacha then kindly assured him that every facility should be afforded to any person commissioned by the company to collect copies of works in Egypt.

It will be thus seen that the fate of the obelisk has once more become matter of uncertainty. The accompanying illustration, from a sketch by Mr. A. H. Nicholl, shows the position of the two obelisks; and the subjoined figures are the signets of the Kings of Egypt engraved upon the prostrate obelisk—the "Needle" intended to be removed.

NAVAL AND MILITARY INTELLIGENCE.

NEW DOCK AND VICTUALLING-YARD REGULATIONS.—A circular order of instruction for the guidance of the superintendents and other officers of her Majesty's naval yards in the selection of candidates for entry into dockyard service, and the promotion of those already employed under the Crown therein, has just been promulgated to the various naval establishments at home. These regulations may be summed up in few words:—No candidate for employment will be entered who is not qualified to perform the duties he seeks to be employed in. No recommendation other than that founded on the report of the Admiral or Captain Superintendent of Yards, after a rigid examination of the fitness of the candidate by a competent board, will be allowed to weigh in the election of such candidate for entry. All these reports to the Admiralty are to pass through the hands of the Surveyor of the Navy. No person is to be promoted whose merits alone, coupled with long servitude, do not fully warrant the officers above him in recommending him for such promotion.

LETTERS FOR THE ARCTIC SEAS. Letters for any of the officers, seamen, and marines serving in any of the ships now in the Arctic Seas, will be forwarded by her Majesty's ship *Prince*, if sent to the Admiralty on or before the 14th of April.

GOOD SERVICE PENSIONS.—The pension of £300 per annum, which lapsed by the death of Sir T. Capel, G.C.B., has been conferred on Vice-Admiral Sir G. Seymour, C.B., K.C.H., on the West India station. And the pension of £150 per annum, which reverted by the promotion of Captain Boxer to Rear-Admiral, has been conferred on Captain M. Seymour, Commodore-superintendent, Devonport.

It is said that Captain the Earl of Hardwicke will supersede Captain Hutton in the command of the *Prince Regent*, 90, the latter having completed his sea-time for his flag, whereas the noble Earl has not.

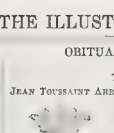
THE *Duke of Wellington*, 131, Captain H. B. Martin, C.B., is ordered to take in twelve months' [illegible]

THE *Great Albert*, 101, screw steam ship, is progressing rapidly at Woolwich, upwards of 600 men and boys being constantly employed upon her.

A FLEET OF ENGLISH VESSELS NEARLY WRECKED BY THE ICE. Intelligence has been received of a large number of vessels having been placed in a most perilous position on the coast, near Cuxhaven, by the immense masses of ice which were being drifted out to sea from the [illegible] and waters. Amongst the ships on shore were [illegible] *Otley* and *Washington* barques, the *Prairie*, *John Spencer* [illegible] *Beckett*, *Sea*, *Elbert*, *Gabriel*, *Geo. Marbles* and many others. The *Trident*, Lee-Bell coal Hamburg steamer, was so much damaged as to put into [illegible] the ice, and was [illegible] heavily, and the ice just [illegible] would [illegible] Nothing like it had been seen on that part of the coast for some years.

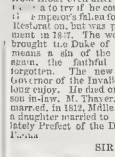
OBITUARY OF EMINENT PERSONS.

THE DUKE OF PADUA.



JEAN TOUSSAINT ARRIGHI, Duke of Padua, a distinguished soldier of the French [illegible] was there- [illegible] can family, [illegible] to that of Hen- [illegible] March, [illegible] life, [illegible] ade into Italy as a [illegible] the 72nd Brigade of the troops [illegible] On the establishment of the [illegible] ary, Arrighi went as secretary of Embassy to Vienna and to Rome. When he returned, he was made Aide de-camp to the famous General Berthier. Arrighi's brilliant conduct at the battle of Salahieh obtained for him the rank of captain. Hence forward his rise was deservedly rapid. On all occasions of moment he displayed the most daring valour. He commanded a chosen band of grenadiers at the assault of Jaffa, and was the first to enter the breach. He became a Chef d'Escadron at Marengo, a General of Brigade at Austerlitz, and a General of Division at Essling. On the battle-field of Friedland, where Arrighi was [illegible] tributed to the victory, Napoleon named him Duke of Padua. [illegible] dral title marked the extent of the imperial estimation, since, like the [illegible] dons of Trevise, Feltre, and Bellona. It was taken from a town where one of the Bonapartes had in early times been a Podestat. The Emperor might well reward Arrighi, for he had not a truer or more [illegible] servant in his whole circle. After [illegible] Arrighi [illegible] and talent in Spain and Germany, and especially at Wagram, [illegible] when the time of adversity came, fought inch by inch for his imperial master. He heroically defended Leipsic; his retreat from thence was to the [illegible] of Paris, where he made head against the Grand Duke Constantine and had his horse slain under him. He supported to the last the restoration of the Bourbons, who, [illegible] Napoleon's return from Elba; even after Waterloo he was for [illegible] to throw [illegible] and to [illegible] for receiving the Emperor's fallen fortunes. Arrighi had to quit France at the second Restoral on, but was permitted to return in 1819. He was put in retirement in 1847. The powerful position of his son-in-law naturally brought the Duke of Padua once more forward. Ingratitude is by no means a sin of the Bonapartes, and when their cause flourished again, the faithful old Corsican warrior and [illegible] was not forgotten. The new Emperor constituted Arrighi a Senator, and Governor of the Invalides. These honours the Duke of Padua did not long enjoy. He died on the 23rd inst. in Paris, at the residence of his son-in-law, M. Thayer, the Director-General of Posts. The Duke had married, in 1812, Mdlle Zoe de Montesquiou, by whom he leaves, besides a daughter married to M. Edouard Thayer, an only son, Ernest Arrighi, lately Prefect of the Department of the Seine and Oise, now Duke of Padua.

SIR JOHN CAMPBELL, BART.



SIR JOHN CAMPBELL, Bart., of Ardnamurchan, recently Lieut.-Governor of St. Vincent's, died, unexpectedly, 18th January, 1853, aged forty-four years, after a short illness of two or three days, of confirmed yellow fever, at the Kingstown residence of the Hon. John [illegible] Q.C. His Excellency, who was born 27th November, 1807, was admitted an advocate at the Scottish bar in 1831; and, in 1834, succeeded to the family baronetcy, at the decease of his father, Sir John Campbell, who had assumed the title on being served heir-male to Sir Donald Campbell, the first Baronet of Ardnamurchan.

In 1845, Sir John was appointed Lieutenant-Governor of St. Vincent. He married, 24th November, 1830, Hannah Elizabeth, daughter of the late James Morland, Esq., of Ramsay, and leaves several children.

GENERAL SIR ROBERT BARTON, K.C.H.

THE death of this lamented officer occurred on the 17th ult., at his residence, Woodstock, [illegible] He had completed his 84th year [illegible] 1st of March. Sir Robert Barton was [illegible] Captain Charles Massey, Dean of Limerick, and eldest sister of Sir Hugh Dillon Massey, Bart., of Doonass, and the grandson of Thomas Barton, Esq., of Carrigmore, county Fermanagh, by Margaret, his wife, daughter of Robert Delap, Esq., of Ballyshannon. The Irish family of Barton—one of considerable wealth and landed estate—claims to be a branch of the Bartons, of Barton-hall, county Lancaster. It is now divided into the several families of Grove, Clonelly, the Waterfoot, Straffan, Grendalough, and Rosanna.

Happening then to be in the South of France, General Barton commenced his military career as a volunteer in the fire division of cavalry of the National Guards, in 1792, and received the thanks of the National Convention, and of General Coursion, for his conduct in the affair of Mussau. Returning to England, he entered the British service in 1793, and was in Flanders in 1794 with the 11th Dragoons, and in Ireland in 1798. In the latter year he received on the field the thanks of Sir Ralph Abercromby for his conduct at Oude Carspel. In 1812, as Lieutenant-Colonel of the 2nd Life Guards, he took part in the Peninsular Campaign; and eventually, in 1851, attained the full rank of General.

Sir Robert married, first, Maria, daughter and co-heir of John Paynter, Esq., [illegible] niece of Lady Northcote, of Pynes, Devon; he wedded, secondly, Marian Colette, daughter of the poet Addison's representative, the [illegible] John Wellington Colette, Esq., [illegible] Sir Th[illegible] Wade, K.C.B., [illegible] Knight, Aide-de-Camp to [illegible]

THE CHEVALIER RESTNER, M.R.

THE Chevalier Restner, late Hanoverian Minister at the Pontifical Court, died on the 8th ult., at Rome, in his 76th year. During a residence of more than forty years in that city, the Chevalier has justly become the favourite of the English residents and visitors. Although he never received remuneration from England, he had, even after the place of Hanoverian Minister at Rome was abolished, in 1848, performed, in the absence of an English resident, all those acts of courtesy and kindness for which foreigners generally look to the representatives of their own Government. Augustus Restner is known to the English literary public by different essays on the fine arts; in particular, by a small, but highly-instructive, volume on painting, ably translated by Sir Charles Eastlake. Restner was himself a distinguished draughtsman and practised painter, and possessed a profound knowledge of the arts, both ancient and modern, and from sense of class-fellowship, he had become a resident of strangers and the founder of the best collection of casts of antique gems. But published by the Instituto Archeologico, of which he was one of the founders, was [illegible] numerous, and at the sittings of which he regularly presided for many years. He also possessed a choice collection of works of art, which formed the Museum Restnerianum. He had also finished an accurate catalogue of this museum, and he bequeathed it to the University of his native country, that of Gottingen. It was to leave, ready to appear in print, a [illegible] quarto [illegible] which [illegible] ther in the years 1772 and [illegible] before and after the marriage [illegible] with Letters, the [illegible] of which [illegible] political cranium [illegible] of our ette

THE VENERABLE ARCHDEACON HILL.

THE Venerable John Hill, archdeacon and missionary of Bucks, [illegible] Rector of [illegible] in that county, and of Shanklin-with-Bonchurch, in the Isle of Wight, died at Shanklin, on the 18th ult., aged 71.

The reverend gentleman was the youngest and last surviving son of Colonel Hill, of St. Boniface. In his early years, he gained distinction as a Latin scholar, at Winchester College and New College, Oxford, of which latter society he was a Fellow. Throughout life his parochial [illegible] were devoted to those among whom he had been known in childhood; and when Bowcrench had been a resort of strangers and invalids, a new church was erected under his auspices. His appointment to the Archdeaconry of Buckingham, in 1825, was to lower by stages and successful efforts to repair the sacred edifice under his [illegible] He published charges indicative an intimate acquaintance with the duties of his office, and a steady adherence to the principles of the Reformed Church of England.

ARCHIBALD WILLIAM BLANE, ESQ.

THIS gentleman, whose death occurred on the 9th of November last, at Boorah, Port Stephens, in the sixty-third year of his age, was Deputy-Governor of the Australian Agricultural Company.

Under Mr. Bone's supervision of this company the wealth of the Peel river [illegible] was [illegible] Mr. Blane [illegible] to his connection with [illegible] offices in the Civil Administration of the Island of Mauritius, and he had a seat in the Council of Government of that colony.

Mr. Blane was the only son of Thomas Blane, Esq., eldest brother of the late eminent physician, Sir Gilbert Blane, Bart., and first cousin to Sir Hugh Seton Blane, the present Baronet. Mr. Blane married, in April, 1834, Mary Magdalene, eldest daughter of the late Thomas Delves Broughton, [illegible] Rev. Sir Thomas Broughton, Bart., of Doddington-hall, Cheshire, by the lady who survives him, he leaves five children.

FOREIGN AND COLONIAL NEWS.

FRANCE.

PARIS, Thursday.

What shall we begin to entertain you with, dear readers? the *question d'Orient* or Longchamp, the panics of the Bourse or the ball of the *Corps Législatif*? *Voyons*, decidedly the *Times* can tell you more about the plans and movements of Prince or General [illegible] Prince Menschikoff Menschikoff Menschikoff Menschikoff Menschikoff Menschikoff! Mr. Menschikoff than such a butterfly chronicler as we are; so we think we had better let the matter alone. The same remark applies to the affairs of the Bourse, and there we maintain the same reserve: but we do think we can give both a point or two on such subjects as Longchamp or the ball of the Hôtel de Ville and the *Corps Législatif*, and the theatres, and other such matters as are of rather too high a flight for his capacity, but to which our sad butterfly wings carry us easily.

To begin with Longchamp. Ah, dear readers, what a *triste* affair! What cold and dark, and shabby-genteel equipages and ugly horses, and out-of place finery, and folly and nonsense, and painted "women of quality" and bedizened actresses and *enfinemchésgriseltes!* what cold and fevers and consumption laid by in store! What ostentation and bad taste, and vulgarity and absurdity displayed! What money wasted, what poverty betrayed! What Longchamp was in its palmy days, we do not pretend to say, that being before our time; but what it is now, we boldly affirm to be the veriest insult to reason and good taste that modern times can boast of. Up and down the Champs Elysées goes Folly rampant, wild with triumph, shaking his bells enchanted, over the heads of the thousands of his votaries, who now, beyond all the other periods of the year, bow before him and do him homage. The follies of the Carnival are nothing to this. They are principally confined to a set of poor folks, who, working the rest of the year, with little to divert or distract them—uneducated and untaught in more intellectual pursuits, spend their time and their money in wild attempts at a sort of frantic, artificial, got-up hilarity, because they know no better way of diverting themselves.

This is not the case with Longchamp; the principal actors and actresses in the farce belong to a class who have no such excuses, meagre though they be, for making fools of themselves, and who, by position and education, ought to know better. They make no attempt at gaiety—there's no pretence at any mirth or fun. It is neither more nor less than a set of people who dress themselves out as fine as they possibly can, for the most part in toilets which we *know* must cause them real and dangerous suffering, from their slightness and total incongruity for the season and state of the March winds; and sit in equipages almost invariably in the worst taste, if not absolutely mean and shabby, to be dragged up and down, doing nothing but staring and being stared at; and this in Passion-week, the most brilliant day being Good-Friday.

The Government, jealous of the *liberty* which permitted the Republican party to manifest its existence in the most peaceful, the most respectful, and the most legitimate manner (as it seemed to our unenlightened minds), has published a circular, addressed to the Préfets, to prevent the members of the party assembling in any numbers at the funeral of members of their own opinion, not to allow them to form *one step ground* even at the house of the deceased, to hinder their entering the cemetery, and to *forbid any kind of discourse whatsoever*.

It is, therefore, no longer permitted to a *free citizen* to follow in respectful silence to the grave the body of one he has loved, admired, or respected, if M. le Préfet of his department takes upon himself to consider he is one too many in the procession; he is not to go to the house of his lost friend, nor is he to enter what all less enlightened nations than France are accustomed to consider free ground—the grave itself! If M. le Préfet think that the deceased had no right to possess more than a certain number of friends to lament his loss—the exact cipher fixed by the will of M. le Préfet. He has no right to exercise the custom that from time immemorial has been considered in France, of expressing in a funeral discourse the virtue and merits of the deceased [illegible] matter in what terms—no matter if all allusion to politics be [illegible] and dead. He has no right, in short—he being a Republican himself to show any respect or regard for a departed Republican; or to see that he possessed any social virtues, any good or fine qualities whatsoever.

Of the ball of the *Corps Législatif* there are few particulars to be given here beyond the general facts that the *coup d'œil* was extremely magnificent, and that the experience gained at the *bal du Senat* was turned to such good account that but little inconvenience, comparatively speaking, was caused by the crowd, while the arrangements we already detailed, respecting the invitations, secured a much more select company of guests. The Empress, on entering, was observed to look pale, and appeared nervous and agitated; but, in a short time, recovered her composure, and seemed more amused and animated than she generally does in public.

A most interesting work, a *histoire dramatique et littéraire*, containing a complete account of the theatre of the nineteenth century, from the pen of the inimitable *feuilletoniste*, Jules Janin, has just given forth its first two volumes: it is to be completed in six. To those who are familiar with the style of Jules Janin, we need not dwell on the piquancy, the sarcastic wit, the brilliant anecdotes, the keen and delicate observations, [illegible] which [illegible] to those who are not, we [illegible] the [illegible] of research, the valuable material, the truth of [illegible] and [illegible] criticism of men and times which form its foundation, and render it a history of the literature, manners, and characters of the period, interesting in the highest degree, even to those who care little for the theatre itself.

A comedy by M. Emile Angier, at the Gymnase, entitled "Philiberte," rivals in public favour "l'Honneur et l'Argent" of M. Ponsard, of which we a short time since gave an account. The subject is novel, the heroine being distinguished from all other heroines of the novel and the stage by being plain—we cannot bring ourselves to say of any woman ugly. This, at least, is the starting-point of the piece, but *Philiberte* is not really, and positively, and hopelessly plain. A want of mutual beauty, exaggerated in the girl's mind by the taunts of a vain and unfeeling mother, and the comparison with a beautiful sister, render her so hopeless of pleasing, that she makes no attempt to cultivate or display what gifts nature has really bestowed upon her; and shy, and proud, and sensitive, she shrinks within herself, and thus indeed offers to accept as a fact what she herself has accepted—her plainness. Love—a passion which she never dreamt of inspiring, at last reveals to her her mistake; with the consciousness of pleasing, of being viewed with eyes of affection, of being loved, she charms, long dormant, burst forth. She becomes not beautiful, but attractive, loveable, charming—all a woman should be to inspire a real and profound attachment: and we need not, of course, finish the story.

At the Grand Opera, the production of "La Jonnrée de la Fronde;" at the Opéra Comique appears "La Tonelli;" while the brilliantly successful début of Mdme Lagrange in the "Barbiero di Seviglia," at the Italiens, has given a new and much-needed éclat to that theatre, which from the [illegible] of Lablache and Grisi has been in a most feeble condition [illegible] ball at the Hôtel de Ville is to be the great event of next week, and is, we hear, to be unusually brilliant.

In the French Senate, the Duke de Caumont Laforce has given notice of a motion for voting a dotation of 500 000 francs to the Empress.

The *Corps Législatif* met on Wednesday, under the Presidency of M. Billault. The bill, reducing from 10c. to 10c. the postage on prepaid letters circulating within the precincts of Paris was voted, as was also the Savings-bank Bill. Of the latter, the first clause reduces the rate of interest from 4½ to 4 per cent; and the second fixes the maximum of the deposit at 1000 francs.

The project of law of the Budget for 1854 exhibits an anticipated augmentation of revenue of 69,000,000f. This estimated amount is founded on the increase of the population, a renewed activity in commercial affairs, and a progressive augmentation in certain imposts. The Council of State has greatly reduced the credits. The Ministry decided about 56,000,000f. more than in 1853. The Council of State has [illegible] accorded 34,000,000f., of which 9,000,000f. is applicable to the [illegible] ent of the Interior, and 17,000 000f. to that of Public Works. The [illegible] er of the Budget entitled "Expenses of Public Security" is increased by about 800,000f. The reduction in the War Estimates is about 15,000,000f. The effective force of the army, as regulated by the Budget of 1853, was 408,450 men and 86,442 horses; in 1854 the effective will be 458,818 men and 83 843 horses. The Navy Estimates, increased by 1 700 000f., are preceded by the note, which states that the [illegible] in arrear from colonial demand, chiefly Guiana, and the continuance of the wars of Gustinian. The estimates, receipts, and expenditure appear much more favourable than when they were presented to the Council of State. But in order that the surplus of receipts be a reality, the maintenance of peace is indispensable; and it may be said that the present Budget is to a certain extent a guarantee of peace.

LOUIS NAPOLEON AND THE LONDON MERCHANTS.

On Easter-Monday, at half past one o'clock, the Emperor of the French received, at the Tuileries, the deputation of the merchants of London.

The Ministers of State, of Foreign Affairs, and of the Interior, were present. The deputation was composed of Sir James Duke, Bart., M.P.; Sir Edward N. Buxton, Bart.; Mr. Samuel Gurney, Mr. W. Globensky, Mr. J. D. Powles, Mr. Glyn, Mr. Dent, Mr. Barclay, and Mr. Masterman.

Sir James Duke addressed the Emperor in the following terms:—

Sire, We have the honour and the gratification to appear before your Majesty for the purpose of presenting to your Majesty, and to the French nation, a respectful address from the commercial community of the metropolis of the British empire, embodying the sentiments of amity and respect by which they are animated, towards their brethren of France.

The circumstances which have called forth this declaration being fully stated in the declaration itself, bearing the signatures of upwards of 4000 of the merchants, bankers, and traders of London, we have only to add the expression of our conviction that this document conveys at the same time a faithful representation of the feelings of the people of England at large.

In conclusion, Sire, we beg to express to your Imperial Majesty our fervent hope that, under your reign, France and England may be always united in a friendly and mutually beneficial intercourse, and that, from the friendship of these two great nations results may ensue favourable to the peace of the world and the happiness of mankind.

The hon. Baronet then read the following, which he afterwards presented to his Imperial Majesty:—

DECLARATION OF THE MERCHANTS, BANKERS, TRADERS, AND OTHERS, OF LONDON.

We, the undersigned merchants, bankers, traders, and others, of London, feel ourselves called upon at this time publicly to express the concern with which we learn, through various channels of information, that an impression exists in the minds of the people of France that feelings of an unfriendly character are entertained towards them by the people of England.

We think it right emphatically to declare that we believe no such feelings exist on the part of the English people towards the people of France. We believe the welfare of both nations to be closely interwoven, as well in a mutually advantageous and commercial intercourse as in a common participation in all the improvements of art and science

Dwelling in the reflection that nearly forty years have passed since the final cessation of hostilities between France and England, we record our conviction that European wars should be remembered only to be deplored, for the sacrifice of life and treasure with which they were attended—the hindrances they presented to useful enterprise and social advancement—the angry and unchrist an feelings which they evoked in their progress—and the heavy financial burdens which they left behind them at their close—considerations which supply the most powerful motives to every individual in the European community to avoid, and to oppose by every means in his power, whatever may tend to cause the recurrence of such evils

We desire to remark, that if, in that expression of opinion on public questions which the press of this country is accustomed to exercise, it is found occasionally to speak with apparent harshness of the Government or the institutions of other States, the same is not to be understood in a spirit of national hostility, or as desiring to give offence. We feel that, with the internal policy or mode of government which the French nation may think good to adopt for itself, it is not for British subjects to interfere, further than heartily to desire that it may result in peace and happiness to all interested therein.

We conclude this declaration by proclaiming our earnest desire for the long continuance of cordiality and good-will between Frenchmen and Englishmen; our determination to do all in our power to uphold the same; and our fervent hope that the inhabitants of both nations may, in future, only vie with each other in cultivating the arts of peace, and in extending the sources of social improvement for their common benefit.

His Majesty replied in English:—

I am extremely touched by this manifestation. It confirms me in the confidence with which the good sense of the English nation has always inspired me. During the long stay I made in England I admired the liberty she enjoys—thanks to the perfection of her institutions. Nevertheless, at one period last year I feared that public opinion was misled with regard to the true state of France and her sentiments towards Great Britain. But the good faith of a great people cannot be long deceived, and the step which you now take is a striking proof of this.

Ever since I have held power my efforts constantly tend to develop the prosperity of France. I know her interests; they are not different from those of all other civilised nations. Like you, I desire tranquillity, and to make it sure, I wish, like you, to draw closer the bonds which unite our two countries.

The deputation then retired. The "Declaration" in question appeared as an advertisement in the *Times* and *Daily News* of Tuesday, with the whole of the names attached. It occupies a page and a column of the leading journal. It comprises the names of many M.P.'s, and of some of the first bankers and commercial firms of the metropolis. The gentlemen forming the deputation have received the greatest attentions from the members of the French Cabinet. On Tuesday they dined with the Minister of Foreign Affairs, on Wednesday evening with the Minister of State, and on Thursday they had the honour of dining with their Imperial Majesties at the Tuileries. The Paris papers are delighted with the expression of opinion from the commercial portion of the British metropolis, and they cordially reciprocate the sentiment that peace between the two countries may be perpetuated.

On Tuesday the Emperor granted an audience to a deputation of the English company who propose joining the Atlantic with the Pacific Ocean. The Ambassadors from the United New Granada form part of the deputation, and were also received by the Emperor Sir Charles Fox, the president of the company, addressed the Emperor in explanation of the project, in favour of which he solicited the patronage and support of France. The Emperor replied in English as follows:—

Gentlemen, I received with the liveliest interest the intelligence of the formation of a great company for the junction of the two oceans. I have no doubt that you will succeed in an undertaking which must render so important a service to the commerce of the whole world, since such eminent men are placed at the head of your company. I have long appreciated all the advantages of a junction between the two seas, and when I was in England I endeavoured to draw the attention of scientific men to this subject. You may, therefore, rest assured, gentlemen, that you will meet with all the support from me which such noble efforts deserve.

The Company's report, plans, and maps were then laid before the Emperor, who examined them with particular attention. When the deputation withdrew, the Emperor said:—

I am happy to have seen your honourable deputation the very day after having received the one which, on the part of the merchants of London, expressed to me the most friendly sentiments in favour of peace—sentiments with which my own feelings have always been in complete accord.

On Good Friday there was a religious ceremonial in the Tuileries, when the "Miserere" was chanted, and a sermon preached. The Emperor and Empress were present, with about twenty or thirty ladies of the household, and as many gentlemen. The Empress appeared fatigued from standing during the ceremony, and, at the Emperor's request, she sat down. The promenade of Longchamps was very gay towards the evening. The Emperor and Empress passed up and down the Champs Elysées three times, they were in a close carriage.

Pariebaud, who was sent for trial before a council of war for the assassination of the Archbishop of Paris, has been found "Not Guilty," but has been sentenced to transportation for having taken part in the insurrection of June, 1848.

GERMANY

A telegraphic despatch from Berlin of the 20th ult. states a conspiracy had been discovered. Twenty persons had been arrested, 80 houses searched, and arms and ammunition found

A letter from Vienna, of the said ult[imo], [illegible] from the Tyrol that the fire of rifles was given to celebrate the recovery of the Emperor, but the character of a national fête. It is said that a disagreeable incident has troubled the pleasure of this fête, the Arms of England having been publicly outraged, and it is added that the Earl of Westmoreland has already addressed a note on the subject to the Minister of Foreign Affairs. Some persons fired at the arms. The authorities then interfered, and put a stop to the demonstration.

The embassy of Prince Menschikoff to Constantinople excites great interest at Vienna. The Austrian *Lloyd* remarks:—"Should the matter be arranged peaceably, the Turkish Empire will fall in peace; if the reverse, it will fall in war. If the Emperor of Russia acquires the right to appoint the Patriarch at Constantinople, and with it the protectorate over the Greek Christians in Turkey (about 14,000,000 or 15,000,000), the Empire which ended 400 years ago, when Constantinople was taken by the Turks, will be restored *de facto* in 1853." The present is regarded as one of the most critical moments that Europe has ever seen. The Viennese say that the power which must eventually suffer most, should the gigantic plans of Russia be realised, is Austria.

SWITZERLAND.

We hear of an attempted *coup-de-main* by some disaffected peasants under Romish influence in the Canton of Ticino. Influenced by the interested misrepresentations of their clergy, and as stated in the report of Colonel Bourgeois, well supplied with money and with weapons for the attack, some hundreds of the inhabitants of the Val Colla secretly made their way to Lugano, and, all at once, assembled on the principal piazza of the little capital of Fribourg. Fortunately, the civic guards ran to arms, prevented the insurrection, and arrested fifteen of the leaders. The troops at Lugano have been reinforced, and the military have occupied the entrance of the valley. A letter from Berne of the 26th ult. states that the Canton of Ticino is tranquil. The Federal government of Zurich and the Vaud have declined to comply with the invitation of the Council of State of Geneva to convoke the Federal Diet. They say they have confidence in the Federal Council for the termination of all existing differences.

ITALY.

We hear from Turin that the Austrian Cabinet has replied to the note of Count Revel on the subject of the sequestration of the property of the Lombards who have taken refuge in Piedmont. This reply has failed to satisfy the Sardinian Government. M. de Cavour has accordingly sent Colonel Actis to Vienna. The Colonel is the bearer of fresh instructions to Count Revel. In these instructions provision is made in case the Count shall have left Vienna.

A letter from Rome states that there has been this year a great falling off in the number of strangers who annually resort to Rome to witness the Easter ceremonies. This is attributed to the persecution of the Madiai, and other acts of intolerance on the part of the Romish Church. The Pope is said to be personally desirous to come to Paris to crown the Emperor.

SPAIN

The report of the majority of the committee of the Senate favourable to the pretensions of Narvaez, has been rejected by that body by 108 to 64. The Minister has signified his intention of departing those senators of their functions as public officers who voted with the minority in favour of the claims of Marshal Narvaez

GREECE

M. R. Palamides, the Minister of the Interior, cedes his place to M. I. Ambrosiades, late Prefect of Attica and Bœotia. Palamudes has, as a special favour, been created a Senator

RUSSIA

Some very interesting particulars of the position and efficiency of the Russian army are contained in the latest of a series of letters on the subject published in the *Army Gazette* of Berlin. The following passage has a present interest:

The construction of the great railroad lines connecting Moscow, Petersburg, Odessa, and Warsaw, in changing the conditions under which a military force may be transported, changes the principles upon which Russia has hitherto conducted her preparations for war. Supposing a war to threaten from the West, we may assume that the active army would not move until Poland had been occupied. Hitherto this operation must have consumed months; but let the railroad from Petersburg to Warsaw be finished, and a week will suffice for the purpose. Before the first rail of the line is laid down, the future military use has been a matter of study, and with especial reference to the transport of large masses of troops. Thousands of military transport waggons are already made or making, and their construction is truly artistic. The packing or suspending of arms, knapsacks, cavalry saddles, and all the appurtenances of a battalion, are abundantly cared for. In three days the half, or in a week the whole, Guard and Grenadier corps may stand in Poland, while the reserves are coming up to St. Petersburg, by the Moscow and Petersburg Railway. The whole political significance of the new railway lies in the fact, that the Guard and Grenadier corps may in future be brought to Poland in a week instead of in months. Let that great artery be connected with Odessa, and with a railroad from Moscow to Warsaw, as well as with another from Warsaw to Odessa, and it cannot then be denied that Russia will have effected a revolution in her military relations to Europe.

It is reported that a division of the Russian army has entered Bucharest, the capital of Turkish Wallachia

We hear of defalcations among high Russian official authorities. The sums embezzled was 1,800,000 silver roubles. The Privy Councillor, General Politkesky, who had the management of certain public monies, on his death-bed confessed how he had abused the confidence reposed in him. The corpse of the penitent man was degraded in its coffin by the executioner, and ignominiously dragged into the earth. Several Generals have been arrested who ought to have examined the accounts of the deceased. The scandalous affair so vexed the Emperor that he was quite ill for a time.

TURKEY.

The much-dreaded interview between Prince Menschikoff, the haughty Envoy of Russia, and the Sultan, took place on the 5th ult. The result is reported to be satisfactory, and no pretension of any claims corresponding to the extraordinary department of Prince Menschikoff on his entry into Constantinople are said to have been put forward. The Prince is stated to have expressed himself satisfied with the reception of Fuad Effendi, and with the Ministry of his successor. The new Minister, Rifaat Pacha, successor of Fuad Effendi, appears to be favourable to Russia. Both in London and in Paris the Russian Government is said to have declared, on the faith of the Emperor, that the formidable list of demands ascribed to Prince Menschikoff has no foundation in his instructions, which are confined to the matter of the Holy Places; and that even on this subject he is to claim no exclusive privileges for the Greek Church but to find out some means of affording an equivalent to the priests of the Latin Church in the Holy Land. These communications have been made, in a very friendly and conciliatory spirit, to the French Government, and apparently with a desire to remove the cause of difference arising from the Greek question.

Letters from Constantinople state that the Russians throw away large sums of money in Constantinople, and make considerable presents to the old Turkish party. Colonel Rose, the English Chargé d'Affaires, has been "snubbed." He proffered his services to the Grand Vizier, as mediator between Prince Menschikoff and Fuad Effendi; but, on calling at the Russian Embassy, M. d'Ozeroff informed him that, as the Ambassador was aware of the cause of his visit, he must beg to be excused seeing him; he wished to avoid all discussion, as he was only obeying the express instructions of his Sovereign in respect to the Turkish Minister. Lord Stratford's arrival was looked forward to with extreme impatience. The new bank plan is neither more nor less than another kind of loan, which will cost the Porte more than Prince Callimaski's would have done. It has, however, one advantage. It will not afford the Turkish *employés* such facilities for enriching themselves at the expense of the state.

MOROCCO

Intelligence has been received of the deplorable state of the Emperor's health. His death, it is feared, will be the signal for a terrible crisis

AMERICA.

By the United States mail steamer *Pacific*, we have advices from New York to the 15th ult. Strong debates have taken place in the Senate on Central America and the Monroe doctrine. The fact of Truxillo having been taken possession of by the British steamer *Devastation* on the part of the Mosquito King is confirmed. The United States Government, it is said, have called upon the English Minister for an explanation with regard to Honduras; and the Secretary of the Navy is to report what efficient naval force he has fit for action. A treaty to Honduras' claims has been signed by the British and American Governments has been ratified by the Senate. The fortnightly steamer from California (seven in number) have brought about four millions and a half of dollars in gold. There is an active war between Honduras and Guatemala, the cause being a disputed boundary.

From Havannah we have advices to the 12th ult. The Commissioners deputed to meet Santa Anna and invite him to return to Mexico, had arrived at Havannah on their way to Carthagena The general impression in Mexico was that Santa Anna would not proceed directly there, but await in Havannah the formation of an army, which it is said is being got together to support his views. Seven States had voted for his Presidency. The other States had not been heard from, with the exception of Puebla and Guanaxuato, which had declared against him. A very decided majority of the people of Mexico were in favour of his return to power. General Blanzarte had left Mexico with a brigade of 1000 men and six pieces of artillery, to bring to terms the State of Guanaxuato. Senor Villamil had arrived at Tehuantepec, commissioned by the Government to deliver up the Isthmus to the representatives of the Sloo Company.

INDIA AND CHINA

The following telegraphic message has arrived, dated Trieste, March 28:—

"The steamer *Bombay* arrived this morning from Alexandria, in 123 hours

"Ambassadors from Ava, accompanied by two missionaries, had reached General Godwin's camp

"The Emperor of Ava was besieged in a small fort by his younger brother, who had the whole army on his side; he was sure of reducing the fort, and desired peace with the British on any terms.

"In consequence of orders received from Ava, the Burmese troops had evacuated the province of Pegu, and General Smith had occupied all the strong positions in the district

The province of Bassein had been cleared of the enemy by Captains Fytch and Rennie, but an expedition sent against a robber chief, near Donabew, had been repulsed with a loss of [illegible] and 88 killed and wounded

"Among the officers killed were [illegible] Kennedy, R.N.; and Capt. Pryce, [illegible] Among the severely wounded were Lieut. Bushnell, R.N.; Messrs. Hinde and Wilson, Mates of the *Winchester*

"Trade was brisk at Calcutta and Bombay

"The rebellion in China [illegible] tranquillity"

The melancholy incident so briefly noticed in the telegraphic despatch has excited a feeling of deep regret for the premature death of Captain Loch, and sympathy for the relatives of the officers and men who fell from the last advices, that an attack was to be made upon a strong position at Donabew, where a mixed force of upwards of [illegible] sepoys, followers, had occupied the square of the Pagoda, and ejected the loyal man of the town, who had been faithful to the British throughout the war. These marauders, or dacoits, as they were called in the army, had already given the forces some trouble, for they occupy a country covered with jungle and dotted [illegible] villages on the banks of the river. Very recently a squadron of boats and a steamer had been sent against them, and had returned with loss, never having seen the enemy, though they ascended a narrow creek, sunked in several places, and were exposed to a galling fire.—(Vide ILLUSTRATED LONDON NEWS, March 19, in which appeared a Sketch by an officer of the Indian army, of the attack made upon the boats by the Burmese). It was, therefore, thought necessary to renew the attack on these formidable robbers with a larger force, and Captain Granville Loch, the flag-captain of the *Winchester*, who had already shown the greatest activity and ability in maintaining the communication by water between Pegue and Rangoon, determined to lead this enterprise in person; for, since his arrival on the station last autumn, he has been foremost wherever there was an enemy to be encountered or a service to be performed. The result of this attack proved most unfortunate. It was repulsed by the natives with very severe loss, amounting to no less than 88 killed and wounded out of a party which cannot have exceeded 300 or 400. Two guns were also lost, and, as if to render this disaster the most painful occurrence in the campaign, it was marked by the death of Captain Loch himself, who commanded the expedition, and of Lieutenant Kennedy, of the *Fox*, while several other officers and mates were severely wounded.

DESTRUCTION OF RANGOON BY FIRE.

By electric telegraph from Marseilles, we learn that the Calcutta and India Mail contains despatches from China, Feb. 10; Rangoon, Feb. 11, Calcutta, Feb. 19; and Bombay, March 1

Rangoon has been almost destroyed by conflagration.

AUSTRALIA.

The *Great Britain* steamer brought files of Australian papers to the Cape of Good Hope. These advices have arrived by the *Canada*, which sailed four days after the *Great Britain*. The *Great Britain* brings a rich cargo of wool, 130,000 ounces of gold, 175 passengers, and a mail. She left Port Phillip on Jan. 5, and arrived at Simon's Bay on Thursday, the 10th of February.

The Government escort from Mount Alexander arrived at Melbourne with 16,135 ounces of gold. The last escort from Ballarat brought down 11,000 ounces of gold, 2677 ounces of which were for Melbourne, and the remainder for Geelong. Another from Mount Alexander and Bendigo arrived at Melbourne with 9002 ounces of gold. The last accounts from the various diggings are by no means favourable; but all experienced persons agree in asserting that there is no probability of the gold-fields failing. The price of gold was £3 9s. 8d. on Feb. 7. A person recently returned to Melbourne from the Ovens with 15 lbs. of gold, got there by himself. The arrest of men from the auriferous diggings arrived at Sydney on the 7th December, with 14,230 oz. of gold. The shares in the proposed Sydney Gold Escort Company have been well received in the market, and it is expected that operations will be speedily commenced. The last reports from the north and south diggings were favourable. Several parties have recently arrived at Maitland, from the Hunter River, with parcels of 60 or 80 oz. of gold.

The first specimens of the sovereigns executed in Adelaide are in circulation. On one side is a crown, the year of coinage, and the words "Government Assay Office, Adelaide." On the other side are the words, "Value, One Pound," and weight 5 dwts., 15 grains, 22 carats.

THE BALL OF THE LEGISLATIVE BODY TO THE EMPEROR AND EMPRESS OF THE FRENCH

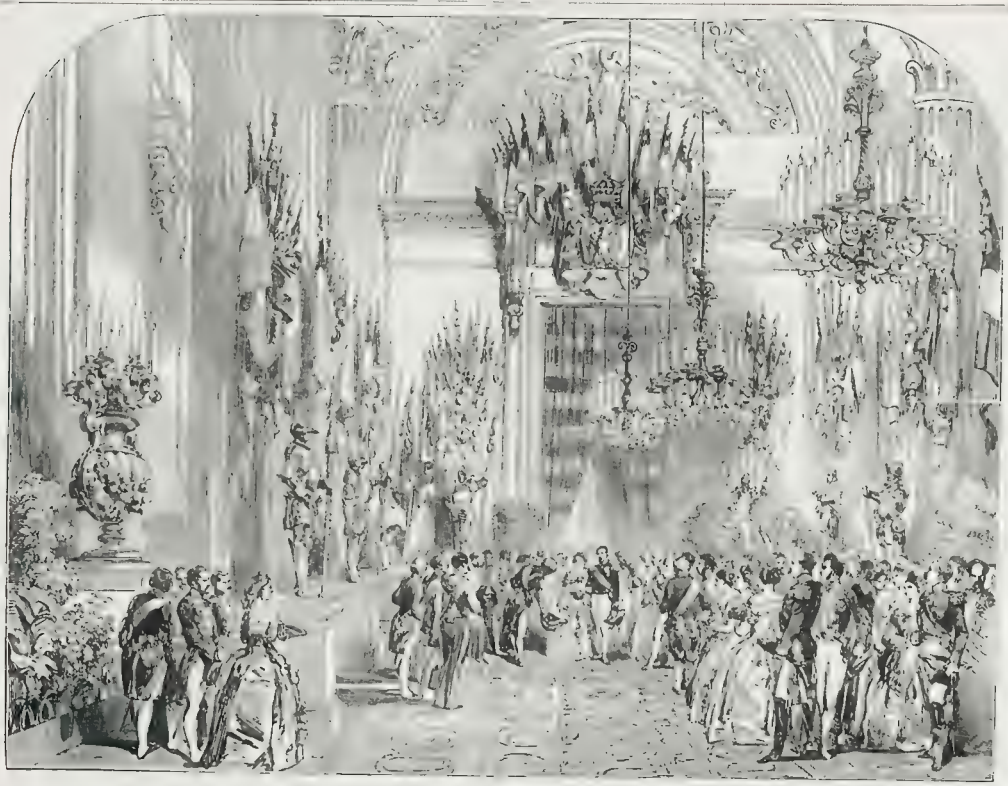
THIS grand fête offered by the members of the Legislative Body, in the Palace, at Paris, to the Emperor and the Empress took place on Monday night with great magnificence. The persons invited began to arrive at nine o'clock, and from that hour until half-past twelve o'clock, an uninterrupted stream of carriages continued to be seen, on each side of the river, advancing towards the [illegible]

Three entrances were opened for the guests: the principal one that by the Court of Honour of the Palace from the Place Bourgogne, which is reserved for the carriages of the Imperial party, of the Ambassadors, and of the Ministers; another by the Rue de Bourgogne, in front of the hotel of the President of the Legislative Body; and the third, on the other side of the Palace, was by the steps in front of the Pont de la Concorde. To make this arrangement available, it was necessary to unite together the Hotel of the Presidence with the Palace of the Legislative Body; and this was effected by means of a temporary construction erected over the whole length of the garden lying between the two edifices. The building thus raised, and which formed the very centre of the fête, consisted first of a vast *jardin d'hiver*; next, of an immense ball-room; and lastly, of a supper-room, capable of accommodating 900 persons at a time. The first-named of these constructions was separated, throughout its whole length, into three distinct galleries, communicating with each other by means of wide arcades, and all [illegible] with flowers, evergreens, statues, fountains of [illegible] masses of chandeliers from the ceiling, and thousands of lights [illegible] walls. These arrangements bespoke the exquisite taste of M. Jolly, the architect; of M. Hebert, and of the *entrepreneur-general*, M. Verdelet. Upon the ensuing page we have engraved the ball-room, *Salle des Armures*; and beneath it, the *Jardin d'Hiver*.

At half-past ten, the carriages of the Imperial party entered the courtyard of the Legislative Palace. Their Majesties were received at the foot of the steps by M. Billault, the President, at the head of the members composing the Bureau of the [illegible] appointed to act as stewards of the fête. They [illegible] conducted through the Salle des Armures, [illegible] (which they stopped a moment to admire), to the Salle du Trône, [illegible] members of the Imperial Family and the Ministers had [illegible] Almost immediately after, their Majesties, accompanied by their numerous suite, proceeded to the Salle des Pas Perdus, [illegible] seats on the chairs of state prepared for [illegible] Mathilde occupied the seat on the right of the Emperor. Prince Jerome and Prince Napoleon were on the left. The Emperor wore the uniform of Colonel-General, and the Grand Cordon of the Legion of Honour. He appeared in excellent health and spirits. The Empress [illegible] universal admiration. Her Majesty wore a pale pink dress, with magnificent point lace, and ornamented with wreaths of roses, rounded with their green leaves. Her hair was [illegible] head, the back of the head bearing a quantity of flowers, [illegible] diamonds. On her neck was a necklace of emeralds and diamonds of great value; and her Majesty wore *en contour* two corresponding bracelets, lately sent to her by the Queen of [illegible]

The [illegible] loudly saluted several persons present, [illegible] before them, and had conversations with [illegible]

The Imperial quadrille was formed to open the ball. [illegible] with M. Billault, President of the Legislative Body; and [illegible] walked through the rooms, and appeared [illegible] other personages in the quadrille were the Princess [illegible] who had M. Vould, the Minister of State, for [illegible] their *vis-à-vis* being M. Rogier, the Minister of [illegible] Comtesse Walewski, wife of the Foreign Minister [illegible] quadrille had concluded, their Majesties [illegible] versed for some time with the [illegible] also descended from his chair to speak [illegible] walked through the rooms, and appeared [illegible] played in the decorations. They then withdrew to the Salle du Trône, where they remained conversing for some time with the persons admitted to their presence; and about half past eleven, proceeded to the Salle des Conférences, which was fitted up as a supper-room, tables being set out round three sides of it, capable of allowing 900 persons to



RECEPTION OF THE EMPEROR AND EMPRESS OF THE FRENCH BY THE LEGISLATIVE BODY.—THE SALLE DES ARMURES.

partake of refreshment at the same time. After partaking of some slight refection, their Majesties returned for a few minutes to the Salle du Trône, and then took their departure at about twelve o'clock—the Emperor expressing to M. Rulhault his entire satisfaction at the admirable manner in which the fête had been conducted.

Looking generally at this fête, the guests were unanimous in declaring it to be one of the most successful seen in Paris of late years. The number of beautiful women present was extraordinary, and the display of diamonds unusually fine. The vast variety of official costumes imparted a peculiar appearance of animation to the scene, and the uniforms of most of the military services of Europe were to be seen there—the scarlet of the English army being pretty numerously represented. Some English court-dresses were also to be seen worn, it is said, by some of the gentlemen who had in the morning presented the Peace Address to the Emperor. It is calculated that about persons passed through the rooms in the course of the night. About three o'clock the company began to thin, but dancing was kept up with great spirit until half past four in the morning.

GRAND BALL OF THE LEGISLATIVE BODY TO THE EMPEROR AND EMPRESS OF THE FRENCH.—THE JARDIN D'HIVER.

THE AUSTRALIAN ROYAL MAIL STEAM-SHIP "SYDNEY."

THE AUSTRALIAN ROYAL MAIL STEAM-SHIP, "SYDNEY"

This noble vessel (commanded by Captain Franklyn) has excited considerable interest, by her return from Australia with a very rich freight of gold valued at £800,000 sterling. Her passengers were 122 adults, and 17 children. In addition, the *Sydney* obtained £1000 for intercolonial passengers only.

The *Sydney* left Plymouth on the 4th of August, 1852, at 8 30 A.M., and arrived at St. Vincent in 10 days 5 hours; she was detained there 2 days 6½ hours. From St. Vincent to Ascension she was 12 days 12½ hours on the voyage, and was detained there 6 days 6½ hours. The run from Ascension to the Cape of Good Hope occupied 9 days 20 hours, and she was detained there 5 days 6 hours. She left the Cape of Good Hope October 5, and arrived at King George's Sound October 24, making the passage in 21 days 12 hours. She was detained at that place, coaling, for 4 days 21 hours, from the impossibility of procuring labour, and sailed October 29; arrived in 3 days at Adelaide, remained there 1 day 7 hours; sailed November 5 for Port Phillip arrived November 7, remained discharging passengers and cargo there 7 days 19 hours; and on November 13 sailed for Sydney, where she arrived November 16, in 71½ hours.

On her return voyage she sailed from Sydney, December 4; arrived in 89 hours at Port Phillip, and remained there 3 days 7 hours. On Dec. 11 she sailed for Adelaide, where she arrived December 14, in 61½ hours, remained there taking passengers and treasure 3 days 9 hours; sailed for King George's Sound, December 17; arrived December 23, in 6 days; remained coaling 3 days 23 hours, sailed January 1, arrived at the Cape on February 1, in 30 days 23 hours; remained at the Cape 4 days 12½ hours coaling, sailed February 6; arrived at St. Vincent February 26, in 20 days 13½ hours, remained coaling 2 days 21 hours; sailed March 2, and arrived at Plymouth in 14 days 3 hours.

The *Sydney* was built by Denny and Co. Her dimensions are:—Length, 216 feet; beam, 34 feet; depth, 25 feet. She is 1500 tons burthen, and 350 horse-power.

THE HAM FAIR AT PARIS.

The yearly fair for the sale of hams, which takes place on the Tuesday, Wednesday, Thursday, and Friday of Holy Week, was held on the 22nd ult., according to an ordinance of the Prefect of Police, upon the Boulevard Bourdon, extending from the Grenier d'Abondance to the Quai Morland. Two days previous to the fair the dealers entered their names, in order to obtain places at the fair for the sale of their goods, which arrived in carts and other vehicles on Monday night. On Tuesday morning, at daybreak, the workmen began to unload the hams, and to construct the booths for their reception. The latter were ranged in two rows—the one abutting upon the Grenier d'Abondance, and the other upon the canal. Some of the booths first constructed were ornamented with gay ribbons and evergreens. Altogether, there were not less than from 300 to 320 stalls, at which were sold, throughout the fair, not only hams, but sausages, salt and hung pork, lard, *andouilles*, and other dainties. A fine sucking-pig, smoked, of the crossed Leicester breed, from the agricultural colony of Petit-Bourg, excited some attention.

In proceeding from the Bastille to the Seine, the ham-merchants were ranged in the following order:—On one side were the wholesale dealers of the Moselle, la Meuse, les Vosges, le Nord, l'Aisne, l'Eure, la Haute-Marne, la Marne, l'Oise, Seine-et-Oise; on the other side those of la Seine, la Nièvre, l'Orne, l'Eure-et-Loir, l'Indre, la Vienne, le Maine-et-Loire, et les Basses-Pyrénées. In the middle of the macadamised road some merchants of the above departments who could not find room on the two other lines, formed a third row. The Department of the Meuse, as in former years, contributed the greater number of dealers to the fair, viz., 64. After them came the Departments of the Seine and the Moselle, the latter numbering 28 dealers. The number of dealers, alto-

EASTER HAM FAIR, AT PARIS.

gathe was much less than last year. The price of ham of all kinds varied from 80 cents to 1 franc 20 cents the demi kilogramme, or from about 8d. to 1s. per lb.

The Ham Fair is of very ancient origin. The Gauls and the Gallic Romans have transmitted to the French their taste for pork-flesh—a taste so exclusively their own, that, according to Legrand d'Aussy, there were up to the twelfth century, feasts where only the flesh of pork was served up. At Paris, the Cathedral Chapter, upon certain days of ceremony, were treated in a similar manner; and such, it is stated, is the origin of the Ham Fair of Paris, which was originally held around the entrance to the Cathedral. When the festival of Easter arrived, the [illegible] observed Lenten fare scrupulously solaced themselves with a ham, and this was considered the dainty *par excellence*. The ham destined to this re-invigoration of the physical system was blessed by the clergy.

At the foot of the Column of July, upon the Place de la Bastille, and on the Boulevard Bourdon, as far as the Ham Market extended, dealers in various fancy wares constructed booths and exposed their goods for sale. This usually solitary and tranquil quarter was thus transformed, during the whole of last week, into a noisy and animated fair.

During the last two or three days the fair was more numerously attended than at the commencement, and a large amount of business was transacted. Seven persons were taken up during the time the fair lasted for theft. One of them is a native of London, who admits that he came over on purpose to attempt something during the fair; and another, [illegible] 15, who was furnished with a dress made into a sort of bag [illegible] kilogrammes of *charcuterie* were found when she was arrested. Four of the persons taken up was a convict, discharged from the [illegible] at Toulon in 1849.

CALENDAR FOR THE WEEK.

SUNDAY, April 3.—First Sunday after Easter.
MONDAY, 4.—St. Ambrose.
TUESDAY, 5.—Goldsmith died, 1774.
WEDNESDAY, 6.—Richard Cœur-de-Lion killed, 1199.
THURSDAY, 7.—Don Pedro, Emperor of Brazil, abdicated, 1831.
FRIDAY, 8.—Fire Insurance due.
SATURDAY, 9.—Battle of Toulouse, 1814. Lord Bacon died, 1626.

HIGH WATER AT LONDON-BRIDGE,
FOR THE WEEK ENDING APRIL 9.

THE ILLUSTRATED LONDON NEWS VOLUMES, from [illegible] Number, [illegible] Price of Volumes I. to [illegible] each. Cases for binding the Volumes may be had at the Office, price 2s. each. Title-pages and Indexes to the Volumes are published with the Numbers.

TO CORRESPONDENTS.

H. F. The *Arms* of Fullerton are "Arg. three otters' heads erased gu. [illegible]" *Motto*—Lux in tenebris."

[illegible] "Arg. a cross sa., in the dexter chief a [illegible] proper."

[illegible] registered to the name of Hickling.

[illegible] *Irues* of Ladock. "Az. a lion couchant or, in chief a dolphin [illegible] but of a mural coronet az. a dexter arm brandishing a sword ppr."

R. A. We have no details or information about the name of Kynoch.

[illegible] Sir John Davidson required. "Az. on a fesse arg. between three plaices or, a buck couchant gu."

A CONSTANT READER.—Daughters take the same precedence as the eldest son. The point submitted would depend on the relative rank of the husbands.

A WALSAL SUBSCRIBER is desirous to obtain information regarding a General Harry Innes, who died a. p. in 1807. Can any of our readers gratify the inquirer?

AN ISO. A name may be *legally* assumed, or changed, by the simple adoption of the new one; but the Royal license does put it beyond the legality; but as desirable as rendering the alteration proper, and acknowledged. Some testamentary bequests require the name to be changed by Royal license, and of course such license cannot be obtained. The cost of a Royal license, procured through a member of the Heralds' College, is about fifty guineas; but there is an additional sum of forty guineas required for the stamp, when the name is under a will.

AN OXFORD SUBSCRIBER.—A younger son, whose mother was a co-heiress, is fully entitled to bear her arms as a quartering; but he has no right to take her family crest.

X. Y. Z. York.—*Arms* of Lillingston, whose eventual heiress married spinster." A bugle stringed between three crescents."

LITA. The children of each generation use the same courtesy designation.

A SUBSCRIBER.—Nicholas Wadham, of Merrifield, county Somerset, was the founder of Wadham College. His wife was Dorothy, daughter of Sir William Petre, but by her he had no issue. Wadham, the founder, was son of Sir John Wadham, of Merrifield, one of the Judges of the Common Pleas, and brother of William Wadham, of Merrifield.—See Collinson's Somersetshire."

AN INQUIRER.—The late Right Hon. Sir Robert Peel succeeded to the baronetcy which had been conferred in 1800 on his father, the first Sir Robert.

AN OLD SUBSCRIBER.—*Arms* of Vaughan, Earl of Carbery: "Per fesse [illegible] and sable, a lion rampant regardant, counterchanged." There does [illegible] which has taken Carbery for the title of their peerage. John Vaughan, 3rd and last Earl of Carbery, died January 12th, 1712, leaving an only child, Anne, Duchess of Bolton; at whose decease, s. p., in 1751, the old family estate of Golden grove passed to her heir male, John Vaughan, Esq., of Shenfield, whose great-grandson and representative is the present John Lloyd Vaughan Watkins, Esq., of Pennoyre, Lord-lieutenant of the county of Brecknock.

A. and B.—The question cannot be solved without reference to the original patents of arms. If the arms were the first Nova Scotia Baronet were those of his father, and not a grant, personally, to himself, the grandson of B. is clearly entitled to adopt them, on becoming head of the family.

A SEEKER AFTER TRUTH, Oxford.—The pedestal of the statue of Charles I., at Charing-cross, was certainly sculptured by Marshall, as proved by the account of the payments of the Treasurer of the Board of Works, preserved in the Audit-office, and recently printed, by Mr P. Cunningham, in the *Gentleman's Magazine*. When may *possibly* have *designed* the pedestal

A CONSTANT SUBSCRIBER.—Lines of Shelley: "On a fesse engr between [illegible] or, Cross Ingrailed hend erased arg. headed and [illegible]"

A. B.—The Chief Baron Capell was Lord Chancellor of Ireland in 1841. Lord Donman never was Lord Chancellor. He obtained his peerage in 1834, [illegible] then Lord Chief Justice of the King's Bench.

A SUBSCRIBER.—A lady, without title or courtesy style, marrying the younger son of an Earl becomes entitled to the precedence of "the Lord's" during her husband's lifetime and her widowhood; but she forfeits it on her marrying with a commoner

EDWARD COPELAND.—If the second picture is taken at the same distance from the object, but with an alteration of the angle of about 20°, a stereoscopic pair of photographs will be obtained. The proto nitrate of iron is employed by the best manipulators for developing the collodion pictures positively.

A CONSTANT SUBSCRIBER, Woodbridge. "Hunt's Manual of Photography"—"Horne and Thornthwaite's Instructions in Photography." The question of the Daguerreotype patent is in abeyance, the process is [illegible] and may be used without a license

MYRTLE. [illegible] which, wherever it may be obtained, must be absolutely free from any gritty or sharp particles

J. P. T. Photogeny offers the only means for quickly and accurately [illegible] and [illegible] paper

A SUBSCRIBER, [illegible], and J. D. Isle of Wight, declined

C. [illegible] Hyde, should address his complaint to the General Post-office.

T. H. [illegible] Outer way is the proper seaman's phrase.

ANXIOUS [illegible] will, perhaps, send further particulars of the steam-[illegible] address.

G. [illegible] "Alison's History of Europe." Foucault's Pendulum [illegible] in No. 1. of "Quarterly Review" of that year; also, a precis of the results of the several Experimenters, 10 pages, in the "Year book of Facts." 1850

A. A. Z. The value of your Hogarth's prints depends upon the state of the impressions. Show them to a printseller

J. S.—The lines "To the Return of the Dove" are by Chas. Mackay, LL.D.

H. J. O.—The gentleman in question is an Albino.

FRIGUS DORRIE. See the glyphographic process described in the specification of the patent.

ZERO.—The marks may be removed by chloride of lime.

H. B. F.—A Key to "Comingsby" was published soon after the first appearance of that novel.

ENQUIRER.—"Entire," or entire butt, was the name given to a liquor partaking of the flavours of ale, beer, and twopenny, by Harwood, the brewer, about 1795.

A SINGER.—Wade's "Handbook to the Pianoforte."

OMEGA.—For a list of Schools, see Low's "Charities of London," or the "Family Almanack and Educational Register" for 1853.

J. W. W., Hull.—Spoonful is used by Arbuthnot, in writer of sound English

OCTAVIUS W.—See the ILLUSTRATED LONDON ALMANACK for 1843, for the origin of "All Fools Day."

S. C., Leeds.—Hippolytus was the son of Theseus and Hippolyte, and Ariena the name of the city rebuilt in Italy. (See Dymock's "Bibliotheca Classica"): also, Gaignaire's "Picture of Paris.")

H. H. O.—The line,

Men are but still trees of a larger growth,

is from Dryden's play of "All for Love."

E. L. D. D.—See "Hunt's Guide to Photography." Third Edition.—Griffin and Co.

SHORT HAND, Warwick.—See "Short Short-hand," lately published.

NEW YORK.—Apply to an American bookseller.

W. B., Usk.—See Mitchell's "Rail-room Companion."

M. R. L.—"Logic is the art of thinking and reasoning justly." *Watts' Improvement of the Mind.*

A. L., Leicester.—See the "Treatises on Sheep and Cattle," in the "Farmers' Library."

A CONSTANT READER.—Members of the House of Commons do not receive any remuneration for serving on private committees

ARTISTICUS.—Address, Mr George Cruikshank, 86, Fleet-street.

ALETHA, Greenwich. Apply respecting the annuity for a professional man, at the Athenæum Institute, Sackville-street, Piccadilly.

J. H.—"Enough for Buckingham," in "Richard III.," is not Shakespeare's, but one of Cibber's nonsensicalisms.

A CYCLER.—See the "Illustrated London Cookery-book."

T. S., Torquay, is thanked. We have not space for his letter.

A SUBSCRIBER.—Mrs. Chisholm's address is Ayre's terrace, Islington.

J. A. B., R. N., United Service Club.—See Webster's "English Dictionary," or Gifford's.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 2, 1853.

THE "Turkish difficulty," and the mission of Prince Menschikoff to Constantinople, which at one period threatened to disturb the peace of Europe, will have one satisfactory result, if they relieve Christendom from the scandal which the quarrels of certain Christian sects in the Holy City have brought upon the Christian faith. The dreadful scenes of which the Church of the Holy Sepulchre has been the arena, the superstitious practices of the rival sects, and their wretched bickerings and vindictive jealousies, have long excited the supreme contempt of the Jews and Mahometans in the Holy City, while their irreconcileable pretensions have occasioned incessant trouble and annoyance to the Ministers of the Porte.

Difficulties of no ordinary magnitude present themselves in the way of an amicable and final settlement of this question, arising not less from the arrogant and conflicting claims of the Christian communities who have established themselves in the Holy Shrines of Palestine, than from the political and religious policy and pretensions of the two Great European Powers who respectively protect the Greek and Latin Churches of the East.

Ever since the right of Francis I. the Kings of France have, by treaty, claimed the right to be the Protectors of the Holy Places, and of the Latin monks who guarded them. The Greeks have, of late years, by means of firmans from the Porte, successfully contested with the Roman Catholics the right to the exclusive guardianship of the Shrines; and the Greek monks proceeded from one encroachment to another until Louis Napoleon, listening to the urgent representations of every French traveller to the Holy Land, has vindicated his title of "hereditary Protector of the Catholics in the East." The Emperor of Russia, on the other hand, as "the Sovereign of the greater number of the followers of the Greek Church," has always abetted the claims of the Greeks, as will become millions of his subjects feel the deepest religious interest in the guardianship of the Holy Shrines, as because Russia has long had its eye upon Palestine, and would not fail, in any partition of the Turkish Empire, to contest the claims of any other Power to the possession of Syria. Recent travellers inform us that the Greek clergy, a few years ago, while infusing education among the rising generation of Mahometans, took care to propagate the notion that the Grand Duke Michael was the second Michael designed by certain Greek interpretations of the Prophecies, as the person who was to wrest the sway of Syria from the Mahometans, and establish the Russian Government on the ruins of the Turkish Empire.

It may seem matter of regret that the Holy Land should still remain the territory of a Mahometan power. But the animosities and intrigues of the Christians compel every traveller of fairness and moderation to avow the conviction that the Turks are for the present the best and safest guardians for the Holy Places, and that the control of an infidel, and, therefore, indifferent arbiter is necessary to restrain within some bounds those vindictive feuds which have occasionally broken out into acts of open and even fatal violence. The moment seems favourable for renewing the negotiations which were commenced in 1819 between France, Russia, and the Porte, with a view to define the prerogatives and possessions of the rival sects, but which were unfortunately interrupted by the battle of Navarino.

The claims of the Latin Church, as they were defined by M. de Marcellus from an investigation upon the spot, show, if they prove nothing else, how many absurd and unreasonable pretensions each community must be prepared to concede before a satisfactory conclusion can be arrived at. That the Christian sects who wrangle with each other in the Sacred City could be brought to any common agreement upon the multitudinous and pitiful subjects of dispute between them is not to be expected. But both the Czar and Louis Napoleon are, fortunately, potentates with sufficient strength of will to disregard the jealousies and heart-burnings which have brought scandal upon the Greek and Latin churches; and they would earn the gratitude of every European nation if they would determine to put an end to these melancholy religious dissensions. France and Russia might define the prerogatives, and establish a common enjoyment of the Holy Places, by the rival sects; but no settlement would be likely to be satisfactory, unless by a liberal subvention the Greek and Latin monks, who at present act as *custodes* of the Holy Shrines, could be removed, and their places filled by ecclesiastics selected by the Greek and Latin churches for their piety and moderation, and strangers to the miserable feuds and jealousies of their predecessors.

THE festivities of Easter have been agreeably marked by the arrival of intelligence which gives reason to anticipate the cessation of hostilities in two distant portions of our Colonial empire towards which public attention has been of late painfully directed. The termination of the Kaffir war and the Burmese war, and the harassing, expensive, and inglorious campaigns by which they have been attended, has diffused general joy throughout the Empire, and will enable Ministers to meet Parliament on Monday with increased confidence. The news from the Cape appears to us more hopeful and decisive than it is regarded by some of our contemporaries. Sandilli has retreated from Kaffraria, and has signified his submission; he has retired across the Kei with Macomo and other chiefs. The independent chief, Kreli, has sent a bundle of assegais in token of his submission; so that the Kaffir war may now be considered at an end. The Kaffirs have shown remarkable bravery and cunning throughout the last war; and we now possess this additional guarantee for pacific relations between them and the colonists—that both races must respect the valour and prowess of the other—a conviction which often prevents nations, as well as individual combatants, from rashly engaging in conflicts. If it should be found that our frontier is, from its extent, indefensible without the maintenance of a large military force, we cannot doubt that our Government, warned by the past, will abandon a barren and useless territory, which would have been dearly purchased at a tithe of the blood and treasure expended on our wars with the Kaffirs.

The approaching termination of the Burmese War is attributable as much to civil commotion and intestine dissension as to the strategy of General Godwin and the success of the British arms. There is reason to suppose that the Emperor of Ava has been deposed by his brother, who has sent an embassy to the British. If the Governor-General should recognise his pretensions, and place him, with the assistance of the disaffected Burmese, upon the throne of Ava, the Government of India will probably establish a Resident at the capital, and security will be taken for the establishment of pacific relations between Ava and the British power in India.

The deaths of Major Hogge, Major Wilmot, and other officers at the Cape, and the death of Admiral Austen, by cholera, at Rangoon, is now to be added the death of Captain Loch, R.N., Lieutenant Kennedy, R.N., and Captain Pryce, in a boating expedition against a Burmese robber chief. The British lost 88 in killed and wounded before the order was given for the boats to retire. The loss of so many valuable lives, while it tempers the joy with which the Burmese and India would otherwise have been received, will increase the desire that the war may bring us more conclusive news of the termination of hostilities with these obscure but desperate and barbarous enemies.

THE COURT.

HER Majesty and the Prince Consort, with the youthful members of the Royal family, left Windsor Castle at half-past two o'clock on Thursday afternoon, on their return to Buckingham Palace. The Royal party travelled by a special train on the Great Western Railway, and were escorted from Paddington by a detachment of Light Dragoons.

The incidents of Court life during the week have been almost exclusively confined to the domestic circle. The Earl of Aberdeen arrived at the Castle on Saturday last, and remained the guest of her Majesty until Monday.

On Sunday the Queen and the Prince with the Prince of Wales, the Princess Royal, and the Princess Alice, and accompanied by the Duchess of Kent, the Earl of Aberdeen, and the Ladies and Gentlemen of the Court, attended divine service in the private chapel of the Castle.

On Monday the Queen, with the Princess Royal and the Princess Alice, took a drive in an open carriage and four. The Prince Consort accompanied her Majesty on horseback. In the afternoon the Duke of Newcastle arrived on a visit to the Queen. The Duchess of Kent and the Princess Adelaide of Hohenlohe, joined the Royal dinner party in the evening.

On Tuesday morning the Queen and the younger portion of the Royal family walked in the Home Park. The Prince Consort rode out on horseback, attended by Capt. the Hon Dudley De Ros. The Prince of Wales and Prince Alfred also rode out, attended by Mr. Gibbs. In the afternoon Earl Granville arrived on a visit to her Majesty. The Duchess of Kent and the Princess Adelaide of Hohenlohe again joined the Royal dinner party this evening.

On Wednesday the Queen and the Prince Consort took a drive in an open carriage and four. Earl Granville took his departure this morning, and Sir James Graham arrived at the Castle.

Yesterday (Friday) the Queen held a Privy Council at Buckingham Palace.

Since the fire in the Prince of Wales's Tower, the Royal dinners have been served in the Oak Dining-room.

Lord Victor Arc has succeeded Lord Camoys as Lord in Waiting, and Colonel the Hon. R. Boyle has succeeded Major-General Berkeley Drummond as Groom in Waiting to her Majesty.

His Excellency the French Ambassador and the Countess Walewska, arrived in town on Thursday evening, from visiting the Earl and Countess of Sandwich, at Hinchinbrooke.

The Duke and Duchess of Norfolk, and Lady Adeliza Fitzalan Howard, arrived in town on Thursday, from Arundel Castle.

The Duke and Duchess of Sutherland have been passing the recess at Stafford-house. Lady Blanche is not yet perfectly recovered from the severe illness from which she suffered a short time since.

The Marquis of Lansdowne has issued invitations for a Cabinet dinner on Wednesday next, at Lansdowne House.

The Earl and Countess of Clarendon have returned to town from visiting the Earl and Countess of Verulam at Gorhambury.

The Earl of Derby returned to St. Leonard's-hill, near Windsor, on Friday, from visiting Lord and Lady Southampton, at Whittlebury-lodge, Northamptonshire.

Viscount and Viscountess Palmerston come to town to-day (Saturday), from Broadlands.

Lady John Russell gave birth to a daughter on Monday last, at Pembroke Lodge. Her Ladyship and the infant are going on very favourably.

The Chancellor of the Exchequer and Mrs. Gladstone return to town to day (Saturday) from visiting the Right Hon Sydney Herbert, M.P., and Mrs. Herbert, at Wilton-house, near Salisbury. The Chancellor gives a grand dinner this evening (Saturday) to a large party of his political friends. Mrs Gladstone has issued cards for assemblies on Wednesday next, and on Wednesday the 13th instant.

The Right Hon. B. Disraeli, M.P., and Mrs. Disraeli have been passing the recess with the Duke and Duchess of Richmond at Goodwood.

TESTIMONIAL DINNER TO SIR GEORGE GREY.

THE signal success attending the career of the commercial policy of Free-trade, as adopted by the Legislature and sanctioned by the people, was celebrated on Monday, at Alnwick, the chief town of the county of Northumberland, and under the very walls of the feudal fortress of the Percys. The celebration assumed the form of a testimonial dinner to Sir George Grey; the price of admission being fixed, in order to meet the wishes of all parties interested, at the comparatively low charge of 3s., wine and other alcoholic stimulants having been dispensed with; and a stanch teetotaller in practice and precept was invited to preside over the festivities of the occasion, in the person of Sir Walter Trevelyan. The dinner took place in a spacious wooden pavilion (erected for the purpose by Mr. Thompson, of Alnwick, and tastefully decorated with evergreens and artificial flowers), in the Market-place, opposite the Town hall; and on the very spot upon which the hustings were erected at the last general election, when Sir George Grey was thrown out of the representation of the Northern Division. The place was calculated to accommodate about 1,600 persons, but the number present must have very closely approached 2000, for every seat and nearly every inch of ground within it was occupied, and many were unable to obtain entrance. The tables were ranged longitudinally, with elevated cross benches at each end for the principal guests; and on each side arrangements were made for the entertainment of ladies, among whom were noticed several female members of distinguished county families. The apartment was brilliantly illuminated with gas.

On the right of the Chairman were Sir George Grey, M.P., the Earl of Carlisle, W. B. Beaumont, Esq., M.P., the Hon. and Rev. John Grey, Capt. the Hon. H. C. Grey, Rev. R. W. Goodenough, M. W. Bigge, Esq., Anthony Lambert, Esq., Hon. E. Howard, Rev. Thomas Ilderton, and Major Orde. On his left were Earl Grey, Lord Panmure, the Hon. and Rev. F. R. Grey, Rev. R. Croft, R. Ingham, Esq., M.P., J. B. Blackett, Esq., M.P., William Grey, Esq., George Wilson, Esq., Rev. Percy Gilpin, Mr. M'Kelvin, and Capt. Drummond.

The vice chair was occupied by Frideaux Selby, Esq., who was supported on his right by the Mayor of Newcastle (R. G. Lambert, Esq.)

The substantial portion of the repast having been disposed, the Chairman gave the usual loyal and constitutional toasts, which were responded to with enthusiasm.

Immediately afterwards, according to previous arrangement, a splendid silver Candelabrum and Salver were formally presented to Sir George Grey by Mr. Young, of Bedlington Ironworks. On the Candelabrum were represented figures of Industry, illustrative of the productive interests of the county—the village blacksmith, the agricultural labourer, and the miner. The inscription upon the Salver is as follows: "To the Right Hon. Sir GEORGE GREY, Bart., M.P., G.C.B.: from more than 12,000 of the Working Class of Northumberland, in testimony of their gratitude for his support of the just, wise, and beneficial measures of Free-trade, and their respect for his private worth; and for the eminent integrity and ability which have distinguished his public career.—Alnwick, 28th March, 1853."

The Candelabrum and Salver were designed and manufactured by Messrs. Garrard, of the Haymarket, London.

Mr. Michael Young, of Bedlington, rose to present the testimonial to Sir George Grey. They were met, he said, to do honour to a distinguished statesman (Cheers); one who is admired by his friends and respected by his opponents (Applause); one who adorns and ennobles the order to which he belongs (Cheers); a friend of civil and religious liberty (Hear); and an able advocate of a policy which has conferred great and innumerable blessings on the people of this country (Loud cheers). Until lately North Northumberland was honoured in having such a statesman for one of its representatives in the House of Commons (Applause). A contrast might be drawn between him and the noble lord who had succeeded him as their represen[illegible] on this picture and on that" (Laughter [illegible] tion might be properly asked, Why is it that one of the most distinguished statesmen of the present day is not now one of the representatives for North Northumberland in the Commons House of Parliament, where his splendid talents and eminent abilities have won for him the admiration of all parties, and where his integrity and consistency, his high character and true patriotism have added lustre to his fame (Applause)? The answer was at hand, and they knew it; the bond knew it as well as the free, the oppressor as well as the oppressed; it was because the voice of Northumbrians had been stifled (Long-continued cheering).

Sir G. Grey, when the applause with which he was received had subsided, said: The circumstances under which I have now to address you are such as cannot fail to inspire me with the most peculiar gratification (Cheers). Holding no public situation, and having ceased—as you have been reminded by Mr. Young to stand, with regard to the greater part of you, in the relation of a representative to his constituents—though I am happy to find such a feeling entertained towards me by those who were my constituents, and happy to feel that my political ties with this division of the county are still not wholly dissevered (Cheers), owing to that seat in the House of Commons which within this division of the county, I have now the honour to hold—holding, as I say, no public situation, and no longer standing, with regard to far the greater part of you, in the relationship it was my pride and honour to hold for more than five years, I have come to-day, by your kind invitation, to receive at your hands—to receive at the hands of the working-classes of the county, represented as they have been with so much talent and ability by Mr. Young to receive a testimonial of your approval of my public conduct during the time I held that trust you generously confided to my hands (Applause), at a moment when personally I was a stranger to most of you, and known only by the name I bear, and my public conduct in Parliament (Cheers).

I stand here to receive a testimonial that in your judgment, and in the

SILVER CANDELABRUM PRESENTED TO THE RIGHT HON. SIR GEORGE GREY, BART., M.P., G.C.B.

judgment of those 12,000 of the working-classes whom Mr. Young has represented, those measures which in my place in Parliament I felt it my duty, while one of the representatives of this division, to promote and advocate by my vote and influence—and especially those measures which relate to the financial and commercial policy of the country—were measures dictated by sound policy, and measures conducive to the permanent welfare and interest of the great body of the people of this country (Loud applause). I feel altogether undeserving of much that he has said regarding me (No, no); but I can say, I have honestly endeavoured to discharge my duty (Cheers). Gentlemen, I accept that testimonial (Applause)—valuable in itself, representing as it does the varied industry of this great county—a testimonial valuable in itself, and justly worthy of admiration in its design and execution; but to me—and I am proud to say it—possessing infinitely beyond its intrinsic value, as it will be a permanent record to me—and I hope also, with Mr. Young, to my children's children—that I have been fortunate enough to obtain what I must consider the highest prize in political life—the warm, generous, and sincere regard, and the good wishes and attachment, of that large and important industrial class of my fellow-countrymen who possess as yet no direct voice themselves in the choice of members of Parliament (Cheers); but whose interests, whose daily comforts, whose happiness and permanent welfare are intimately concerned in the good government of the country and the acts of the Legislature, and in whose moral and social well-being the prosperity of this country is so intimately bound up.

Bearing in mind the occasion on which we have met, bearing in mind the inscription placed on that testimonial, recording the opinion of those who presented it to be that those measures to which reference has been made were "wise, just, and beneficial" (Cheers), and remembering too that we are on the very spot on which the electors of North Northumberland were assembled when I addressed them from the hustings last July, it is not possible for me to avoid making some allusion to the altered position the advocates of Free-trade now occupy, and the remarkable circumstances which since that time have occurred (Hear). There can, I think, be no doubt now entertained—though a slight attempt was made at the time to disguise it—that the real question then at issue, the question submitted for the decision of the constituencies at the last election, was whether the Free-trade policy should or should not be maintained—whether the commercial system which has been recently adopted by successive Parliaments should be upheld as conducive to the best and permanent interests of the country, or whether—as some strenuously contended—it should be reversed as prejudicial to those interests (Hear). I felt the difficulties and disadvantages which I, as a candidate, would have to encounter, avowing myself an advocate for the maintenance and extension of that system of Free-trade, and addressing myself to a constituency consisting in a great part of agriculturists.

Under these circumstances, asking, as I did, for a renewal of the trust which in 1847 was reposed in me, I felt it my duty to make a clear, unequivocal, and explicit avowal of the opinions I entertained (Cheers); and, having made that avowal, I was willing to abide whatever might be the issue of the contest (Applause). Of the result of that contest I have not the slightest reason to complain. The result was the defeat, by a small majority, of the Free-trade candidate; followed, as soon as Parliament met, by the complete, unambiguous, and unequivocal triumph of the Free-trade policy (Loud cheers). An attempt, it is true, was made by the leaders of that party once called Protectionists, to avoid an express recantation of the opinions they had long and strenuously urged on Parliament and the country; but ultimately a resolution was passed by such a majority of the new House of Commons as to amount almost to unanimity—a resolution in which stands recorded on their journals their verdict that the present commercial system of Free-trade ought to be maintained, and on the especial ground that it was conducive—eminently conducive—to the welfare and comforts of the industrious classes. The right hon. Baronet concluded (amidst rapturous cheering) a brilliant speech by declaring his resolution to promote, with all his ability, the political, social, and physical welfare of the whole body of the people.

The Vice-Chairman then proposed the health of the Lord-Lieutenant of the County, Earl Grey (Cheers).

Earl Grey said he had the greatest satisfaction in attending on this most interesting occasion. He had with the greatest pleasure joined in paying this compliment to one with whom he had been so long connected in the closest manner, both by unrivalled friendship and by complete agreement on public questions; nor had he had the less pleasure in showing his sense of respect for those with whom he had been acquainted from the outset of his political life, and from whom he had often experienced so much kindness—he meant the inhabitants of Northumberland (Cheers). The testimonial which had been presented to Sir George Grey was honourable to them as it was honourable to him. He could not but deeply regret that they had been brought together here, rather to show that they were still undismayed in spite of defeat, than to express their satisfaction at a victory (Hear). The noble Earl then proposed the health of the worthy Chairman.

The Chairman, acknowledging the toast, created some amusement, and also some embarrassment, by his warm advocacy of "temperance" doctrines.

Ralph Carr Ellison, Esq., of Hedgley, gave "The Earl of Carlisle and the House of Lords," which was received with loud applause.

The Earl of Carlisle in responding to the toast, begged the audience not to measure either his gratitude for the very cordial reception they had given him, or his sympathy with the occasion which had now brought them together, by the brevity—the necessary brevity—of the remarks he must now address to them. But the fact was, he had been labouring under a most severe indisposition, and he happened to have rather a busy week before him; so that he ought rather to be by a very quiet fireplace—not, he could assure their worthy chairman, with any inebriating posset before him (A laugh), but in what he should quite agree with him in considering some more healthful doing—than thus to stand up in the middle of the market-place at Alnwick; at a time, too, when the unmelted snows still capped the Cheviots (Laughter). Under the circumstances of imperfect he only could have been tempted by united respect for their guest, Sir George Grey, and for their hosts, the men of Northumberland (Cheers). With respect to Sir George Grey, he felt that words were not wanting from him; for the feelings which were entertained for him were such as had brought them together, and such as now throbbed and glowed on that vast assembly, embracing so much of the industry, the enterprise, and the worth of the stout and hardy Northumbrians (Cheers.)

The Hon. Charles Howard, M.P., proposed the health of Lord Panmure and the illustrious guests (Loud cheers)

Lord Panmure responded.

Robert Ingham, Esq., M.P., proposed the health of W. B. Beaumont Esq., and the other member for South Northumberland, to which

Mr Beaumont responded in appropriate terms

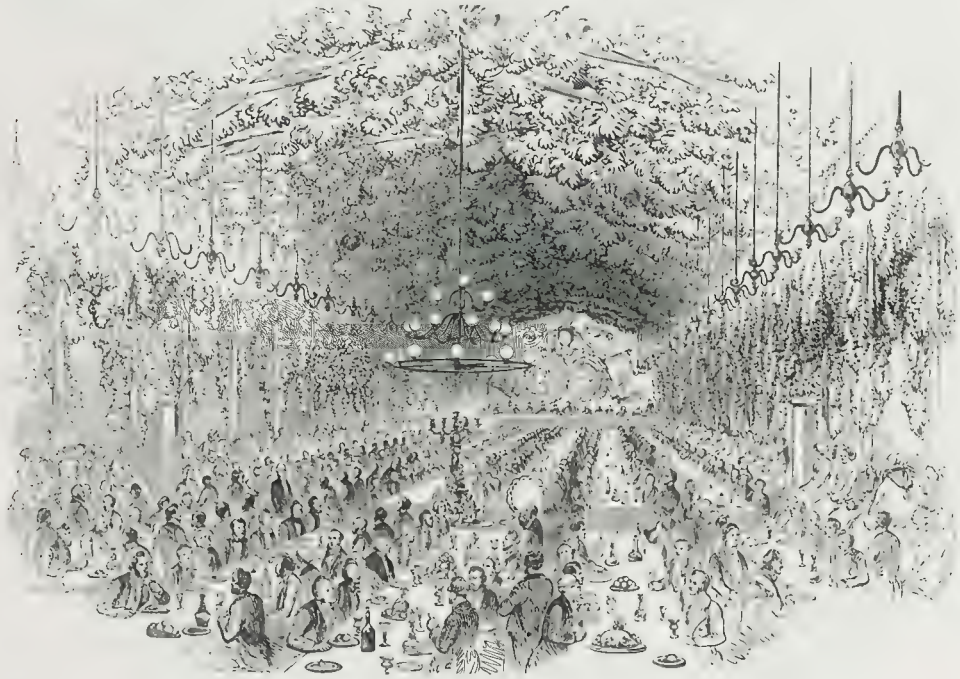
Mr Fenwick, Esq., proposed the health of the members for Newcastle.

Mr. Blackett, the junior member, returned thanks for himself and his colleague, Mr. Roebuck, who, he said, had been prevented from attending the meeting by a severe domestic calamity.

Sir John Fife then proposed "The Members for Berwick."

Mr. Daniel Robertson gave "The Independent Electors of North Northumberland;" which was responded to by Mr. Samuel Donkin, who reminded his hearers, in alluding to a future election for North Northumberland, that so long as the same weapons remained in the hands of territorial power, which caused the last defeat, they must not be too confident of victory (Hear, hear).

Several local toasts were afterwards given, and the party separated about six o'clock.



TESTIMONIAL DINNER TO SIR GEORGE GREY, AT ALNWICK, ON MONDAY LAST.

CHURCH OF THE HOLY SEPULCHRE.

The dissensions of the Greek and Latin Churches in Jerusalem have for many years been a scandal to the Christian religion, and a perpetual stumbling block to Jews and Mahometans. These disputes are carried to Constantinople and submitted to the decision of the Ottoman Porte, to be ruled, not according to the principles of justice and equity, but as bribery, or private influence, or political interests may chance to prevail. Since the great fire in the Church of the Holy Sepulchre, in 1807, the Latins—as the Roman Catholics are called in the Holy City—have been rather oppressed. The Greeks, by means of their riches, were at once ready to rebuild and repair the sacred edifice; by doing which, they acquired a claim to the whole; not exclusively, indeed, but so far that they are considered as the keepers. Thus, the guardianship of the Holy Sepulchre, which belonged to the Latins, was transferred to the Greeks, who, besides, likewise possess the largest Church, the Altar of the Crucifixion at Golgotha, and several subordinate places. The Greeks and Latins both enjoy the countenance of powerful European Monarchs, whence they derive an importance at Constantinople which, independently of this, they would not possess. Last autumn, the French Ambassador at Constantinople, the Marquis de Lavalette, used all the arts and intrigues of diplomacy to obtain a firman from the Sultan in favour of the Latins. His efforts were crowned with success; but the triumph of the Latins has caused such vindictive resentment among the professors of the Greek Church in various countries, who look up to the Emperor of Russia for protection, that Prince Menschikoff has been despatched from St. Petersburg with the most peremptory instructions to procure a revocation of the exclusive privileges conceded to the Latins. The Greek Church forms the most numerous and powerful body of Christians in Jerusalem: out of a Christian population of 6500, no less than 5000 are of the Greek faith. The number of worshippers of this church is also swelled by the 3000 or 4000 Russian pilgrims who annually visit the Holy City; many of whom are charged with valuable presents from the Czar, consisting of silver lamps, candelabras, and rich brocade for the decoration of the altars. The average population of Jerusalem is between 15,000 and 20,000. The Roman Catholics are said not to exceed 900 in number. There are also a few hundred Armenians, Copts, and Syrians. The Armenians make up by their wealth what they lack in political influence, and have thus been able to sway the decisions of the Porte. The Syrians and Copts have been too poor and insignificant to contend with all these powerful rivals; but, being in communion with the Armenians, they are for the most part identified with their interests, and enjoy their protection, in return for which they are expected to submit to such spoliation as their protectors think right to inflict.

There is no single building within the walls of Jerusalem which excites a more intense interest in the mind of the Christian traveller than the church of the Holy Sepulchre, built by the Empress Helena, mother of Constantine. It covers the supposed spot of our Saviour's interment. It is situate at the north-west corner of the city, and has gathered around it most of the convents, and the principal portion of the Christian residences. The exterior of the edifice is that of the middle ages, and is of rather an uncertain character of architecture. The façade of the church, which is richly adorned, but half decayed, presents a singular contrast of beauty and meanness, capitals and friezes of elaborate workmanship being surmounted by a bare wall with broken windows. The appearance of the church is confined, being shut in by the adjoining buildings which belong to the Greek monastery, situated on the opposite side of the way. The prevalent style of architecture in Jerusalem is the dome, which could not be combined with the tower; and as the domes are not to be seen when standing in front of the façade, the edifice has scarcely the appearance of a church.

The interior of the Church of the Holy Sepulchre is a world of churches, chapels, and altars. Here are all creeds and sects of the Christian religion, except those that emanated from the Reformation. The large central dome of the church is about 70 feet in diameter, and of nearly the same height. Around the open space under the dome are small chapels for the Syrians, Copts, Maronites, and other sects of Christians who have not, like the Roman Catholics, Greeks, and Armenians, large chapels in the body of the church. The Greek church is splendidly and richly ornamented, is kept up in a magnificent style, and is unquestionably the most imposing. The church of the Roman Catholics is confined, mean, and dark; the Latins being not only destitute of the great riches of the Greek and Armenian churches, but being in fact very poor. The chapel of the Syrian sect of the Jacobites is close to that of the Latins. A very wretched chapel belonging to the poor Copts stands in the rotunda at the back of the wall of the most holy place, and consists of a small wooden box, not much larger than a confessional.

Directly under the dome, in the centre of the area, is a small oblong building, within which is the Holy Sepulchre. The visitor mounts a few low steps to the marble platform before the entrance, and enters a small dimly-lighted room, which serves as an ante-chapel to the Sepulchre itself. A few steps further, and passing through a low narrow portal, the worshipper is alone in the inner sanctuary, the holiest of holy places, where thousands and tens of thousands kneel, weep, and prostrate themselves in the full faith that this is the very site of their Master's burial-place. The spot which is shown as that of the holy resting-place, is a sort of sarcophagus of white marble, six feet one inch long, which occupies about one-half of the chamber. The sarcophagus surrounds and conceals from the eye everything in relation to the tomb, and is about two feet above the level of the floor. The sepulchre retains nothing of its primitive material, except the oblong stone on which the body was laid, and even the upper surface of this is covered with white marble; it looks like an altar, and, indeed, serves as such when mass is celebrated here. Forty-three lamps, of gold and silver, ever burning, light this solemn spot, which is probably the only one upon earth that no one ever trod without seriousness and deep reflection, and where tears have flowed and prayers have been offered such as no other spot ever heard or witnessed. The air is kept redolent with perfumes night and day.

SHRINE OF THE HOLY SEPULCHRE, AT JERUSALEM.—FROM "VIEWS IN PALESTINE, EGYPT, ETC.," BY DAVID ROBERTS, R.A.

LOWER ARCADE OF THE CHURCH OF THE HOLY SEPULCHRE.—FROM "PHOTOGRAPHS OF THE MONUMENTS OF EGYPT, NUBIA, AND SYRIA."

Chateaubriand, in an eloquent passage, has painted the church of the Holy Sepulchre:—

The Church of the Holy Sepulchre, composed of several churches, erected upon an unequal surface, illumined by a multitude of lamps, is singularly mysterious; a solemn light pervades it, favourable to piety and profound devotion. Christian priests, of various sects, inhabit different parts of the edifice. From the arches above, where they nestle like pigeons, from the chapels below, and subterraneous vaults, their songs are heard at all hours both of the day and night. The organ of the Latin monks, the cymbals of the Abyssinians, pierce the voice of the Greek calover the prayer of the solitary Armenian, the plaintive accents of the Coptic friar, alternately, or all at once, assail your ear; you know not whence these concerts proceed; you inhale the perfume of incense, without perceiving the hand that burns it; you merely perceive the pontiff, who is going to celebrate the most awful of mysteries on the very spot where they were accomplished, pass quickly by, glide behind the columns, and vanish in the gloom of the temple.

Travellers all unite in reprobating

the deceit, dissension, and evil passions which characterise the Christians of the Holy City. Their jealousies and heart-burnings are not unfrequently accompanied with sanguinary quarrels and acts of violence which call for the interference of the civil powers. The Turkish officials treat with the utmost scorn and contempt these jealous and vindictive Greeks and Latins, whose mutual hatred knows no bounds. We will not weary our readers by attempting to describe all the subjects of their quarrels—such as the several rights to churches, chapels, and altars belonging—how many ever-burning lamps each denomination is entitled to light—where, and on what succession, they read mass—what rights each claims in ecclesiastical functions how they envy each other, and always fancy that they are over-reached and supplanted by other persuasions—and in what perpetual hatred, strife, and enmity they live. Greek priests, Armenians, and Franciscans reside together on the most holy spot in all Christendom, day and night persevering in prayers, and the pious thoughts which they ought to have in common inspire them with no feelings of brotherly love. The following statement of the possessions and prerogatives of the Latin Church of Palestine, which was drawn up by Count Marcellus, a French envoy in 1819, will indicate the nature of the points in dispute between the two churches. The "possessions" of the Latin Church are as follows:—

I.—IN THE CITY OF JERUSALEM.

1. The Church of the Holy Sepulchre. 2. The Monastery of Deir-ul-Amoud, or the Holy Saviour, its appurtenances and dependencies. 3. The Sepulchre of our Lord Jesus Christ, which is in the centre of the church of the same name. 4. The great and the small cupola, with the end which covers them. 5. The arches and columns which are round it on, as far as the iron gates placed to mark the line at which the part of the church belonging to the Greek commences. 6. The galleries and dwellings of the Latin Monks which are over the aforesaid arches of column. 7. The great arch which is surmounted with the cupola, which is over the above-mentioned iron gates. 8. The chamber which is at the end of the wall of the above mentioned great arch. 9. The chandeliers placed by his Majesty the King of France under this same great arch. 10. The stone called After 'St Mary Magdalen, and the entire space which extends from the step of the Vestry of the Frank Monks to the steps of the gate of the Cistern, and from beneath the columns to the steps of the Catholic chapel. 11. The upper part of the two arcades called the arches of St. Mary. 12. The lower portion of these arches. 13. The small altar which is beneath the said arches. 14. The entire space from the stone of St. Mary Magdalen to the place which is beside the door of the Greek Chapel, and from the wall of the said chapel to the wall of the Church of the Holy Sepulchre. 15. The lower part of the grotto of the finding of the Holy Cross. 16. The half of Mount Calvary, called the Place of Crucifixion. 17. The four arches of Mount Calvary, in the lateral part of the Church of the Holy Sepulchre. 18. Its two altars. 19. The marble resting chair 20. The stone of unction. 21. The entire space which extends from the steps of Mount Calvary to the lower part of the arcade in possession of the Armenians, and from the wall of the Greek Chapel to the steps of the door of the Temple of the Holy Sepulchre. 22. The chapel called the Exterior Calvary placed on the top of the temple, to which the ascent is by a stone staircase.

The "prerogatives" of the Latin Church are still more fertile of dispute:—

PREROGATIVES

1. The Fathers of the Holy Land, Latin Monks, alone possess the keys of the gates of the convents or sanctuaries above-mentioned, and particularly the three keys of the altar of the manger at Bethlehem. 2. They have a right to guard properties, to repair, maintain, decorate, and light lamps there. 3. To celebrate the Holy Mass there, and to exercise the rites and ceremonies of their worship. 4. To take the lead over all other nations in their visitations as pilgrimages of the Holy Places. 5. They have a right to visit the half of Mount Calvary which does not belong to them, to celebrate mass on the aforesaid half, and to light lamps there. 6. The Frank Monks have an exclusive right to exercise their worship in the lower part of the cavern of the great Church of Bethlehem. 7. To prevent other nations from lighting lamps there, to celebrate their offices, and to exercise there religious worship there. 8. To oppose the visit of other nations to the Holy Places possessed by them, Frank Monks. 9. The articles of law brought against the Frank Monks shall not be submitted to the authorities of the country, but referred to the Sublime Porte at Constantinople. 10. The Mussulmans are forbidden to offer any violence to the Frank Monks at Easter, during the usual period. 11. The Turkish Custom officers are forbidden to search the baggage of the monks or Catholic pilgrims which had been searched in the Levant, where they landed. 12. It is likewise forbidden to take or delay the clothes of the monks or the ornaments of the Latin Churches. 13. To compel the Frank Monks to receive base coin. 14. To take money from them. 15. It is forbidden to demand the smallest fee from the Frank Monks for the privilege of burying their dead. 16. To ill-treat the monks who bring the usual tribute from Europe, in case they arrive too late. 17. To disturb in any manner the monks and pilgrims in the Holy Land in the course of their visitations or pilgrimages. 18. To disturb them at any time in the exercise of their religious worship as long as that worship out of doors is not contrary to the laws of Islamism. 19. The Turkish authorities are forbidden to pay more than one visit each year to the Holy Sepulchre. 20. To compel the Frank Monks to purchase damaged wheat. 21. The Latin Fathers possess an exclusive right to send members of their communities or couriers to Constantinople on business, without opposition.

The View of the Interior of the Church and Shrine of the Holy Sepulchre, upon the opposite page, has been engraved from Mr. David Roberts's splendid work on Palestine, Egypt, &c., by permission of Messrs Day and Haghe. The second Illustration the Lower Arcade of the Church, is copied from a series of large Photographs of the Monuments of Egypt, Nubia, and Syria, published by MM. Gide and Baudry, Paris; agent in London, M. Gambart.

GOLD REGIONS.—Another series of Parliamentary documents have been issued, under the title of "Further Papers relative to the recent discovery of Gold in Australia." A brief outline of the contents of these papers will show the interest attaching to the subjects of which they treat. Reports of further gold discoveries in the northern parts of New South Wales; indications of quicksilver and the discovery of gems; correspondence on the probable existence of gold, not only in the alluvial deposits, but also in the rock; the employment of clergymen at the principal gold-diggings; expenditure consequent on the gold discoveries; maintenance of order in the gold districts; state of the aborigines of New South Wales; probable area of the gold regions; the present state and future prospects of the eastern and southern gold fields; migration of the population to Victoria; desertion of the crews of merchant ships; military arrangements, and the administration of justice, &c.

THE JOHN BULL NUGGET.—A Mr. Potter, one of the successful adventurers in the gold diggings, has brought home an enormous nugget, which he has christened the "John Bull," and proposes exhibiting it before it goes to the crucible. The lucky man is one of a party of three, in the Wild Horse Gully, Beadigo, and was fortunate enough to turn up this gigantic piece within a few inches of the surface. The solid mass weighs 45 lb. 6 oz., and is worth £181.

ROTATORY STEAMER.—A new description of steamer, the invention of David Napier, Esq., named the "Rotatory," has commenced plying on the Clyde. The peculiarity of the steamer lies in her paddle-wheels, for paddles being much lower than the bulwarks; and, as her engine is on the rotatory principle, it occupies very little space. The advantages of these engines are, that no water; consequently, consumes about one-fourth less fuel, and requires no engineer; the steersman, by a peculiar valve, moves the vessel a head or a stern without communicating with any one of the furnace-bars consumes water; consequently, the hot ashes, which are destructive to the common furnace-bar, in this case tends to the production of steam. There is also a simple application of the fan, to assist combustion. These are of the patent might be applied with advantage to most of the steamers

THE GOVERNORSHIP OF NEW ZEALAND.—It is stated, on the authority of papers just shed in the Canterbury settlement that Sir Geo Grey is about to resign the Governorship of New Zealand, and it has also been announced that Lord Lyttelton, Under-Secretary for the Colonies in Sir Robert Peel's Administration, will succeed to the office. The noble Lord has always taken a deep interest in the affairs of New Zealand, and particularly in the Canterbury settlement, of which, indeed, he may be said to have been the founder.

EFFECTS OF CHEAP POSTAGE.—Uniformity of postage, combined with a low rate of charge, forms the conspicuous and chief benefit which the monopoly of the carriage of letters enables the Government to confer upon the whole body of its subjects, by almost annihilating distance, and placing in this the most remote individual in power to communicate freely with all parts of the empire. It makes the Post-office the unrestricted means of diffusing knowledge, extending commerce, and promoting in every way the social and intellectual improvement of the people

THE FIRST HACKNEY-COACH STAND IN LONDON.—The cab-stand in the Strand, from Catherine-street to Somerset-house, has just been removed, by order of the Commissioners of Police. This has been described by a contemporary as "one of the oldest stands in the metropolis, but it was a continual source of complaint and inconvenience to all. Thus, we read in Read and's Letters, April, 1654:—"One Captain Bailey has erected some four hackney coaches, just like unto a livery, and appointed them to stand at the May pole in the Strand, (where St. Mary's Church now is), giving them instructions at what rates to carry men into several parts of the town, where all the day they may be had." In the next year the coaches had so increased as to be considered a nuisance by the Court, and to be limited by Star Chamber.

CHESS.

TO CORRESPONDENTS.

M. F. S. and D. D.—For the information you ask, we must refer you to the series of papers called "Sketches of the Provincial Chess-clubs and the Chess Associations," now publishing in the *Chess-player's Chronicle*; our stock is too limited.

E. D. B.—The game is interesting, though hardly up to our standard for publication. With regard to the Problem, we shall gladly support your right.

EUTO.—It is not true, as you say, that Mr. Lewis has a system to sell; but on which he obtains a fee of 5 guineas. The two Kings are always have one square between them.

H. W., Wakefield.—At the first glance, it looks to us very pretty. If it proves so on examination, we shall give it insertion.

N. P. L., Newcastle.—Your Solution at the right one.

T. F., Hawkwich.—The variations you have sent us are correct.

C. C., Exeter.—We are preparing a correction, to be accurate yourself; there are two glaring mistakes in the position.

MORLEY.—See our advertising pages in the present Number.

R. D. A. PATEY, BRIGHTON, JUNIOR, and others.—The author of Problem No. 478 proposes to alter the Mate in four moves, by withdrawing the Pawn at Q 5th, and placing it at Q Kt 3rd. With this alteration, it is again submitted for Solution.

R. H. KEMP, Wye.

R. H. [illegible] If the alliance was not accepted, and we doubt it if will be

A. Nott [illegible] Problem was corrected in a subsequent number by the solvers of a White Rook at Duke's K 4th.

H. T. C. A list of competitors for the Tournament Tool box Prizes is still open both for British and Foreign candidates, and we cannot say how our space has been occupied.

SOLUTIONS OF PROBLEM No. 472, by H. T. L., M. P., Merlin, B. P., Rev. M. Jones, S. P. Q. B., Medicus, Delta, E. F., Oriental, H. P. Q., Philo, Geppy Omega, Inverness, A. R. H. M., Student, and Beta.

SOLUTIONS OF PROBLEM No. 473, by S. W. Albert, Bank of Shrewsbury, Plas, Mungo, Old Tom, M. D., Philo-Chess, Nabob, H. B., B. R. S., Midge, D. P. Q., Rugby, P. P., Annabel, Andrew, Tom of Lincoln, S. W. N., O. P., W. P., H. R., Jack of Worcester are correct.

SOLUTIONS OF ENIGMAS by D. W. H., M. B., Phiz, E. F., Sigma, Albert, Rat-ess, Annabel, F. T. M., Stubbs, H. E., R. S., G. P., Marrowsnails, are correct. All others are wrong

23. Kt to K 2nd (e)	Q R to K Kt sq	48. P to K Kt 8th	
	And Black abandoned the game.		

(a) The usual move is to take the Pawn with the Queen; but the move adopted by Mr. Szen may be played it appears, without danger.

(b) Judicious. Preparing to win a Pawn, by advancing the Q Pawn next move, and then, if the Queen be not moved, to play K B to Q B 6th

(c) This loses a valuable Pawn. It would have been better to dislodge the Bishop by advancing the Q Kt Pawn, although at the risk of giving the White Kt an outpost

(d) We played *If* Black take the Bishop, he evidently loses his Rook, by the Queen checking at K Kt 6th

(e) Had the K R 4th would have been pretty, but not quite sound, because it would have given Black a forced Pawn on the K's file, e.g.:—

— Kt to K 4th	P takes Kt
(The seems best. If he take the Bishop, White rejoins with Kt to K Kt 6th, &c.)	
2. B takes B (ch)	R takes B
3. R takes Kt	R takes Q
4. R takes Q	R to K 3rd

And the advance. Black Pawn will be irresistible presently.

(f) It would have been dangerous permitting the Kt to get a fierce stroke on his K 5th

(g) Q to K R 3rd would have been much better play

(h) Some interesting play would have arisen from Black taking the K D Pawn with his Kt at the onset.

PROVINCIAL INTELLIGENCE.

ENCUMBERED ESTATES COURT.—Mr. Maurice O'Connell, M.P. for Tralee, has lodged a petition for the sale of the house in Dublin which had been long occupied by his father, the late Mr O'Connell. The following is the notification in this case:—"Maurice O'Connell, petitioner. Property consisting of the house in Merrion-square South, formerly in the occupation of the late Daniel O'Connell, Esq., M.P., but now unoccupied; head rent, £105; encumbrances, principal, £538 8s. 9d.; interest, exact amount cannot be at present stated."

CHATHAM ELECTION.—The number of voters on the registry is 2,870 for Chatham was 1,339, of whom 1,531 are in the employ of Government, and 47 half-pay officers, pens. &c. &c. The number of voters who voted at the last election in the employ of government was 804, of whom 171 voted for Sir F. Smith, and 135 for Sir J. Stirling.

A PUBLIC PARK FOR SOUTHAMPTON.—In the heart of the town of Southampton there are about 100 acres of land, in which the inhabitants have common rights during some portion of the year, and private individuals have privileges the other portion. The townspeople, through their corporation, have nearly completed the purchase of the whole, and are going to plant the latter ornamentally for the private pleasure promenade. In another twelvemonth these grounds will be planted and open for the pleasure and recreation of the public at the present round. A botanic garden, a maze, and an observatory will be erected on the grounds. A portion of the land is to be set aside for a cricket ground.

SCARCITY OF LABOURERS.—In reply to one of the guardians, the master of the Bedminster Union stated, at the weekly meeting, that there was only one able-bodied pauper in the house, and he could get employment, but he had no house in which to live. The guardian said there was employment for at least 40 labourers, if they could be obtained.

ADVANCE OF WAGES.—The journeymen bricklayers of Leicester have been soliciting an advance of 6d per day upon their present rate of wages. The masters have agreed to offer 2d per day. It is doubtful whether this will be accepted by the journeymen. The journeymen carpenters are also taking steps to procure increased wages

ARMS OF SCOTLAND.—The Earl of Eglinton has communicated to the gentlemen in Edinburgh taking the management of the movement for obtaining the restoration of the arms of Scotland to their legal precedence, his approbation of the object, and willingness to present the petition to the Queen. On Thursday week it was unanimously resolved by the Town-council of Glasgow to present a petition similar to those already forwarded by other burghs.

GOLD IN MAYO.—The existence of gold in the soil of Mayo was first established at Castlebar last week, in the yard of Mr. Brennan, where the workmen were sinking a hole for the erection of his gasometer. The ore found has been tested by Dr. Atkinson, who pronounced it to be pure gold.

THE Hanoverian gallivat, *Aginata Juliana*, came into Plymouth on Monday evening, having on board thirty of the crew and fifteen passengers of the *Duncan Yacht* (Mackinnon, master), from Leith to Port Phillip. She left on the 18th inst., and on the 23th, thirty miles off Scilly, she was in great distress, having sprung a leak, and had four feet water in the weather-pump The gallant took off the above. The master, five officers of the ship, and about thirty passengers, were left on board, and when the gallant left she was making for Scilly.

MONEY ORDERS.—The following notice has been issued:—"Money Money Order Offices will be opened at the undermentioned places on the respective days named:—Ash, Kent, 1st April; Charing, Kent, 3rd April; Jarrow, Durham, 1st April, Maesteg, Glamorgan, 7th April; Oulton, York, 1st April; Wateringbury, Kent, 19th April; West Malling, Kent, 21st April.

FIRE-FISHING EXTRAORDINARY.—On Monday, at Thurstonfield, a boy eight years of age, succeeded in hooking, and bringing to land, a pike of the weight of 15½ lbs., with an ordinary cord line and double hook, baited with eel.

SOUTHAMPTON NEW DOCKS.—A public meeting has been called to consider the propriety of exempting the new docks about to be formed at that port from being rated to the local burdens for a limited period. The new docks will cause an outlay in the town during their formation of between £300,000 and £400,000, and will be of vast benefit to the town on account of the shipping they will bring to it. The South-Western Railway Company and the various steam companies have offered the greatest encouragement to induce the Southampton Dock Company to proceed with the new docks

QUEEN'S COLLEGE, BIRMINGHAM.—Active preparations are being made to open the department in connexion with "arts, manufactures, and commerce" in May. The appeal from the institution to the noble patrons and friends of education, to enable the council to purchase expensive philosophical apparatus, models, &c., to get up the chemical laboratory and the engineering workshop, has been generously responded to by the Duke of Sutherland, the Earl of Lansdowne, the Lords of Dartmouth, Clarendon, and Granville; the Lords Foley, Calthorpe, Leigh, and Lufford; General Wyse, Mr. Mark Phillips; by Messrs. Percy, Bagnall, Dawes, Barrow, Barrow, and many leading Staffordshire ironmasters; by Messrs. Welch, Arundel, Upfill, and other influential merchants of the town. Considering the condition of commercial enterprise, a cognate department is much required, under the powers recently granted by the Crown, should be energetically carried out; and the recent alarming and numerous accidents in ships, mines, manufactories, and railways must be allowed to call up matter of importance to this branch of education. It must be admitted that no town in the kingdom offers such practical advantages as Birmingham. The council also expect to have very liberal donations from the friendly of specimens of mining and mineral products, of vegetable and animal substances used in manufactures; of civil engineering, architectural and building contrivances; of manufacturing machines and tools; of philosophical apparatus; of models and plastic art—a great "central museum," open to the artisan free, under certain regulations, and subservient to the general purpose of literature and science.

DEATH AT CHURCH.—During divine service at Brockley Church, Suffolk, on Sunday morning last, and just as the rector had read the 11th verse of the 102nd Psalm "For my days are gone as a shadow, and I am withered like grass"—a poor man, named Thomas Game, suddenly dropped down and expired.

FALL OF A CHURCH STEEPLE.—On Wednesday night week, the steeple of Great Sandal Church (Lincolnshire)—which has for a long time past been in a very dilapidated state—fell with a tremendous crash, on the north side, forcing the earth up into an embankment, to the height of three or four feet. The body of the church, also fast decaying, has been considerably shaken, and has been since shored up; and, it is expected, the whole of the edifice will have to be pulled down.

ROSE COTTAGE, DEVON.—A destructive fire took place on Wednesday week, at Rose Cottage, near Newton Bushell. This splendid seat was for so me time the residence of Queen Caroline, who was much struck with its delightful situation. At the time of the fire it was in the occupation of Miss Strickland. The whole building was destroyed, and very little furniture saved. The property was partially insured.

THE FIRE IN WINDSOR CASTLE.—We are assured that, although the damage is roughly estimated not to exceed £10,000, it will not amount to anything like that sum. It scarcely is too much to aver that the experiment, by which future and more serious accidents may now be guarded against, has not been dearly purchased at that price. *Windsor Express.*

DESTRUCTION BY FIRE OF ST. HILARY CHURCH, CORNWALL.—The parish church of St Hilary, Cornwall, near Penzance, was entirely destroyed by fire on Saturday morning last, not a vestige remaining but the bare walls. It is supposed that the fire was caused by the stoves employed for warming the church which had been used during the worship of the preceding day (Good Friday).

RESTORATION OF DONCASTER CHURCH.—A public meeting of the clergy and laity of Doncaster took place on Tuesday week, at the Mansion-house, to consider the measures to be adopted for rebuilding the parish church of Doncaster (in the ILLUSTRATED LONDON NEWS of March 5th and 19th, our readers will find illustrations and details of the fire and the church as it stood previous to that unfortunate event). The meeting was one of the largest and most influential ever held in this town, and, from the circumstance of her Majesty having graciously and munificently evinced her practical sympathy for the loss the town has sustained, the proceedings assumed a character and interest altogether unprecedented in Doncaster. His Grace the Archbishop of York presided on the occasion. The meeting was addressed by his Grace the Earl of Harewood, Lord Lieutenant of the West Riding, Mr. Denison, M.P., and other gentlemen, when resolutions in favour of the rebuilding of the church were unanimously passed. The following sums were announced by the Archbishop, amidst great applause:—Her Majesty the Queen, £100; his Grace the Archbishop of York, £500; Mr. Wrightson, M.P., £500; Mr. Montague (High Sheriff of Yorkshire), £100; Mr. J. Brown, £250; Mr. Denison, M.P., £200; Sir C. Wood, £200; Mr. Chaloner, £200; Mr. Brooke, £200; the Earl of Feversham, £150; the Earl of Carlisle, £100; the Earl of Harewood, £100; Lord Londesborough, £100; Mr. E. B. Denison, jun., offers £500, as soon as a suitable plan for the new church has been decided upon. The total sum subscribed at the meeting was £3000, making a total of £17,760

THE ESSEX MURDER.—The medical examination into the case of Charles Saunders, condemned to death for the murder of Mr. Toller, has failed to establish the plea of insanity; the sentence was, therefore, carried into effect on Wednesday morning, at Chelmsford. He persisted to the last that he killed Mr. Toller in self-defence.

EPITOME OF NEWS—FOREIGN AND DOMESTIC.

Only fifteen public Acts of Parliament have been passed in the present session, which assembled in November; and after a short sitting adjourned to the beginning of last Month.

A working man at Brentwood.. named Hall, has received two letters from Australia, containing £50, a present from his two sons, who were transported some years ago. They report themselves to be worth nearly £1000

A tornado recently visited Clarksville, Tenn.-see (U.S.), levelling dwellings, [illegible] trees to the ground, but, as far as heard from, not [illegible] the track of the storm was half a mile wide.

[illegible] Parliament is called to hunt the North Warwickshire boundary next season, providing the noblemen and gentlemen following the hunt will contribute £1000 per annum.

By accounts received from Sydney, a number of Frenchmen had returned from the gold diggings, and had demanded from the French Consul to be sent home.

By *Chambers' Journal* we learn, that, in forty cities and towns in Scotland, every 149 of the population support a dram-shop, while it requires 981 to keep a baker, 1067 to support a butcher, and 1080 to sustain a book-seller

It is understood that the object of Sir George Russell Clerk's mission to the Cape is the settlement of boundaries, and particularly the boundary of the Orange River Sovereignty.

The deal wharf at Cronstadt had been destroyed by fire on the 22nd ult., involving a sacrifice of half a million of silver rubles. The proprietor is insured

The emigration movement has given a fresh impetus to the Irish shipping trade; and there is an increased demand for tonnage at Dublin, Belfast, and other ports.

A Spanish hen, belonging to Mr. Knight, of Whitstable, laid, a few days ago, an egg of the following extraordinary size and weight:—Round the oval, 7½ inches; round the girth, 6½ inches; weight, 4 oz.

An American paper states that the following bill has been introduced into the Indiana Leg slature:—"By Mr. M'Donald, bill to compel old bachelors of 30 years of age to marry, or pay fifty dollars a year into the county treasury, to go to the benefit of the first lady who shall marry after the 1st of January. The provisions of the bill apply to widowers of one year's standing.

At the assizes at Bedford, the other day, a woman, having a baby in her arms, was arraigned for stealing a piece of muslin. When the article was produced, it was a *small white rag*, apparently a strip of a white frock: the jury directed the prisoner to be discharged.

According to a Parliamentary paper, in the last four years, 27,215 immigrants and liberated Africans have been introduced into the West Indies; and 46,750 to the Mauritius.

Two new materials for textile manufactures have been sent to Manchester from Western Africa. Both were sent as specimens of cotton, but one is a new kind of silk, the other of wool.

The health of M. de Lamartine, far from improving, is now in a state which causes the utmost affliction to his friends. The physicians give no hopes of his recovery.

Government have begun to cure their own meat for the use of the navy. Three bullocks per week are slaughtered at the Clarence Victualling-yard at Gosport, and salted down. The new Arctic expedition has been supplied with this beef.

The East Essex Militia is to be converted into a rifle corps; and the East Suffolk into an Artillery Corp.

The amount of the new copper coinage is to be five hundred tons.

Jung Bahadoor, well known to our readers as the great Nepaulese Ambassador to England, is now a refugee in British territories

The Copenhagen-house Tavern, for many centuries a popular London resort, has been disposed of, with the rare-ground attached, to the Corporation of Liverpool, for the new cattle-market

On the 4th of March there were at St. Petersburgh, 201 cholera patients under treatment. During the day 32 new cases appeared, there being 81 recoveries and 9 deaths.

Edinburgh is projecting a Great Industrial Exhibition, to be held in that city next year.

A farmer has died at Cambridge from a very trivial cause: he accidentally put his chest with the lash of a whip; but the slight wound produced a fatal lock-jaw.

Sugar of a very fine quality is being manufactured in the Sandwich Islands.

The Shannon Canal, between the Bay of Galway and Lough Corrib, has been opened for traffic free of any expense to carriers.

Advices from the north of Europe state that the weather had been very severe, and that the ice in the Sound, at Elsinore, was so that the opening of the Baltic shipping season will, no doubt, be delayed for some weeks.

A tradesman at Luton, Bedfordshire, has the following curious notice stuck up in his window:—*Good Ladies*, 1s.; lasting ditto, 1s. 6d. per pair.

The Council of Education meet at the Privy Council Office this day (Saturday), at half-past seven o'clock.

Mr. Hitzfield, the American lady who was apprehended at Hamburgh, as agent of the revolutionary propaganda, has been sentenced to six weeks' imprisonment, in the prison of Moabach.

On Easter Monday the British Museum was visited by 26,837 persons; being an increase of 7000 upon that of last year. Notwithstanding the great influx of visitors, the greatest order and regularity were observed.

Persons are at Winchester Cathedral taking casts, for the New Crystal Palace, of an ancient font, the tomb of William of Wykeham, an altar screen, and the carving of a choir stall.

The electors of Dumfriesshire who supported Lord Drumlanrig at the last election have defrayed the whole expenses of the contest, and handed over the surplus, amounting to £20 6s. 6d., to the Dumfries and Galloway Royal Infirmary.

Mr. John H. Howe, J.P., Killyleagh, Down, died on Wednesday week of glanders, communicated to him whilst examining a horse which laboured under that disease.

The Chinese do everything differently from other people. We have a "jack" for pulling the boot from the foot; the "Flowery Land" people, on the contrary, have an instrument for pulling the man from the boot.

The Bishop of Melbourne has applied for a loan of £5000 or £6000, to import into his diocese a number of iron churches, to be set up at the diggings and elsewhere.

Last week, Mr. Scott, of Stockton, shot a large sea-bird on the Tees, and upon opening it found a portion of a gold earring in its gizzard probably torn from the ear of some drowned woman.

A vessel built of zinc, the first of the kind, has been launched at Nantes.

The Emperor of Austria has granted the Golden Medal for literary and artistic merits to M. Leoli Levi, for his work on the Commercial Law of the World

On Wednesday night the Lady Mayoress gave a very elegant entertainment to about 350 guests in the Egyptian-hall. The dancing and refreshments were kept up till a late hour. The Lord of the Manor Lords were in attendance

The English Government has transmitted a fine Dollond telescope to Captain Denyd, of the *Reine Hortense*, for saving four sailors of the *Lady of the West*, whom he picked up at sea, and brought in safety to Brest.

On Sunday night, the 20th ult., a fire broke out in the deal yards at Troppenau, and about 3000 standard hundred of deals and a great [illegible] of battlewood were destroyed. The loss is estimated at between £20,000 and £30,000.

During the past week, the coal-miners of the Glasgow district, numbering about 2000 men, have been on the strike; but the employers acceded to their request, and pay an advance, amounting from 6d. to 8d. per day.

Mr. *Farley's Bristol Journal*, after existing for upwards of a century, made its last appearance as a newspaper on Saturday. The paper in has been purchased by the proprietor of the *Bristol Times*, with which it will henceforth be associated.

By a recent act of Parliament (16th Victoria, c. 15), after the 1st of October next, polls at county elections are only to continue one day, instead of two, and the hour for closing is five o'clock.

A modern miracle has taken place at Florence, some thieves having robbed a chapel in the cathedral of that place, and two days after—confessed!—the [illegible] of the [illegible].

The owners of the American steamer *Humboldt* contemplate selling her, on account of her draught of water being unsuitable to the port of Havre. She is a remarkably fine steamer, and last week made the passage from New York to Cowes in eleven days five hours.

The traffic on the North-Western Railway has so greatly increased, that the directors are about to double the lines from Euston-square to Primrose-hill, and if that prove insufficient, to double them on to Willesden.

A fellow named Joseph Wardle, has been committed to Gloucester jail for bigamy, he having married no less than six wives.

THE THEATRES.

THE ROYAL ITALIAN OPERA

The Royal Italian Opera was to have opened on Tuesday, but the announcement was postponed till Thursday, and the campaign will be commenced to-night (Saturday) thatis, if Koncoui, Tamberlik, Tagliafico, and Polonini, have made their way through the Russian snow. Marzo, who started a few days before his comrades, is here, after most severe weather on his journey from St. Petersburgh. Mdme. Rosio, Mdme. Castellan, Mdme. Julienne, Lucchesi (the new tenor), Ferrucci, and Zelger, are in town; but the opera must have Marco or Tamberlik to begin with. At the time we write it is uncertain whether "Il Barbiere" (with a new ballet divertissement), or "La Fille Mal Gardée"), or "Masaniello," will inaugurate the season.

EASTER PIECES

DRURY-LANE.—The management has contented itself, by way of Easter piece, with a burlesque of Sir Walter Scott's romance of "The Talisman." The subject admits of abundant spectacle and scenery. The ample resources of the theatre have furnished the requisite material for display in costume and pageantry. The decorations of the piece, however, far surpass its literary merit. With much wit, and many puns, the dialogue was occasionally brilliant; but compression would have been wise, as the length of some of the passages "leading to nothing," as said generally de-provoked unmistakeable symptoms of weariness. The mounting of the drama, however, is decidedly creditable.

HAYMARKET.—On Monday was inaugurated the new management, with great spirit. Mr. Albert Smith's "Ascent of Mont Blanc" seems to have *suggested* to Mr. Planché's parodial in agination "Mr Buckstone's Ascent of Mount Parnassus," and no subject for the comedy of "The Rivals" could be more [illegible] [illegible] Mr. Farren [illegible] and Mrs. [illegible] [illegible] Credibly for both, they rendered [illegible] favour; and Mr Buckstone himself confesses to [illegible] which Mr. O. Marshall has pictorially indulged [illegible] panorama of "the green," including a general view of Parnassus, and views of the Village of Arissa, the Schiste and the Sacred Way, Ruins of the City of Delphi, the Castalian Fountain, the Corycian Cave, and the Snowy Peak of Liakura, are all admirably and beautifully painted. Of the general hits at things as they are especially "things theatrical"—we may distinguish the second from the "Corsican Brothers," and the "Gold-digger's Wife" were finely painted and humorously accompanied. The dialogue abounds in witty allusions, and, of itself, is an earnest of the promises held out by Mr Buckstone as to his future management. Cordially for both, they received [illegible] favour; and Mr Buckstone himself confesses to [illegible] which Mr. O. Marshall has pictorially indulged [illegible] panorama of "the green," including a general view of Parnassus, and views of the Village of Arissa, the Schiste and the Sacred Way, Ruins of the City of Delphi, the Castalian Fountain, the Corycian Cave, and the Snowy Peak of Liakura, are all admirably and beautifully painted. Of the general hits at things as they are especially "things theatrical"—we may distinguish the second from the "Corsican Brothers," and the "Gold-digger's Wife" were finely painted and humorously accompanied. The dialogue abounds in witty allusions, and, of itself, is an earnest of the promises held out by Mr Buckstone as to his future management. His predilections in favour of the poetic drama are highly honourable to him, and will, we hope, prove successful. The performances [illegible] lively comedy introduced into the new management [illegible] metropolitan favour—Mr. Chippendale and Mrs. Paynter, the former as *Sir Anthony Absolute*, the latter as *Mrs. Malaprop*. Both have merit; the first in particular has an original vein of humour and style of acting, which, when more developed, will establish a reputation, and the latter will prove an acquisition in parts better suited to her powers and appearance. Miss Reynolds, too, was welcomed back, as *Lydia Languish*; and Mr. Compton, in *Bob Acres*, was exceedingly rich.

ADELPHI.—By way of signalising his exclusive management of this theatre, Mr. Webster opened the season with a slight accession [illegible] Webster at Home, an Adelphi fare of Three Courses and a Dessert introducing the performers who have migrated with him from the Haymarket. Mr. Leigh Murray, Mr. H. Bedford, Mr. Keeley, Mr. Parselle, Miss F. Maskell, and others, and who will much strengthen the company at this establishment. The piece is repete with Green room allusions, and was received with [illegible] "A Nice Expedient," "To Parents and Guardians," "The Pretty Girls of Stilberg," and "Pepino, the Dumb Boy." Such performances sometimes may be a useful run of entertainment—but in the present case, to [illegible] to find at some intend a alteration in the character of the pieces henceforth to be produced. The house was crowded.

PRINCESS'S.—M. Scribe's libretto of "Marco Spada," as modified to English taste by Mr. Fulgrave Simpson, was produced on Monday. The scene is laid in 1735, and the hero is acted by Mr. Ryder. Inspired with vengeance against the Roman Government, *Marco Spada*, as a brigand leader, has filled the country with terror; but remains undetected, while living in magnificent style in a forest chateau, with his supposed daughter *Andrea* (Miss Heath), who has no suspicion of his being a bandit, under the assumed name of the *Baron di Torrida*. This young lady has a lover, *Prince Fr[illegible]reco*, nephew of the Governor of Rome; who, with his niece, *ss Marchesa San Piero* (Miss Laidelaw), are visiting the chateau, forced to seek refuge in the secluded chateau. *Marco Spada*, though he has thus his enemies in his power, declines to take advantage of the circumstance; and accepts, at *Andrea's* request, an invitation to a fete at the Governor's palazzo. The second act is rich in [illegible] scenic accessories that represent a country ball, and is one of the most brilliant scenes we have ever witnessed. Here *Francisco* is recognised as the governor's nephew, and found to be affianced to the *Marchesa*. *Marco* is also recognised by a priest, who, however, is immediately spirited away by some of his troops disguised as peasants, and a third act the scene presents the secret retreat of the brigands. Here the *Marchesa* and *Count Pepinelli*, a captain of dragoons (Mr. W. Lacy), are brought in as prisoners, and forced to wed, so that *Francesco* may be free to fulfil his pledge to *Andrea*. The bandits are dispersed and attacked by soldiers, in which conflict *Marco Spada* receives his mortal wound, and then confesses that *Andrea* is the child of a murdered man who, with his attendants, had been formerly [illegible] by his band. The *mise en scene* of this drama, and the whole of the arrangements are of the most costly kind. The acting throughout was careful and well studied. Mr. Lacy and Miss Leclercq were lively and [illegible] to their different *rôles*. The dialogue, in which the audience delighted, and the whole forms a melodramatic spectacle of an extraordinary character. The house was well attended.

LYCEUM.—Having succeeded well in a seven-act play, the sharp-witted manager of this theatre, in partnership with the ever ready Mr. Saunby Laurence, has ventured on "a Dramatic Tale in Nine Chapters, for his present Easter piece. As in the former occasion, they have been assisted by the pencil of Mr. Beverley, whose scenes are worth all the money required for the performance. We have here his picturesque [illegible] of an Alpine inn, an [illegible] in the same, a hut in the mountains, with an avalanche, a farm, grounds on a chateau, a ballroom, the chateau itself by moonlight, an elaborately-constructed and grandly-painted waterfall on a glen, and a rustic habitation, which magically converts itself into a saloon of mirrors. These nine scenes constitute the nine chapters; the drama appended to them is the mere filling up and justification of their presence. But it would be injudicious to expect that the outline has been carelessly or negligently occupied. *To contrairy*, the authors have worked together most diligently to present us characters, philosophy, and novel scenes in their pieces. If they have failed to amuse, it is not for want of the desire to please. In constructing this piece, but not altogether successful, piece of stage [illegible] the authors have sought to found a drama upon the audience by at first presenting three brief and exceedingly single chapters, and then adventuring others more complex in their arrangement and incidents. These latter were not so happy as the first. The simple pictures of the drum-head marriage of a Swiss Sergeant and a Vivandière of the latter being wounded—of her recovery and debilitation—and of [illegible] being arrested for a supposed theft, while in the act of rejoining her children, these were touching and effective, and promised a novel, or a drama, of some natural interest. All this changes, however, in the fourth part, for scenic heartless, conventional scenes, in which, after a [illegible] [illegible] [illegible]

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

other parts of the picture. Amongst this artist's other works those which will attract more especial notice and admiration are (145) "Descendants of Marius and the Gracchi"—Italian beggar boys playing marbles, &c., in the streets of Rome; (220) a "Shepherd Boy in the South," (288) an "Italian Shepherd Boy," carrying a sheep across his shoulders; and (445) "An Italian Girl putting on a Necklace." The rest are portraits, a class of work more interesting to the artist and the originals, than to the public.

Salter (who has been rather idle some years past), comes out with eleven pieces also, which, with the exception of four or five, are historical or poetic subjects. First in attractiveness is a picture of considerable dimensions in the Great Room (119), "Cupid's Amusement—Venus teaching her Son the use of the Bow." The idea is entirely fanciful; Venus is encouraging her chubby and mischievous son to play havoc with his little bow and arrow amongst several nymphs who happen to compose her court. One has already been mortally wounded, and is lying at the feet of her mistress; another still braves the little god's power, and is about to suffer for her temerity; the rest look on with a mixed feeling of curiosity and misgiving at the dangerous pastime. The subject and grouping are ingenious and well studied; but it is obvious that the artist has bestowed even still more attention upon the colouring, which is highly ambitious, and, we may add, is generally successful. Mr. Salter appears to have aimed, in this one work, at a complete illustration of the principles of colouring, and upon the relations of colours as displayed by the prism; a subject upon which much learned disquisition has been written, from the time of Newton down to our own day, but which practically was much better understood by the early painters, with Da Vinci and Titian in the van, and Murillo bringing up the rear, than it is likely to be for some time. Nevertheless, in the picture before us, a noteworthy attempt is made to carry into practice the rules of scientific theory; so as, by a proper disposition of colours, both as to relative position and quantity, the whole range of the colours of the rainbow and their combinations may be brought into harmonious association on the same canvass. The details of the process would be too technical for our present purpose; we will merely remark that the colouring of the principal group in the centre is made up of the three primitive colours—red, blue, and yellow—with a very small addition of green near the right; conducting the eye to the next principal group on that side, in which the secondary colours—green, orange, and purple—prevail, with a very small portion of red; whilst on the opposite side is a third group, also harmoniously connected with that in the centre, in which the tertiary colours—as olives, browns, and slates—are introduced; whilst various modified compounds are spread over the rest of the picture. As a whole, the effect is of extreme brightness, which may be improved by the subduing effects of age, or a little judicious glazing. Amongst this artist's other exhibits we remark, with approval (80), "A Bacchus and Ino:" (149) "The Nosegay," a female figure smelling flowers; (137) "A Bacchante;" and (297) "A Bacchanalian Dance:" the second of which is perhaps a little deficient in tone—the last very spirited. Two portraits of female children, (358) "with a Kitten" (query "Dog"), and (386) "Playing with Wild Flowers," are remarkable for their happy simplicity of treatment and naturalness of expression.

Woolmer displays his accustomed fertility of invention in the use he makes of his peculiar style of colouring—consisting chiefly of pale greens, yellows, and satin whites, with a dash here and there of vermillion; all very smooth and attractive, and upon the whole, truth to say, not inelegant. "The White Rose" (33) is a rather happy conceit; the said white rose resting tenderly on the amber-coloured drapery of the shoulder, where it forms a cold focus of light; appropriately enough in illustration of the lines:—

Beautiful maid, and snow-white flower,
Well are ye paired in your opening hour!"

The companion piece in the Great Room (87)—

Oft pining care in rich brocade is dressed,
And diamonds glitter on an anxious breast—

represents a young lady preparing for bed, after her return from a masquerade (a *Juliet*, perhaps—certainly no masquerader of the modern school), and who has evidently left her heart behind her. "Titania Imprisoned," from the German, is in a superior vein; the grotty recess in which the figure reclines forming, as it were, the setting round a pearly gem. The drawing of the right side, however, is slightly "out."

West's Coast Scenes, whether in Norway or nearer home, are well appreciated, for their excellence of colour and naturalness of treatment. The one which we engrave (517) represents a bold sea-bord, with a wrecked ship on shore. The scene is replete with nature, and the execution in every respect is satisfactory. In another picture by the same artist (344), "Recollections of the Devonshire Coast, near Lynmouth," we admire the bold reality of the presentation, and more particularly the accurate realisation of the stratified rocks with which on one side the view is bounded.

Baxter has several pleasing subjects of female beauty and freshness, treated, perhaps, a little tamely, but still with great delicacy of finish. From these we have selected for engraving (19), one entitled "Rustics," representing children returning from gleaning—a group very happily conceived and executed.

We shall return to this Exhibition next week; when we shall notice some admirable landscapes by Tennant and Boddington, and some clever productions by Pettit, G Smith, Buckner, Hill, and many others.

"RUSTICS."—PAINTED BY C. BAXTER.

"A WRECK.—THE SEA-BORD."—PAINTED BY W. WEST.

BURFORD'S NEW PANORAMA OF GRANADA.—VALLEY OF THE DARRO.

BRITISH MUSEUM.

The paucity of objects of mediæval art in the British Museum collections, invests any accession to the long-promised Gallery of Antiquities of the Middle Ages with considerable value. Accordingly, the item here engraved is of interest. This rare example was lately found in the river Tyne, and purchased a few days since by the trustees of the Museum. It is a brass vessel, about twelve inches high, in the form of a knight on horseback, in the war panoply of the early part of the thirteenth century. The surcoat is richly dispered, and the flat-topped helmet (the upper part of which served for the lid), and the hauberk, of

MEDIÆVAL BRASS VESSEL JUST ADDED TO THE BRITISH MUSEUM.

ringed or chain mail, afford excellent examples of the armour of the period.

MR. BURFORD'S PANORAMA OF GRANADA AND THE ALHAMBRA

We now give, according to promise, an Illustration of this grand Painting. The section we have selected represents a vale by the river Darro, under the summit of Silla del Moro, with the gay and the fair engaged in music and dancing, that harmonise with the beauty of the scene. This charming spot, entirely surrounded by mountains, is unequalled for its picturesque attractions. The Panorama presents not only the finest of plains, but the grandest of cities. It is taken from the Generalife, and embraces the Alhambra and the Vega, with the encircling mountains; including ravines, woods, fortress-battlements, towers, palaces of Arabian architecture, churches, and convents "The cities, squares, principal streets, and public buildings," says the descriptive key, "may be as easily traced as on a map; the cathedral, the ancient convents and churches, and numerous miradors rising conspicuously above the vast masses of brown roofs, form striking features, and contrast pleasantly with the numberless little gardens and orangeries in the open courts below, and the flower-decked terraces on many of the roofs above. Towards the right is seen the Beas of the mills, and the valley of the Darro, through which the river so named winds its way, under embowered terraces, fruit groves, and flower-gardens—the favourite retreats of the Moors; in the small pavilions of which, then so numerous, they enjoyed at once seclusion, the freely-tempered breeze, and the flowers and fruit to which they were so partial." We quote the following animated picture of the Darro from Mr. Ford's "Hand-book of Spain":—

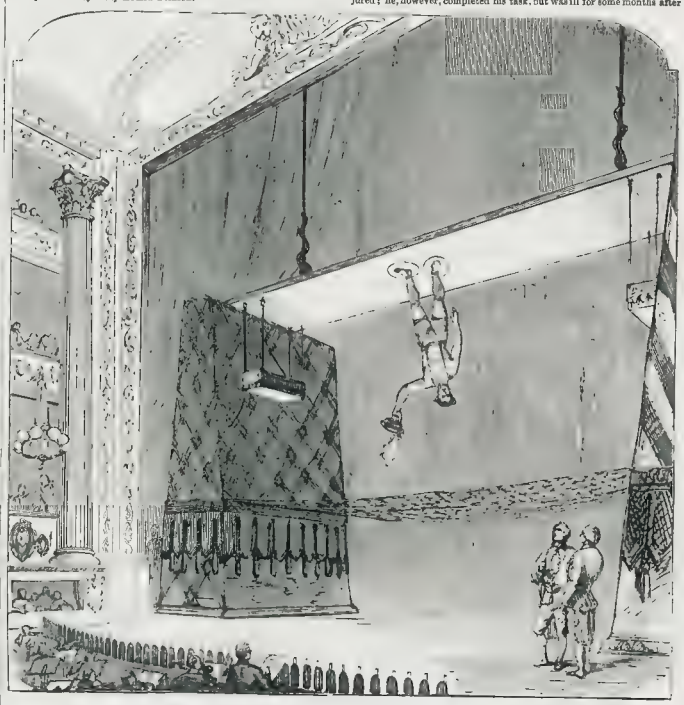
The *Darro* rises from the hill of myrtles near Huetor, and approaches Granada under the *Monte Sacro*: so called from the finding certain *sacred* bones and relics, to which is attributed the sweetness and fertilizing quality of the stream. Thus, among the Pagans, the waters in which Juno bathed the morning after her marriage, retained their perfume. *Manait odor possis scire Jubæ deam.* The walks on both sides of the swift arroyo Darro up this hill are delicious: the stream gambols down the defile; hence its Arabic name *Hadarah*, from *Hadar*, "rapidity in flowing." Gold is found in the bed, whence some, catching at the beloved sound, have derived the name Darro, "quasi *dat aurum*;" and, in 1526, a crown was given to Isabel, wife of Charles V., made from grains found in this Pactolus. Here amphibious gold-fishers still puddle in the eddies, earning a miserable livelihood in groping for the precious metal. The Romans called the river *Salon*; the gorge through which it flows, under the Generalife, was the *Hazarig*, or "Garden of Recreation," of the Moors, and was studded with villas. The Darro, after washing the base of the Alhambra, flows under the *Plaza nueva*, being arched over; and, when swelled by rains, there is always much risk of its blowing up this covering.

This exceedingly fine picture was painted by Mr. Burford himself, assisted by Mr. H. C. Selous, from drawings taken by J. Uwins, Esq., kindly assisted by Lady Louisa Tenison.

THE "AIR-WALKER" AT DRURY-LANE THEATRE.

Many years since, we remember a certain Sieur Sanches accomplishing the feat of walking on the ceiling at the Surrey Theatre. *How* this was effected we are not prepared to say: it is stated to have been by the employment of hooks; be this as it may, the feat which has for some nights past been performed at Drury-lane Theatre, and which our Artist has illustrated, is asserted to be altogether of another class from the "Surrey" marvel.

The Drury lane novelty is a Transatlantic contrivance. The performer is Mr. Sands, who has been an equestrian from his childhood and is now proprietor of the Hippodrome at New York. He acknowledges to have received the *secret* from a scientific man, and first accomplished the feat at Auburn, on the 26th of May last. Whilst attempting it, at Penyann, in July last, Mr. Sands fell, and was much injured; he, however, completed his task, but was ill for some months after.



FEAT OF MR. SANDS THE "AIR-WALKER," AT DRURY-LANE THEATRE.

The arrangements for the performance at Drury-lane Theatre were as follows:—Ten lofty draped supports was placed a temporary ceiling, 28 feet in length, and consisting of a stout timber framing, with a smooth surface; at each end was a slung seat; and beneath the ceiling was a net, provided in case of accident. Mr. Sands prepared himself by lacing sandals over his boots, to which were attached brass loops; and these were connected, by springs, with a pair of platter-like soles, in which lay the secret, as they were brought to the theatre to a locked box, and conveyed away in the similar casion at the close of the performance. Mr. Sands commenced by ascending by a ladder to one of the slung seats, and, lying upon his back by nit of the ropes, placed his platter-shod feet upon the ceiling, then gently detached himself, and very slowly walked across the platform, occasionally poising himself on one leg; thus he reached the seat at the opposite end, and descended by the ladder. It is surmised that the support is occasioned by the bullet soles being exhausted of air, upon the same principle as that by which a fly walks upon the ceiling—the performer's feet being detached by the pressure of a valve, which re-admits the air. The performance has been throughout very neatly executed.

PHOTOGRAPHY.

THERE has been a sudden re-awakening, in the public mind, to the advantages and beauty of the practice of sun-drawing. Hence there has originated an exhibition of photographs, and a Photographic Society has been established, under the Presidency of Sir Charles Eastlake, P.R.S. This society has held two evening meetings, the first of which is fully reported in the journal which it has commenced.

Sir William Newton communicated some "Notes on Photography, in an Artistic View, and in its Relations to the Arts," with a view to establish that photography can only be considered as a science to those who investigate its properties; but that, to the public, its results, as depicting natural objects, ought to be in accordance (as far as it is possible) with the acknowledged principles of Fine Art. Sir Wm. Newton contends that many of the more important effects are to be produced in photographic pictures, by sacrificing some of the sharpness of outline, which is usually regarded as the perfection of a photograph, and thus secure "a greater breadth of effect, and consequently a picture more suggestive of the true character of nature." Although we may not be disposed to admit Sir William Newton's canon of working with a camera out of focus, we fully coincide with his concluding remarks. He says:

I consider it to be a sort of duty, as an artist, to recommend the student in art not to take up the camera as a means of advancement in his profession until he has made himself well acquainted with the true principles of his art, as well as acquired considerable power of hand, with a view to draw with ease and exactness the *outline* of any object he may wish to represent. If however, any student should imagine that the camera will help him to the desirable attainment without the requisite study on his part, he will find himself much mistaken, when, perhaps, it may be too late to repair the injury. I am the more des rous of directing the attention of the student in art to the foregoing observations, because I am well aware of the extensive nature of the practice of photography, and how it is calculated to divert him from his principal object in the earlier part of his studies

Dr. Percy read a paper "On the Waxed Paper process, as applicable to Hot Climates." It was proved by experiments made during the hot summer months, that the waxed paper is especially applicable to the conditions of high temperature. One special advantage in the use of the waxed paper is that it will keep well in hot weather. "As the waxed paper," says the author, "will keep so well after excitement and exposure in the hottest weather, it might be anticipated that, *ceteris paribus*, it would keep proportionately longer than ordinary paper, under ordinary circumstances of temperature in this climate. And the anticipation generally accords, I think, with the experience of photographers. One of the best negatives I ever saw was on waxed paper. It was taken by Vicomte de Vistier, a month after excitement. The scene was part of the Palais Royal at Fontainbleau. I have also myself obtained pretty good results with the use of waxed paper, excited several days previously."

The process employed by Dr. Percy is as follows:—

1. The paper is iodised by the single wash. Twenty grains of nitrate of silver require for complete solution, in one fluid ounce of water, about 980 grains of iodide of potassium.

We must now explain, for the benefit of our young photographic readers, that the paper is soaked in this solution, and then immersed in water, by which process an iodide of silver is left in the paper.

2. *Exciting Liquid.* Fifty grains of nitrate of silver to one fluid ounce of water. One or two drops of this are added to one drachm of distilled water, and one or two drachms of aqueous solution of gallic acid

3. The picture is developed by the aceto-nitrate of silver and gallic acid, diluted with once or twice the volume of water.

Mr. Fenton stated that he iodised his wax-paper by the following preparation:—

Rice water,	1000 grammes
Iodide of Potassium,	20 "
Bromide of Ditto,	2 "
Cyanide of Ditto,	2 "
Fluoride of Ditto,	½ "

We beg to inform our English readers that the French gramme is equal to 15½ grains nearly, English. We cannot but object most seriously to the use of this weight when it is so readily, by those familiar, converted into English grains. In the communication made by Mr. Fenton, an important error in this point occurs in the following sentence:—"The solution for exciting the paper was the usual one of thirty *grains*. (meaning really *grains*) of nitrate of silver, and half a drachm of acetic acid to the ounce of water."

On the second meeting of the society, a paper was read by Mr. Robert Hunt, "On the Principles upon which Lenses should be Constructed for the Photographic Camera." We believe this paper will appear in extenso in the next number of the journal of the society; but the following is a general outline of the conditions involved:—

According to Mr Hunt's views, the solar ray consists of three distinct agencies or principles—light, heat, and chemical power. These produce, at all events, distinct phenomena, and exhibit very different degrees of refraction in passing through transparent media. Heat is the least refracted by a lens, and light the next in order; the chemical principle or actinism being more refrangible than the others: consequently, in correcting a lens for chromatic aberration, it is not corrected for the chemical rays, and a good achromatic lens may still be an inefficient one for the photographic camera. Taking an ordinary non-achromatic lens, it will be found that the focal point of these three principles *-light, heat,* and *actinism*—will fall in the inverse order to that in which they now stand, at different distances from the inner surface of the lens; and, although with an achromatic lens, these points are brought together, they are seldom coincident. This want of coincidence in the luminous and chemical focus for achromatic lenses was first pointed out by Mr. Claudet. It is usual to correct lenses upon the data laid down by Fraunhofer, measuring from certain well-defined fixed dark lines which are visible in the prismatic spectrum.

The indices of refraction for the several rays have been most carefully determined by Fraunhofer; and for a standard medium, a flint glass prism, they are respectively:—

Red	..	1·627740	dark line B
Orange	..	1·629681	" C
Yellow	..	1·635040	" D
Green	..	1·643024	" E
Blue	..	1·648980	" F
Indigo	..	1·662682	" G
Violet	..	1·671063	" H

With the co[illegible] of the lines H and I [illegible] that was known to exist.

Mr Stokes has shown that an extensible set of rays, far beyond the violet, may, under certain conditions, be rendered visible; and, therefore, we have now a guide in the formation of lenses which we did not previously possess; for, if all these new rays are brought into consideration in the construction of a lens, we secure, as nearly as possible, the coincidence of the luminous and the chemical forces

The achromaticity of a lens is not, therefore, all that is required; but opticians must calculate the refractive and dispersive powers of glasses, and give them the necessary curvature so as to form a *diachroic* lens, or a lens perfectly transparent to actinism, ere we can hope for perfection in photographic pictures. In addition to this, to secure sharpness of definition over the whole of a perfect flat field, the general form of the compound lens should be determined by two facts—that one surface being a section of an ellipse, the other, being a section of a circle struck from the farthest of the two foci of that ellipse, prevents aberration, and secures the desired effect

By attention to these conditions, it was thought lenses of the best possible kind could be formed; and Mr. Ross, in the discussion which followed, admitted the correctness of Mr. Robert Hunt's views; and stated that he had always been guided by these principles in the construction of his photographic lense

Mr Sanford, of Paternoster-row, has constructed a most ingenious and inexpensive camera-obscura for photographers. The whole of the arrangements, with the exception of the legs, pack up into a box not more than six inches deep; and the weight is very trifling. By the arrangement adopted, a photographic artist can take out into the country a large number of pieces of prepared paper, containing, without exposing them to any light except the radiations in the camera, pictures of any desired spots, which can be developed at any convenient place at night; thus obviating much of the difficulty which has been a constant source of complaint with travelling photographers

It was our intention to have devoted some space to the construction of cameras; but we find the Photographic Society intends, at their next meeting, to consider this question; and, no doubt, a large number of these instruments will be exhibited. We, therefore, prefer waiting until next month, when we hope to give our readers all the advantages of this meeting

We find that, in Paris, some very fine photographic copies of old and rare prints, of the full size, and in every respect fac-similes, are in circulation. These are executed by mere superposition, and differ in no respect—except their perfection—from the earliest positive pictures obtained on paper sensitised with a solution of silver

The Rev. Professor Stokes, of Cambridge, has proved, as above stated, the existence of a set of colo ared rays entirely unknown in the ordinary Newtonian spectrum. These are best seen by dissolving sulphate of quinine in some distilled water slightly acidulated with sulphuric acid—the outer edge of that fluid possesses the power of turning back the [illegible] rays. Many other substances possess this property, and [illegible] be the chemical rays rendered visible, since some peculi[illegible] graphic phenomena appear to depend upon their presence or absence

Professor Schonbein, of Bale, states that, if turpentine, [illegible] in a lightly-covered vessel to sunshine for some time, and frequently stirred, acquired some very peculiar properties—such as the power of decolourising indigo, decomposing sulphuretted hydrogen, and the like. It is not improbable that it may thus be rendered a most important photographic auxiliary agent

We have lately seen some very good lithographic impressions, the original picture on stone being obtained by a photographic process.

ANOTHER STOPPAGE TO THE AUSTRALIAN MAILS.—Notice has been issued at the General Post-office, that the mails for the Cape of Good Hope, Adelaide, Port Phillip, Melbourne, Sydney, New South Wales, and Moreton Bay will be delayed one night (or to have been forwarded from Southampton on Saturday last) in consequence of the mishap to the Australian mail-packet. Her Majesty's steamer Niger, however, endeavouring to effect arrangements for their conveyance, of which due notice is to be given. In the meantime the following vessels have been taken up for the conveyance of ship-letter mails:—the *Thames*, [illegible] from Sydney 20th of April, from London for Melbourne and Hobart Town. The *Avon* steamer, on the 27th of April, from Liverpool for the Cape de Verd Islands, St. Helena, Cape of Good Hope, and Port Phillip; and the *Argo* steamer, for Port Phillip on the 4th of May.

MONETARY TRANSACTIONS OF THE WEEK.

(From our City Correspondent.)

Advices having come to hand from the Cape to the effect that the Kaffir war is at an end, the market for Consols has been very firm during the whole of the week, and the quotations have been on the advance, the Three per Cents having reached par. The favourable accounts from Australia and California in reference to the produce of gold, and the steady imports of the precious metals, have tended to produce more confidence amongst the speculative class. There has been an active demand for money for commercial purposes during the week, the rates of discount have not advanced. The private bankers, as well as the various bill-brokers, have still large surplus means on hand; hence, an advance in the value of money can scarcely be anticipated

Some excitement has been observed amongst the frequenters of the Stock Exchange, from it being considered that, in future, Government will not, part[illegible] or incorporation for any banking interest hereafter proposed to be established in London. The reason assigned for this determination is, that the Bank of England do not possess sufficient state in the colony—in other words, that their profits are [illegible] to the amount of colonial interests: besides which, it is considered that the issues are [illegible] legitimate means; and, therefore, that a [illegible] of the subscribed capital is invested in securities in the mother country.

On Monday the Three per Cent Consols, for Money, were done at 99½ to ⅝, and for the Account, 100 to 100½. Three per Cent Reduced Bills were 98 to 98½, and India Bonds, £1000, 40s. prem. The Market, both on Tuesday and Wednesday, was firm, at the above quotations. On Thursday the Consols were a shade higher, with a very firm market. The Three per Cents, both for Money and the Account, were marked 100 to 100½. Exchequer Bills sold at from 7s. to 5s. prem., and India, 47s. prem.

The business doing in miscellaneous securities has been comparatively small. Australian Agricultural have sold at 20 to 21; West Australian, 23 to 24; South Australian, 22 to 23; British American Land, 63 to 65; North British Australian Investment, 1¼ to ½ prem.; Scottish Australian Investment, 1½ to 1¾ prem.; Nova Scotia Mining, 1½ to ⅝ prem.; Australasian Coal Mining, ½ to 1 prem.; Union Bank of Australia, 76½ to 77½; Bank of Australasia, 91½ to 94; Oriental Bank, 5½ to 6; London Chartered Bank of Australia, 4½ to 4¾ prem.; English, Scottish, and [illegible] Bank, 2½ to 2¾ prem.; British India, China, and Australia, ¾ to ⅞ prem.; Peninsular and Oriental Steam, 74 to 74½ prem.; Great Nugget, 2½ to 2¾ prem.; Australian Agricultural, 1½ to 1¾ prem.; Colonial Gold, 2½ to ⅞ prem.; Australian, par to ½ prem.; Crystal Palace, 2½ to 2¾ prem.; North of Europe Steam, par to ½ prem.; Crystal Palace, ¼ to ⅜ prem.; General Steam Navigation, 3½ ex div; and Honour; General Screw, 11½; Peninsular and Oriental Steam, 84½; ditto New (£25 paid), 46; Submarine Telegraph, 1; shares in Hungerford-bridge have marked 12; Waterloo, 9¾; Vauxhall, 2½; East London Waterworks have been done at 1.. ½; Grand Junction, 69; Kent, 84½; New River Company, 60; Southwark and Vauxhall, 99; West Middlesex, 110

The whole of the Surrey Railway Set Road has now been converted according to the arrangement already noticed. Prior to the close of the month a notice was issued to the bondholders, to the effect that unless [illegible] presented for payment on or before the 31st inst., the holders would be paid [illegible] ½ per cent. [illegible] to the 31st inst., and no interest would be allowed after that date. [illegible] Securities have extensively Francotinus have fallen to 1½ and 1¾ prem. Ditto, Four-and-a-half per Cents, 99; Brazilian Five per Cents, 104; to 104; ditto, Four-and-a-half per Cents, New, 88½; Equador Bonds, 5½; Grenada, One-and-a-Half per Cent Certificates, 11½; Greek Bonds, 8½; Mexican Three per Cents, 20½; Ditto, 26; Peruvian Scrip, 3⅞ to ¾ prem.; Ditto Three per Cents, Deferred, 6¾; Portuguese Five per Cents, 83½; Ditto Four per Cents, 39¾ ⅝; Dutch Two-and-a-Half per Cents, 59½; Russian Five per Cents, 117½; Ditto Four-and-a-Half per Cents, 103½; Sardinian Five per Cents, 97½ ⅝; Spanish Three per Cents, 19½; Ditto, New Deferred, 24½ to ⅝; Ditto, Certificates, 4½; Ditto, Passive, 5½; Ditto, Coupons, 5½; Turkish Loan of 1829, 11½; Ditto, Loan of 1844, 11½; Ditto, Loan of 1850, 11½; and Ditto, Loan of 1852, 11½.

The following are the closing prices of the leading Railway Shares on Thursday:—Caledonian, 8½ to ⅝; Eastern Counties, 5½ to ⅝; Edinburgh and Glasgow, 84 to 86; Great Northern, 84 to 86; Great Western, 59½ to ⅝; Lancaster and Carlisle, 93½; Ditto, Thirds, 1¾ pm.; Lancashire and Yorkshire, 75½; Ditto, Fifths, 11; Leeds Northern, 56½; Midland, 54½ to ⅝; London and North-Western, 118; London and South-Western, 89½; Londonderry and Coleraine, 3½; Manchester, Sheffield, and Lincolnshire, 20½; Midland, 74; Midland Great Western, 5½; Newport, Abergavenny, and Hereford, 14½; Norfolk, 51; North British, 26½; North Staffordshire, 12½; Oxford, Worcester, and Wolverhampton, 50½; South Eastern, 76½; South Wales, 36; Taff Vale, 15½; Vale of Neath, 48½; Waterford and Kilkenny, 5½; Waterford and Limerick, 5½; York, Newcastle, and Berwick, 51½; Ditto, Extensions, 1½; York and North Midland, 39½.

LEASES LEASED AT FREE RENTALS.—Buckinghamshire, 106; East Lincoln, 102; Manchester, Euxton, and Matlock, ⅜; Midland Bradford, 105½; Wiltshire and Somerset, 102½.

PREFERENCE SHARES.—Bristol and Exeter 4 per Cent Stock, 136; Chester and Holyhead, 7 per Cent, [illegible] per Cent; Eastern Counties (No. 2), 13; [illegible] per Cent Stock, 15; Great Northern 5 per Cents, [illegible] Ditto, 5 per Cents, 131; Ditto [illegible] per Cent Scrip, 8½; Great Western 4 per Cent, 104½; Ditto, 5 per Cent, 130; Londonderry and Enniskillen Half shares, 10½; Manchester (New £10), 10½; North British, 16½; North Staffordshire, 9½; Oxford, Worcester, and Wolverhampton 8 per Cents, 1 ⅜; York, Newcastle, and Berwick, 10[illegible]

FOREIGN.—Charleroi and Erquelines, 15⅝; Great Indian Peninsular, 7, [illegible] and Pistoga, 5 per Cent Preference, 12½; Luxembourg, 8; Madrae, [illegible] Paris and Strasbourg, [illegible]

On Thursday, Mining Shares were in very moderate request. Again, for a week done at 2⅝; Anglo-Australian Gold, 1¼; Australian Cordillera, 1¼; British Australian Gold, 1⅝; Brazilian Imperial [illegible] Ditto, Cocaes and Cunha, 6⅝; Carson's Creek, ⅜; Copper Miners [illegible] per Cent, 2¼; English and Australian Copper Smelting Company, 3⅝; Great Nugget Vein, 4½; New Grenada, 1⅞; Nouveau Monde, 2½; Port Phillip, 1½; South Australasian, 1½; Ural, 1½

THE MARKETS.

CORN EXCHANGE.—Since our last report the arrivals of [illegible] have been moderate, but, owing to very limited demand, the trade in [illegible] have been dull at steadily, at very full prices, and the value of [illegible] been well supported. Foreign wheats in general have met a fair value of [illegible] Oats, though rather more plentiful, have produced rather more money. [illegible] and shelling sorts heavily, at late rates.

[illegible] Red, fine, and Rye [illegible]
[illegible] Red and fine [illegible] 42s to 44s; grinding [illegible] to 40s; malting ditto 42s to 44s; Lincoln and Norfolk [illegible] 38s; Kingston and Ware, 37s to 40s; Chevening, 44 to [illegible] Grey [illegible] to 40s; Chevening, 44 to [illegible] Grey [illegible] to 40s; Kingston and Ware, 37s

AMUSEMENTS, &c.

ROYAL PRINCESS' THEATRE.—Monday, Wednesday and Friday, Macbeth; Tuesday and Saturday, St Cecilia; Thursday, [illegible]. To conclude the Opera of the new drama of Marco Spada every [illegible]

FRENCH PLAYS AT ST. JAMES'S THEATRE.—Mr MITCHELL respectfully announces that the French Plays will be performed in Passion Week, on Tuesday, April 5th, and Thursday, April 7th, by the [illegible] Theâtre du Gymnase (now first appearance in London), in Scribe's celebrated comedy, entitled LA CAMARADERIE. Boxes and Stalls at MITCHELL'S Library, 33, Old Bond-street, and at the Box office.

ST. JAMES'S THEATRE.—ROBERT HOUDIN, the WONDERS of NATURAL MAGIC, under the patronage of SPANISH and ARABIAN ENTERTAINERS, at the above Theatre, THIS EVENING, and EVERY TUESDAY and THURSDAY, at Half past Eight o'Clock. A MATINEE PERFORMANCE on Saturday next, April 9, commencing at Half past Three o'Clock. Boxes and Stalls at MITCHELL'S Library, and at the Box office.

MUSICAL UNION.—H.R.H. PRINCE ALBERT PATRON.—TUESDAY, APRIL 5th. WILLIS'S ROOMS. The Third Concert. Quartet, Mendelssohn in E flat, Op. 44, No. 3. Beethoven, Variations, Op. 69, Trio, Mozart, in E flat. Pianist, Herr Hallé, who will also play Solos, which must be those of Beethoven in which he excels. Vocalist, Miss Dolby. Violin-at-Command, Herr Joachim, who will perform the Concerto of Mendelssohn. Conductor, Mr. Mellon. Private subscription. Reserved seats 3s.; to the area, 2s. 6d. Tickets and programmes at all the music-sellers. ALFRED NICHOLSON, Hon. Sec.

BRIGHTON.—LOVE'S ENTERTAINMENT. MONDAY, APRIL 4, and during the Week, at the ROYAL NEWBURGH ROOMS, BRIGHTON Tuesday, April 12, at Hastings, Monday, April 18, at Norwood, April 20, at Tunbridge, April 21, at Wells, Wednesday, April 22, at Maidstone, April 23, at Tenterden, May 4, at Canterbury, May 5, at Sittingbourne, May 6, at Deal, May 7, at Dover, May 8, at Ramsgate, May 9, at Margate, May 10, at Sandwich, May 11, at Faversham, May 12, at Rochester, May 13, at Chatham, May 14, at Gravesend, May 15, at Dartford, May 16, at Greenwich, May 17, at Woolwich, May 18, at Croydon, May 19, at Kingston, May 20, at Richmond, May 21, at Hounslow, May 22, at Staines, May 23, at Windsor, May 24, at Slough, May 25, at Uxbridge, May 26, at Harrow, May 27, at Edgware, May 28, at Hampstead, May 29, at Highgate, May 30, at Islington, May 31, at Hackney, June 1, at Hornsey, June 2, at Tottenham, June 3, at Edmonton, June 4, at Enfield, June 5, at Barnet, June 6, at Watford, June 7, at Uxbridge, June 8, at Hounslow, June 9, at Kingston, June 10, at Wandsworth, June 11, at Battersea, June 12, at Chelsea, June 13, at Brompton, June 14, at Kensington, June 15, at Hammersmith, June 16, at Brentford, June 17, at Ealing, June 18, at Acton, June 19, at Shepherd's Bush, June 20, at Uxbridge, June 21, at Harrow, June 22, at Edgware, June 23, at Hampstead, June 24, at Highgate, June 25, at Islington, June 26, at Hackney, June 27, at Hornsey, June 28, at Tottenham, June 29, at Edmonton, June 30, at Enfield, July 1, at Barnet, July 2, at Watford, July 3, at Uxbridge, July 4, at Hounslow, July 5, at Kingston, July 6, at Wandsworth, July 7, at Battersea, July 8, at Chelsea, July 9, at Brompton, July 10, at Kensington, July 11, at Hammersmith, July 12, at Brentford, July 13, at Ealing, July 14, at Acton, July 15, at Shepherd's Bush, July 16, at Uxbridge, July 17, at Harrow, July 18, at Edgware, July 19, at Hampstead, July 20, at Highgate, July 21, at Islington, July 22, at Hackney, July 23, at Hornsey, July 24, at Tottenham, July 25, at Edmonton, July 26, at Enfield, July 27, at Barnet, July 28, at Watford, July 29, at Uxbridge, July 30, at Harrow, July 31, at Edgware, August 1, at Hampstead, August 2, at Highgate, August 3, at Islington, August 4, at Hackney, August 5, at Hornsey, August 6, at Tottenham, August 7, at Edmonton, August 8, at Enfield, August 9, at Barnet, August 10, at Watford, August 11, at Uxbridge, August 12, at Harrow, August 13, at Edgware, August 14, at Hampstead, August 15, at Highgate, August 16, at Islington, August 17, at Hackney, August 18, at Hornsey, August 19, at Tottenham, August 20, at Edmonton, August 21, at Enfield, August 22, at Barnet, August 23, at Watford, August 24, at Uxbridge, August 25, at Harrow, August 26, at Edgware, August 27, at Hampstead, August 28, at Highgate, August 29, at Islington, August 30, at Hackney, August 31, at Hornsey, September 1, at Tottenham, September 2, at Edmonton, September 3, at Enfield, September 4, at Barnet, September 5, at Watford, September 6, at Uxbridge, September 7, at Harrow, September 8, at Edgware, September 9, at Hampstead, September 10, at Highgate, September 11, at Islington, September 12, at Hackney, September 13, at Hornsey, September 14, at Tottenham, September 15, at Edmonton, September 16, at Enfield, September 17, at Barnet, September 18, at Watford, September 19, at Uxbridge, September 20, at Harrow, September 21, at Edgware, September 22, at Hampstead, September 23, at Highgate, September 24, at Islington, September 25, at Hackney, September 26, at Hornsey, September 27, at Tottenham, September 28, at Edmonton, September 29, at Enfield, September 30, at Barnet, October 1, at Watford, October 2, at Uxbridge, October 3, at Harrow, October 4, at Edgware, October 5, at Hampstead, October 6, at Highgate, October 7, at Islington, October 8, at Hackney, October 9, at Hornsey, October 10, at Tottenham, October 11, at Edmonton, October 12, at Enfield, October 13, at Barnet, October 14, at Watford, October 15, at Uxbridge, October 16, at Harrow, October 17, at Edgware, October 18, at Hampstead, October 19, at Highgate, October 20, at Islington, October 21, at Hackney, October 22, at Hornsey, October 23, at Tottenham, October 24, at Edmonton, October 25, at Enfield, October 26, at Barnet, October 27, at Watford, October 28, at Uxbridge, October 29, at TESTIMONIAL PRESENTED TO SIR HARRY SMITH.

PLATE PRESENTED TO SIR HARRY SMITH.

IN the same page wherein we record the termination of the Kaffir War, it will not be inappropriate to illustrate a highly gratifying testimony of the colony to the popularity of its late governor Sir Harry Smith. The funds for this purpose were raised by subscription previous to Sir Harry Smith's return to England.

The testimonial is of the value of three hundred guineas, and consists of a set of side-board dishes, or salvers; the centre (which we have engraved) being thirty inches in diameter; and the two smaller, twenty inches diameter. The whole work, as will be seen by the Illustration, is of the very richest design. The inscription is as follows:—

Presented to Major-General Sir H. G. W. SMITH, Bart., G.C.B., on his quitting the Government of the Cape of Good Hope, by a number of gentlemen of the colony, as a tribute of sincere respect and esteem, 18th April, 1852.

The testimonial has been designed and manufactured by Smith, Nicholson, and Co., Duke-street, Lincoln's-inn-fields, and is a beautiful specimen of design, and working in metal.

THE KAFFIR WAR.

BY the Calcutta steamer, on Tuesday last, we have the welcome intelligence of the termination of hostilities at the Cape. The *Cape Town Mail* of Feb. 22, states: Since General Cathcart's return from the Basuta country, after the battle of Berea, no further hostilities have taken place. Head-quarters are again established at King William's Town, where the 43rd, 47th, and 74th regiments are stationed, the remainder of the forces being so disposed as to hold possession of various points in the Amatolas, and keep that part of the country free from marauders.

To all appearance the Kaffir War is at an end. All idea of fighting has evidently been abandoned by the hostile tribes, and the latest accounts from the frontier state that the chiefs Sandilli and Macomo have moved over the Kei, in compliance with the proclamation issued by his Excellency on his arrival, declaring that this was the only position in which he would ever treat with them. Attempts had been repeatedly made to open up a "talk" by messengers from these chiefs; but the General was inexorable in demanding removal as an indispensable preliminary to negotiation. This condition having now been ostensibly complied with, there seems a prospect that some kind of peace will shortly be agreed upon. Several of Sandilli's councillors are stated to have arrived at head-quarters with the chief's "word," and been admitted to an audience; but the nature of the arrangements proposed on either side has not yet been made public.

Whatever these arrangements may be, it is now certain that General Cathcart intends to retain military possession of the Amatolas until her Majesty's pleasure be known on the subject. In a Government notice, he announces his intention to establish townships and villages, in the neighbourhood of sufficient military forts and garrisons, in that portion of the lands formerly occupied by the Gaikas, named the Keiskama Hoek; and invites applications for land from the "deserving persons who have fought nobly in the ranks of colonial levies and other corps, during the rebellion now happily suppressed." The first settlers are to be rationed for six months, and provided with implements, seeds, &c.; and, in the event of the home Government abandoning the project, compensation is to be given them, either in money or land elsewhere.

Notwithstanding this apparently promising condition of affairs over the border, the frontier districts have not been wholly free from depredation. Several serious losses of cattle and horses have taken place, and Kaffir scouts and small parties of rebel Hottentots are continually met with, far within the more settled parts of the colony.

Up to the arrival of the last post the state of affairs in Kreli's country, the scene of General Cathcart's first "foray," was looked upon as very unsatisfactory. All accounts concurred in representing the Amagaleki territory as in a state of dangerous confusion.

Kreli, feeling, doubtless, that this was a condition of things which might lead to a second visit from General Cathcart, sent in messengers, professing great contrition and suing for peace. A proclamation issued by the Governor on the 14th instant, at King William's Town, announces that peace and amity have been restored between her Majesty and her faithful friend Kreli; who, on his part, promises to be true and faithful to all his engagements, and to regard the rivers Indwe and Kei as the boundary between her Majesty's territories and his own (thus, by the way, sponging Kaffirland from the map). He engages to keep his people from disturbing the Tambookies, and to be responsible for the lives and property of British subjects within his territory; they, however, making their own agreements with him as to the terms on which they shall be permitted to reside there.

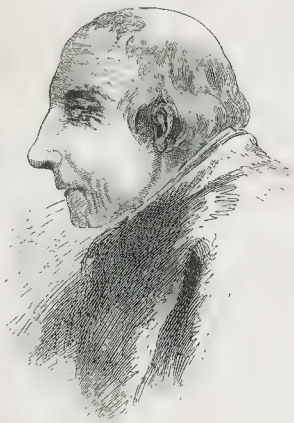
King William's Town, the scene of these negociations, is the capital of British Kaffraria. Here was held the great meeting of the chiefs assembled by Sir Harry Smith, on the 7th of January, 1848, when the first English Bishop appeared in Kaffraria.

The accompanying View is from a clever Sketch, in oil, by a Correspondent.

DEATH OF A CANADIAN INDIAN, AGED 115.

THIS fine old Indian, called "Abraham Miller" by the Whites, though his Indian name was "Pishikee-Ooshkeeshik," *i. e.*, ox-eyed, died on the 20th of February, and, according to the last census, was 115 years old! Pishikee and two other Indians, who always looked up to him as their senior, had long been known as having been engaged at the taking of Quebec, in 1759; and one of them, it is believed, still survives. The *Montreal Herald*, remarking on the census returns, and referring to Abraham Miller, says, "Ninety-three years ago he scaled the cliffs of Quebec with General Wolfe, so that his residence in Canada is coincident with British rule in the province."

Our Correspondent (who writes from Astley, Canada West), states that "Abraham Miller and his two daughters pitched their wigwam in the



ABRAHAM MILLER ("PISHIKEE-OOSHKEESHIK"—OX-EYED), AGED 115 YEARS.

woods, near my 'clearing,' in November last; and, as I was his nearest neighbour, I saw a good deal of him. As an instance of his strength and vigour, I may mention that, on the Thursday before he died, I saw him cutting down a good sized maple-tree for firewood, and, as I had my axe with me, I assisted him in the task.

"The enclosed sketch was taken by my sister about a fortnight before he died, and is an excellent likeness. When we visited him for that purpose, we found him and his two daughters clothed in their comfortable blankets, the present of the English Government; and when I looked at their slight wigwam, the snow to the depth of nearly three feet around us, and remembered that the thermometer this winter had been as low as 12 deg. below zero, I thought it was a cruel economy to deprive the poor Indians of their greatest treasure—a warm blanket; but such I am sorry to say is the case, for no more will annually be distributed to them as heretofore; and in vain do the poor Indians show their beaded wampum belts given in years gone by as a pledge of future favours always to be continued. The Indians are a brave, loyal, and contented race: their numbers, indeed, are fast diminishing, and they are weak and feeble as a nation; but that is no reason why their former services should be forgotten, or the promises solemnly made to them should be broken. May we hope that some influential advocate will yet plead their cause in the British Parliament."

KING WILLIAM'S TOWN.—FROM AN ORIGINAL SKETCH.

THE ILLUSTRATED LONDON NEWS

No. 616.—VOL. XXII.] FOR THE WEEK ENDING SATURDAY, APRIL 9, 1853. [SIXPENCE.

THE EDUCATION OF THE PEOPLE.

LORD JOHN RUSSELL reminded the House of Commons on Monday, when he explained the intentions of the Government with reference to public education, that his father, the late Duke of Bedford, was among the many persons who, in 1805, formed themselves into a society for its promotion. The noble Lord has through his whole career followed the paternal example, and gallantly persevering against much opposition, but with much support, is found nearly fifty years after that period—having in the meantime done a great deal to improve the moral condition of the people—still consistently labouring in the same good cause, and bringing as far as he can the influence of the Cabinet and the Legislature to bear upon it. Rightly did he say, as the justification for the interference of the State—in opposition to those who contend that education should be left wholly to the voluntary exertions of individuals—that it is regarded as the great duty of the State to preserve peace and enforce the observance of the rules of morality; and it is, therefore, bound to assist in the religious and moral training of the people. Well, too, did he intimate at the close of his speech, that great as have been the triumphs of modern society over the most subtle agencies of the material world, still nobler triumphs await those who shall spread new light and life through society itself, raise its now cast-away children to the dignity of useful citizens, and place its manners and institutions on the permanent basis of religion and morality. Higher and greater objects cannot be contemplated, and with a courage that is unflinching Lord John has aimed at them from his first entrance into public life.

His proposition on Monday was to introduce a bill to enable municipal councils of corporate towns—under some restrictions, such as having the consent of two-thirds of the council, and applying the money according to the plan of the Committee of Privy Council for Education—to levy a rate for the purpose of improving education in municipalities. It is the beginning of a system for establishing public education by means of public rates. It does not go very far; but no persons expected that the Government would go very far at first in such a scheme, concerning which there is a great diversity of opinion; and any comprehensive measure would be sure to meet with sturdy opposition from many of the warmest friends of education, who are habitual supporters of the Government.

It must be remembered, too, that an opposite system has long been patronised as expressly adapted to the religious freedom enjoyed by all sects in England, and has spread its roots widely through society. For the first time we have in Lord John's speech an authentic account of its extent. On the 31st March, 1851, when the census was taken, there were in England and Wales 15,473 public day schools, with 791,548 male scholars, and 610,021 females on their books; and of these 635,107 males and 480,130 females attended at the schools on that day. The number of *private* day schools was 29,425, with male scholars on the books 347,649, and females 353,210; actually attending, males 317,390, females 322,349. The proportion of scholars on the books to population was 11.76 per cent, or 1 scholar to 8½ persons; the number of scholars attending, 83 1-5th per cent of the scholars on the books. It is estimated that, in 1847, 955,865 scholars attended Church schools; 225,000, British and Foreign; 38,623, Wesleyan; 6839, Congregational; 34,750, Roman Catholic; and 20,000, Ragged Schools; making, according to that estimate, a total of 1,281,077 scholars. The income of the several schools was:—Church, £817,081; British and Foreign, £161,250; Wesleyan, £27,347; Congregational, £4901; Roman Catholic, £16,000; Ragged Schools, £20,000; other schools, £50,000: total, about £1,100,000. The income was derived from—local endowments, £69,537, local subscriptions, £366,823; local collections, £114,109; private supporters, £54,000; and contributed by the scholars, £413,044. This sum being under-estimated, Lord John concludes that the working and poorer classes actually at present contribute £500,000 a year for the education of their children. Very imperfect, very conflicting, and very costly as the present system is, when its magnitude is thus brought before us, and we see by the mere enumeration the many different sources from which the income is derived, and the different religious parties that contribute it, we cannot be surprised nor displeased with Lord John for not proposing a measure which at once might cast the existing system loose, or check the zeal by which such a sum of money is raised, and such a large number of children taught. Though the general ignorance in the rural districts is far more dense than the ignorance in towns, yet in these latter are the children most neglected, most exposed to temptation, and most systematically bred up to crime. It is in them, therefore, that public education is most needed, and we may hope that the rate Lord John proposes to authorise the municipalities to levy, will be in the towns the beginning of a system which will, at some future time, extend the advantages of education to all their children.

Another very important part of the Minister's scheme, which is universally approved of, concerns the trust funds devoted in past times by the piety of our ancestors to purposes of education, and which have in many cases been grievously misapplied. A commission appointed in 1837 to inquire into the subject, reported that the public endowments for education in England and Wales reached the large sum of £312,000. Many of these endowments are perverted and wasted, and the Government which authorises rates to be levied for the purpose of educating the poor seems bound to take care that the endowments already existing for the purpose should be properly appropriated. Accordingly, a bill is to be introduced into the House of Peers, by the President of the Council, to place in the hands of a Committee of Privy Council a power to propose an amended scheme for the application of the trust property whenever it is misapplied, or is no longer applicable for the purposes for which it was destined. The decision of the question, however, will not be left to the committee; that belongs to the administration of law; but the committee will have the power of directing suits to be instituted, to ascertain whether the funds be improperly applied. When the trust-money is of less value than £30 a year, the jurisdiction will be with the county courts; when it is above that sum it will be with the Master of the Rolls. It seems strange that, at this period, all these charities having been brought under

"THE DUKE OF SUTHERLAND" STEAM-SHIP, WRECKED OFF ABERDEEN PIER, ON FRIDAY, APRIL 1.—(SEE NEXT PAGE.)

public notice nearly forty years ago, that there should still be a necessity to pass a law to regulate the jurisdiction of courts in such cases, and empower some persons to call them into activity, and to act on their decisions. The necessity existing, however, the Ministers are to bring in a bill to place the trust funds for public education under proper control, and to authorise a committee to ask of a competent court, in doubtful cases, a decision concerning their application.

Lord John Russell does not now propose on his own authority to interfere with the Universities. Those sources of education for the chief educators of the people, and on whose instruction the morality and teaching of all is, to a great extent, dependent, are to be left untouched. Lord John stated, indeed, that the Ministers are of opinion that of both Universities the improvement of the governing body is requisite; that a larger number of students should be admitted without compelling them to belong to particular colleges; that the restriction now laid in the way of the attainment of honours and rewards in the Universities should be removed; and the funds of the Universities, now applied to no purposes whatever, should be devoted to providing additional instruction. But, while the Ministers think that these and other alterations are necessary, they will trust at present to the authorities of the Universities to carry them into effect, giving them a hint that if they neglect this duty, the aid of Parliament will be evoked to compel them to perform it.

Although these propositions fall below our expectations, the subject is surrounded with so many difficulties that we may well be thankful for what has been attempted. Society must wait till the evils of a neglected population have become so great that leading men shall be alarmed for their own safety and ashamed of the narrow and sectarian views which place them in opposition to the work of true religion. All classes will then unite in the good work of establishing a sound and complete system of public education.

TOTAL DESTRUCTION OF THE "DUKE OF SUTHERLAND" STEAMER, AT ABERDEEN.

IF No. 609 of the ILLUSTRATED LONDON NEWS we had to record the disaster of the Irish steamer *Queen Victoria*, and consequent serious loss of life, through, certainly, something like neglect or inattention; and we have now to detail an equally dreadful catastrophe. For although there does not, at present, appear to have been any mismanagement on board previous to the steamer's striking the rocks of the pier, yet it would seem that a part of the crew were the first to look to themselves, and the subsequent want of management with the rocket apparatus, &c., on such a coast, is very reprehensible: for had that life-saving apparatus, with its powder, cradles, &c., been in working order, and only one person to have properly managed it, there is little doubt but that every soul on board might have been saved. The following letter records the details of this painful disaster

ABERDEEN, April 2.—The Aberdeen and London iron steamer, *Duke of Sutherland*, was wrecked at the entrance of our harbour last evening, and upwards of 22 persons have perished.

The vessel left London on Wednesday evening. The voyage was very easy, with the wind at south-east; but when the steamer reached the bay it was found that there was a heavy sea running on the bar, and that the fresh of the river Dee was setting down very strongly. The pier, which is of granite, and extends about half a mile into the sea, terminating in a shoeing which rounds off in a ledge of boulder rocks, affords shelter from the north, but with the wind as it was yesterday tends to make the run to port a most dangerous undertaking. The harbour-master hoisted his flag at half tide, which was the signal that the steamer might come in, and there was no fear for the *Duke* crossing the bar. But just as the steamer crossed, low, fresh took her on the larboard bow and threw her head northwards, so that for a time she was steaming right on to the end of the pier. Captain Howling, seeing the danger to which she was exposed, ordered the engines to be backed, and this was done; but scarcely had the vessel got stern way, when a heavy sea struck her on the quarter and bore her right on to the rocks by the breakwater of the pier. In ten minutes the water was three feet deep in the saloon, and all hope of saving the ship was abandoned. The waves now made a clean breach over her, and she lay broadside on, with her bow to the south.

Captain Howling, to save the lives of his crew and passengers, ordered the life boats to be lowered. One of them was speedily in the water, and seven men and women got into it under the charge of the first mate. Unfortunately the holding rope was not unpied, and she was carried away without getting any more on board, and all were safely landed. The second boat was stove by a heavy sea as it lowered alongside.

The life-boat on shore was by this time manned, and made the vessel with much difficulty, but receiving injury in her upper works while alongside the steamer, a limited number of the passengers only could be taken off. With these she was pulled ashore

The steamer now rolled dreadfully, and about an hour after she struck the forepart broke off with a tremendous crash, and instantly broke up. The passengers still on board had by this time clustered around the larboard paddle-box, the ship amidships having sunk down solidly on the rocks. To receive them Captain Jenkins of the shore and the agent for Dennett's rockets with the life lines; but the key of the apartment could not be found. Mr. William Hall then broke open the door, and the rockets and lines were got down to the *Alexander*, when it was found that there was no powder. A man then ran to the harbour-master's house, half a mile off, for some, but when he returned the vessel was ready to fire the rocket. Most providentially, one of the officers of her Majesty's ship *Archer* appeared at this juncture, and, with the utmost dexterity, sent a line over the wreck. With this the crew got off the pier hawser, and fastening it well, those in charge of it on shore tightened it up. But then it was found they had no cradle. In this dreadful emergency a temporary cradle was made from one of the boxes which had floated from the wreck, and this, with rope "hitches," instead of rings, was run out to the steamer, and one passenger was brought ashore. It was evident, however, that the box cradle was not safe, and slings were made, by which several passengers were suspended from the hawser by the waist and saved. The captain all this time was managing all on board with great coolness and self-possession; but, in his endeavours to save a female passenger who got entangled in the netting, he was hurt; and while warping, soon after, to relieve a passenger, who was hung up in the slings by one of the hitches being jammed, he was thrown off his balance, fell into the water, and was drowned. So near was the wreck to the pier at this time, that the captain's brother, thinking that he was attempting to warp to the shore, called on him to return.

The life-boat being unable to make way through the breakers again, six men rashly manned a gig-boat and pulled out to the wreck. They got safely through the breakers, and succeeded in taking off two, but in returning to the shore the boat slipped a heavy sea, foundered, and five of the men were drowned. The one who was not floated ashore on a piece of loose timber. One of those drowned was brother-in-law to the captain, and second mate of the steamer, who had first come ashore in the life-boat, and, in his anxiety to save others, lost his own life.

The stern part of the steamer now broke off by the engine-room, and was scattered in a thousand pieces. A lady passenger, who was holding by the netting, was swept away, and the engineer, Mr. Fyfe, who threw himself overboard on a life-buoy, not entangled among the stakes of some salmon nets, and was drowned. Several of the passengers were about this time washed overboard, and also perished.

The steward of the steamer, Duncan Christie, who remained to the very last, acted nobly. He put the female passengers into the slings, and was mainly instrumental in rescuing fifteen persons. He refused to leave the vessel so long as there was a person on board to whom he could be of any service, and slung himself half way down the warp and was got ashore at half past seven o'clock. The funnel of the steamer fell at dusk, and by eight o'clock the paddle-wheel was all that remained of this fine vessel.

The scene along the beach while these efforts were being made to save the crew and passengers was of the most harrowing description. The shore was strewed with goods, pieces of wreck, and the packing of luggage; women were running in a frantic state, screaming and tearing their hair, while their friends and relatives were perishing at their own doors; and loud and bitter were the complaints and execrations on those who ought to have had better preparations made for such a catastrophe. The recent losses on the shore, when the want of such preparations was so painfully felt, ought to have excited the strongest feelings of hope and caution at the time, should have led to better means of safety being provided, but little or nothing has been done. It is, indeed, a most melancholy thing to see one's fellow-creatures that are perishing within speaking distance, in circumstances when, with ordinary care, they might have been saved. But until we have some authority which can really command obedience, and some one at least who can fire a rocket or direct a gun, such scenes as those which were witnessed yesterday, will, it is feared, on this rugged coast, be of no rare occurrence.

The following is a list of the crew and passengers:—Cabin passengers—Miss Jessie Mrs. Lawrence, Miss Brenner, and Master Stewart. The boy only, Miss Jessie was saved. His other two were drowned. Miss Brenner was coming to Aberdeen to be married

In the steerage there were five women and two men servants of Mr S. C. Jervoise, on their way to Ness-cottage, Inverness; Mr. Barnett, Miss Milne, Mrs. Metcalfe, Mr. Finnie, Mr. Mackabe, and eight seamen from the *City of Aberdeen*. The crew of the steamer consisted of the captain, mate, second mate, boatswain, carpenter, eight seamen, eleven engineers and firemen, three stewards, and one stewardess—in all, 39 souls on board. Miss Milne and Mrs. Metcalfe are saved, and Ann M'Donald, Ann Gregory, Ann M'Gregor, and Susan Jones, of the servants, are saved; the coachman and lady's-maid are drowned; the stewardess is also drowned.

The ship was insured for half her value, and the cargo is valued at £20,000. The military are protecting the cargo on the beach.

The *Duke of Sutherland* was built at Glasgow, in 1847, by Mr. R. Napier, and was of the following dimensions:—Length from stem to stern, 198 feet; beam, 26 feet; depth of hold, 17½ feet; 804 tons register, and 350 horse power. She had berths for sixty first-class and twenty-eight second-class cabin passengers. Her state-rooms and chief cabins were fitted in the most elegant manner, and the vessel herself was one of the most beautiful models that entered the Thames. Her lamented commander, Captain Howling, was a special and able seaman. So ably commanded, and so efficiently equipped have been the vessels of this company, that during its existence, over a space of nearly thirty years a similar accident has never occurred; and its excellent management has given the greatest confidence and satisfaction. We are happy to learn that the number of lives supposed to have been lost is reduced to sixteen.

FOREIGN AND COLONIAL NEWS.

FRANCE.

The Emperor has been unwell for the last day or two, and for the greater part of Wednesday kept his bed.

The Bishop of Montpellier (M. Thibault), one of the most eminent orators of the French Church, is invited to preach the funeral sermon on the occasion of the inauguration of the tomb of Napoleon I., which will take place in the Chapel of the Invalides on the 4th or 5th of May.

The Emperor has conferred a medal of honour on Lieut. Charles Pearson, of the British navy, for having saved the crew of the French ship the *Nouvelle Amélie*, on the 17th of December last.

The *Independance* of Brussels says that the Pope will not go to Paris to crown the Emperor and Empress. In the Court circles at Paris the visit of the Pope is now spoken of as doubtful, the Emperor having positively refused to make any concessions to the Court of Rome on the marriage question.

The priest party, encouraged by the belief that the Emperor will shrink from no sacrifice to induce the Pope to come to Paris to place the Imperial crown upon his head, has commenced a serious campaign against the validity of civil marriages. The present marriage law was accepted by Louis XVI. without a protest. It was inserted without a question in the Code Napoleon. The *Univers* asserts that in every civilised country but France religious marriage is obligatory. The French journalist forgets that in England, all parties who desire it may be legally married before a civil officer

The *Union*, the *Assemblée Nationale*, and several other journals, have received private notices from the Government, cautioning them to moderate their ill-concealed opposition to the present *régime*. The increasing opposition of the *Siècle* has also attracted to it the unfavourable attention of the authorities. Nevertheless, the *Assemblée Nationale* of Saturday contains a bold article, in which it plainly speaks of the Empire as no regular Government, but a mere expedient, which even its founder must be well aware cannot last long. The occasion for this *sortie* is the appearance of a pamphlet, which has thrown the *Pays* into ecstasies, entitled "Speeches and Messages of Louis Napoleon Bonaparte, from his return to France to December 2, 1852." This pamphlet has been distributed gratuitously to every member of the Senate and *Corps Législatif*, and is, of course, understood to be a direct emanation from the head of the Government.

HOLLAND.

The English agitation against Papal encroachment and the assumption of ecclesiastical titles is about to be reproduced in Holland, where the Papal allocution, restoring the Romish hierachy in that country, has made a profound impression on the minds of the Protestant population. The citizens of Utrecht have agreed upon an address to the King reminding his Majesty of the solemn reformation of the Church the Dutch nation has been Protestant, and praying him not to grant permission to any ecclesiastic to accept, when conferred by a foreign Prince, the title, rank, or dignity of metropolitan or suffragan Bishop of any part of Holland. "Where Ultramontanism establishes and extends itself (they add) it makes war upon Protestantism with systematical contempt of the rights of other confessions." Addresses to the same effect are in the way of signature at Amsterdam, the Hague, Rotterdam, and the other principal towns of Holland.

GERMANY.

The Berlin papers state that the domiciliary visits continue, and that more arrests, particularly of workmen, have taken place. A considerable quantity of arms has been seized. The King of Prussia, who takes a great interest in the welfare of the Moabit prison, has given asylum in his states, but it is supposed they will prefer proceeding to England.

The Emperor of Austria has recovered his eyesight, but is forbidden to take violent exercise. It is believed that the vessels immediately connected with the Imperial family are eighty distended. Count Buol is at times considerable determination of blood to the head. It is supposed that his Majesty has fixed on his cousin, the Archduke William, as the future Governor-General of the Lombardo-Venetian provinces

A despatch from Vienna, of March 24, says:—"The refugee question is settled. The British Government has promised to keep a strict guard on the refugees, and to visit them with the full severity of the law whenever it should be proved that they have taken part in revolutionary intrigues."

The treaties which re-constitute the Zollverein with the Steuerverein have been signed by all the Plenipotentiaries, who have also given their adhesion to the treaty of commerce concluded between Prussia and Austria.

ITALY

After deliberation of the whole Imperial family, the young Emperor of Austria has, it is said, adopted the following resolutions relative to the Lombardo-Venetian kingdom:—1st, the substitution of the civil authority for the military power; 2nd, a full amnesty to the refugees, on condition of their immediately returning home; and 3rd, the replacement of Marshal Radetzky, who is to be placed on the retired list, with the title of Prince of the Blood, in recompence for his long and loyal services

The Chamber of Deputies at Turin have passed the Slavery Repression Bill by seventy votes to thirty three.

We hear from Naples that numerous and most illegal arrests continue to be made. The prisons are said to be full. The system of sending off people from their residences to distant districts were made out in one day. The police talk of plots and conspiracies.

SPAIN.

At the opening of the sitting of the Chamber of Deputies, the Minister of Finance laid on the table a project of law for the adoption of the decimal metrical system. The *Gazette* publishes a return, from which it appears that the receipts of the Treasury amounted, in February last, to 119,569,160 reals, showing a diminution, as compared with those of the corresponding month of 1852, of 1,157,800 reals. Government securities, and particularly coupons, have fallen considerably.

TURKEY.

A despatch from Constantinople, of the 28th ult., announces that Prince Menschikoff has transmitted a draft of a Convention. He has received satisfactory assurances from the Grand Vizier, and the Russian army has been ordered to retire from the Turkish frontier

The Seraskier, Omer Pacha, and General Mustapha Pacha, have evacuated Montenegro and returned to their stations in Montenegro. The Ottoman fleet has left Antivari, and retired to other Albanian ports, to await orders from Constantinople.

Mustapha Effendi has been sent by the Sultan upon a special mission to Vienna, to renew a good understanding between Austria and the Porte.

EGYPT.

We hear from Alexandria that the Viceroy was to leave that city to lay the first stone of the Turkish station in the section from the Nile to Cairo. Towards the end of the present year the section from Alexandria to the Nile will be in a state to be opened to the public. Edhem Pacha, who was sent to Constantinople on an important mission, had perfectly succeeded in his negotiation. The Viceroy sent him to represent to the Sultan the impossibility of ensuring order and security in Egypt if any restriction was made in the administration of justice. The result of the mission has been, that the right of inflicting the penalty of death is secured to his Highness during his life, and the revision of the sentences pronounced is not to be made subordinate to any other authority than that of the country. The news has been received with great satisfaction in Egypt.

The English merchants had an application made by the Directors of the Oriental and Peninsular Company to the Government of the Viceroy, for the suppression of the transit duty of half per cent., and a diminution in the sums paid for passengers and goods across the Isthmus. The Government has consented to reduce from 300f. to 250f. the fare for passengers, but refused to make any further concession. Linant Bey, the French engineer, who has been long in the reserve of the Viceroy, has again surveyed the levels of the Isthmus of Suez. He has, it is said, obtained the same results as M. Bourdaloue, who made a survey four years ago. It appears from them that the elevation of the Red Sea is only one metre above that of the Mediterranean Sea.

LIFE IN AUSTRALIA.

The following extracts from the letter of an Emigrant will be read with great interest—presenting, as they do, a picture of what has fallen under the writer's own observation. He is a worthy, sensible, member of the working classes, who is sure to make his way in the new colony. Men of steady, industrious, and sober habits, after perusing this letter, will see the advantages which they would possess in the struggle for wealth in Australia, over the dissipated and extravagant persons whose conduct our Correspondent describes.

Camp—Mr. A. J. Skene's Surveying Party—in the bush near Mr. Griffith's station, 30 miles from Geelong and 35 miles from Melbourne.

Sunday, Midday, Dec. 26, 1852.

I sailed in the ship *Nepaul*, on the 8th of July, at five P.M., under Mrs. Chisholm's arrangements, of which I cannot speak too highly in all respects; and I would advise all persons emigrating to come out under her management. We had a fine and prosperous voyage, making the passage in 14 weeks. Landed on the 23rd of October, having to pay very dear for landing myself and luggage. I would say to all persons, bring as little luggage as ever you can, and you will find the benefit when you arrive here. Found a great many ships in the harbour, and coming in at the rate of six per day. The scene at the harbour and scenery was true to the Sketch given in the ILLUSTRATED LONDON NEWS. On landing, we went to Mrs. Chisholm's tents, on the outskirts of the town, and in two days were provided with a house to go to, for there were no lodgings to be got, and no tents to be bought here.

Melbourne presented a lively and stirring appearance. Two things which attracted our observation were, the great number of bullock-drays, fully employed, and the number of men riding up and down the streets furiously, merely for the sake of amusement. It appeared these were fortunate gold-diggers; and the prevailing fashion, so let people see that you had been successful at the gold-fields, was to buy a horse and ride through the streets as if you were riding for your life. What pleased me most was, that every body appeared free and independent. I have seen men—ay, scores of them pull out a handful of notes, throw them down to pay their way, and then shove them in their pockets again, as people at home would a piece of old paper to light one's pipe with.

And now I come to a painful subject in the promising country; namely, that of drunkenness. I have travelled through Great Britain, and at different periods took a deep interest in observing the extent to which the drinking customs have gone in various towns, and in the metropolis of London, but never did I witness such sights as I have seen here, and the article at such a price too—ale and porter, 2s. per quart—all spirits and liquors, 6d. a nobbler (that is the flash name for a certain quantity), about to a penny-worth in London; in fact, a glass, at home about four pennyworth. It is thought nothing for a man to spend £5 per day, and I have heard of men spending £100 per week, and of others worth £1100 and £1200 going to a public-house, and never leaving it till all was gone. Nor are these isolated instances. It is the common practice for a man, after he has been six or twelve months shepherding, or working in the bush at a station, to go to the first public-house, or to the town, and spend every penny he has drawn for the above length of service before he leaves. The publicans are the best gentlemen they are making a rich harvest; and I much question, if this state of things continue, whether this country will receive that great and lasting benefit from the discovery of its gold-fields which is necessary to it, and its wonderful resources can be fully developed. No man ought to leave his native land to try his fortune, or to endeavour to make a future for himself here, unless he comes prepared to resist the gold-fields, the intoxicating cup.

Melbourne, in a few years, I have no doubt, will be a fine place, when the authorities have had time to make all the improvements which are requisite. There appeared to be universal complaint against the Government for the manner in which the public welfare was legislated for in regard to the police regulations, roads, emigration, posts, steam engagements, the making of public roads, &c. I fear that, if they do not attempt to keep pace with the growing wants of this fast increasing country, an attempt will be made to sever the union between this and the mother country; and I am inclined to think with success, too

No fine clothes are worn, no chimney-pot or bell-shaped hats. The men either wear broad cloth, like an American slave driver, or else the Kossuth hats. Emigrants should bring no fine clothes: good strong boots and trousers, blue shirts to wear outside, and check shirts, and a few coloured ones, are enough for a man who is going to "bush" it, as he will have to carry all his luggage on his back.

On the 10th of November I saw an advertisement for a man to join a Government party, with rations, £30 per year, with board and lodging (which is worth £50 more, at this time). I made application, was accepted, and signed a three months' engagement, with a gentleman of the name of ——. I left Melbourne (or Geelong, our head quarters, on Friday, November 13, at eight A.M., by the steamer, the distance being sixty miles. We landed at two P.M., and the next day (Saturday) started for the encampment, twenty miles distant, across the plain. Our party consists of six men: one bullock driver, to remove our tents and implements from one place to another; one man to cook; and the other four to assist in the survey.

On Monday, the 20th of the same month, we struck our tent soon after sun-rise, and were on the journey to survey a section of land. for a settler on the river Marrabeel, and about twenty-six off Ballarat. The settlers are allowed the privilege of purchasing 640 acres, at £1 per acre, and we go from one station to the other, at each of which we get as much milk and vegetables as we like to be at the trouble of fetching. The country is sadly deficient in navigable rivers; and fresh water, though I believe it can be got for digging, is the last thing thought about. The country is thickly covered with timber, little of it fit for building purposes; the soil black in many parts and alluvial, free from worms and grubs, and covered with long grass up to your waist, or as high as I have seen corn at home: the sun will soon dry it and set fire to it, for there is neither labour to gather it nor cattle to eat it.

SALE OF THE NELSON CORRESPONDENCE.—Last week this valuable correspondence, consisting of about 200 letters written by Lord Nelson to Lady Hamilton during the period of the French war, and other interesting documents, were sold by auction by Messrs Sotheby and Wilkinson. The sale produced £501 6s. 6d. The most remarkable was the last letter written by the immortal hero. It is dated on board the *Victory*, October 19, 1805, noon, Cadiz, E.S.E., sixteen leagues, with a postscript on the 20th, and addressed to Lady Hamilton, who has added some lines to it. This letter was found lying open on his desk after the battle of Trafalgar, and brought to Lady Hamilton by Captain Hardy. It sold for £81. "Of all the gallant Admiral's autographic letter; is sold for £81." John Bull, we know, calculates nothing right that does not place the British fleet alongside that of France. I have now traversed 1000 leagues of sea after them. "Frenchmen fleet," is all I want to have answered me. I shall never rest till I find them and they shall neither, if I can get at them."

EXTENSION OF THE ELECTRIC TELEGRAPH.—On Monday upwards of 300 men were actively at work in laying down the electric wires and iron tubes to the Houses of Parliament, the Treasury, the Board of Admiralty, and Buckingham Palace, which will communicate with Holyhead, Liverpool, and other parts of the north-western districts of England direct

BOOKS FOR THE LEARNED SOCIETIES.—The steamer *Panther* arrived from Ostend, having on board two bales, containing presentation copies of books for the use of the Royal and other learned societies in this country, and the revenue authorities have issued directions for their delivery free of duty for the above purpose.

THE COPPER COINAGE AND A DECIMAL COINAGE.—It is understood that Government has entered into a contract with Messrs. Heaton and Son, of Birmingham, for the manufacture of one million pounds sterling in copper coin, to be delivered in the course of the present and the first quarter of the next year. It cannot be known until the result of the experiment now in progress at the Mint is ascertained, how far the present machinery for coining will be found adequate to the task; but it is presumed that the means taken to obtain this supply have reference to whatever further coinage may be required in the course of the year. What is very much to be regretted is, that the question of a decimal coinage is at the hands of the Government, and the public is deprived of copper coin could not have been long postponed. Nor will the existing copper coins be affected materially by the adoption of the decimal coinage, should it be determined to resort to it. In that case, the pound will be the unit of the system, and a farthing will be the thousandth part of a pound; at present it is the 960th part of a pound.

THE CONSERVATIVE LAND SOCIETY.—A public meeting took place at the Town hall, Hertford, on Wednesday evening, Mr. H. Gibberson in the chair. There was a numerous attendance. The plan and objects of the society were fully explained by R. N. Fowler, Esq., the banker. A resolution, expressive of the opinion of the meeting, that the society, both on political and commercial grounds, was entitled to support, was passed unanimously.

THE THEATRES.

ROYAL ITALIAN OPERA.

The representation of Auber's master-piece in serious opera, the ever fresh and popular "Masaniello" on the opening night of the season (last Saturday), was, without exception, the flattest performance that has ever taken place since Covent garden had been devoted to the Italian lyric drama. It is difficult to account for the unsatisfactory execution. The work is quite familiar to the company at large, the only change in the cast being a new *Fenella*, who, we have every reason to think, is a valuable addition to the corps dramatique. The band, chorus, and the lead of the, and conductor presenting the familiar faces of former seasons. It was clear not the fault of the audience, for whatever there was a legitimate desire enthusiastically to welcome the overture the duo of liberty, between Lablache and Formes, and in the market prayer—already fervently encored the house was quick to respond—and certainly the applause given to Lablache, Formes, Tamburini, and Mdme. Castellan proved that there was no fidelity lacking for the established favourites. And yet, unaccountable languor, indecision, want of occasional correctness and uncertainty, seemed to be the error, or rather the disease of the evening. It is not sufficient to say that Lablache was fatigued from a long and perilous journey from the Russian capital; for, whatever may have been his deficiency of power, as an artist he never more distinguished himself. It helps little towards a solution to record that Madame Castellan was not in her best voice in *Fenella*, which never was adapted for her. It brings us no nearer an explanation of the night's contrarity, to mention that at the singing of Mr. and Rosati was execrable and the latter not *heroïne* capitale; nor is it of paramount importance to Auber's superb production, that the representative of *Pescor* should always prove a Phalaris heroic or a Nonni, devoid of a florid note and vertiginal *dexterité*, as Mariuet turned out to be. All these drawbacks, mishaps, and contrarieties may be encountered in the most bitter spirit, and still the last fact of a very dull night at the Royal Italian Opera may not be accounted for. The last name to the management is that it occurred on the first night of the season; and how to the universal feeling of disappointment and vexation. But, in making the full admission as to Saturday's and inauguration, it would be very unfair to conclude that it is to be the precedent for future doings. The directors have displayed too much artistic feeling, although not altogether immaculate, to authorise such a supposition; and Costa has too much love of his art, to allow such an exhibition to be repeated. But even in the best-regulated theatres in the world, containing the largest amount of talent, it will happen that a performance will be lifeless, from most inexplicable causes.

On Tuesday, the Duchess of Kent, accompanied by the Princess Adelaide of Hohenlohe, occupied the Queen's box, at the second performance of "Masaniello."

Owing to the late period at which the season began, it was necessary to give the last subscription night on Thursday night, when the well-known Parisian ballet divertissements, "La Fille Mal Gardée" (the mass by Herold), was produced, under the direction of M. Desplaces; and supported by Mdlle. Besson, Mdlle. Kolenberg, Mdlle. Santi, Mdlle. Borville, M. Petit (from the Grand Opera, Paris), M. Gouriet, M. Calde (Mr Harris), M. Desplaces. Prior to the ballet, Rossini's "Barbiere" was performed, with Madame Bosio as *Rosina*; Ronconi, as *Figaro*; and Taglafico, *Dr. Bartolo*. Signor Lucchesi made his first appearance in this country as the *Count*; and Herr Formès undertook, for the first time, the character of the wily *Basilio*. The new tenor will be a very essential acquisition: his voice is not of the most sympathetic quality, but his style is good. Madame Bosio made quite a sensation; if she had not sung a mawkish air, with variations, by Yaccaj, her triumph would have been complete. Formès is ill-adapted for *Basilio* in every respect; his reading of the great air of "Calunny" was quite a mistake. Ronconi's reception was rapturous, and he acted and sang *Figaro* to perfection, convulsing the artistes as well as the audience with laughter. The National Anthem was sung after the opera, in consequence of the interesting event of the day. Madame Castellan and Herr Formès sang the solo verses. The ballet scarcely exacts a remark; it must be added to the list of choregraphic casualties at this establishment, at which opera alone appears to flourish. The execution of the "Barbière," in the ensemble, was superb.

ST. JAMES'S

This theatre reopened on Monday, with Mdlle. Page in "Les Extrêmes Se Touchent," as *La Comtesse*, M. Lafont acting *Le Chevalier*. In the next piece, "L'Intrigue," the same lady impersonated the *Marquise*, and was supported by M. Julian in the part of *Leopold*. The Queen and Prince Albert were present.

HAYMARKET.

A new comedy, from the pen of Mr. Robert Sullivan, was produced on Thursday. It is entitled "Elopements in High Life" Like all the other pieces by the same author, it is a clever piece of work—dialogue sustains rather than of story, and the dialogue is written with his usual neatness and point. *Lord Betterton* (Mr. Chippendale) and his lady (Mrs. *Fitzwilliam*), having differed on the education of their children, have lived apart, and his daughter *Sybilla* (Mrs. Buckingham) is about to be married to a gentleman of supposed fortune, named *Travers* (Mr. Barry Sullivan), while really in love with his friend *Tom Singleheart* (Mr. C. Howe). She is relieved, however, from this disagreeable prospect by the discovery of Mr. Travers's real character, who has also paid his addresses to the widow *Lovelock* (Miss Reynolds), and *Katherine* (Miss Louisa Howard), daughter to Lady Betterton. There are underp ots in relation to *Charles Perfect*, the friend of Mr. Travers, and *Jeremy Tulip* (Mr. Buckstone), who, in a fit of over-cleverness, in association with a friend named *Gamb*" of the Unattached" (Mr. Compton), turns the plan into an abduction of *Sybilla*. But the whole affair is detected in time; and, by the contrivance of *Mrs. Lovelock*, who is really in love with *Travers*, the debts of the latter are paid, and all parties are made happy; the *Lord* and *Lady Betterton* being reconciled both to their children and themselves. The comedy was well placed on the stage by the manager's taste and the diligently acted. It was well received by a crowded house. Owing to the accouchement of her Majesty, "God save the Queen" was played immediately on the fall of the curtain, which prevented the author being called for, as usual on first nights of performance. There is, however, no doubt of the success of the performance.

SADLER'S WELLS

The performance of "The Second Part of King Henry IV." has been repeated this week, and thus gives us an opportunity of reverting, as promised, the manner in which the play is acted. Though old to the library, this fine dramatic chronicle is so new to the stage, that the performers could have had no assistance in their studies from tradition The *Falstaff* of the previous part, and of "The Merry Wives," is also different from the *Falstaff* of this same "second part" Here we are not treated with the fat and oily gentleman, but with a thin man of wit and courage. He is a very leonine hero in the estimation of his braggart associates, as also of *Dame Quickly* and *Doll Tearsheet*. In the former play he had soliloquised on "Discretion," as "the better part of valour is;" in this he soliloquises on "Valour," as the product of "your excellent sherris." "Skill in the weapon is nothing without sack; for that sets it a-work: and learning a mere hoard of gold kept by a devil, till sack commences it, and sets it in act and use." Perhaps, there is no actor on the stage, at present, who could have delivered this speech with more elocutionary force than Mr. Barrett, except, perhaps, Mr. Phelps himself, whose performance of the old moral, *Falstaff*, ranks among the achievements for which he will be remembered Mr. Barrett acted the whole part with discretion and judgment; though a further acquaintance with it, and greater study, will improve and more finish it. It will bear still more study and experience; but, of "what is done," we can report well. The *Dame Quickly* of Mrs. Marston is also a new study, not altogether of the most pleasant; perhaps; but this truly Shakspearian actress undertakes it with commendable boldness, and gives, at all hazards, a veritable portrait, true as a sun-painting—the pouts and, momentarily hovering over the—one of his triumphs, being the coy to which the processes of her own are directed, in the histrionic conception and execution of this inimitable work of stage art. But we must not conclude the present notice, without conferring marked distinction on Mr. Phelps's performance of the two characters, *Henry IV.* and *Justice Shallow* For the excellence of the former, all were prepared for, but, the transcendant merit of the latter is calculated to take by surprise even those most acquainted with the versatility of the actor's powers. Mr. Phelps's *Justice Shallow* is a complete impersonation of the part. The make-up thoroughly disguises the actor's identity, and substitutes the senile, foolish, fidgety justice to the life. The near-sightedness, the self importance, the nervous irritability, the authority of office, and its modifications by means of its associates, its inherent dignity, and its accidental corruptions—all these things enter somehow into this marvellous impersonation. The nearest approach to it that we remember was in one or two of poor Power's most intelligent assumptions. As an old man, nothing that Mr. Farren has done was equal to it. It was complete in every scene; not the least falling off anywhere. It must be acknowledged as one of the most precious and perfect works of a first-rate artist; true in drawing, rich in colouring, and excellent in composition. With acting such as this, the play, though burdened with classical speeches of royal length, appeared to us not in the least heavy; but, on the contrary, afforded a delightful evening's entertainment, calculated to elevate and instruct both the taste and the understanding.

STRAND

English Opera, of the old school, has been given every evening since Easter Monday, at this theatre, in the shape of Bickerstaffe's "Love in a Village"; sustained by Miss R. Isaacs, Miss E. Ormond, Miss Featherstone, and Leffler.

CITY OF LONDON.

The deserved success of Mr. Wilkie's drama of "Civilisation" has induced the management of this theatre to attempt the production of another original play from the same pen. This time it is a tragedy, which, under the title of the "Egyptian," was introduced to an early and audience on Monday. In structure the play is strictly classical, and the hero rather of the French tragic school than the Shakspearian. He is, in fact, a statesman and warrior of Egypt, a Princess being the object of his adoration, the daughter of *Zenobia*, Queen of Palmyra. *Antiochus* a giant Parthian, personated by Mr. N T. Hicks; and *Orocchus*, a Roman, are also suitors of the lady. Her affections are, however, given to the Wolfbred; and *Zabdas*, the "Egyptian" (Mr. C. Pitt), resigns her, though not without a terrible struggle of the heart. *Antiochus* proves traitor to the cause of *Palmyra* and is ultimately slain by *Zabdas*; who is then commissioned by the *Queen*, on the fall of the city, to immolate her daughter, lest she should fall dishonorably into the hands of the victorious invaders. From this doom, however, she is saved by the clemency of the Emperor *Aurelian*.

The tragedy is very effectively written, was exceedingly well mounted, respectably acted, and was received with well-merited applause. This is the second triumph of the legitimate original drama obtained by the sufferages of a popular audience, and does much credit both to the conductors and supporters of this theatre.

DRURY-LANE.—On Saturday next the performances at this theatre will be for the benefit of Miss Kate Saxon, who will play the part of *Helen*, in "The Hunchback;" to be followed by other entertainments.

MUSIC.

PHILHARMONIC SOCIETY.

Considerable curiosity was manifested to hear the overture, scherzo, and finale of Dr. Schumann, one of Germany's latest musical lights He is noted as a critic, and as the husband of the celebrated Clara Wiech, one of the greatest of classical pianistes. Dr. Schumann, like Richard Wagner, the uncle of Joanna, the prima donna of the Court of Chancery, is a musician militant; and, perhaps, like some of our own native musicians militant, his works have been treated with undue severity, for professors who wield the pen have no right to expect quarter when they are merciless themselves. To deny Dr. Schumann the possession of any amount of ability is, however, carrying passion and prejudice too far. He is a composer of considerable power, who knows the theories and principles of the art right well, but who, having an inordinate ambition to be ranked as an original thinker, gives to the world the ugliest possible music. The ear is always on the stretch to catch the meaning of strange and unsouth modulations, but there is scarcely a chance of an oasis in the wilderness of sound, to slake the thirst of the seeker of the melodious spring. So far as effect went, therefore, the overture was a nullity. Whether, as his admirers pretend, a taste for his music by constant hearing may be acquired it is impossible to state; but, in this country, on Monday's trial, his chances may be pronounced to be very remote. What a delicious contrast was Mozart's symphony in E flat, and how sparkling was the "Masanie.lo" overture, after Schumann's erudition. Even chromatic Spohr's violin concerto, in E minor, No 7, came like the flowers of spring after the Leipsig Doctor's dreary effusion. Sainton played the concerto admirably: he conquered the intricacies of the allegro with marvellous ease and precision, and sang the adagio with all the passion of the most sensitive singer of a southern sky. He was rewarded with the sympathies of a really moved auditory. Beethoven's "Praise of Music" cantata made little impression. Written to order, in honour of the Allied Sovereigns at the Congress of Vienna in 1814—for whom and with which the democratic composer had little liking—it betrays the mind of the tasked musician more than his inspiration: it has all his learning, but not much of his fancy and imagination. The last movement is the most effective, and it was rendered vigorously by band and chorus. Blagrove's playing of a curiously-introduced violin obligato, which acts the part of the soprano singer in the cadence, did not escape notice and commendation. Miss Louisa Pyne was allotted the impassioned scena from Mendelssohn's unfinished opera, "Lorely" but, impudently for having been much overtaxed in the cantata of Beethoven, she has not the voice and style requisite for the whirlwind of passion of the rejected heroine In the duo with Miss Poole, from Weber's "Der Freyschütz," "Come, be gay," she was infinitely more successful; and this charming duet has rarely been more delightfully sung. The next concert will be on the 16th, when Miss Arabella Goddard is to perform Sternd ale Bennett's magnificent Pianoforte Concerto in F minor.

THE MUSICAL UNION.

Under the especial patronage of Prince Albert, the presidency and vice-presidency of the Duke of Leinster and the Earl of Westmorland, and the chairmanship of the committee of management of Lord Mount Edgcumbe, the Director of the Musical Union commenced on Tuesday, at Willis's Rooms, his ninth season, with the largest subscription list of aristocratic amateurs he has ever had to welcome, and the largest subscription list of distinguished clever arrangements; he has, perhaps, made less mistakes than the direction of any other musical society. The scheme was remarkable for the return of Vieuxtemps, the violinist *par excellence* of the grand classical school, and for the début of the new pianist, M. Haberbier, who has gained great glory in Germany. The scheme was remarkable for the re-turn

Ellis, but he showed them that his hands were bleeding and blistered too; and they resumed their work without a murmur. He is a man of the truest piety and kindness of heart; and all these various attributes and virtues give him an influence over the lads which leads to the most extraordinary and successful results in the way of reforming them. "And when you speak to him about it all (says a friend of Mr. Ellis), he always speaks of himself as nothing—as an instrument only—and that all the glory is God's."

John Ellis was born Nov. 9, 1809, at Swaffham, of humble but respectable parents. His father enlisted into the 56th Regiment, in 1794, and, after serving in Holland and in the West Indies, was discharged, in 1802, in the city of Cork. He married a native of Ireland, and returned to his native town, where he was sergeant in the Norfolk Volunteers, and sergeant-major in the West Norfolk Local Militia, until the peace which followed Waterloo. He is still living, and in the enjoyment of a small pension. John Ellis, who was the third son, was taught the trade of a

MR. JOHN ELLIS,

THE INDUSTRIAL AND RAGGED SCHOOL TEACHER.—FROM A PHOTOGRAPH BY WHITLOCK, BIRMINGHAM.

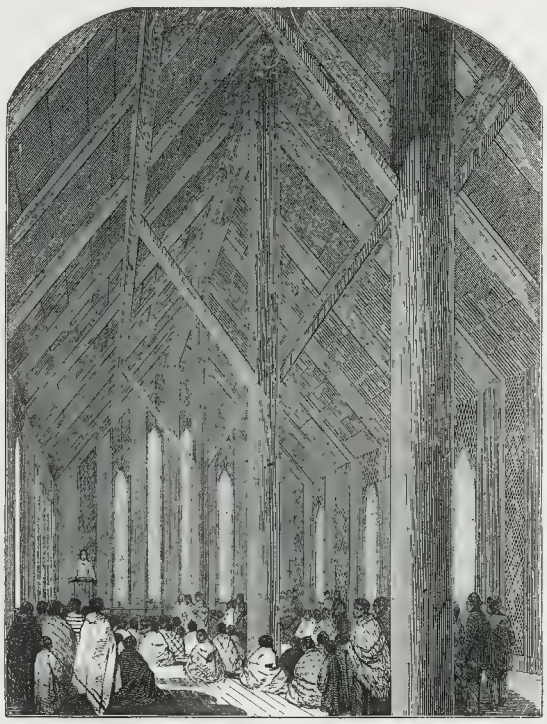
shoemaker, and came to London about the year 1833, to work for his brother, Mr S Ellis, of Albany-street, where he resided until last June. In his humble way he has been a great reader, and has especially endeavoured to study the human heart. His friends state that there is an amount of benevolence in his character inconceivable by any but those who are intimately acquainted with him. He has been twice married, and lost his second wife about four years since. He has only one son (by his first wife), now about twelve years old, who has been of great assistance to his father in his reformatory plans. Mr. Ellis thus described his system to the Select Committee of the House of Commons:—

My system is a system of privilege; I have, perhaps, twenty degrees of privilege, such as favour, food, liberty, indulgence, kindness, and so on. I have quite sufficient rewards and punishments. You must have a system of rewards and punishments, but of mental, not corporal punishment; for if you get hold of the mind, you will find that it is capable of suffering far more than the body. . . . With regard to their labour, I put the boys all on a pivot of their own. I make them move in a circle with regard to their labour. I say to them, "If you do so much labour, all you do over you shall be paid for." That was a system they liked; they could gain by this, and, of course, they could get my favour, and food; and a boy that was industrious and willing to do all he could to oblige me would be raised to a better state of work. He would sit near to me at my table, and he would receive marks of favour of different sorts; he would have a better pair of boots made, better clothes, and various other little things that are great things to him; whereas a boy that would not work would not have a penny to spend, nor any clothes. Whenever I saw anything wrong, I have been used to warn them, and say, "Now, do not do that again." Though I never used the rod, or anything else of that sort, there is a feeling in these lads that brings them to perfect submission; they dread my looks, or a frown, or a word from me more than they would dread the lash.

NEW ZEALAND.—NATIVE CHURCH AT OTAKI.—CHRISTCHURCH, CANTERBURY COLONY.

THE accompanying Sketches illustrate very interesting points of the progress of the affairs of the Church in New Zealand.

First is an interior View of the Native Church at Otaki, from a clever drawing by Mr. C. D. Barraud, Wellington, lithographed by Mr. E. K.



NATIVE CHURCH AT OTAKI, NEW ZEALAND.—FROM A DRAWING BY C. D. BARRAUD, WELLINGTON.

Thomas, and Messrs. Day and Haghe. This church is entirely the work of the natives, and constructed much after the native fashion; but, zealous for the honour of "God's House," they have bestowed the utmost pains on the workmanship, which to them has been a labour of love. The building is 80 feet long, 36 feet wide, and 40 feet high, and is capable of containing seven hundred persons. It is lighted on each side by lancet-headed windows; and four lofty lancet windows, separated by totara slabs, coloured red, fill the eastern end. Instead of tye-beams and framing, one solid totara slab eighty feet long, cut from a single tree, fit from its size "to be the mast of some great ammiral," forms the ridge board, which is supported by massive totara columns, each also formed from a single tree; and additional strength is given to the roof by means of braces abutting on these columns. The slabs which form the roof are ornamented with a rude scroll work, relieved in white, and the spaces between the slabs in the roof are neatly filled in with reeds; the compartments between the slabs in the walls of the buildings are ornamented with plaited raupo.

The church has been erected entirely by the voluntary labours of the Maories, under the superintendence of Archdeacon Hadfield and the Rev. H. Williams. The timber was carefully selected from the forest, and was brought a distance of several miles.

The whole structure affords a very satisfactory proof of the skill of the natives, and of their proficiency in the use of European tools. The Artist has represented the natives attending the celebration of Divine worship, clothed in blankets and mats of native workmanship, as more characteristic: but we believe the great majority who attend service on Sunday are habited in European costume.

The Sketch of Christchurch, the capital of the newly-founded colony of Canterbury, was taken by one of the earliest settlers, who was a member of the party landed from the *Charlotte Jane* (the leading ship of the four which carried out the founders of the colony), on the 16th of December, 1850.

At that time, the site of the future town was not even chosen. Although a general decision had been made that the future capital must be founded in some part of the vast plains to the *north* of Banks's Peninsula, it had been wisely left for the colonists themselves, upon their arrival, to make the final choice of its exact locality.

In the eleventh number of the *Canterbury Papers*, published for the Association, a view appeared of the great plains, with the "Forty-mile Beach," as seen from the top of the hills around Port Lyttleton, in which the future site of the capital is indicated by smoke arising from the neighbouring farm of Riccarton, in the possession of the Messrs.

ELEPHANT BRIGADE, AT MOULMEIN.

Deans. This imaginary site has now been converted into a reality; and the above view exhibits the actual state of the town on the 4th of December, 1851 less than twelve months after the landing of the first colonists

The river Avon flows through the centre of the town, bordered on the banks by bulrushes of enormous growth, and the *toi-toi*, or tufted grass, which often grows to the height of eight feet, and is found in most moist places. Specimens of the flax plant, also, with which New Zealand abounds, may be seen interminglied, in the foreground of the Sketch.

At that time, the only mode of transit across the river was by the foot bridge, which is here delineated; since that time, however, a wooden bridge, fit for the passage of horses, has been added in another part, and it is hoped that the town may not be long without a bridge of a more substantial nature. The stream is beautifully clear, and abounds with fish, though not in general so good for eating as those which may be found in large quantities in the sea, at four miles' distance

The principal structure in the foreground of the picture is the land office, where all transactions respecting the sale and transfer of land are carried on; the flagstaff that is attached to it, seems both to indicate the seat of local government, and also answers the purpose of a town clock; the time of day being indicated by the flag, which is hoisted when the sun-dial which is erected in the garden opposite has registered the hour of noon.

The larger house to the left belongs to Mr. W. Britian; and the less pretending one, still more to the left, called, from the hue of the walls, Blackwall-house, is occupied by Mr. A. C. Barker, late surgeon-superintendent of the *Charlotte Jane*. The building in the distance, to the right, above the wooden bridge, is the temporary church, also of wood.

The hills that bound the horizon separate Port Cooper from the plains: varying in height from 800 to 1600 feet, and dying out to the right of the picture, where the great Summer plains stretch to the southward, forming the southern portion of the Canterbury block

At the present time, however, the town of Christchurch is somewhat in advance of the state here depicted, as more houses have been built, and the population considerably increased by emigration; but it is to be feared that the continual tide of population that has lately set in to the gold-producing colonies of Australia, must for a time at least retard the growth of this growing colony.

Should the reports be confirmed which have lately arrived, announcing that gold is discovered in New Zealand, it is more than probable that the Canterbury Settlement will have to go through the same fiery ordeal as the neighbouring colonies of Australia; and he must be gifted with far more than ordinary penetration who can foresee the effects of the discovery upon the fortunes of the present settlers.

Hitherto, the Canterbury Colony has appeared a desirable locality for extensive sheep-farming: its vast plains, being nearly destitute of wood, are suitable for the pasturing of sheep to an almost unlimited extent But, should such a change as that which is now reported, come over the spirit of their dreams: the well-intentioned plans which were formed by the Canterbury Association, will, in all probability, be rendered abortive by discoveries which no human foresight could have anticipated.

THE BURMESE WAR.

Since our last number the Indian Mail has arrived. The report of the revolt at Ava is confirmed. The King was besieged in his palace by Prince Memdoon, his younger brother. The King had only a garrison of 300 men, while the Prince had with him "the whole army." While General Godwin was at Meaday, a town above Prome, an embassy, consisting of two Burmese chiefs, an Austrian and Italian missionary, Burmese prisoners on parole, waited on the General, on behalf of Prince Memdoon, asking for peace. They stated that Ava and Utamerapoora had both been burnt; that the King could not hold out any longer; that the Burmese, from highest to lowest, were heartily sick of the war, and would gladly see matters amicably settled;" and that as soon as Prince Memdoon had established himself on the throne he would conclude a treaty of peace. The emissaries were informed that if Prince Memdoon would send down persons properly accredited, General Godwin would be happy to hear what they had to say; but they had better be quick, or else a British force would one day appear at Ava. And with that answer the embassy withdrew. This took place before the 21st of January, on which day General Godwin returned to Prome, having left a garrison at Meaday. The Governor-General embarked at Calcutta for Rangoon on the 18th February.

The reported repulse of General Steel is without foundation; on the contrary, he had occupied the strong places in Pegu without opposition; the Burmese, in obedience to orders, retiring upon Ava, thus clearing the province of Pegu. Meanwhile, Captain Fytche, Deputy-Commissioner of Bassein, and Captain Rennie, of the Indian Navy, had, about the end of January, performed gallant service in clearing the province of Burmese. They had 2000 native auxiliaries, eighty Europeans, and four boat-guns. The Burmese General retreated slowly before them. On the 28th January, Captain Fytche, learning he was only a few miles ahead, got on his front by a night march, formed an ambush across the road, and surprised him with a volley and a bayonet charge before daylight The result was the utter rout of the Burmese, and the complete clearing of the province

A dreadful fire is reported to have desolated Rangoon.

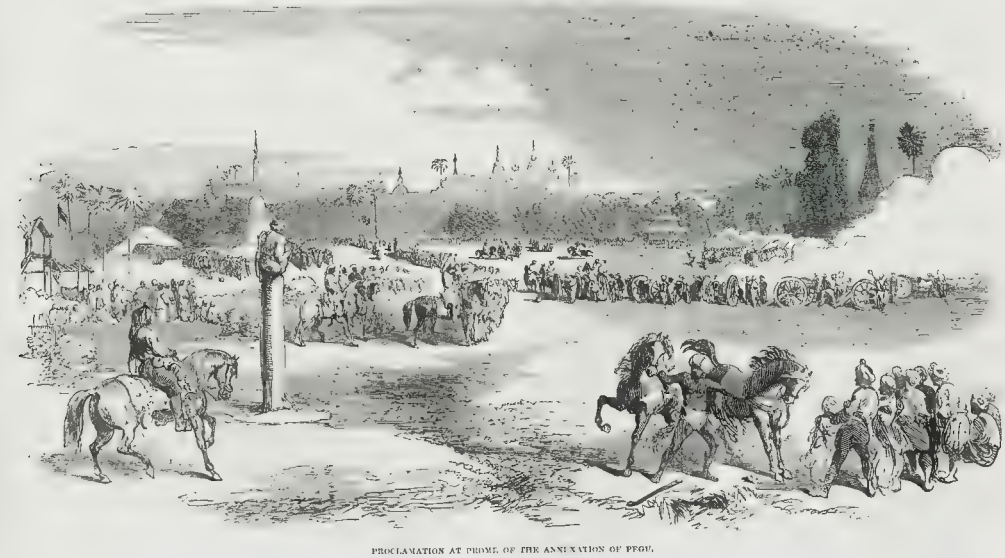
It is stated that a civil war had broken out at Bahawulpore, on the Indus: a kind of war of succession, arising out of the death of the late ruler, and requiring British interference. Hydrabad and Oude are described as rapidly approaching desolation; but this news has no novelty.

Intelligence from China represents the rebels as rapidly gaining ground, with Nankin as the gaol of their hopes.

THE ILLUSTRATIONS.

It will be recollected that in the news received at the close of January from the seat of war in Burmah, the Elephant Brigade figured somewhat prominently, and the arrival of this stupendous force was expected at Prome. A Correspondent has enabled us to present to our readers the accompanying very remarkable scene of the brigade of 90 elephants being taught to stand fire, at Moulmein, previous to their accompanying the force

The next scene is the ceremony of the Proclamation at Prome of the Annexation of Pegu to the British Dominions; the conditions of which were given in the Illustrated London News of February 19. The proclamation took place on the 8th of January. In the centre of the view is a portion of the Ramnuggur Horse; on the right, a portion of the Light Field Battery, which had the honour of firing the salute on the occasion. The distant pagoda on the right is the Shuay Sandan. In the distance, on the left, is Battery Pagoda; it has been partly knocked down, and two eight-inch howitzers being placed in position there gave it the present name. On the intermediate heights are the quarters of her Majesty's 18th and 80th Regiments.



PROCLAMATION AT PROME, OF THE ANNEXATION OF PEGU.

CALENDAR FOR THE WEEK.

SUNDAY, April 10.—Second Sunday after Easter.
MONDAY, 11.—Canning born, 1770 Napoleon's first abdication, 1814.
TUESDAY, 12.—America discovered, 1492.
WEDNESDAY, 13.—Dr. Jenner introduced vaccination, 1796.
THURSDAY, 14.—Bishop Portens died, 1809.
FRIDAY, 15.—Easter Term begins. Mutiny at Spithead, 1797.
SATURDAY, 16.—Buffon died, 1788.

HIGH WATER AT LONDON-BRIDGE,

FOR THE WEEK ENDING APRIL 16.

TO CORRESPONDENTS.

T. S.—In the Royal navy a frigate is a man-of-war; but, though full rigged, does not rank as a ship Ships of the line are vessels carrying above sixty guns—two and three-deckers. We never heard of a 64-gun brig.

W. F. F.—The *Royal Albert* man-of-war is still in the same slip at Woolwich where she was laid to undergo the process of lengthening, to carry machinery for a screw propeller. It is expected she will be ready for launching next month.

W. C. F.—The publication of the *Morning Herald* newspaper was commenced in the year 1780.

POPE JOAN.—We do not interfere in card-playing disputes.

YOUNG INQUIRER.—The Census returns of 1851 will be published in a Supplementary Number of the ILLUSTRATED LONDON NEWS, as early as possible.

CABBELLE.—Skivers are sheepskins, prepared for bookbinding. (See "Webster's Dictionary")

W. L., Holborn-hill; G. L. T., Woolwich; and SCRIBBLER, Dublin.—Declined.

B. C., Northampton.—The words—

Quam Jupiter vult perdere, prius dementat.

are Barnes's translation of a fragment of Euripides.—See *Gentleman's Magazine*, July, 1847, p. 15, note; and *Notes and Queries*, No. 22.

W. H.—See a work on Taxidermy (Van Voorst, Paternoster-row).

INDIA should address the Secretary of the Dublin Industrial Exhibition.

W. F., Southsea.—No such Act as that in question has been passed.

T. G., York.—We shall be glad to see the sketch.

THE ILLUSTRATED LONDON NEWS.

LONDON, SATURDAY, APRIL 9, 1853.

A MOTION is to be brought forward by Sir Benjamin Hall, on Thursday next, which both parties in the House of Commons profess an extreme eagerness to have discussed. It concerns the honour and character of the late Administration, particularly of the late First Lord of the Admiralty, the Duke of Northumberland, and of the late Secretary of the Admiralty, Mr. Augustus Stafford O'Brien Stafford. The facts as we find them stated in the two Parliamentary papers, Nos. 371 and 373, of the present session, are these:—In the month of February, 1847, the then Admiralty issued instructions to regulate promotion in the dockyards, with the intention of rewarding merit and stimulating exertion; referring, as the ground for the change, to the vast expense of the naval service, and, with evident dissatisfaction, to the quantity of work done in the dockyards "being below the standard of well-conducted private establishments." By these new regulations all the appointments in the dockyards were to take place consequent on recommendations, founded on merit, forwarded to the Admiralty by the immediate superiors of candidates. To carry out the principle effectually, the reports or recommendations were all directed in 1849 to be made through the Surveyor of the Navy, and direct applications to the Lords of the Admiralty were discountenanced. A better method of getting at a knowledge of the merits of the public servants in the dockyards could scarcely be devised, and the scheme was creditable to the Admiralty of the day. This method of rewarding merit, however, did not suit the late Administration; and on the 19th of April, 1852—very soon, therefore, after the accession of the late Ministers to office—they rescinded the orders of 1847 and 1849; and Mr. Augustus Stafford, then Secretary of the Admiralty, informed Sir Baldwin Walker, the Surveyor of the Navy, that "great dissatisfaction existed amongst his political friends at the manner in which the promotions were made in the dockyards." Sir Baldwin regarded this as a censure on his conduct; and, therefore, in an *official* letter to the Secretary of the Admiralty, Mr. Stafford himself, tendered his resignation. At the same time, he wrote an *official* letter to the First Lord of the Admiralty (the Duke of Northumberland), stating his reasons for taking such an important step, and pointing out the great advantages which had already resulted from the regulations of 1847 and 1849, and the injury the public service would suffer from repealing them. It was not found convenient to accept the resignation; it would have caused too great a scandal. How Sir Baldwin was induced to withdraw it, has yet to be explained; but he never withdrew his letters, and, greatly to his surprise, Mr. Augustus Stafford denied, on the evening of November 23rd, in the House of Commons, that any correspondence had taken place between the Admiralty and the Surveyor of the Navy on the subject of promotions, or that the Surveyor had rendered his resignation. To refute Mr. Stafford, the correspondence is published by order of the House of Commons.

This is bad enough, but it is not the whole case. Following out the view mentioned in 1847 that the work done in the dockyards was not equal to the work done in private establishments, persons have latterly been imported from the "private trade" into the dockyards; and, according to the decision of the Admiralty, and by the recommendation of Sir Baldwin Walker, a Mr. Wells was appointed, from Liverpool, to be master-smith at Portsmouth, on September 10th, 1852. After he had given up his private business and been a fortnight at Portsmouth, his appointment was suddenly cancelled, without reason assigned. In his place, a Mr. George Cotsell, "who figures," says the *Times*, "in the bribery list of Sir Frederick Smith's committee," was removed from Chatham Dockyard; and several other removals consequent on his made way for the promotion of another Chatham elector of the name of Forbes. The public service at the very time when the nation was called on to pay large additional sums for the national defence was sacrificed, honourable men were disgusted, and corrupt electors recommended to promote the supposed interests of the party then in power. All this was done with the sanction, tacit or actually pronounced, of his Grace the Duke of Northumberland.

We must add that the present Admiralty have restored Mr. Wells, and have cancelled all the other appointments made on his dismissal. To guard against any such interference as that of Mr. Stafford in future, the regulations respecting promotion in the dockyards have, by the present Admiralty, been made an Order of Council, and henceforth can only be set aside by the formal consent of the Queen given in Council.

THE Revenue accounts, exclusive of Ireland, for the quarter and financial year ending the 5th inst., just published, inform us that on the quarter the increase of the Revenue was £44,613, and on the year £920,999. In the year and in the quarter there has been an increase in the Excise, in the Stamps, and in the Property-tax; and a decrease in the Customs and the Taxes. These branches of the revenue, therefore, are more permanently influenced than the other branches—such as the Post-office, which decreases in the year but increases in the quarter; and such as Crown lands, and Miscellaneous, which increase in the year and decrease in the quarter The diminution in the Customs is due partly to a higher duty on sugar, which continued to be paid till July, 1852, and to a considerable reduction this year in the quantity of tea taken into consumption, the consequence of a continued expectation that the duty would be reduced. The diminution in the taxes is probably due to the change from the Window to a House-tax, and some transference of taxes from one account to another. The increase in the Property-tax, in the Excise, and in the Stamps, are unmistakeable signs of a great and continued increase of business, of consumption, and prosperity. The Board of Trade tables for the month, when published, will confirm this statement. They will show us a further increase of exports to the amount of upwards of £1,000,000 in the month of February, as compared to the corresponding month of 1852; while in January there was a similar increase of £1,000,000: making, should the progress continue, an increase in the year of £12,000,000. They will mention a slight decrease in the consumption of sugar, and a large decrease in the consumption of tea, both of which we have continued in March, and which may be partly accounted for by the great emigration. Ships' stores, pay no duties; and, therefore, what the emigrants consume on board ship is free of duty. That the revenue increases, notwithstanding the immense emigration now going on, is a testimony to the very extraordinary prosperity of the nation. Those who stay and those who go are alike benefited.

THE REVENUE.

THE quarterly returns of the revenue made up to the 5th, are published. The following details will show the nature of the increase and decrease:—

INCREASE.

Excise	£98,817
Stamps	141,764
Property-tax	83,406
Post-office	23,000
Total ordinary revenue	276,987
Imports and other entries £80,655	
Repayments of advances 83,251	163,906
	£440,593

DECREASE.

Customs £184,104	
Taxes 189,572	
Crown Lands 6,000	395,980
Miscellaneous 22,215	
Increase on the Quarter	£44,613

THE COURT.

ACCOUCHEMENT OF HER MAJESTY.

The interesting event which has been looked forward to with national anxiety for some weeks past took place on Thursday. At a quarter after one o'clock on the afternoon of that day, the Queen was safely delivered of a Prince. There were present on the occasion, in her Majesty's room, his Royal Highness Prince Albert, Dr. Locock, and Mrs. Lilly, the monthly nurse. In the adjoining apartments, besides the other medical attendants (Sir James Clark and Dr. Ferguson), were her Royal Highness the Duchess of Kent, the Lady-in-Waiting on the Queen, and the following officers of state and Lords of the Privy Council, viz.:—The Earl of Aberdeen, First Lord of the Treasury; Earl Granville, Lord President; the Duke of Norfolk, Lord Steward; the Duke of Wellington, Master of the Horse; the Duke of Newcastle, Secretary of State for the Colonies; the Marquis of Lansdowne; the Marquis of Breadalbane, Lord Chamberlain; the Duke of Argyll, Lord Privy Seal; Viscount Palmerston, Secretary of State for the Home Department; and Lord Cranworth, Lord Chancellor

The near approach of the gratifying event can scarcely have been anticipated, for we learn that on the previous afternoon her Majesty not only took a drive in an open landau and four, but subsequently had a dinner party, at which Lord and Lady Canning and other official personages were present.

The bulletin issued on Thursday night was as follows:

"BUCKINGHAM PALACE, April 7th, 1853.

"The Queen was safely delivered of a Prince at ten minutes past one o'clock this afternoon. Her Majesty and the infant Prince are well.

"JAMES CLARK, M.D.
"CHARLES LOCOCK, M.D.
"ROBERT FERGUSON, M.D."

On Monday the Queen and the Prince, accompanied by the Princess Alice, took a drive in an open landau and four. In the evening her Majesty and his Royal Highness honoured the French Plays with their presence

On Tuesday her Majesty, accompanied by the Princesses Helena and Louisa, and attended by the Countess of Gainsborough and Major-General Buckley, visited her Royal Highness the Duchess of Gloucester, at Gloucester House The Prince Consort, on the same day, visited the Exhibition of the Society of British Artists, in Suffolk-street.

The Countess of Gainsborough has succeeded the Duchess of Wellington in her duties as the Lady in Waiting to her Majesty. Lieutenant-Colonel Francis Hugh Seymour has relieved Captain the Hon. Dudley de Ros in his duties as Equerry in Waiting to his Royal Highness Prince Albert.

Her Royal Highness the Duchess of Kent, accompanied by her Serene Highness the Princess Adelaide of Hohenlohe, and attended by Lady Anna Maria Dawson and Sir George Couper, honoured the Royal Italian Opera with her presence on Tuesday evening.

His Excellency the Belgian Minister and Madame Van de Weyer have arrived in Portland-place, from a visiting tour. Madame Van de Weyer will have a grand reception this evening (Saturday), in honour of the Duke de Brabant's coming of age.

The Earl and Countess of Jersey and Lady Clementina Villiers have left Deane-park, for Belvoir Castle, on a visit to the Duke of Rutland.

The Earl and Countess of Lanesborough have arrived in Great Stanhope-street, from their seat in Leicestershire.

Mrs. W. E. Gladstone held her first reception on Wednesday evening, at the official residence of the Chancellor of the Exchequer, in Downing-street.

CHURCH, UNIVERSITIES, &c.

The Rev. R. C. Coxe, M.A., was installed Archdeacon of Lindisfarne, on Saturday morning, in the cathedral church of Durham.

NEW CHURCHES.—From the thirty-second annual report of the Commissioners for Building New Churches, it appears that since the last report twenty-two churches have been completed, in which accommodation has been provided for 13,658 persons, including 9247 free seats for the poor. It appears that, in the whole, 519 churches have now been completed, and provision has therein been made for 532,636 persons, including 314,979 free seats There are twenty-eight new churches in the course of erection, including one in Oakley-square, St. Pancras, in which accommodation is to be afforded for 1240 persons—600 in pews, and 550 in free seats. The estimated expenses of the church are £3000.

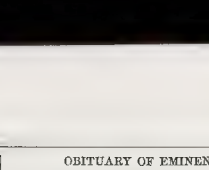
LONDON UNIVERSITY.—The Senate has chosen William Smith, Esq., LL.D., the editor of the "Dictionaries of Greek and Roman Antiquities and Biography," to be classical examiner, in place of Dr. Jerrard, and George Owen Rees, Esq., of Guy's Hospital, to be examiner in Materia Medica, in place of Mr. Pereira—both recently deceased.

PREFERMENTS AND APPOINTMENTS.—The Rev. G. Casson, rector of Olde, to a rural deanery in his diocese. *Rectories*: The Rev. W. H. Curtler, M.A., to Abbess Rodney, Essex; the Rev. O. W. Davys, B.A., to Stilton, Huntingdonshire; the Rev. G. P. Cosserat, M.A., to Drinkstone, Suffolk; the Rev. A. Williams, M.A., to St. Alphege, London-wall; the Rev. R. Decker, M.A., to Lyndon, Rutland; the Rev. R. A. Gordon, to Barley, Hertfordshire. *Vicarages*: The Rev. J. W. Dunne, to Warkworth, Northumberland; the Rev. C. Moody, to Newcastle-upon-Tyne; the Rev. Joseph Place, B.A., to Isleham, near Mildenhall; the Rev. W. Prosser, to Aston Flamville, the rectory of Burbage annexed, Leicestershire. *Incumbencies*: The Rev. H. Jolley, M.A., to Wingfield, near Stradbroke; the Rev. C. Jenkyns, M.A., to All Saints, Tuckingmill, Cornwall; the Rev. F. H. Vyvian, B.A., to St. Bartholomew's Church, Bethnal-green; the Rev. T. E. Wilkinson, B.A., to Grosmont, Yorkshire; the Rev. W. L. Smith, to Radstone, Brackley.

OBITUARY OF EMINENT PERSONS.

EDWARD-BOOTLE WILBRAHAM, LORD SKELMERSDALE.

THE decease of this nobleman, who had attained the advanced age of eighty-two, occurred on the 3rd inst., at his seat, Latham House, near Ormskirk. His Lordship, the representative of a branch of the very ancient Cheshire family of Wilbraham, was the eldest son of Richard Wilbraham Esq., of Rhode, M.P. for Chester, who assumed the additional surname of Bootle, on his marriage with Mary, sole daughter and heiress of Robert Bootle, Esq., through whom he became possessed of the fine historic mansion of Lathom House, memorable for the gallant and successful defence Charlotte

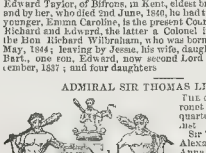


de la Tremouille, Countess of Derby, made in it against the Parliamentarians.

Before his elevation to the Peerage, which event was in 1828, Lord Skelmersdale sat in the House of Commons, from 1796 to 1812, as member for Newcastle-under-Lyne; and for Dover, from 1818 to 1828.

He married, 18th April, 1796, Mary Elizabeth, daughter of the Rev. Edward Taylor, of Bifrons, in Kent, eldest brother of Sir Herbert Taylor; and by her, who died 2nd June, 1846, he had two daughters—of whom, the younger, Emma Caroline, is the present Countess of Derby; and two sons, Richard and Edward, the latter a Colonel in the army. The elder son, the Hon Richard Wilbraham, who was born 27th October, 1801, died 9th May, 1844; leaving by Jessie, his wife, daughter of Sir Richard Brooke, Bart., one son, Edward, now second Lord Skelmersdale, born 12th December, 1837; and four daughters

ADMIRAL SIR THOMAS LIVINGSTONE



THE death of this venerable Baronet occurred at his seat, Westquarter, near Falkirk, on the 1st inst.

Sir Thomas, who was son of Sir Alexander Livingstone, Bart., by Anne, his first wife, daughter of John Atkinson, Esq., of London, succeeded to the title at the decease of his father, nearly sixty years ago, and became, at the same time, heir of the attainted Earl of Linlithgow, and keeper of the Royal Palace of Linlithgow. He entered the Royal Navy in 1782, and attained the rank of Admiral of the White in 1851. In the expedition against Quiberon and Rolleis e in 1850, he commanded the *Daedeus*, and in 1808-7 served as captain of the *Revenge*.

Sir Thomas married, in 1809, Janet, only surviving daughter of the late Sir James Stirling, Bart., of Mansield; but by her, who died in 1831, he had no issue. The title now devolves on the deceased's brother.

SIR DANIEL TOLER OSBORNE, BART.

SIR TOLER OSBORNE, died at Rathmines, on the 25th ult., aged seventy. He was son of the late Sir Henry Osborne, Bart., by Harriet, his first wife, daughter and co-heir of Daniel Toler, Esq., of Beechwood, eldest brother of the first Lord Norbury. The old estates of the Osbornes passed from the family in consequence of the marriage of Catharine-Isabella, only child of Sir Thomas Osborne, eighth Baronet (uncle of the gentleman whose death we are recording), with Ralph Bernal, Esq., captain in the army, who assumed, in consequence, by Royal licence, the surname of Osborne. he is the present M.P. for Middlesex, and Secretary of the Admiralty. Sir Toler Osborne married, in 1805, Lady Harriet Trench, daughter of the first Earl of Clancarty, and leaves several children, of whom the eldest is now Sir William Osborne, twelfth Baronet.

HENRY JOHN CONYERS, ESQ., OF COPPED-HALL, ESSEX.

THIS gentleman, the famous sportsman, died on the 30th ult. "Mr. Conyers (says the *Chelmsford Chronicle*), might well be called the father of the Essex hunting field, since he had been at the head of a pack of fox-hounds for half a century, and no man had spent more, or applied a greater portion of time and energy to the pursuit of the chase in all its spirit." For the last few years age had begun to tell on his once iron frame; but his last illness was not of many days' duration In politics Mr. Conyers was a staunch Conservative. At the period of his decease he was a county magistrate, a Deputy-Lieutenant, and Colonel Commandant of the East Essex Militia.

The family, of which he was a descendant, was a branch of the ancient stock of Conyers, of Yorkshire and Durham, and has been settled in Essex since the beginning of the seventeenth century. Amongst its Essex ancestors were the two learned serjeants-at-law, William Conyers, of Copped-hall, and his son, Tristram. The latter was father of Sir Gerard Conyers, Knight, of Copped-hall, whose son, John Conyers, Esq., King's Counsel, sat in Parliament for East Grinstead, as did his son, Edward Conyers, Esq. Of this Edward Conyers, who died in 1742, the gentleman whose death we record was great-grandson. Colonel Conyers was born in February, 1782, and married, 8th January, 1817, Harriet, youngest daughter of the Right Hon. Thomas Steele. By her he had three sons, of whom the eldest, Julia, married, in 1840, the Hon. Anthony John Ashley Cooper, brother of the present Earl of Shaftesbury, and the second, Charlotte Elizabeth, married, in 1839, Richard Le Gendre Starkie, at one time M.P. for Cambridgeshire. Many of our readers will, doubtless, remember the exquisite workmanship of the Conyers' testimonial, that was exhibitted at the Crystal Palace. The figure of the horse was a very excellent likeness

THE REV. DAVID WOOD, M.A.

THE Rev. D. Wood, of whose demise there is recent intelligence, was the eldest son of the late David Wood, M.D., Staff-Surgeon to the Forces, and Isabella, his wife, daughter of the late John Ramsden, Esq., of "the Arbur," Monmouthshire, a younger branch of the Yorkshire Ramsdens; and brother of William Wood, M.D., of Kensington House, Middlesex.

The Rev David Wood was for some years curate of St Peter's, Vere-street, London; and he subsequently became a great traveller. In 1846 he visited Egypt and every part of the Holy Land; and was made a Hadji at Jerusalem. He returned to England in 1848; and, in the spring of 1849, he resumed his wanderings, and proceeded by the northern countries of Europe through Russia, Persia, and India, to Australia, preaching in every city and town which he visited where there was an English congregation. Mr. Wood was accidentally killed by a fall from a chaise within a short distance of the residence of his brother, Edward Wood, Esq., J.P., of Penkridge, near Melbourne. He was at the time rector of St. Peter's, Melbourne. He died unmarried, in his thirty-seventh year.

SUDDEN DEATH OF DR. CHAMBERS.—On Wednesday morning Dr. Richard Chambers was found dead in bed, at half-past eight o'clock, upon his servant going to call him. Deceased, who was in his sixty-third year, was physician to the Royal Free Hospital, the Cancer Hospital, the Dispensary for Consumption and Diseases of the Chest, and the Blenheim-street Dispensary. He was also a member of the Medical and Harveian Societies, and the Provincial and Medical Association; and author of several practical treatises on medicine.

HANDSOME CHURCH GIFTS.—A beautiful east window has just been presented to the parish church of Stockland, Devonshire, by the Rev. W. H. Turner, Rector of Trent. Subscribers to the design of the glass of the window is the four Evangelists, with their Gospels in their hands. Within the last seven years there have been no less than four entirely new windows placed in the church, and restored.

THE INDEPENDENCE OF TURKEY.—On Tuesday, a public meeting, convened by the Mayor, in compliance with an influentially-signed requisition, was held in the Lecture-room, Newcastle, "for the purpose of considering the propriety of addressing a memorial to Government, praying them to endeavour to maintain the independence of Turkey against the aggressions of Austria and Russia." The spacious lecture-room was crowded with auditors. The Right Worshipful the Mayor (N. G. Lambert, Esq.) presided. Mr. George Crawshay moved that a memorial (in accordance with the views expressed in calling the meeting) should be presented to Lord John Russell; and Mr Turner seconded the motion. Mr. Blackett, M.P.; Mr. Henderson, Mr. John Fife, and other gentlemen, subsequently addressed the meeting. The memorial was unanimously adopted.

LATEST INTELLIGENCE.

HOUSE OF LORDS.—FRIDAY.

Lord ELLENBOROUGH presented a petition from the master mariners, mates, and common seamen of Hartlepool, against the repeal of the Act of 12th Victoria, which restricts the number of foreign seamen in British ships.

Earl GRANVILLE, on the part of the Government, disclaimed any intention of introducing any measure which might tend to injure the British seaman

After some conversation the subject dropped, and the House adjourned at six o'clock.

HOUSE OF COMMONS.—FRIDAY.

In answer to Mr. Hume, Lord J. RUSSELL stated that Government intended to issue a commission to inquire into the state of the Corporation of London.

REDUCTION OF INTEREST ON THE NATIONAL DEBT.

Mr. DISRAELI and Mr. RICARDO complained that since they had entered the House the resolutions of the Chancellor of the Exchequer on this subject had been put into their hands in an amended form; and that, therefore, there had been no time for considering the alterations.

The House then went into committee to consider the National Debt Acts.—Mr. Bouverie in the chair.—when

The CHANCELLOR of the EXCHEQUER brought forward the following resolutions:—

1. That the capital trading stock of the Corporation of the Governor and Company of Merchants of Great Britain trading to the South Seas and other parts of America, and for encouraging the fishery, which is called and known by the name of South Sea Stock; the capital stocks of the £3 per Centum Annuities, called and known by the name of the Old South South Sea Annuities and by the name of the New South Sea Annuities; the capital stock of the £3 per Centum Annuities created by an act passed in the twelfth year of King George the First, intituled "An Act for Granting to his Majesty the sum of £1,000,000, to be raised by way of Lottery," called and known by the name of the Bank Annuities, 1726; and the capital stock of £3 per Centum Annuities, created by an act passed in the twenty fourth year of King George the Second, intituled "An Act for Granting to his Majesty the sum of £2,000,100, to be raised by annuities and a lottery, and charged on the Sinking Fund, redeemable by Parliament," called and known by the name of the £3 per Centum Annuities, 1751, shall be paid off and redeemed.

2. That every person, body politic and corporate, who now is, or hereafter may be, interested in the capital stock of any of the said £3 per Centum Annuities, who shall, in manner hereinafter directed, give notice at any time on or before Friday, the 8th of May, 1853, of his assent to receive other Government securities in lieu and in place of the said capital stocks of the said Annuities, instead of being paid in money, shall, at the option of the said parties, receive for every £100 thereof £82 10s. in a new stock of Three-and-a-half per Centum Annuities, which said annuities shall be paid at the rate of £3 10s. per centum per annum until the 5th day of January 1894, from and after which day the said annuities shall be subject to redemption by Parliament; or for every £100 of the said capital stocks of annuities the sum of £110 in a new stock of Two-and-a-half per Centum Annuities, which said annuities shall be paid at the rate of £2 10s. per centum per annum until the 5th day of January, 1894; from and after which day the said annuities shall be subject to redemption by Parliament; or for every £100 of the capital stocks of the said £3 per Centum Annuities, an Exchequer Bond for the like amount, payable to bearer, and carrying interest at the rate of £2 12s. per centum per annum, payable half-yearly on the 1st day of March and the 1st day of September in every year, until the 1st day of September in a year to be named in such bond, and not later than 1st of September, 1854, inclusive; and thereafter £2 10s. per centum per annum, payable half-yearly in like manner, until and including the 1st of September, 1894; and thereafter to be subject to redemption at par, at the option of the holder or at the option of the Commissioners of her Majesty's Treasury, as shall be named in such bond.

3. That the dividends and interest payable on such New £3 10s. per Centum Annuities, on such New £2 10s. per Centum Annuities, and on such Exchequer Bonds, shall be charged and chargeable upon the Consolidated Fund of the United Kingdom of Great Britain and Ireland.

4. That the dividends now payable by law on 5th July and 5th January in every year on the said capital trading stock, and on the said capital stock of New South Sea Annuities, created 1726, and Annuities 1751, shall continue payable until the 5th January, 1854 inclusive, and no longer.

That the dividends now payable by law on 10th October and 10th April in every year on the said capital stock of Old South Sea Annuities shall continue payable until 5th April, 1854, inclusive, and no longer.

5. That if the Corporation of the Governor and Company of Merchants of Great Britain trading to the South Seas and other parts of America, and for encouraging the Fishery, shall at any time on or before Friday, the 3rd day of June, signify to the Commissioners of her Majesty's Treasury their assent to commute and exchange the said capital trading stock, or any part thereof, into any one or more of the said New £3 10s. per Centum Annuities, New £2 10s. per Centum Annuities, or Exchequer Bonds, the said Corporation shall be permitted to make such commutation and exchange upon the same terms, and subject to the like conditions, as are granted to the person, body politic or corporate, interested in or entitled to the capital stock of £3 per Centum Annuities now proposed to be paid off and redeemed.

6. That all and every person or persons, bodies politic or corporate, possessed of any part of the said £3 per Centum Annuities, and who shall desire to signify his, her, or their assent to receive the said New £3 10s. per Centum Annuities, New £2 10s. per Centum Annuities, or Exchequer Bonds, in lieu thereof, shall, on or before the 6th day of May, 1853, but within the usual hours of transacting business at the Bank of England and at the South-Sea-House, by themselves or some agent or agents for that purpose duly authorised, signify to the Governor and Company of the Bank of England, or to the Governor and Company of Merchants of Great Britain trading to the South Seas, as the case may be, such assent in writing under his, her, or their hand or hands, or the hand or hands of his, her, or their agent or agents, together with the amount of his, her, or their respective share or shares in the said £3 per Centum Annuities, and which said assent shall be entered in a book or books to be opened and kept by the said Governor and Company of the Bank of England and by the said Governor and Company of Merchants of Great Britain trading to the South Seas, for that purpose; and in case of any transfer of such share or shares of such Annuities, or any part or parts thereof, after such assent, the part or parts of such Annuities so transferred shall be entered in the said book or books separately from the said £3 per Centum Annuities in respect of which no such assent shall be signified; and every such person or persons so assenting, or his, her, or their assigns, or the executors or administrators of such assigns, under any such transfer, shall be entitled, for every £100 capital stock of the said £3 per Centum Annuities, to £82 10s. of the capital stock of New £3 10s. per Centum Annuities, or to £110 of the capital stock of the New £2 10s. per Centum Annuities, or to an Exchequer Bond of £100, bearing interest as aforesaid. Provided always, that if any person or persons holding any such £3 per Centum Annuities, shall not be within the limits of the United Kingdom at any time between the 8th day of April and the 6th day of May, 1853, both inclusive, but shall be in any other part of Europe, it shall be lawful for such person or persons to signify such assent at any time before the 30th day of July, 1853; and if any such person or persons shall not at any time between the 8th day of April, 1853, and the 30th day of July, 1853, be within any part of Europe, it shall be lawful for him, her, or them to signify such assent at any time before the 1st day of February, 1854, such person or persons proving to the satisfaction of the Governor or Deputy-Governor of the Bank of England, or to the Governor of the South Sea Company, his, her, or their absence from the United Kingdom, or out of Europe, as above specified, and that his, her, or their assent to the transfer of such £3 per Centum Annuities stood in his, her, or their names respectively, or in the name or names of any one or more trustee or trustees on his, her, or their behalf, in the books of the Governor and Company of the Bank of England, or Governor and Company of Merchant Traders to the South Seas, on the 6th day of May, 1853: Provided, also, that such person or persons so absent from the United Kingdom, or out of Europe, shall signify such his, her, or their assent, within ten days after his, her, or their return to the United Kingdom.

7. That every person or persons, body politic or corporate, who now is or hereafter may be interested in or entitled to any part of the capital stock of the Consolidated £3 per Centum Annuities, or of the capital stock of the Reduced £3 per Centum Annuities, payable at the Bank of England or at the Bank of Ireland, and which said annuities have been the subject of October, 1853, and the 5th day of January, 1854, inclusive, at the Bank of England or Bank of Ireland, and Company of the Bank of Ireland, in such books to be opened for such purpose, his desire to commute and exchange any of the said Annuities to which he may be entitled into any one or more of the said New £3 10s. per Centum Annuities, New £2 10s. per Centum Annuities, or Exchequer Bonds, shall be permitted to make such commutation and exchange upon the same terms and subject to the like conditions as are granted to the person or persons, bodies politic or corporate, interested in or entitled to the capital stock of £3 per Centum Annuities now proposed to be paid off and redeemed as aforesaid.

8. That the Commissioners of her Majesty's Treasury be authorised and empowered to issue at any time between the 5th of April, 1853, and the 5th of April, 1854, Exchequer Bonds, payable to bearer, upon the like terms and conditions as hereinbefore described, and after public notice in the *London Gazette*, from time to time to sell such Exchequer Bonds, or any part thereof, and to apply the proceeds in redeeming any part of the capital trading stock or capital stock of Annuities now proposed to be paid off and redeemed, or in purchasing and cancelling any Exchequer Bills, or in exchanging such Bonds for Exchequer Bills, upon such terms as the said Commissioners shall think proper, or in purchasing and cancelling any of the Consolidated £3 per Centum Annuities, or Reduced £3 per Centum Annuities, payable at the Bank of England or at the Bank of Ireland, as the case may be.

9. That the interest on such Exchequer Bonds shall be charged and chargeable on the said Consolidated Fund.

10. That an amount of such Exchequer Bonds shall be issued exceeding in the whole the sum of thirty millions.

11. That it shall be lawful for the Accountant-General of the Courts of Chancery in England and Ireland respectively, and for the Accountant in Bankruptcy in England, at any time before the 6th day of May, 1853, to signify to the Governor and Company of the Bank of England, or to the Corporation of the Governor and Company of the Merchants of Great Britain trading to the South Seas and other parts of America, and for encouraging the Fishery, on behalf of any suitor or suitors, or other interested in any such £3 per Centum Annuities hereinbefore referred to, standing in the names of such Accountants-General and Accountant respectively, their assent to accept and receive shares in the said New £3 10s. per Centum Annuities, or New £2 10s per Centum Annuities or Exchequer Bonds, in lieu of all such £3 per Centum Annuities standing in their names respectively; and the said Accountant-General and Accountant respectively shall be fully indemnified against all actions, suits, and proceedings for and in respect of any action, matter, or thing done by them respectively in pursuance thereof

12. That all executors, administrators, guardians, and trustees interested in or entitled to any part of the capital stock of the Old South Sea £3 per Centum Annuities, of the New South Sea £3 per Centum Annuities, of the 3 per Centum Annuities created by the Act 12th George the First, of the £3 per Centum Annuities created by the Act 24th George the Second, of the Consolidated £3 per Centum Bank Annuities, and of the Reduced £3 per Centum Bank Annuities, whether payable at the Bank of England or the Bank of Ireland, as the case may be, and who shall signify their desire to convert the Annuities in which they may be respectively interested into any of the New £3 10s. per Centum Annuities, New £2 10s. per Centum Annuities, or Exchequer Bonds, shall be identified

He did not introduce the resolutions as likely in themselves to produce any great immediate result, but as likely to produce some immediate benefit, with a prospect of a greater amount of benefit resulting to the public hereafter. Such large results as had been attained in former Governmental operations were not now to be expected; but still, the Government were of opinion that the time was come for doing something more in the same direction. The first species of Stock to which the resolutions referred was the South-Sea Annuities, &c., amounting to about £9,500,000, to which it was proposed to apply a compulsory operation; because it was thought better to do away with them, as being limited and complicated, and to assimilate them to the other Stocks. The charge would also effect a permanent reduction of interest upon these Stocks of ½ per cent., or an annual saving of £47,500. To pay off these Stocks, there would be the cash now in the Exchequer, and he proposed to operate to the same end by Exchequer Bonds; and then there would be the alternative Stocks, which it was now proposed to create. The second portion of the resolutions related to the creation of Exchequer Bonds, and the third to the change in the Stocks mentioned. He did not think they would be justified in looking for any great future reduction in the interest now paid on the National Debt. The Exchequer Bonds which he proposed to issue would be transferable without expense, and would bear interest at the rate of £2 15s. per cent. for a period to be fixed by Parliament, and subsequently from Sept. 1854, at the rate of £2 10s. until 1894, when they would be liable to redemption. The amount they would not exceed £30,000,000. He proposed that they should be exchangable against Exchequer Bills, and against the Stocks which he proposed to commute. That they should, in industry for the purchase of Stocks from those who preferred repayment to the alternative now offered in place of the South Sea Annuities, &c. The easy and rapid transfer of these Annuities, without cost, would, he thought, render them exceedingly popular, because there was nothing similar now existing in this country, although they were current on the Continent. And they would be useful to the mercantile classes as a means of raising temporary loans. Another consequence of these securities would be that it would tend to bring the Irish Stocks into the principle market, and so raise their value to holders—a result which he was very desirous of achieving. These Bonds would also afford facilities for foreigners to hold English Stocks. With regard to the power to sell these Exchequer Bonds should be sold, he asked the House to leave that point to the discretion of the Government. In addition to these securities, he proposed a voluntary conversion of the great mass of the Three per Cent Stock. The proposal was that the holders of the Three per Cent Consols should have the option of exchanging their stock for the Exchequer Bills in the first place; or, in the second place, for £82 10s. of a New £3½ per Cent Stock, which would give to each £100 an income of £2. 17s. instead of £3. This was a considerable sacrifice for them, but he thought Government might be able to make a still further reduction. A third proposition was to give holders the option of accepting £110 of a New £2½ per Cent Stock; a proposition which this proposal would not preclude. Bonds should be sold, he asked the House to leave that point to the discretion of the Government. In addition to these securities, he proposed a voluntary conversion of the great mass of the Three per Cent Stock. The proposal was that the holders of the Three per Cent Consols should have the option of exchanging their stock for the Exchequer Bills in the first place; or, in the second place, for £82 10s. of a New £3½ per Cent Stock, which would give to each £100 an income of £2. 17s. instead of £3. This was a considerable sacrifice for them, but he thought Government might be able to make a still further reduction. A third proposition was to give holders the option of accepting £110 of a New £2½ per Cent Stock; a proposition which this proposal would not preclude

EXHIBITION OF THE SOCIETY OF BRITISH ARTISTS.

SECOND NOTICE.

PETTITT has three works, in which he aims at striking effects—but effects very different in character. "Corfe Castle —Twilight" (224), is a circular picture, reminding one strongly of the ivy-clad church exhibited by Anthony last year, in the same room, and nearly at the very same spot. The ruin is covered with ivy, moss, &c., elaborately painted, and with more of local colour than the almost total absence of light from the sky would warrant—the dark green of the foreground forming a strong contrast with the cold slate-tints of the sky. In No. 187, representing the "First Formation of the Beasts of the Field and the Fowls of the Air," the atmosphere is the very reverse of that just spoken of, being of the brightest sun-light The details of the innumerable objects introduced are set forth with painstaking finish, but are too minute to be fully appreciated in the position, just above the line, where the picture is now hung. The greatest effort of the three, however, is (422) "The Seventh Vial," from the Revelations:—

> And the seventh angel poured out his vial into the air; and there came a great voice out of the temple of heaven from the throne, saying, It is done. And there were voices, and thunders, and lightnings; and there was a great earthquake, such as was not since men were upon the earth, so mighty an earthquake, and so great. And the great city was divided into three parts, and the cities of the nations fell. —*Revelation* xvi. 17 19.

Mr. Pettitt divides his canvas not into three parts, but into two. One side represents the Divine wrath manifesting itself in a lurid torrent, which pours into a fiery sea, the surges of which threaten soon to overwhelm the devoted city. The other side represents part of the city itself; some of its principal monuments cracking and toppling to the ground, whilst the terror-stricken inhabitants crowd together in the open space, vainly deprecating their impending doom. The atmosphere here is of a sickly greenish hue, which in itself has a very good effect, but which is hardly brought into keeping with the peculiar red of the other side, in which too much lake is employed, and amongst which pale blue tints are introduced. Barring the objections on the score of colour, which are too palpable not to be noticed; barring, also, the too close resemblance of style to that in which Martin, as the originator, achieved well-earned honours, there is still considerable merit in the general conception of the work before us, and much power in the execution.

In the Landscape department Boddington displays his accustomed talent, and more variety than usual. Of his eleven pictures, that which commands the largest share of attention and deservedly so—is (101) "On the River Mawddach, at Tyn-y-groes, North Wales." Without any diminution of the careful finish always manifested by this artist, we observe in this picture a freer and broader treatment than he has generally aimed at, and with happy results. We look down from a mountain height into a deep valley, through which a stream holds its rapid course—a fact admirably told by the sharp ripple on its surface. The atmosphere is fresh, and nicely chequered. (98) "The Lake of Tal-y-Llyn, North Wales," is a scene of more breadth, naturally, than the last; treated with a sympathetic feeling; and under a brighter atmosphere. (231) "A Weedy Branch of the Thames" is a subject in which the artist is quite at home. (402) "Evening Prayer" is a small circular picture, representing a village church, embedded in foliage, under a mild evening sky, most agreeably rendered.

Pleasant charms us with his fine appreciation of nature and freshness of pencil, and is almost equally at home at sea or on dry land. Still, if we were called upon to decide between the two on the present occasion, we should say the sea had "the call." Who would pine after the glories of the Mediterranean, when such a glorious sea and sky are to ought to their very doors in (260) "Margate Sands—Reculvers and the Isle of Sheppy in the distance"? The world of fashion and taste who go abroad in search of the picturesque will begin to suspect, when looking at this little picture, that the picturesque is to be found nearer home, if it is but sought out with the eye of an artist. The point of view chosen is very low—low as the Margate Sands; yet so skilfully is the aërial perspective managed, that theeye is made to travel a distance of many miles in a small height of canvas. The tide is out, the weather calm; and there is a soft, silvery radiance on the water, which is the very truth of nature under the aspect chosen. The sky, though lofty, is judiciously chequered with light clouds. "Near Fairlight Glen—Hastings" (169) is a fine coast scene, under a glowing sunlight, the influence of which pervades the recesses of the rugged foreground with the happiest effect. "Cwm Cwyr, Glamorganshire" (77), is a bold mountain view, partially illumined by the sun. The clouds which cover the hills on the left are, in our opinion, not correctly realised—having more of a smoky than a watery appearance. "Between Twickenham and Teddington" (471) is a remarkably genuine bit of Thames scenery. The effect, however, is a little marred, by the undue extent of the cold blue sky, which over-balances the picture.

Clint has several of his glowing sunsets, in which he is at the present day almost without a rival, and of which we especially admire (468) the "Closing Hour of Day," in which a fine mountain distance is introduced. But still more to our taste are his efforts after the more ordinary aspects of nature, as his "On the Coast of Sussex—Hastings and Fairlight Down in the distance" (271). Here the broad bosom of the deep is spread out in calm and simple majesty, under a generous sky, upon which only a few light straggling clouds intrude. The water is deep and pellucid, the air warm and grateful: all is combined to make a scene upon which the eye delights to dwell, and upon which "the sun should never set!"

Before taking leave of the landscapes we must mention a very pleasing picture by J. Danby, "Connell Ferry, Loch Etive, Scotland:" in which the golden effects of a broad sunlight are realised with very great success.

Hill presents us with three of his pretty studies of clear-eyed mountain girls, in the primitive occupation of fetching water, &c.; and, in addition, a very meritorious group picture, entitled, "May-day" (164). Two playful girls are stretching upward to gather bunches of the may-bloom, whilst a boy lends his aid to bring down the branch to within their reach; one younger child completes the happy group, which is surrounded with a nice homely landscape, in the distance of which a flock of sheep are grazing The colouring is very delicate and agreeable.

We must now make passing mention of works in various branches which we noticed in our rounds. Stooping very low right down to the ground—we admire a very accurate portraiture of Southdown sheeps' heads, within a small circle some 9 inches diameter (80), by W. Webb. Near at hand, but higher up, is a small picture, "Cows at a Pond—Evening," by A. R. C. Corbould (103), which, though of unpretending appearance, has a good deal of Cuypish character about it.

Proceeding to other animal subjects, we remark some capital "Dead Poultry," by J. Hardy, jun. (336); and two fish pieces by Rolfe (387 and 420), the latter of which, entitled the "Death Struggle," represents the closing incidents of a well-contested tussle with a jack, which is just about to be dropped into the landing-net.

344. "N'y Touchez pas!" (*Anglaise*, "Paws off!") is a clever little picture: two rough terrier dogs barking at a hedgehog, and looking for all the world as though they could make mincemeat of him; the mixed expression of savage intent and prudent forbearance being capitally given.

309, "Waiting for the Carriage," by Mrs. Bassett, is a very small study of a single female head, muffled in a black silk hood, with a rich brown background; and is an illustration of how much of very satisfactory effect may be produced by very simple means. Dartaguenave has two small female studies (182), the "Affections," representing a girl at the tomb of a relation; and (383) the "Cottage Girl—Recreation," both remarkable for delicate but appropriate expression.

G. Smith produces a little rustic interior—"The Breakfast" (276)—representing a boy eating bread-and-milk, with a dog for looker-on: full of spirit and life, and well-finished in every respect.

"Happy as a Queen" (326), by B. Roberts, presents us to a little foreign girl, dressed in a green worsted polka, a red handkerchief round her head, brandishing a tambourine, and grinning a broad grin, as an inducement for the bestowal of an odd halfpenny. Spirited in character, and the colour very pure.

Fitzcook has made a very clever little picture of "Don Quixote and Sancho Panza waiting for sunrise on the Strand at Barcelona" (319): a small study for which he also this year exhibits in the Portland Gallery

"The Man the Rail Ran Over—a Vision of the Past" (538), by J. G. Fennell, is a touching though comic reminiscence of the stage coachman of the olden time, sitting on his box (which is inscribed "Independent"), with rubicund countenance, and flourishing his whip as heretofore,—only in the clouds.

By R. Buchnar we remark two very expressive heads, artistically treated (410), "Study from a Sicilian Exile" and (448) "Study of a Roman Head:" the former a male, the latter a female. He has, also, a portrait of Gardoni, the favorite tenor (120), which may be pronounced a speaking, if not a singing likeness.

"MAY-DAY."—PAINTED BY J. J. HILL.—FROM THE SOCIETY OF BRITISH ARTISTS' EXHIBITION.

"LYTHAM COMMON, LANCASHIRE"—PAINTED BY E. ANSDELL.—FROM THE BRITISH INSTITUTION EXHIBITION.

NATIONAL INSTITUTION OF THE FINE ARTS.

We now take a farewell glance at this generally interesting exhibition.

S. Laurence exhibits a rather striking portrait of "Professor H. H. Goodeve, M.D." (186): painted, we are informed, for the Medical College of Calcutta, at the request of the students, more especially to commemorate the triumph over Eastern prejudices, resulting from the study of practical anatomy, by Dr. Goodeve, amongst the natives of India. The prejudices of the Oriental nations upon this point are well known; and the successful exertions of Dr. Goodeve in removing them cannot be too highly appreciated by those who look forward to the social regeneration of these numerous tribes. The Professor has a commanding presence, with good intellectual development. He is attired in his black silk gown, which is richly painted in, and apparently in the act of addressing his class; and on a table at his side is a "subject," or dead body, which being ably foreshadowed, and kept in a subdued tone, does not in the slightest degree shock the eye, whilst it produces essentially to the historical interest of the picture. The same artist has a portrait of "Samuel Rogers, Esq." (19), the poet, which though certainly a likeness lacks the intellectual character of the original, and is carelessly executed in many particulars. The colours in some places seem to have been laid on in the wrong succession—those of the face, for instance, being over, instead of beneath, that of the black velvet cap; and there is no distance shown between the head of the sitter and the top of the black arm-chair, nor between the latter and the wall. These are errors, which must not be overlooked, when admitting much general merit in the artist.

Provis has several very pretty interiors, in which he elaborates the details of the domestic household, chiefly amongst the humbler classes, with great accuracy and finish. The tone, also, is warm and harmonious, though sometimes a little monotonous. The picture which we engrave—"A Wiltshire Farmer's Fireside"—is an agreeable sample of this artist's talent.

Amongst the landscapes, we remark with pleasure a highly agreeable one—"Sunset: Winter," by G. A. Williams. We have here a group of boys amusing themselves on the snow-clad ice on the village pond. The figures are full of action and life; and the whole of the various features of the landscape are well chosen, and tastefully treated. But what constitutes the greatest charm of this little picture is its transparent effect, even under a hazy sky; and the warmth which is imparted to surfaces in themselves cold. This is arrived at by a broad diffusion of the red tints from the setting sun; and the green hue given to the shades (strictly accordant with the truth of nature), which, blending with the other colours—they being but faintly suggested—produce a result of perfect harmony.

F. Besson exhibits two little pictures in the French style—the style of the time of the decline of French art in the eighteenth century, which is, after all, better than that of its revival since; and, in treatment more particularly, after that light dabby or woolly touch which we find in Watteau and Boucher. And though these little pictures are by no means of a high class, or objects which we would hold out for imitation, we would yet point to them as containing matters usefully suggestive in a day when colouring is too much left to caprice or chance. One of this pair represents "Boucher, the celebrated painter, buying cherries of the beautiful Rosine;" and, as we have said before, is executed in close resemblance to the weak and flimsy style of that artist. When closely looked into, however, some of the subdued points—as the eyes of the female, the colour of the cherries, and other objects—come out with remarkable effect. The other—"Venus, attended by Cupids"—is a more ambitious, but less satisfactory, effort.

Amongst the various works of still-life which the collection comprises, we must mention with especial praise a "Family Meeting on the Banks of the Thames," by W. L. Rolfe; in other words, a group of all the fish that are found, or ever were found, in the Thames—from the noble salmon to the minnow—the colour and character of each being admirably distinguished.

"A WILTSHIRE COTTAGER'S FIRESIDE."—PAINTED BY ALFRED PROVIS.—FROM THE PORTLAND GALLERY EXHIBITION.

BRITISH INSTITUTION.

Amongst the gems at the Exhibition of the British Institution, is an extremely clever little piece by Ansdell, entitled "Lytham Common, Lancashire;" which we have much pleasure in engraving. This picture is not so remarkable as a landscape—though in that respect of great merit—as for the character given to the respectable quadrupeds which happen to be brought into juxta-position upon it. Thus we have on the one side a group of donkeys, as natural and intelligent as donkeys can be; and on the other, a group of sheep. One very young donkey stands, crest erect, vainly attempting to stare an old wether out of countenance. The situation is full of humour, and the features and texture of the animals perfection. The same artist's larger picture of "A Sheep-Gathering in the Isle of Skye" is remarkable for the successful treatment of the woolly coats of the mountain flock, but somewhat cold and hard in other points.

"A Spanish Landscape and Figures," also exhibited at the British Institution, is a very admirable specimen of Mr. Gilbert's careful and finished style; and, in its treatment, evidences, also, a ripe appreciation of the commanding features of the old school of art. The group is that of a Spanish peasant conducting a mule, on which are his wife and child, with a basket of fruit. The colouring is very rich, with an agreeably warm tone; and, on all accounts, the picture is one which would do honour to any cabinet of British art.

"A SPANISH LANDSCAPE AND FIGURES."—PAINTED BY JOHN GILBERT.—FROM THE BRITISH INSTITUTION EXHIBITION.

IMPERIAL PARLIAMENT.

HOUSE OF LORDS.—MONDAY.

Their Lordships re-assembled to-day, after the Easter recess.

Lord CAMPBELL called attention to the proceedings of the deputation of the London merchants who had gone to Paris, and presented an address to his Imperial Majesty Napoleon III., in the name of the English nation; and who, in so doing, had been guilty of an outbreak, if not against the law of the land, at all events against the law of nations—which declared that intercourse between independent nations could only be carried on through Ministers appointed by the Government of the country. The address simply set forth that relations of peace and amity ought to subsist between the two nations—a most innocent declaration, and one which he should have thought wholly unnecessary, for he never knew a time when there was a more general concurrence in that sentiment. There was Napoleon on his throne, surrounded by his ministers, and then enters the English deputation. He did not find that the English Ambassador was present, or that he gave his countenance to the transaction. Was he to suppose that Sir James Duke was sent over to supersede Lord Cowley? In the case of a railway company or the proposed Isthmus of Darien Canal Company, when the concurrence of a foreign Government was sought for, he did not think a deputation at all objectionable; but when the subject related to peace and war, to the relations of amity between the two countries, then it became a national matter, and it ought to be transacted through the accredited agent of the Crown. Was the danger to which we should be exposed if this were to be taken as an example: suppose there were a party in this country differing from and disapproving of the policy of the French Government, and that they were to present an address to the Emperor, praying his Majesty that it might be altered. He remembered the alarm which was felt by the English Cabinet, in 1848, when Mr. Smith O'Brien and a deputation of United Irishmen went to France, and were received by the French Government. No doubt the gentlemen who composed the late deputation to the Emperor were actuated by the most disinterested motives. If they had erred, they had done so by inadvertence. But these demonstrations might be got up in this country for mere stock-jobbing purposes; and those who would not sign the Irish Government addresses of a peaceful character, while those who desired to lower them would make declarations which gave an alarming aspect to the relations of the two countries.
